THE CENTURY MAGAZINE.

VOL. XXVII.

NOVEMBER, 1883.

NO. 1.

THE BULL-FIGHT.

LET us begin tranquilly. We are going to kill a good many old horses, whose four feet were in the grave before they entered the ring, and we are going to torture them in their last hours on the way to the bone-yard; we are going to bait, and worry, and weaken by loss of blood, and finally slaughter a number of noble bulls; perhaps we shall break some *picador* ribs; we are about to enter the region of chivalry, and engage in the pastime most characteristic of and most esteemed by the Spanish people; we promise gore and carnage enough farther on, and we may be pardoned for a gentle and gentleman-and-lady-like introduction to the noble sport.

One afternoon, in Seville, we learned that there was to be a *funcion* at the Bull Ring, given by amateurs, by a society of gentlemen Caballeros, whose object is the cultivation of horsemanship and the manly, national pastime. It was an entertainment given by the gentlemen of Seville to their lady friends, offering at the shrine of beauty the best fruit of a gallant civilization, and probably that which is most acceptable, just as the amateur Mendelssohn Society of New York gives its winter concerts to a refined and fashionable circle of friends. As admission was to be had only on special invitation of the members of the club, we had no expectation of participating, but we drove down to the amphitheater with a praiseworthy curiosity to see the beauty of Seville, in holiday attire, flock in to the spectacle.

The Bull Ring, which stands on the flat—all Seville is flat, and subject more or less to the overflow of the river—near the Guadalquivir, is an ample one, with a seating capacity of eleven thousand persons. It is built of stone, with wide interior corridors and entrance galleries to the different stories and private boxes, like the ancient Colosseum. Begun over

a century ago, it is still rough and unfinished, but it answers all the substantial purposes of its erection. The upper galleries and rows of benches on the shady side are set apart for the gentry; while the tiers near the ring and all the sunny side are given up to the lower orders and the rabble, the seats being much less in price than the others.

Carriages blocked the space in front of the entrance,—the most aristocratic of which were a sort of private and not much glorified omnibus, drawn by a team of gayly caparisoned mules,—and into the gates poured a stream, principally of ladies in full toilet. It was evidently an occasion of the highest fashion, and one that exhausted and put on view the entire beauty and gentility of Seville. The regular bull-fights of late years appear to have lost caste somewhat with the more refined circles of society, and the stranger might attend a dozen and not see a tithe of the dress and display, or women of the upper rank, that were forthcoming at this amateur performance. This rare opportunity to admire the beauty of Spain, which is becoming, so far as national peculiarities are concerned, somewhat traditional, made us anxious to be admitted.

At length I plucked up courage and asked one of the gentlemen keeping the gate and taking tickets if there was any proper way by which a stranger could gain admittance. He replied, with great courtesy, that the only entrance would be by a member's ticket, but that, if I would wait a little till the rush was over, he would see what could be done. We amused ourselves with watching the gay throng trip past, in all the excitement of anticipation of the choice entertainment. At length the person upon whom my hopes depended beckoned to me, and said that he had

been fortunate enough to secure a member's ticket, which was quite at my service, and he was evidently very glad to be able to oblige a stranger. The ticket bore the name of Don somebody, with a long title, and was evidently a piece of paper to be respected. I was required to write my name on it as his guest. When I read the document, I found that it virtually entitled me to all the privileges of the club for fourteen days. I had heard so much of Spanish courtesy and generosity, and unfortunately seen so little of it in streets and highways of travel, that I was glad to have my faith restored by this act of hospitality. Thanking my temporary friend as profusely as I was able, I was about to pass into the arena, when an expression on his face arrested my attention, and a good providence led me to ask, "How much may I give you for this ticket?" "Four dollars," was the prompt reply. I said I thought that was very little for a piece of paper conveying such privileges, paid the vulgar silver, thanked him anew for his favor; to which he replied, in effect, that I needn't mention it, with a gracious air of presenting me with the entire Bull Ring, and I passed in among the select elect.

The ring had been contracted for action to about two-thirds of its usual size, and the greater part of the seats, including all on the sunny side, were vacant. But the audience was, nevertheless, large, all the balconies and boxes, and most of the benches on the gentry side, being full, and the spectacle was exceedingly brilliant. How could it be otherwise, with three thousand ladies in full drawing-room toilet? The ladies of Spain, except in

some remote towns in the mountain regions, have laid aside the national costume, and dress according to the dictates of Paris, preferring even the French fans to their own decorated with the incidents of the bull-fight and the serenade. In Seville, the black lace mantilla is still worn at church, and to some extent on the street; but the hat is the cover of the new fashion, more's the pity, and the high combs have gone altogether. I do not know why a woman, even a plain woman, should be so utterly fascinating in a mantilla, thrown over a high comb and falling gracefully over the shoulders, stepping daintily in high-heeled shoes with pointed toes, and moving her large fan with just that nonchalant air so accurately calculated to wound but not to kill. In the whole assembly I saw only one or two national costumes: the mantilla and the high comb, with the short petticoat, brilliant in color. Nothing could be more becoming, and it makes one doubt whether woman's strongest desire is to please, and whether it is not rather to follow the fashion, when we see a whole nation abandon such a charming attire.

But the white mantilla is *de rigueur* for a bull-fight, and every lady wore one. It was a little odd to see ladies in the open light of a brilliant, cloudless day, and in the gaze of the public, in full (as it is called) costume of the ball-room; but the creamy-white mantillas softened somewhat the too brilliant display, and threw over the whole the harmony of subdued splendor. What superb Spanish lace, blonde, soft, with a silken luster, falling in lovely folds that show its generous and exquisitely wrought figures, each leaf and stem and flower

ENTRANCE OF THE BULL.

THE ATTACK.

the creation of dainty fingers! Such work as this, of such a tone and fineness, in such large mantillas, sweeping from the head to the train, is scarcely to be found in the shops nowadays. These were heir-looms,—great-great-grandmother's lace, long yellowing, and growing rich in locked chests, worn only on state occasions, and now brought forth to make a bull's holiday.

We spent a good deal of the waiting time in scrutinizing the packed seats for beautiful women, and, I am sorry to say, with hardly a reward adequate to our anxiety. I am not sure how much the beauty of the women of Seville is traditional. They have good points. Graceful figures are not uncommon, and fine teeth; and dark, liquid, large eyes, which they use perpetually in *ceillades* destructive to peace and security. And the fan, the most deadly weapon of coquetry, gives the *coup de grâce* to those whom the eyes have wounded. But the Seville women have usually sallow, pasty, dead complexions. Perhaps the beauty of the skin is destroyed by cosmetics, for there was not a lady at the bull-fight who was not

highly rouged and powdered. This gave an artificiality to their appearance *en masse*. Beauty of feature was very rare, and still rarer was that animation, that stamp of individual character, loveliness in the play of expression, and sprightliness, that charm in any assembly of American women. No, the handsome women in the ring were not numerous enough to make any impression on the general mass, and yet the total effect, with the blonde lace, the artificial color, the rich toilet, and the agitation of fans, was charming. The fan is the feature of Spanish life. It is, I believe, a well-known physiological fact that every Spanish girl is born with a fan in her hand. She learns to use it with effect before she can say "mamma." By the time she receives her first communion, it has become a fatal weapon in her hands, capable of expressing every shade of feeling, hope, tantalization. But ordinarily its use is excessively monotonous. It has, in fact, only three motions. It is opened with a languid backward flirt, it is moved twice gently to stir the air, it is closed with a slow, forward action,

and then the same process is exactly repeated, — open, two movements of fanning, shut; open, fan, shut,—hour after hour, until the beholder is driven half wild by the monotony of the performance. It is such a relief when there are three fanning movements between the opening and the shutting. In a public drawing-room, in the cars, in the street, in the bull-ring, this is the everlasting iteration of the fan. The effect produced when three thousand women are executing the monotonous maneuver is exasperating. This mechanical motion proceeds, of course, when the lady is in an attitude of mental and physical repose. When she is in conversation, and has an object, the fan has a hundred movements and varieties of expression, as the victim learns to his cost.

But let us not forget that this is a bull-fight, and the bull is probably waiting. The attention of the rustling, chattering, fanning audience is suddenly fixed upon the arena gate, which at the sound of a trumpet swings open to admit the procession of performers,—the *picadores* on horseback, the *chulos* or *banderilleros*, and *matador* on foot, and a gayly caparisoned team of mules with a drag of chains for removing the dead animals. We need not detain ourselves here with the details which will be necessary when we come to engage in a serious affair. The performers are all gentlemen, clad in the fantastic dress of the professionals. The procession makes the round of the arena under a shower of hand-clapping, salutes the president and the bevy of ladies in the central balcony, and withdraws, leaving only the *picadores*, or spearmen, and attendants in possession of the field of honor.

The trumpet sounds a second time, and the door of the *toril*, the dark cage on wheels in which the bull is confined, is opened, and the bull rushes out. He is also an amateur, a two-year-old, of good lineage like his tormentors, but of imperfect development. He has been exasperated by confinement in a dark box, and pricked into a rage by an ornamented rosette of ribbons, which is fastened between his shoulders by spikes that have drawn blood. Astonished at first by the glare of light and the noisy welcome of the assembly, he stands a moment confused, and then runs about the arena looking for some place of escape. He is a compact, clean-built, intrepid little fellow, and probably does not at first comprehend that this is a duel for life, without a single chance for himself. He does not yet know that he is to be stabbed and pricked and baited for an hour for the amusement of these gracious, applauding ladies, and then butchered, to give them a holiday sensation. He does not know how unequal the fight is to be,

until he learns by experience that he is deprived of his natural weapon of attack. But we feel a pity for him in advance, as we notice that the points of his horns have been sawn off, so that their thrusts will be harmless. After a circuit or two, he becomes aware that he is among enemies, and seeing the *picadores* advancing and menacing him with their spears, he makes a rush at one of them. The clumsy rider attempts a spear-thrust, but the bull disregards that and gets in under the flank of the horse and attempts to gore him. Alas, the blunt horns will not gore; the blinded beast is lifted a little off his hind legs by sheer force of the plucky little fighter, and then the bull turns away in disgust, pursued by the courageous *picadores*. Again and again he is nagged and pricked into a charge, but always with the same result. This sort of thing goes on till both the bull and the spectators are weary of it, and then the trumpet sounds and the merry *chulos* enter to assist the *picadores* in further worrying the bull. These light-clad skirmishers bear darts and long red cloaks. They surround the puzzled bull and torment him, shake their aggravating red cloaks in his face, and when he rushes at one of them, the athlete springs lightly aside and lets him toss the garment; or, if he pursues too closely, the man runs to the barrier and escapes through one of the many narrow openings. When this sport has continued some time, the *banderilleros* come into play. One of them advances with a long barbed arrow in each hand, holding it by the feathered end of the shaft. The little bull looks at him, standing still and wondering what new sort of enemy this is. The man, with watchful eye, comes nearer, in fact, close to him; the bull lowers his head and concludes to try a charge, but he has scarcely taken two steps when the *banderillero* plants the two cruel arrows on the top of his shoulders and springs lightly aside. The bull passes with the weapons sticking into his flesh, loosely swaying, and irritating him, and the blood flows down his shoulders. The crowd applaud the gallant young gentleman. This operation is repeated by a second *banderillero*, and when this sort of baiting ceases to be any longer amusing, the trumpet sounds again.

This is for the last act in this noble drama. The *picadores* withdraw, the arena is occupied by the skirmishing *chulos*. At a blast of the trumpet the *matador* enters, advances to the central balcony, makes an address, receives permission to dispatch the little beast, throws his cap over the barrier, and advances to his work. He carries in the left hand a small scarlet flag, and in the other, a long, slender Toledo blade. He must kill

the bull, but in only one way. The sword must enter in the back part of the neck just between the shoulder-blades, so as to pierce the heart. The blow must consequently be delivered when the bull is charging, head down. It requires a quick eye, a steady hand, and unshaken nerves to plant the sword exactly in this spot. The *matador* advances warily to play with the bull and study his nature; his assistants group themselves about at his command, to goad the bull into action by shaking their cloaks, or to protect the *matador* if the latter is hard pressed. The little bull is tired and bloody and hot, and has had enough of it. But the *matador* is tantalizing, the scarlet banner is irritating, the *chulos* are exasperating. After much irresolution, and turning his eyes to one tormentor and another, he decides to pay his attention to the man with the sword. He makes a rush at the red banner; it flirts in his face; the *matador* steps aside, and as he does so makes a thrust. The sword enters the beast only an inch or two, and in the wrong place. The bull canters away to the other side of the arena to get rid of his tormentors. They follow him and bait him. He turns again upon his cool pursuer. This time the sword is thrust into his neck and sticks there, while the bull runs and bellows at the hurt until he shakes out the weapon. The *matador* recovers it, and the sport continues. There is nothing very exciting about it, but the crowd apparently enjoy the torture of the animal. The *matador* is cool; he is practicing a noble art. After long maneuvering and feinting and false thrusting, he plants his sword in the fatal spot. The bull stops in his career, astonished. An attendant runs up and drives the sword in by a blow on the hilt; the bull falls on his knees, and "the arena swims around him." He tumbles over; the mule team gallops in and drags away his carcass; the hero advances to the central balcony and receives a tempest of applause and a shower of bouquets. He has done what man can do in this land of romance to commend himself to the favors of the gentler sex. Two other bulls are slain with exactly the same prolonged and ceremonious torture, and then the arena is cleared for another sort of performance.

Meantime, the fans flutter with a new meaning, the chatter is continuous, the brilliant behavior of the performers is discussed with earnestness, and boys make their way up and along the tiers of seats with great trays of costly and toothsome candies and sweetmeats, which are gratuitously distributed at the expense of the club.

The next performance is by the gentlemen riders. Sixteen of them, superbly mounted,

in morning costume, with tall hats, enter the ring and begin a series of pleasing evolutions. The performance has not the dash and danger of an Arab *jereed* nor the break-neck pace and skill of some of our Western and Indian horsemen, but it is better than most of the riding in our best circuses with trained horses, and is altogether a pleasing sight. The riders sit and manage their spirited horses perfectly, and their complicated evolutions, like the mazes of a dance, in time to the music of the band, are a charming exhibition of grace and skill.

This was followed by riding at the scarf. On a projecting arm in front of the president's stand were rolls of colored scarfs, the end of each roll hanging down with its fringe about six inches. The scarfs of blue, red, white, yellow, and green had been embroidered by the fair hands that were applauding the horsemen, and the capture of these was the prize of the riders. Each horseman carried a long wooden lance with a sharp point. They were drawn up in line on the opposite side of the arena. At a signal one advanced, and put his horse into a gallop around the circle; as he neared the balcony, the pace increased to a dead run. Just before the rider passed under the roll of scarfs, he raised his lance and thrust it at the six inches square of hanging silk. He had to estimate the height, to calculate exactly the distance from the balcony, and to hit this small object exactly while guiding his fiery horse at a prodigious pace. If the point of the lance caught the silk, the scarf unrolled and fluttered down, and another one was ready for the next trial. Opposite the balcony, by the side of the track, on a stand about eighteen inches high, lay a bouquet. When the rider had essayed at the scarf, he threw down his lance and, with the horse still at full speed, leaned from his saddle and attempted to snatch the bouquet. I could see how the riders could very well spear the silk and catch the flowers; but how, in all this excitement, with a plunging horse, they could keep on their tall hats, was a mystery to me. There were many rounds made without capturing a scarf. Whenever one was caught down, a footman picked it up and carried it to the winner, who decorated himself with it by passing it over his right shoulder and knotting it on his left hip. In time, the successful competitors presented a gay appearance, with scarfs of many colors. The game went on for nearly two hours, and almost at the last there were some unfortunate riders who had no scarf, while others were ornamented with a dozen of these tokens of affection. I fancied there were some heart-aches in the galleries on seeing so many of the embroidered decorations go to the wrong

men. But the supply held out, and when the trial was over every gallant had at least one. No doubt it was a happy night for the heroes who wore a dozen. But what their social rank would be, in comparison with the swordsman who killed the amateur bull, I cannot say.

The high and almost sacred rank the bull-fight holds in Spain may be inferred from the fact that all the important spectacles are on Sunday. As the great *funciones* had already

There are very few who attain great eminence in their profession, never more than three or four at a time in the whole kingdom; but for them there is profit as well as honor. These great men are the autocrats of the ring when they enter it. Each one has his own train of followers, *chulos* and *banderilleros*, who accompany him in his circuit of engagements, and who are paid as he dictates. A great favorite receives a thousand dollars for a

THE BANDERILLERO'S CHALLENGE.

taken place during the Easter holidays in Seville, we were obliged to go to Jerez on the thirtieth of April in order to witness a real engagement. Every town in Spain of any size has a large bull-ring, whatever other public buildings it may lack; and the erection of new ones recently proves that the sport has not declined in popular estimation, although a few fastidious persons are beginning to regard it as a barbarous and unseemly usage. And during some portion of the year, usually during the local fair, or on some high *fête* of the Church, there is in every bull-ring in the kingdom a great *funcion*. There are a few bull-fighters who have a national reputation, whose services are always in demand, and the local fights have to be postponed till one or more of them can be secured. Although it is said that the professional bull-fighter is very low caste in Spain, I think no one, not even the military hero, enjoys so much consideration with the masses as the successful and skillful *matador* of the ring. They are followed by the boys, they are the admiration of the rabble, they are smiled on by the gentle ladies in the boxes, they are dined by the local governors, and they move about in their own social circles with the port of conquerors who subdue hearts as easily as they slay bulls.

fight, and as he is crowded with engagements during the whole spring, summer, and autumn, he reaps a good harvest. Two fighters whom I saw, one of Seville and one of Granada, had accumulated large fortunes, owned many houses, and lived in considerable, showy ostentation. Bull-fights are very expensive entertainments, costing usually two thousand dollars and more, and the prices of admission are high compared with the wages paid in Spain; the artists must be well paid, and the animals cost much to breed. But there is no difficulty in filling a ring anywhere, for the fight is a passion with the people; children are taken early to the arena, and bred to love it—their common game is a “bull-fight”; and all Spaniards love to see a bull slain, for they seem to have an unconquerable hatred of the animal, and never see one in the field without attempting to irritate and insult him. Of the bulls that are bred for this pastime, only the noblest and fiercest are fit for the arena, and the breeders have methods of testing their courage and mettle. The lovers of the sport always post themselves as to the character of the bulls who are to perform, and the reputation of the fighting quality of the forthcoming bulls is an attraction only second to that of the famous artists who are to meet

AN ACT OF AUDACITY.

them in the arena; and the latter are esteemed as great actors are with us.

It was fair and horse-race week at Jerez, and the little "sherry" city was crowded with visitors. The culminating interest was in the bull-baiting on Sunday afternoon, and when we found our way to our seats in the vast edifice, at half-past three, it was already packed from the barrier-ring to the top of the walls. And such an assembly! I doubt if a Roman circus could ever have shown a more brutal one. Very few women were present, though there were many children; and there was a sprinkling of ladies in white mantillas in the grand balcony, where the town officials were seated. These functionaries had the air of the judges and important personages on the stand at an American horse-trot *funcion*. The occasion had been anticipated with great eagerness, because the bulls were from a famous Andalusian herd, and two fighters with a national reputation were to officiate: Antonio Carmona, called "El Gordito," of Seville, and Salvador Sanchez, called "Frascuolo," of Granada. These men are both in the first class

of the brotherhood, although two of the Madrid fighters are their acknowledged superiors.

I had imagined that a bull-fight, with all its cruelty and much to disgust, must be an exciting and gallant spectacle. I saw, in my mind, the trained spearmen on horseback dashing in full gallop at the bull, dexterously evading his enraged rush, and flying and charging about the arena, alternately pursuing and pursued. I saw the bull, always alert and bellicose, charging the footmen, who pricked and baited and enraged him with their scarlet mantles, who put their lives against his in a closed arena, and only saved themselves by the utmost address and skill. I had imagined, in short, a chivalrous performance.

We had not long to wait. The gate swung open, and the bull-fighting company entered in what was meant for a gorgeous procession. It had the cheap elements of a spectacular effect in a sawdust arena. The costumes, at least, were showy in spangles and in divers colors, as in the "grande entrée" of a circus, and some of them were rich; and scarlet cloaks and swords and plumes and the courtly,

high-stepping march of the fighters imitated, I supposed, the opening of a mediæval tournament. First came four *picadores*. These men wore broad-brimmed Thessalian hats and carried long spears; their bodies were thickly padded, their legs incased in iron and leather, the right one being most protected; they were rusty in appearance, and so encumbered were they with armor and wadding that they sat their horses insecurely. The poor beasts they rode were worthy of the occasion, thin Rosinantes, old, knock-kneed, stiff-legged, who stumbled along and with difficulty could be urged out of a walk. They were blindfolded. They would be dear purchases at two dollars and a half a head. When you speak to a Spaniard of the cruelty of torturing such poor beasts, he says, "Why, they are worth nothing!" These were followed by a band of foot-fighters, comely fellows in spangled jackets, plumed caps, waist sashes, short breeches, and stockings, bearing on the left arm red mantles. After them walked the two *matadores en grande tenue*, with conscious pride, and the procession closed with a team of six gaudily caparisoned mules. The procession marched up to the judges' stand and saluted; the president threw down the key of the *toril*, or bull-cell, to an attendant policeman, the round of the arena was made amid the roar of nine thousand spectators, and all passed out except the *picadores* and half a dozen of the footmen.

And now came the first moment of intense anxiety, the awaiting of the appearance of the bull. Would he be game or indifferent? would he be boldly savage or slyly murderous, a dangerous customer or a coward? Pending this issue, however, I was aware of a rising tumult on the opposite benches, an angry sort of roar and grumble that spread speedily over the whole house except in our immediate vicinity near the grand balcony; men rose gesticulating and sputtering wildly, and pointing in our direction, until nearly everybody was standing on the benches, half of them not comprehending what the matter was, and eager to see, but all roaring in tones that had no good nature in them. "They are all looking at you," said my companion; "I think it must be your hat." I was wearing, for protection against the sun, an India pith helmet, common enough all along the Mediterranean, but for some reason apparently offensive to these courteous provincials. The whole arena rose at me. It was some seconds before I could comprehend that I was the center of such polite attention. The hubbub increased; men shook their fists and howled, and began to move as if they would climb up to our tier. They demanded something

most vehemently, but whether it was my head or my hat I could not tell. I did not, however, rise to acknowledge the honor, but sat smiling, much as I suppose the *matador* smiles when the bull is about to charge him; and when the tumult was at its height there was a cry, "*El toro! El toro!*" and the crowd turned to a greater attraction.

The bull was in the ring. He was a noble animal, dun in color, handsomely marked, thin flanks, powerful shoulders, high-bred head with dilating nostrils, large, glaring eyes, and symmetrical polished horns. Affixed to the back of his neck was the variegated rosette, and blood trickled down his shoulders. He stood for a moment facing the nine thousand enemies who roared at him, and then dashed around the ring, head erect and lashing his tail, with blood and defiance in his eye. The *chulos* sought cover, and the *picadores* stood still, awaiting his attention. After his first course, the bull stood for a moment pawing the ground and bellowing, and then, catching sight of one of the weak, blindfolded horses, whose rider was urging him forward, he advanced to the attack, though not with any rush. As he came near, the *picador*, who was swaying clumsily on his horse, made a thrust at the bull with his spear and slightly turned his horse's head to the left. The horse stood still, and the bull inserted his horns under the animal's flank, slightly raising him from the ground. The footmen ran to the rescue with their distracting mantles, and the bull turned in pursuit of them. They nimbly skipped behind the shelters that are erected every few paces in the barrier, and the horse got away with his entrails trailing on the ground, his rider trying to spur him into a gallop. The crowd roared in great delight. The horse was good for sport as long as he could stand. (When the horse is not too weak to keep his feet, the wound is sewed up, that he may be gored again; for seeing the horses tortured is one of the chief delights of the ring.) After a brief interval, the bull was excited to attack another horse. This time the horse was lifted from the ground and thrown on his side, the man under him, and the bull drew back to give him a finishing stroke. The attendants again rushed in, distracted the attention of the bull, pulled the man from under the horse, got the horse up, lifted the *picador* to his feet (for encumbered as he was with armor and wadding he could not rise), and put him on the horse again. The bull, still full of fight, wheeled about in a rage at losing his assailants, who had quickly stepped behind their shelter, and advanced threateningly

toward another horse. The *picador* walked his horse to meet him. The same clumsy maneuvers occurred as before. But this time the bull not only overthrew the horse, but gored him severely, and then attacked the prostrate rider. The footmen rushed in just in time to save the man from being tossed. The horse lay dead, and the man was carried out of the ring. It was considered by this time a lively fight, and the *picadores* were reinforced by two more horsemen. The next horse assailed was gored so badly that, although he escaped, he was in a shocking condition; and after his cruel rider had spurred him a couple of times around the ring, he collapsed. The bull continued raging about, stopping occasionally to gore and toss the dead horses or chase the aggravating *chulos* to cover, and then sullenly advancing and ripping open another of the blindfolded steeds. When the trumpet sounded, he had virtually cleared the ring, and roamed around, its master. Six horses lay dead or dying in the sand.

In the second act the *chulos* and *banderilleros* had the field, to torture and bait the noble fighter, who was getting a little weakened by his extraordinary efforts, but still seemed to think he had a chance for his life. These fellows are light and nimble, costumed exactly like *Figaro*, in the "Barber's" opera, and skip about the arena with considerable agility. Their office is to tease the bull, to run toward him and irritate him by shaking their colored mantles in his face, to distract him to pursue first one and then another, and to elude him, when they are hard pressed, by dodging behind the shelters. The only danger they run is in slipping on the sod when the bull is in pursuit. After this game had gone on for some time, a *banderillero* stepped forward with a barbed arrow in each hand and faced the bull. His object was to plant an arrow in each shoulder. The two looked at each other warily. The bull was studying how he could kill the man. He pawed the ground, he lowered his head, and made a dash; the *banderillero* planted the arrows exactly in the shoulders, and skipped aside, just avoiding the points of the sharp horns. It was very neatly done; and the bull went roaring around the arena, bleeding and trying to shake himself free from the stinging barbs. This operation, after two or three failures, was repeated by another *banderillero*, and the bull was further dispirited by nagging until it was deemed time to kill him. The trumpet sounded for the third and last act.

Frascuelo entered. He was not by any means a bad-looking fellow, and, physically, he deserved a good deal of credit. He advanced straight across the arena with the

lordly strut of a great man, conscious of his merit and of deserving the thunderous applause that greeted him, to the president's box. There he made a grandiloquent speech, signifying his willingness to rid the earth of that pestilent bull. Permission was graciously accorded: we are nothing here if not courtly. Frascuelo pledged himself to do his duty, tossed his plumed hat over the barrier, and turned and addressed himself to the work. The bull had been meantime patiently waiting for the oratorical part of the performance to finish, and evidently not caring particularly for any more fighting that day.

Frascuelo carried in his right hand a long Toledo blade; in his left, a scarlet mantle a yard square. He wore a small wig of black hair, with a sort of chignon on the back of the head, and a short cue. His jacket and breeches were of light olive-green velvet. The open jacket and the front of his thighs were thickly crusted with silver spangles. His waist was girt with a red sash; his long stockings were pink, and his shoes were black. He was a cool-eyed, steady-nerved, well-made fellow, and he presented a pretty appearance as he advanced to his duel with the bull. His attendants, with the mantles, were disposed near at hand and under his orders, to excite the bull to the combat and to rescue the *matador* in case of extreme peril.

The two stood face to face; the man fresh and cool, the bull enraged, but weakened by the running and the nagging and loss of blood. The only stroke the *matador* is allowed to deliver is between the shoulders; in order to kill, he must pass the sword down close to the shoulder-blade into the heart. In order to reach this spot, the bull must have his head down, and consequently be charging. The combatants eye each other. Frascuelo shakes the scarlet before the bull's eyes. The bull paws the ground and looks wicked, but distrustful of the blade. Frascuelo comes nearer, never for a second losing the bull's eye. He insults him with the scarlet. The bull dashes at it. Frascuelo delivers a stroke as the bull comes on, flirts the banner in his eyes, and steps aside. The bull is wounded, but not in the vital spot, and speedily turns and faces his foe. Frascuelo coolly wipes the blade on the silk in his hand, and is ready for another turn. The same wary maneuvers follow, with the same result. Then a longer period of skirmishing follows, in which the attendants again nag and torment the now distracted and reluctant animal. In the third round, Frascuelo plants his sword in the right spot, half way to the hilt. The crowd rise and roar with delight. The bull goes bellowing around the arena in pain, blood running from his

TAKING OUT THE VICTIM.

mouth. As he passes near the barrier, the spectators lean over and, with one blow after another, thrust the sword in to the hilt. The bull falls on his knees and is done for. Frascuelo, still cool, gracious, dignified, advances to the grand balcony. He is greeted with a hurricane of hurrahs, and a shower of hats is thrown at him from the benches. These hats are not, however, gifts. Frascuelo goes around and picks each one up and restores it to its owner. Then the trumpet sounds, the mule team gallops in and drags away the bull and the carcasses of the horses, and the arena is ready for another fight.

The second fight was essentially a repetition of the first, only this bull was sullen and less enterprising than the first one, though equally strong and dangerous. In the second act, an incident occurred that sent a delightful thrill of horror through the spectators for a moment. One of the *chulos*, pursued by the bull, fell, and the brute's horns were just about entering his body when Frascuelo, who was in the arena, rushed forward with incredible swiftness and address and, blinding the bull with his cloak, diverted his attention and saved the man's life. It was the cleverest feat of the day.

The *matador* in this fight was El Gordito, a man of fame, but older than Frascuelo, and on this occasion he appeared to be a very clumsy swordsman. Although the bull was much fatigued when he took him, the fight was intolerably long. El Gordito made pass after pass, wounding the bull repeatedly, but never in the right spot. Twice he lost his sword, the bull carrying it away in his neck, and it was recovered and brought to the *matador* by his attendants. Once he thrust it so deeply into the shoulder that it was a long time before it was pulled out, and then by one of the spectators leaning over the barrier when the bull was sulking, and El Gordito had to be furnished with another sword. After twenty minutes of this clumsy work, the

crowd got very impatient, and did what is very seldom done in a bull-ring—they demanded the life of the bull. The signal of this act of mercy is the waving of a white handkerchief. Soon the whole arena was fluttering with these flags of truce. But the president would not heed them. He probably hesitated to disgrace so notorious a fighter. The farce went on. Again and again the crowd rose, waving handkerchiefs and demanding that the bull should be let go. But the president was inexorable. The fight went on, intolerably weary and monotonous. At the end of nearly three-quarters of an hour, El Gordito succeeded in planting his weapon in the right spot, though not delivering an immediate death-blow; but the bull, after some hesitation, sank on his knees, and an attendant crept up to his side and dispatched him with a butcher-knife.

We assisted at the killing of one bull more. It was always the same thing. Six bulls were slaughtered that day, but three were quite enough for us. I do not know how many horses bit the dust, but a good many,—I should think twenty-five dollars' worth, in all. Perhaps I should have got used to the cruelty, the disgusting sight of the gored horses, and the cheap barbarity, if I had staid through the entire performance; but I could not longer endure the weariness and monotony of the show, the tedious skirmishing between bulls that had to be all the time irritated up to the fighting point, and decrepit, blindfolded horses that could not see their danger, and nimble athletes that could easily skip to a place of safety. It would have been something like fair if the barriers had been closed and the fighters had owed their escape to speed and address. One's sympathy went always with the tormented bull, whose very bravery and courage insured his death, for there was no chance for him from the first moment. There were times when it

would have been a relief to see him dispatch one of his tormentors.

The profoundest impressions left with one were of the weary monotony of the show, and the utter tameness and cheapness of most of it, and the character of the spectators. There were a good many children in the crowd, having their worst passions cultivated by the brutal exhibition. It is an important part of the national education, and the fruits of it are plain to be seen. I am glad to record that a little girl, seated near us, who had enjoyed the grand entry and the excitement of the scene, was quite broken up by the disgusting details, and frequently hid her face on her father's shoulder, crying nervously at the distress of the poor horses. But the great, roaring crowd heartily gloated over all that was most revolting.

Long after we left the arena, there was ringing in my ears their barbaric clamor.

We went out from the blazing light and tumult of the ring, glad to escape from the demoniac performance, and sought refuge in an old church near by, to bathe our tired eyes and bruised nerves in its coolness and serenity. Here, at least, was some visible evidence that the Christian religion has still a foothold in Spain.

We tried to console ourselves for the part we had taken in the day's sport, by the thought that we had once for all discharged the traveler's duty in a study of the great national pastime—the pastime that royalty encourages by its presence, the pastime that reveals and molds the character of a once powerful people.

Charles Dudley Warner.

AN AMERICAN ARTIST IN ENGLAND.

MR. WINSLOW HOMER holds, as to time, an intermediate place between our elder and our younger painters. He cannot be classed with those who won their position and gained their chief honors before the War of the Rebellion; nor is he identified with the later generation which has so rapidly grown in numbers and in influence since the appear-

ance of a few clever Munich and Paris students on the Academy walls in 1877. And not only in time, but in the character of his work, he stands apart from both these well-known groups.

Mr. Homer was born in Boston in 1836. At the age of six his family removed to Cambridge, where country life fostered

A CHARCOAL SKETCH. BY WINSLOW HOMER.

the tastes and feelings he reveals so clearly in his art. Never was any painter more rurally minded. Never did any dweller in cities more completely ignore on canvas not their existence only, but also the existence of the human types they foster. This would not, of course, be remarkable if he were simply a landscape painter; but while landscape elements are very prominent in his work, humanity is rarely absent, and is usually his chief concern. But it is rustic humanity always. The rural American of his earlier pictures is shown with a persistence, a sympathy, and an artistic clearness and directness of speech quite unequaled in our art. We get the very essence of New England forms and faces and gestures, and of New England fields and hillsides, in this early work, and just as truly the very essence of negro life and its surroundings. No man could mistake the home and people of this artist. No man could doubt his being an American by birth and nature. This national quality it was—always a precious thing, but never so valuable as now when art has grown so eclectic and cosmopolitan—that caused his pictures to be so much noticed at the Paris Exposition of 1878, so much praised by critics who saw their technical peculiarities quite clearly, but forgave them, prized them, indeed, for the breath of genuine transatlantic sentiment they preserved.

Mr. Homer's taste for art seems to have developed very early, for we are told that by the time he was twelve years old he had already accumulated a large stock of crayon drawings. He was encouraged in his efforts and ambitions by his father,—a fact in refreshing contrast to the usual course of artistic true love,—and at the age of nineteen was apprenticed to Bufford, the Boston lithographer. The first work of his apprenticeship was in the shape of title-pages for sheet music. The most important, perhaps, was a series of portraits of all the members of the Massachusetts Senate. When he was of age, Mr. Homer abandoned the lithographer's craft, the mechanical and business requirements of which he had found alike galling, and set up a studio in Boston. He designed much for the Harpers' wood-engravers, and the firm soon offered him a permanent engagement. But he refused to bind himself in any way again, and worked on quite independently, studying diligently all the time. In 1859 he removed to New York and attended the night schools of the Academy. In 1861 he began to use color for the first time, going directly to nature for his models and to his own instincts for his methods. With the outbreak of the war, he went to Washington, and thrice accompanied the army of the Potomac

in its campaigns, the first time as artist correspondent of the Harpers, and later for his own private purposes. His first oil paintings were war scenes,—among them the famous "Prisoners from the Front," than which no American picture is more familiar to his countrymen.

In later years Mr. Homer has, I believe, lived chiefly in New York, though making trips to various places at home and across the water. He has been extremely prolific in oils, in water-colors, and in black-and-white. Most of his work has been, as I have said, in the line of outdoor *genre*, though he sometimes gives us landscape by itself, sometimes interiors, and occasionally figures without surroundings of importance. We all know the little water-colors he sent by the dozen for many years to our annual exhibitions,—the bare-footed, sun-bonneted little girls; the flocks of ragged sheep; the Yankee boys playing by the gaunt little school-house or under twisted apple-boughs through which the sun was sifting; the negro urchins eating water-melons; the tanned hay-makers in their shirt-sleeves and their coarse hide boots; the thousand and one rustic scenes—pictorial scenes merely, without incident or story—that were recorded with so much freshness and so much truth and strength, if often with so little beauty. Among his oil paintings we find, as is but natural, many subjects of more ambitious sorts, though almost always conceived from a pictorial and not a literary point of view. Just as well as we know his little water-color sketches, we know his thoroughly studied interiors of negro huts or New England rural homes, with the characteristic human types they shelter, and the groups of blue-coats that were prominent in war days. Even here, it is interesting to note, Mr. Homer is still the painter of character or simple incident, never of "story" or dramatic effect. His soldier-boys are shown in their more peaceful moods, there being, so far as I remember, no battle scenes among his military paintings.

With all these things every visitor to our galleries had been long familiar—every visitor, though of the most careless and unobserving sort. For a noteworthy point about Mr. Homer's work, one that proves its inherent originality of mood and strength of utterance, is that it always makes itself felt, no matter amid what surroundings. Every passer-by marks it at once, and is apt to give it an unusually decided verdict in his mind, whether of approval or dispraise. No one can be blind to it in the first place or indifferent in the second, as one may be to the things by which it is encompassed on the average ex-

hibition wall,—things probably more “pretty” or more “charming,” possibly more polished, but in almost every case much weaker, more conventional, less original, and at the same time much less truthful. As an instance in point, I may refer to the way in which it affected my own childish eyes, in days when I dared to hold very few positive opinions in such matters. As a youthful visitor to our exhibitions and student of our illustrated papers, I remember to have hated Mr. Homer in quite vehement and peculiar fashion, acknowledging thereby his individuality and his force, and also his freedom from the neat little waxy prettinesses of idea and expression which are so alien to true art, but always so delightful to childish minds, whether in bodies childish or adult.

Two or three years ago, Mr. Homer must have astonished, I think, many who, knowing his work so well, thought they had gauged his power and understood its preferences and its range; for he then exhibited a series of water-colors conceived in an entirely novel vein. No one could have guessed he might attempt such things. Yet the moment they were seen no one could doubt whose hand had been at work,—so strong were they, so entirely fresh and free and native. They were marine studies of no considerable size, done at Gloucester, Massachusetts. Never before had Mr. Homer made color his chief aim or his chief means of expression. In his paintings his scheme had usually been cold, neutral, unattractive. In his aquarelles he had often used very vivid color, but rather, apparently, for the purpose of meeting that most difficult of problems, the effect of full sunlight out-of-doors, than with an eye to the color in and for itself. And the result had usually been strength not unmixed with crudeness. But in these marine sketches color had been his chief concern, and there was much less of crudeness and more of beauty in the result. They were chiefly stormy sunset views—glowing, broadly indicated, strongly marked memoranda, done with deep reds and blacks. A sweep of red-barred black water, a stretch of black-barred red sky, and the great black sail of a fishing-boat set against them, with no detail and the fewest of rough brush strokes, gave us not only the intensified color-scheme of nature but nature’s movement, too,—the slow rise and fall of the billows, the motion of the boat, the heavy pulsation of the air. The hues were a palpable exaggeration of the hues of nature; but then all color that is homogeneous and good on canvas is and must be an exaggeration, either in the way of greater strength or of greater weakness. No one can paint nature just as she appears;

and if one could, the result would not be clear and expressive art. As a Frenchman has well said, “Art is a state of compromises, of sacrifices,”—much omitted or altered for the sake of the clear showing and the emphasizing of a little. Most artists accomplish this end, as we know, by the weakening process—by taking, to start with, a lower, duller, less positive key than nature’s, and by then still further modifying minor things in order that the chief may appear strong enough by contrast. To use the familiar phrase, they *tone things down*. But Mr. Homer had gone the other way to work in these little marines, and had toned things *up*. He had boldly omitted everything that could not serve his purpose,—which was to show the demoniac splendor of stormy sunset skies and waters,—and then, unsatisfied by the brilliant hues of nature, had keyed them to deeper force, made them doubly powerful, the reds stronger and the blacks blacker,—insisting upon and emphasizing a theme which another artist would have thought already too pronounced and too emphatic for artistic use. That he could do this and keep the balance of his work is a patent proof of his artistic power. For though over-statement is not more non-natural or less allowable in art than under-statement, yet under-statement is, of course, the easier, safer kind of adaptation. If this is unsuccessful, the result is simply weak; but if over-statement is unsuccessful, the result is an atrocity. Mr. Homer, however, was so artistic, so clear, so well poised in his exaggerations, that he did more than satisfy the eye. He opened it to the full force and beauty of certain natural effects, and filled for us the sky of every future stormy sunset with memories of how his brush had interpreted its characteristic beauty.

I would not be understood to mean, nevertheless, that even in these pictures Mr. Homer won himself a title to the name of colorist in its highest sense. His color was good in its way, and most impressive. But the finest color must always, no matter how great its strength, preserve an element of suavity; and suavity, sensuous charm of any kind, Mr. Homer’s brush is quite without. Its notes may be grand and powerful upon occasion, but, in color at least, are always a little rude and violent. Those who remember these pictures will remember also, I think, how they divided the honors of the exhibition with Mr. Currier’s, his also being color-studies of stormy sunset skies, though over moorland instead of water. In comparing them, we saw the difference between the temperament of a true colorist like Mr. Currier and a vigorous artistic temperament like Mr. Homer’s, making itself felt through color

"LOOKING OVER THE CLIFF."

which still was not its native element. Mr. Currier's drawings, in spite of their hurrying dash of method, were far more suave in tone, more subtle in suggestion, more harmonious, more beautiful. They were also more refined and skillful in handling. But they were no more artistic in conception than Mr. Homer's, — no stronger, no more valuable as fresh individual records of personal sensations in the face of nature. And they lacked, of course, the native American accent which Mr. Homer had put even into his waves and boats.

At the water-color exhibition of 1883, Mr. Homer again surprised us with drawings of a new kind and possessing novel claims to praise. They were pictures of English fisherwomen, set, as usual with him, in landscape surroundings of much importance, and were, I think, by far the finest works he had yet shown in any medium. They were lacking in but one quality we had prized in his earlier work—in the distinctively American accent hitherto so prominent. But we could not resent this fact, since, if an artist chooses a foreign theme, he must, of course, see it in its own light or do uncharacteristic and savorless work. To paint English girls as though they were Americans would have been as great an artistic sin as is the more common crime of painting Yankees to look like Bretons or Bavarians. It is a proof of his true artistic instinct and insight, and his freedom from conventionality of thought or method, that Mr. Homer, who had so clearly understood and expressed the American type during so many years of working, could now free himself so entirely from its memory as to make these English girls as distinctly, as typically English as any which have ever come from a British hand.

It is this most recent phase of Mr. Homer's work which is illustrated here,—both from his exhibited pictures and from the contents of his portfolio. "The Voice from the Cliffs" and the "Inside the Bar" were among the former, and seem to me not only, as I have said, the most complete and beautiful things he has yet produced, but among the most interesting American art has yet created. They are, to begin with, *pictures* in the truest sense, and not mere studies or sketches, like most of his earlier aquarelles. Then they are finer in color than anything except the sunset sketches just described, and finer than these in one way — as being more explicit and comprehensive in their scheme. Another exhibited picture, a harbor view called "Tynemouth," seen close at hand, with its pale sunset pinks and yellows, seemed a little crude as well as odd; but from the proper distance it was not only subtly truthful, but fine in harmony. The dark gray tone

of "Inside the Bar" was admirably kept and modulated through the entire landscape, giving us as marvelous a sky as I remember to have seen in water-color work from any hand. And though the flesh-tones were, as so often with the artist, too purplish for either truth or beauty, yet they worked in well with the general scheme. In "The Voice from the Cliffs," the same fault in the flesh-tones was noticeable. Yet I cannot say the picture was disagreeable in color. It was pitched in a peculiar and rather crude key, but held well together within that key, and this is always the first thing that must be secured to make color *good*, if not beautiful. And in handling, these works were, I think, a great improvement on all that had gone before—more skillful, more refined, more delicate, while not less strong and individual. But the most interesting and valuable thing about them was their beauty of line. Linear beauty is a rare thing in modern art, scarcely ever aimed at even by a modern artist without a lapse into conventionality or would-be-classic lifelessness. And it is a quality which we might have thought the very last to which Mr. Homer could attain. Certainly he had never seemed even to think of it before. In his paintings the composition had been sufficiently good, but not marked in any way, and in his water-colors it had usually been neglected altogether. Never had he shown, so far as I know his work, a care for really artistic, well-balanced composition, still less a trace of feeling for the charm and value of pure linear beauty. Compare the carelessly chosen attitudes, the angular outlines, the awkwardly truthful gestures of his New England figures, with the sculptural grace of these fisher-girls, and no contrast could be greater. The novel choice of material does not explain the matter. Had Mr. Homer seen with the same eyes as heretofore and worked with the same ends in view, he would not have marked and emphasized the splendid linear possibilities of his new models, more suggestive though they doubtless were than those of his native land. For they had been possibilities only, to be discovered and utilized by artistic selection, and not persistent, evident, and unmistakable characteristics inherent in every figure and every attitude he might see. The pose of the woman in "Inside the Bar" is fine in its rendering of strength, of motion, of rugged vitality. But it is very beautiful as well, even in the almost over-bold line of the apron twisted by the wind, which gives it accent, and greatly aids the impression of movement in air and figure. The grouping of "The Voice from the Cliffs" is still more remarkable. These outlines might almost be transferred

LISTENING TO THE VOICE FROM THE CLIFFS.

to a relief in marble; and yet there is none of the stiffness, the immobility, with which plastically symmetrical effects are usually attended in painted work. They are statuesque figures, but they are living, moving, breathing beings, and not statues; and they are as characteristic, as simply natural and unconventional, as are the most awkward of Mr. Homer's Yankee children. It is interesting to note how this fine symmetry has been secured—as it is often secured in art of very different kinds, though more frequently in marble than in paint. The method is one that needs a master hand to manage it aright. It works first, of course, by making the lines fine in themselves, and then by making the lines of one figure reproduce to a great degree the lines of its fellows—not nearly enough to produce monotony and stiffness, but nearly enough to secure repose, harmony, and a sort of rhythmical unity not to be obtained in other ways. This device—the word is correct, for what looks to us like artistic instinct is always, of course, artistic reasoning, conscious or unconscious—is used throughout these English pictures and studies of Mr. Homer's, and often with the most exquisite result. In a water-color not yet exhibited,—which is a most remarkable rendering of figures seen through a thick fog,—there is in particular a group of two girls with their arms

linked together, which as a bit of linear composition could hardly be surpassed by any pencil,—so statuesque is it, so superbly graceful, yet so simple, so natural, so apparently unstudied. In “The Voice from the Cliffs,” moreover, we may note the working of the same principle of delicately varied unity in the faces themselves. Instead of the strongly contrasted types which most artists would have chosen, we have but a single type, though distinctly individualized in every case. As with the outlines of the figures, so here, also, there is no monotony, no repetition. But variety has been secured in such subtle, reposeful ways that a wonderful harmony and artistic force are the result.

Nor is the linear beauty of these pictures confined to the figures only. The composition of the “Tynemouth”—with its waves and its drifting smoke-wreaths and the groups of figures in the foreground boat—is fine in every way; and in the “Inside the Bar,” and other similar works, the lines of cloud and shore are arranged with consummate skill, framing, as it were, the figure, giving it additional importance, and bringing it into close artistic relation with the landscape.*

* In the accompanying sketch, which shows the whole scheme of “Inside the Bar,” the boats, owing to the absence of *chiaroscuro*, seem much too prominent. They are well in the background, and the figure dominates

In oils, too, Mr. Homer has shown one work which belongs to the same series. This is "The Coming of the Gale," exhibited with the last Academy collection. A wide, wind-tormented sweep of gray, foamy sea stretches away to a gray and cloudy sky. In the middle distance is a group of fishermen beaching their boat, and on the pier in the foreground a sturdy young woman, with her baby strapped to her back by a shawl, striding vigorously against the gale. Sea and sky are finely painted, full of color, atmosphere, and motion; and there is the same sort of sturdy beauty in the principal figure, though the attitude is less well chosen than in the water-colors just described, since with as much of power it has less of naturalness and ease.

But no analysis of these pictures, no pointing out of the elements upon which their power depends, can convey the impression that they make,—the way in which all elements work together to produce an effect of artistic strength, of artistic dignity and beauty, that fall nothing short of grandeur. They are serious works of "high art," in spite of their peasant subjects and their water-color medium. That is to say, they have an ideal tinge which lifts them above the cleverest transcripts of mere prosaic fact. And this idealism, this high artistic sentiment on the part of the artist, is of so strong, so fresh, so vital, so original a sort, that his pictures took the life and vigor out of almost everything else upon the wall. Many other things were as well done, some were better done as concerned their technique only; but not one seemed quite so well worth the doing. Mr. Homer does indeed, in these pictures, show something quite different from the fresh and individual but crude and unpoetic suggestiveness of his earlier aquarelles, something different from the prosaic realism of his war paintings and his negro interiors, something different also from the fervid, half infernal poetry of the Gloucester studies. The dignity of these landscapes and the statuesque impressiveness and sturdy vigor of these figures, translated by the strong sincerity of his brush, prove an originality of mood, a vigor of conception, and a sort of stern poetry of feeling to which he had never reached before.

I began my chapter by saying that Mr. Homer holds a place in our art apart both from our elder and from our younger schools; and this not only by reason of the time when he gained his first fame, but by the nature of his work. He began to practice his art at a

distance from the schools and the popular artists of the day, and so it was not molded into conformity with the dry, detailed, conscientious, but unindividual and inartistic methods then in vogue. And he was born too soon to be drawn into the current which some fifteen years ago set so strongly toward the *ateliers* of Europe. He has worked out his technical manners for himself. The results show something of crudeness, of rugged angularity,—are unscholarly, perhaps, but extremely original, and also forcible and clearly expressive of what he has to say. He has invented in some sort a language of his own. It is not polished, not deft and rapid and graceful. We could never care for it in itself and apart from the message it delivers, as we so often care for really beautiful artistic workmanship. But it is not hesitating, confused, inadequate. It is always sure of itself, and always reaches its end, as ignorant or immature work does not, though it may reach that end in a rather blunt and uncompromising fashion. In a word, it is not childish, uncertain technique; but it is, I think, a little primitive, a little *rustic*. It is the strong, characteristic, personal, though unpolished, diction of a provincial poet. We do not resent the fact; we are tempted to feel, indeed, that upon this unconventional, unacademic accent of his brush depends something of the interest if not the value of his work. Perhaps it is *because* of his *naïveté*, his occasional *gaucheries*, his sturdy if angular independence, and not in spite of these things, that his handling seems so fresh, so unaffected, so peculiarly his own, so well adapted to the nature of the feeling it reveals. I think it is an open question whether, had Mr. Homer been born a few years later and taken an early flight to Paris or to Munich with our younger brood of callow painters, his art would have gained or lost in value. It might have grown more scholarly, more gracious, more beautiful, more delightful to the eye and to that second sight which rejoices in work well done simply because it *is* well done. But with its polish might have come some loss of its freshness, of its genuine, spontaneous rendering of genuine, untutored feeling. No artist has a more personal message to deliver than Mr. Homer, and none tells it more distinctly or in a more native way. And we can well afford to lose a little possible technical brilliancy or charm in the gain we register hereby. No man is less self-conscious, works less as though centuries of great painters were watching him from the pyramid of fine accomplishment. And his strong freshness of mood and manner is peculiarly precious in these days when most men *are* self-conscious,—these days of

the entire picture. In the original drawing of "Looking Over the Cliff," a wall of chalky rock is seen below the figures. It was necessary to omit it in the engraving, in order that these last might be of satisfactory size.

"INSIDE THE BAR."

cosmopolitan experience and hackneyed practice. Talents so produced and so self-nurtured are apt, perhaps, to fall into hard, unprogressive mannerisms of conception and of treatment. But we have seen that Mr. Homer

technique will not make up for conventionality of feeling, for lack of sentiment and personality on the artist's part. The way he feels and the way he speaks—these are the two parallel things which must always

OUTLINE OF "INSIDE THE BAR."

has been too true an artist to lose himself in such a way. I have already noted the variety of his work, its constant gain in poetic sentiment, in dignity and beauty of conception, and its constant growth in technical excellence as well. These last pictures are very different in treatment from those by which he has so long been known. A few years ago he could surely not have painted the fine and subtle sky in "The Coming Storm" or "Inside the Bar," or the delicate harmony of tones in "The Foggy Day." A few years ago his brush was stiffer, his tones were cruder, than they are to-day; his art altogether was harsher and more angular. That he will give us many different kinds of work in the years to come, no one who has followed his course thus far can greatly doubt. And I am equally sure it will be work that, while keeping all his early independence of mood and freshness of vision, will show an ever-growing feeling for beauty, and an ever-growing power to put it beautifully on canvas.

It may seem ungracious to have pointed out the flaws in art so good as this—so much better in many ways than much of the current work which is technically more lovely. But I have acknowledged them chiefly to get a chance of showing—no unnecessary preaching in these days of devotion to technique for itself alone—that there is something more in art than technical grace and charm. Of course, no art can be perfect, can be really great, which is not perfect and great in technical ways as well as in conception and in feeling. But even the most marvelous

be considered in judging of a painter. And when a man feels so strongly, so freshly, sometimes so grandly and poetically, as Mr. Homer, and when he expresses himself so clearly, so distinctly, so impressively, we are foolish indeed if we resent the fact that he does not speak as smoothly, as beautifully, as gracefully as he might. Beauty—sensuous charm of motive and of treatment—is a factor in art, and a factor of much value; but it is not *all* of art. There is no denying the fact that Mr. Homer's work has sometimes been positively ugly. Even the beauty of his later efforts is beauty of form, of idea, of feeling, and of strong expression only—very rarely beauty of color, and never, whether in color, in form, in handling, or in sentiment, beauty of the suave and sensuous sort; and, needless to say, of so-called "decorative" beauty we find not the slightest trace. But always, whether it be austere beautiful or frankly ugly, his work is *vital art*—not mere painting, not the record of mere artistic seeing, but the record of strong artistic *feeling* expressed in strong, frank, and decided ways. It is always artistic in sentiment if not artistically gracious in speech, always clear, always self-reliant, always genuine, and—to use again the word which comes inevitably to my pen—always *strong* to a remarkable degree. For the sake of these qualities—so important and to-day so very rare—we may a thousand times excuse all technical deficiencies we find; and the more gladly since, as I have said, they are gradually disappearing, year by year.

M. G. Van Rensselaer.

MADAME MODJESKA.

OF the many foreign actors who have played during the last ten years in New York, not more than four, Salvini, Ristori, Bernhardt, and Modjeska, have acquired a permanent reputation. The great German artists who have visited us from time to time have acted in their own tongue and, chiefly, before their own countrymen, and cannot justly be said to have appeared before the American public at all. Charles Fechter—French, English, and German in one—was a cosmopolitan, and can scarcely be included in the category of foreigners. There are no names but these whose memory is likely to outlive the present generation or the fame of many English-speaking actors. The triumphs of Ristori already belong to the past; and it is uncommonly doubtful whether Bernhardt, great artist as she is, could repeat the successes achieved by her during her first engagement here. The public excitement attending her performances then was almost largely due to the notoriety insured by skillful management; and her audiences grew steadily smaller, both in numbers and enthusiasm, when the curiosity concerning the personal appearance of so reckless and eccentric a woman had been satisfied. That she is a consummate mistress of her art cannot be questioned; but her claim to the possession of positive genius rests upon a very shadowy foundation, while the fact remains that, although she spoke a language and acted in plays perfectly familiar to a large proportion of her hearers, she rarely reached the height of absolute illusion, or wrought the spell by which the inspired player overwhelms the intellect with the emotions. She has not, in other words, displayed that magnetic quality essential to true genius, but existing sometimes apart from it, by which public admiration and affection are aroused in spite of the obstacles opposed by foreign speech or any other difficulty whatever.

Salvini and Modjeska have both stood the test of public trial. Both of them won the most cordial critical appreciation on the occasion of their first appearance in this country, and both have grown constantly in popular favor. This, of course, is stated as a fact, not with any idea of instituting a comparison between the two. Salvini, in whom towering dramatic genius is strengthened and elevated by all the resources of the most exquisite art, stands by himself alone; but Modjeska, nevertheless,

possesses, in a modified degree, some of the qualities common to the great Italian and all actors of eminence, and it is the object of this brief sketch to consider what these qualities are.

It would be unnecessary, even if space permitted, to enter upon a minute history of the life of Madame Modjeska, or a recital of her personal characteristics. These have been treated at length in a former number of *THE CENTURY*.* All that is needful now is to refer to her work during her latest engagement in New York, and more especially to those characters in which she appeared then for the first time. These were *Rosalind*, *Viola*, and *Odette*, three parts which show with sufficient clearness the sum of her artistic attainments and the limitations of her dramatic power. Her brilliant success in the first and her comparative failure in the last of these characters once more prove that her greatest strength lies in the direction of pure comedy, and that she imposes too great a strain upon her physical strength and exceeds the limits of her inspiration in simulating the stormy passions of tragedy or even the emotional throes of the modern lachrymose drama. She can portray *hauteur*, anger, or scorn, but not the frenzy of either rage or despair; she can be infinitely tender and exquisitely pathetic, but the agony of a great nature is beyond her grasp. She can indicate the pangs of suppressed sorrow with admirable and touching truthfulness, but the full expression of tragic grief or horror is not within her range. The woes of *Camille* never found a more graceful or more pathetic interpreter; but the awful imaginings of the despairing *Juliet* at the one supreme moment in the potion scene, demand powers of a different and higher order than any which she possesses, although the impersonation, as a whole, is most poetic in ideal and brilliant and fascinating in execution, glowing, as it does, with the true southern ardor, and employing all the witchery of that personal charm which is the marked characteristic of this actress. Again, in *Odette*, a vile play upon which it is sheer waste to expend any intellectual effort, Madame Modjeska

* See this magazine for March, 1879; also see note in the May number, 1879, by her husband, C. Bozenta Chlapowski, who, it is interesting to know, recently became an American citizen, in California, the State in which Madame Modjeska's art first received recognition in America.—ED.

failed at the critical point in the first act, where nothing but a whirlwind of blind passion can give even the semblance of decency to the position assumed by the erring heroine, or furnish the slightest excuse for sympathy with her in her later sufferings. In this scene, both before and after her discovery of the removal of her child, the actress failed to maintain the illusion, because her assumed passion was plainly artificial; whereas in the final act, where the anguish of a breaking heart is suggested rather than expressed, her acting was so entirely natural and affecting as to move many persons in the audience to tears. There are, perhaps, two or three actresses upon the American stage who could use this opportunity with similar effect, that is, so far as the tears are concerned, but there is not one of them capable of creating the effect by means of the few and simple devices employed by Modjeska. It is only the accomplished artist who can draw a perfect picture in a few strokes.

It was by her *Rosalind* that Madame Modjeska chiefly added to her reputation last season. This was an impersonation full of charm, lovely to the eye, and satisfying to the sense, giving life to a poetic ideal, and presenting many of the rarest beauties of prosaic flesh and blood, without resolving a fanciful creation into a being essentially earthy. There was a sustained elevation in the performance which was delightful; a refinement which was not affectation, a delicacy which was not finical. It differed widely from the *Rosalind* prescribed by the traditions of the English stage; but no less an authority than Salvini has ventured to denounce traditions as cankerous, and they most certainly should not be allowed to trammel genius. The typical English *Rosalind* is perhaps a little more robust, a little less mercurial, as if infected by the heavy insular air, a little less prodigal of gesture, slower of speech, and more restrained in manner. But it is surely hypercriticism to object to Modjeska's brilliant audacity, in which there is no trace of immodesty, or to the elaboration of her by-play, which is invariably apt and graceful. Restlessness upon the stage is a vice, but the constant gesture of Modjeska is always guided by intelligent purpose, and is illustrative both of the text and of her conception. A remarkable instance of her skill in this respect is seen in her treatment of the love scenes with *Orlando*, in which, by an infinite variety of subtle touches, she suggests to the audience the archness and coquetry of a woman, while to her lover she is nothing but a wayward and fanciful boy. This same assumption of a double identity was maintained with brilliant effect in the scene with the bloody handkerchief, where,

amid all her extreme solicitude concerning the safety of her lover, she betrayed a semi-humorous perception of the incongruity between her masculine attire and her sinking heart. All this is comedy of the finest kind, and the remembrance of it will be treasured among some of the choicest memories of the contemporary stage.

Her *Viola*, a part to which she is yet new, promises to become a fit companion picture to her *Rosalind*. The distinction between the two characters is cleverly marked, and will, of course, grow more clear with future study and rehearsal. The sentimental side of *Viola* is projected into strong relief, and is treated with exquisite tenderness and grace. The key-note of the impersonation is given at the first entrance from the boat. At Booth's Theater, this coast scene was a marvel of shabbiness and grotesque unfitness; yet the actress, by her power of pantomime, created a vivid impression of cold and storm, of suffering, fatigue, and fear. The natural timidity of woman was substituted for the high courage of *Rosalind*, and this phase of the character was emphasized throughout the play, and was made manifest even in the love scenes with *Olivia*, which were treated most picturesquely, in varying moods of bewilderment, incredulity, and raillery, but with a constant suggestion of the pain inflicted for love's sake by a loving heart upon itself. The performance, as has been intimated, is not yet a finished work. There are rough spots in it here and there, and there are traces of labor and uncertainty which only time will remove. But these flaws are only discernible at intervals, and never at important crises. The versatility of the actress is displayed in the contrast between the delicate pathos and unsurpassable grace of the famous scene between *Viola* and *Orsino* and the admirable humor of the duel scene with *Sir Andrew*, which excites the heartiest merriment without recourse to any methods except those which belong legitimately to comedy. These scenes contain the promise of the completed work.

Madame Modjeska is undoubtedly advancing in artistic growth. She is and long has been entitled to a place in the first rank of living players, but it is not easy to determine her exact position. She has challenged comparison with Bernhardt, her chief female rival, and in comedy is at least the equal of the famous Frenchwoman; but the latter has a wider range of character in tragedy. In respect of artistic accomplishment, the mere mastery of stage device, there is little to choose between them; but Modjeska, when at her best, is far nearer to nature than Bernhardt ever is,

even if she sometimes fails to make so brilliant a theatrical effect. If Bernhardt has the brilliancy, she has also the coldness and hardness of the diamond; whereas Modjeska, in addition to the resources of her skill, possesses the sympathetic power which stirs the heart. It has been the fashion to name Bernhardt as the first of living actresses, chiefly because she has played so many parts; but in acting it is necessary to look for something more than the perfection of mechanism. This can be acquired by intellectual effort, and is no indication of genius or inspiration. It raises, indeed, something like a presumption in the opposite direction, for genius is impatient of restraint. Clara Morris has greater moments than either

Bernhardt or Modjeska; but as an artist she cannot be named in the same breath with either of them. She has genius, or something very nearly akin to it, and no training. Bernhardt has perfect training, but no genius. Whether Modjeska has genius or not is a question which the reader may decide in his own way, according to his own definition of that much abused term. She has, at least, the power of infusing life into her creations, and of exciting sympathy in their behalf, which is to create an illusion and to fulfill the principal aim of the actor. In this respect, if in no other, she is the superior of Bernhardt, and the public, which knows more about nature than art, will probably give the final verdict in her favor.

IN ROME.

SOMETHING there is in Death not all unkind,
 He hath a gentler aspect, looking back;
 For flowers may grow in the dread thunder's track,
 And even the cloud that struck, with light was lined:
 Thus, when the heart is silent, speaks the mind;
 But there are moments when comes rushing, black
 And fierce upon us, the old, awful lack,
 And Death once more is cruel, senseless, blind.

So, when I saw beside a Roman portal
 "In this house died John Keats"—for tears that sprung,
 I could no further read. O bard immortal!
 Not for thy fame's sake,—but so young, so young!
 Such beauty vanished, spilled such priceless wine,
 And quenched such power of deathless song divine!

THE CELESTIAL PASSION.

O WHITE and midnight skies! O starry bath!
 Wash me in thy pure, heavenly, crystal flood;
 Cleanse me, ye stars! from earthly soil and scath,
 Let not one taint remain in spirit or blood!
 Receive my soul, ye burning, awful deeps!
 Touch and baptize me with the mighty power
 That in ye thrills, while the dark planet sleeps,—
 Make me all yours for one blest, secret hour.
 O glittering host! O high celestial choir!
 Silence each tone that with thy music jars—
 Fill me, even as an urn, with thy white fire,
 Till all I am is kindred to the stars.
 Make me thy child, thou infinite, holy night!
 So shall my days be full of heavenly light.

R. W. Gilder

THE SILVERADO SQUATTERS.

SKETCHES FROM A CALIFORNIAN MOUNTAIN.

BY ROBERT LOUIS STEVENSON,

Author of "New Arabian Nights," "Travels with a Donkey in the Cévennes," "An Inland Voyage," etc.

THE scene of these chapters is on a high mountain. There are, indeed, many higher; there are many of a nobler outline. It is no place of pilgrimage for the summary globe-trotter. But to one who lives upon its sides, Mount Saint Helena soon becomes a center of interest. It is the Mont Blanc of one section of the Californian Coast Range, none of its near neighbors rising to one-half its altitude. It looks down on much green, intricate country. It feeds in the spring-time many splashing brooks. From its summit you must have an excellent lesson of geography: seeing to the south San Francisco Bay, with Tamalpais on the one hand and Monte Diablo on the other; to the west and thirty miles away, the open ocean; eastward, across the corn lands and thick tule swamps of Sacramento Valley, to where the Central Pacific Railroad begins to climb the sides of the Sierra; and northward, for what I know, the white head of Shasta looking down on Oregon. Three counties, Napa County, Lake County, and Sonoma County, march across its cliffy shoulders. Its naked peak stands nearly four thousand five hundred feet above the sea. Its sides are fringed with forest, and the soil, where it is bare, glows warm with cin-nabar. Life in its shadow goes rustically forward. Bucks, and bears, and rattlesnakes, and former mining operations are the staple of men's talk. Agriculture has only begun to mount above the valley; and though, in a few years from now, the whole district may be smiling with farms, passing trains shaking the mountain to the heart, many-windowed hotels lighting up the night like factories, and a prosperous city occupying the site of sleepy Calistoga; yet in the meantime, around the feet of that mountain, the silence of nature reigns in great measure unbroken, and the people of hill and valley go sauntering about their business as in the days before the Flood.

To reach Mount Saint Helena from San Francisco, the traveler has twice to cross the bay, once by the busy Oakland Ferry, and again, after an hour or so of the railway, from Vallejo Junction to Vallejo. Thence he takes rail once more to mount the long green strath of Napa Valley.

Early the next morning we mounted the hill along a wooden footway, bridging one marish spot after another. Here and there, as we ascended, we passed a house embowered in white roses. More of the bay became apparent, and soon the blue peak of Tamalpais arose above the green level of the island opposite. It told us we were still but a little way from the city of the Golden Gates, already, at that hour, beginning to awake among the sand hills. It called to us over the waters as with the voice of a bird. Its stately head, blue as a sapphire on the paler azure of the sky, spoke to us of wider outlooks and the bright Pacific. Far Tamalpais stands sentry, like a light-house, over the Golden Gates, between the bay and the open ocean, and looks down indifferently on both. Even as we saw and hailed it from Vallejo, seamen far out at sea were scanning it with shaded eyes; and as if to answer to the thought, one of the great ships below began silently to clothe herself with white sails, homeward bound for England.

For some way beyond Vallejo the railway led us through bald green pastures. On the west, the rough highlands of Marin shut off the ocean; in the midst, in long, straggling, gleaming arms, the bay died out among the grass; there were few trees and few inclosures; the sun shone wide over open uplands, the displumed hills stood clear against the sky. But by and by these hills began to draw nearer on either hand, and first thicket and then wood began to clothe their sides, and soon we were away from all signs of the sea's neighborhood, mounting an inland, irrigated valley. A great variety of oaks stood, now severally, now in a becoming grove, among the fields and vineyards. The towns were compact, in about equal proportions, of bright new wooden houses, and great and growing forest trees; and the chapel bell on the engine sounded most festally that sunny Sunday as we drew up at one green town after another, with the towns-folk trooping in their Sunday's best to see the strangers, with the sun sparkling on the clean houses and great domes of foliage humming overhead in the breeze.

This pleasant Napa Valley is, at its north end, blockaded by our mountain. There, at Calistoga, the railroad ceases; and the trav-

eler who intends faring further, to the geysers or to the springs in Lake County, must cross the spurs of the mountain by stage. Thus, Mount Saint Helena is not only a summit, but a frontier; and, up to the time of writing, it has stayed the progress of the iron horse.

CALISTOGA.

It is difficult for a European to imagine Calistoga; the whole place is so new and of such an occidental pattern: the very name, I hear, was invented at a supper party by the man who found the springs.

The railroad and the highway come up the valley about parallel to one another. The street of Calistoga joins them, perpendicular to both,—a wide street with bright, clean, low houses; here and there a veranda over the sidewalk, here and there a horse-post, here and there lounging towns-folk. Other streets are marked out, and most likely named; for these towns in the New World begin with a firm resolve to grow larger, Washington and Broadway, and then First and Second, and so forth, being boldly plotted out as soon as the community indulges in a plan. But in the meanwhile all the life and most of the houses of Calistoga are concentrated upon that street between the railway station and the road. I never heard it called by any name, but I will hazard a guess that it is either Washington or Broadway. Here are the blacksmith's, the chemist's, the general merchant's, and Kong Sam Kee, the Chinese laundryman's; here, probably, is the office of the local paper (for the place has a paper, they all have papers); and here, certainly, is one of the hotels, Cheeseborough's, whence the daring Foss, a man dear to legend, starts his horses for the geysers.

It must be remembered that we are here in a land of stage-drivers and highwaymen: a land, in that sense, like England a hundred years ago. The highway robber—road-agent he is quaintly called—is still busy in these parts. The fame of Vasquez is still young. Only a few years ago, the Lakeport stage was robbed a mile or two from Calistoga. In 1879, the dentist of Mendocino City, fifty miles away upon the coast, suddenly threw off the garments of his trade, like Grindoff in "The Miller and his Men," and flamed forth in his second dress as a captain of banditti. A great robbery was followed by a long chase, a chase of days if not of weeks, among the intricate hill country; and the chase was followed by much desultory fighting, in which several—and the dentist, I believe, amongst the number—bit the dust. The grass was springing, for the first time, nourished upon their

blood, when I arrived in Calistoga. I am reminded of another highwayman of that same year. "He had been unwell," so ran his humorous defense, "and the doctor told him to take something; so he took the express box."

The cultus of the stage-coachman always flourishes highest where there are thieves on the road and where the guard travels armed, and the stage is not only a link between country and city and the vehicle of news, but has a faint wayfaring aroma, like a man who should be brother to a soldier. California boasts her famous stage-drivers; and among the famous, Foss is not forgotten. Along the unfenced, abominable mountain roads, he launches his team with small regard to human life or the doctrine of probabilities. Flinching travelers, who behold themselves coasting eternity at every corner, look with natural admiration at their driver's huge, impassive, fleshy countenance. He has the very face for the driver in Sam Weller's anecdote, who upset the election party at the required point. Wonderful tales are current of his readiness and skill. One, in particular, of how one of his horses fell at a ticklish passage of the road, and how Foss let slip the reins, and, driving over the fallen animal, arrived at the next stage with only three. This I relate as I heard it, without guarantee.

I only saw Foss once, though, strange as it may sound, I have twice talked with him. He lives out of Calistoga at a ranch called Fossville. One evening, after he was long gone home, I dropped into Cheeseborough's, and was asked if I should like to speak with Mr. Foss. Supposing that the interview was impossible, and that I was merely called upon to subscribe the general sentiment, I boldly answered yes. Next moment, I had one instrument at my ear, another at my mouth, and found myself, with nothing in the world to say, conversing with a man several miles off among desolate hills. Foss rapidly and somewhat plaintively brought the conversation to an end; and he returned to his night's grog at Fossville, while I strolled forth again on Calistoga high street. But it was an odd thing that here, on what we are accustomed to consider the very skirts of civilization, I should have used the telephone for the first time in my civilized career. So it goes in these young countries: telephones and telegraphs, and newspapers and advertisements, running far ahead among the Indians and the grizzly bears.

THE PETRIFIED FOREST.

WE drove off from the Springs Hotel about three in the afternoon. The sun

warmed me to the heart. A broad, cool wind streamed pauselessly down the valley, laden with perfume. Up at the top stood Mount Saint Helena, a great bulk of mountain, bare atop, with tree-fringed spurs, and radiating warmth. Once, we saw it framed in a grove of tall and exquisitely graceful white-oaks; in line and color a finished composition. We passed a cow stretched by the road-side, her bell slowly beating time to the movement of her ruminating jaws, her big, red face crawled over by half a dozen flies, a monument of content.

A little further, and we struck to the left up a mountain road, and for two hours threaded one valley after another, green, tangled, full of noble timber, giving us every now and again a sight of Mount Saint Helena and the blue, hilly distance, and crossed by many streams, through which we splashed to the carriage step. To the right or the left, there was scarce any trace of man but the road we followed; I think we passed but one ranch in the whole distance, and that was closed and smokeless. But we had the society of these bright streams, dazzlingly clear, as is their wont, splashing from the wheels in diamonds, and striking a lively coolness through the sunshine. And what, with the innumerable variety of greens, the masses of foliage tossing in the breeze, the glimpses of distance, the descents into seemingly impenetrable thickets, the continual dodging of the road, which made haste to plunge again into the covert, we had a fine sense of woods, and spring-time, and the open air.

Our driver gave me a lecture by the way on Californian trees: a thing I was much in need of, having fallen among painters who knew the name of nothing, and Mexicans who knew the name of nothing in English. He taught me the *madrona*, the *manzanita*, the *buckeye*, the *maple*; he showed me the crested mountain quail; he showed me where some young redwoods were already spiring heavenward from the ruins of the old; for in this district all had already perished—redwoods and redskins,—the two noblest indigenous living things alike condemned.

At length, in a lonely dell, we came on a huge wooden gate, with a sign upon it like an inn. "The Petrified Forest; proprietor, C. Evans," ran the legend. Within, on a knoll of sward, was the house of the proprietor, and another smaller house hard by to serve as a museum, where photographs and petrifications were retailed. It was a pure little isle of touistry among these solitary hills.

The proprietor was a brave, old, white-faced Swede. He had wandered this way, Heaven knows how, and taken up his acres, I forget

how many years ago, all alone, bent double with sciatica, and with six bits in his pocket and an axe upon his shoulder. Long, useless years of sea-faring had thus discharged him at the end, penniless and sick. Without doubt, he had tried his luck at the diggings, and got no good from that; without doubt, he had loved the bottle, and lived the life of Jack ashore. But at the end of these adventures, here he came; and the place hitting his fancy, down he sat to make a new life of it, far from crimps and the salt sea. And the very sight of his ranch had done him good. It was "the handsomest spot in the Californy mountains,"—"Isn't it handsome, now?"—he said. Every penny he makes goes into that ranch to make it handsomer. Then the climate, with the sea breeze every afternoon in the hottest summer weather, had gradually cured the sciatica; and his sister and a niece were now domesticated with him for company; or rather the niece came only once in the two days, teaching music meanwhile in the valley. And then, for a last piece of luck, the handsomest spot in the "Californy" mountains had produced a petrified forest, which Mr. Evans now shows at the modest figure of half a dollar a head, or two-thirds of his capital when he first came there with an axe and a sciatica.

This tardy favorite of fortune, hobbling a little, I think, as if in memory of the sciatica, but with not a trace that I can remember of the sea, thoroughly ruralized from head to foot, proceeded to escort us up the hill behind his house.

"Who first found the forest?" asked my wife.

"The first? I was that man," said he. "I was cleaning up the pasture for my beasts, when I found *this*"—kicking a great redwood, seven feet in diameter, that lay there on its side, hollow heart, clinging lumps of bark, all changed into gray stone with veins of quartz between what had been the layers of the wood.

"Were you surprised?"

"Surprised? No! What would I be surprised about? What did I know about petrifications—following the sea? Petrification! There was no such word in my language. I thought it was a stone; so would you, if you was cleaning up pasture."

And now he had a theory of his own, which I did not quite grasp, except that the trees had not "grewed" there. But he mentioned, with evident pride, that he differed from all the scientific people who had visited the spot; and he flung about such words as *tufa* and *silica* with irreverent freedom.

When I mentioned I was from Scotland,

—“My old country,” he said; “my old country,” with a smiling look and a tone of real affection in his voice. I was mightily surprised, for he was obviously Scandinavian, and begged him to explain. It seemed he had learned his English and done nearly all his sailing in Scotch ships “out of Glasgow,” said he, or Greenock, but that’s all the same; they all hail from Glasgow; and he was so pleased with me for being a Scotchman and his adopted compatriot that he made me a present of a very beautiful piece of petrification, I believe the most beautiful and portable he had.

Here was a man at least, who was a Swede, a Scot, and an American, acknowledging some kind of allegiance to three lands. Mr. Wallace’s Scoto-Circassian will not fail to come before the reader. I have, myself, met and spoken with a Fifeshire German, whose combination of abominable accents struck me dumb. But, indeed, I think we all belong to many countries. And perhaps this habit of much travel, and the engendering of scattered friendships, may prepare the euthanasia of ancient nations. And the forest itself? Well, on a tangled, briery hill-side (for the pasture would bear a little farther cleaning up, to my eyes) there lie scattered thickly various lengths of petrified trunk such as the one already mentioned. It is very curious, of course, and ancient enough if that were all. Doubtless, the heart of the geologist beats quicker at the sight; but for my part, I was mightily unmoved. Sight-seeing is the art of disappointment.

“There’s nothing under heaven so blue
That’s fairly worth the traveling to.”

But, fortunately, Heaven rewards us with many agreeable prospects and adventures by the way, and sometimes, when we go out to see a petrified forest, prepares a far more delightful curiosity in the form of Mr. Evans; whom may all prosperity attend throughout a long and green old age.

THE SCOT ABROAD.

I WROTE that a man belonged, in these days, to a variety of countries; but the old land is still the true love, the others are but pleasant infidelities. I task myself in vain to think what it is that makes up Scotland. Insurmountable differences of race divide us. Two languages, many dialects, many religions, many local patriotisms and prejudices split us among ourselves more widely than the extreme East and West of that great continent of America. When I am at home, I

feel a man from Glasgow to be something like a rival, a man from Barra to be more than half a foreigner. Yet let us meet in some far country, and whether we hail from the braes of Manar or the braes of Mar, some ready-made affection joins us on the instant. It is not race. Look at us. One is Norse, one Celtic, and another Saxon. It is not community of tongue. We have it not among ourselves; and we have it, almost to perfection, with English or Irish or American. It is no tie of faith, for we hate each other’s errors. And yet somewhere, deep down in the heart of each one of us, something yearns for the old land and the old, kindly people.

Of all mysteries of the human heart, I think this bears the bell. There is no special loveliness in that grim, gray land, with its rainy, sea-beat archipelago; its fields of dark mountains; its unsightly places black with coal; its treeless, sour, unfriendly-looking corn lands; its quaint, gray, castled city, where the bells clash of a Sunday, and the wind squalls and the salt showers fly and beat. I do not even know if I desire to live there; but let me hear, in some far land, a kindred voice sing out: “Oh, why left I my hame?” and it seems at once as if no beauty under the kind heavens, and no society of the wise and good, can repay me for my absence from my country. And though, I think, I would rather die elsewhere, yet in my heart of hearts I long to be buried among good Scots clods. I will say it fairly,—it grows on me with every year,—there are no stars so lovely as Edinburgh street lamps. When I forget thee, auld Reekie, may my right hand forget its cunning!

The happiest lot on earth is to be born a Scotchman. You must pay for it in many ways, as for all other advantages on earth; you have to learn the paraphrases and the shorter catechism; you generally take to drink; your youth, as far as I can find out, is a time of louder war against society, of more outcry and tears and turmoil, than if you had been born, for instance, in England. But somehow, life is warmer and closer; the hearth burns more redly; the lights of home shine softer on the rainy street. The very names, endeared in verse and music, cling nearer around our hearts. An Englishman may meet an Englishman to-morrow upon Chimborazo, and neither of them care; but when McEckron, the Scotch wine-grower, told me of Mons Meg, it was like magic.

“From the dim shieling on the misty island,
Mountains divide us, and a world of seas;
Yet still our hearts are true, our hearts are Highland;
And we, in dreams, behold the Hebrides.”

And Highland and Lowland, all our hearts are Scotch.

Only a few days after I had seen McEckron, a message reached me in my cottage. It was a Scotchman who had come down a long way from the hills to market. He had heard there was a countryman in Calistoga, and came round to the hotel to see him. We said a few words to each other; we had not much to say—should never have seen each other had we staid at home, separated alike in space and in society; and then we shook hands, and he went his way again to his ranch among the hills. That was all.

Another Scotchman there was, a resident, who for the mere love of the common country,—douce, serious, religious man,—drove me all about the valley and took as much interest in me as if I had been his son: more, perhaps; for the son has faults too keenly felt, while the abstract countryman is perfect—like a whiff of peats.

And there was yet another. Upon him I came suddenly as he was calmly entering my cottage, his mind quite evidently bent on plunder: a man of about fifty, filthy, ragged, roguish, with a chinney-pot hat and a tail coat, and a pursing of his mouth that might have been envied by an elder of the kirk. He had just such a face as I have seen a dozen times behind the plate.

"Hullo, sir!" I cried. "Where are you going?"

He turned round without a quiver.

"You're a Scotchman, sir?" he said, gravely. "So am I. I come from Aberdeen. This is my card," presenting me with a piece of pasteboard which he had raked out of some gutter in the period of the rains. "I was just examining this palm," he continued, indicating the misbegotten plant before our door, "which is the largest specimen I have yet observed in California."

There were four or five larger within sight, but where was the use of argument? He produced a tape-line, made me help him to measure the tree at the level of the ground, and entered the figures in a large and filthy pocket-book: all with the gravity of Solomon. He then thanked me profusely, remarking that such little services were due between countrymen, shook hands with me "for auld lang syne," as he said, and took himself solemnly away, radiating dirt and humbug as he went.

A more impudent rascal I have never seen; and, had he been American, I should have ragged. But then—he came from Aberdeen.

A month or two after this encounter of mine there came a Scot to Sacramento—perhaps from Aberdeen. Anyway, there never

was any one more Scotch in this wide world. He could sing and dance and drink, I presume, and he played the pipes with vigor and success. All the Scotch in Sacramento became infatuated with him, and spent their spare time and money driving him about in an open cab, between drinks, while he blew himself scarlet at the pipes. This is a very sad story. The piper must have been a relation of my friend with the tape; or else the devil in person; for after he had borrowed money from everybody all round, he and his pipes suddenly disappeared from Sacramento, and, when I last heard, the police were looking for him.

I cannot say how this story amused me, when I felt myself so thoroughly ripe on both sides to be duped in the same way.

It is at least a curious thing, to conclude, that the races which wander widest, Jews and Scotch, should be the most clannish in the world. But perhaps these two are cause and effect. "For ye were strangers in the land of Egypt."

MR. KELMAR.

ONE thing in this new country very particularly strikes a stranger, and that is the number of antiquities. Already there have been many cycles of population succeeding each other and passing away and leaving behind them relics. These, standing on into changed times, strike the imagination as forcibly as any pyramid or feudal tower. The towns, like the vineyards, are experimentally founded; they grow great and prosper by passing occasions; and when the lode comes to an end, and the miners move elsewhere, the town remains behind them, like Palmyra in the desert. I suppose there are in no country in the world so many deserted towns as here in California.

The whole neighborhood of Mount Saint Helena, now so quiet and rural, was once alive with mining camps and villages: here there would be two thousand souls under canvas, there a thousand or fifteen hundred ensconced, as if forever, in a town of comfortable houses; but the luck had failed, the mines petered out, the army of miners had departed, and left this quarter of the world to the rattlesnakes and deer and grizzlies and to the slower but steadier advance of husbandry.

It was with an eye on one of these deserted places, Pine Flat, on the geysers road, that we had come first to Calistoga. There is something singularly enticing in the idea of going, rent-free, into a ready-made house; and to the British merchant, sitting at home at ease, it may appear that, with such a roof

over your head and a spring of clear water hard by, the whole problem of the squatter's existence would be settled. Food, however, has yet to be considered. I will go as far as most people on tinned meats; and some of the brightest moments of my life were passed over tinned mullagatawny in the cabin of a sixteen-ton schooner, storm-staid in Port-ree Bay; but after suitable experiments, I pronounce authoritatively that man cannot live by tins alone. Fresh meat must be had on an occasion. It is true that the great Foss, driving by along the geysers road, wooden-faced, but glorified with legend, might have been induced to bring us meat; but the great Foss could hardly bring us milk. To take a cow would have involved taking a field of grass and a milkmaid. After which it would have been hardly worth while to pause, and we might have added to our colony a flock of sheep and an experienced butcher.

Now my principal adviser in this matter was one whom I will call Kelmar. That was not what he called himself; but as soon as I set eyes on him, I knew it was or ought to be his name. Kelmar was the store-keeper, a Russian Jew, good-natured, in a very thriving way of business, and on equal terms one of the most serviceable of men. He also had something of the expression of a Scotch country elder who, by some peculiarity, should chance to be a Hebrew. He had a projecting under-lip, with which he continually smiled, or rather smirked. Mrs. Kelmar was a singularly kind woman; and the oldest son had quite a dark and romantic bearing, and might be heard on summer evenings playing sentimental airs on the violin.

I had no idea, at the time I made his acquaintance, what an important person Kelmar was. I believe, even from the little I saw, that Kelmar, if he chose to put on the screw, could send half the farmers packing in a radius of seven or eight miles round Calistoga. These are continually paying him, but are never suffered to get out of debt; he palms dull goods upon them, for they dare not refuse to buy; he goes and dines with them when he is on an outing, and no man is louder welcomed; he is their family friend, the director of their business, and, to a degree elsewhere unknown in modern days, their king.

For some reason Kelmar always shook his head at the mention of Pine Flat; and for some days I thought he disapproved of the whole scheme, and was proportionately angry. One fine morning, however, he met me, wreathed in smiles. He had found the very place for me: Silverado, another old mining town, right up the mountain; Rufe Hanson, the hunter,

could take care of us—fine people the Hansons; we should be close to the Toll House, where the Lakeport stage called daily; it was the best place for my health besides—Rufe had been consumptive, and was now quite a strong man—aint it? In short, the place and all its accompaniments seemed made for us on purpose.

He took me to his backdoor, whence, as from every point of Calistoga, Mount Saint Helena could be seen towering in the air. There, in the nick, just where the eastern foot-hills joined the mountain, and she herself began to rise above the zone of forest—there was Silverado. The name had already pleased me; the high station pleased me still more. I began to inquire with some eagerness. It was but a little while ago that Silverado was a *great* place; the mine, a silver mine, of course, had promised *great* things; there was quite a lively population, with several hotels and boarding-houses; and Kelmar himself had opened a branch store, and done extremely well. "Aint it?" he said, appealing to his wife. And she said "Yes, extremely well." Now there was no one living in the town but Rufe, the hunter; and once more I heard Rufe's praises by the yard, and this time sung in chorus.

I could not help perceiving at the time that there was something underneath, and that it was not an unmixed desire to have us comfortably settled which inspired the Kelmar family with this unusual eloquence. But I was impatient to be gone, to be about my kingly project; and when the Kelmars offered my wife and me a seat in their conveyance, I accepted on the spot. The plan of their next Sunday's outing took them, by good fortune, over the border into Lake County. They would carry us so far, drop us at the Toll House, present us to the Hansons, and call for us again on Monday morning early.

FIRST IMPRESSIONS OF SILVERADO.

WE were to leave by six precisely. That was solemnly pledged on both sides, and a messenger came to us the last thing at night, to remind us of the hour. But it was eight before we got clear of Calistoga: Kelmar, Mrs. Kelmar, a friend of theirs, whom we named Abramina, her little daughter, my wife, myself, and, stowed away behind us, a cluster of ship's coffee-kettles. These last were highly ornamental in the sheen of their bright tin, but I could invent no reason for their presence. Our carriageful reckoned up, as near as we could get it, some three hundred years to the six of us. Four of the six,

besides, were Hebrews. But I never, in all my life, was conscious of so strong an atmosphere of holiday. No word was spoken but of pleasure; and even when we drove in silence, nods and smiles went round the party like refreshments.

The sun shone out of a cloudless sky. Close at the zenith rode the belated moon, still clearly visible and, along one margin, even bright. The wind blew a gale from the north; the trees roared, the corn and the deep grass in the valley fled in whitening surges; the dust towered into the air along the road and dispersed like the smoke of battle. It was clear in our teeth from the first, and, for all the windings of the road, it managed to keep clear in our teeth until the end.

For some two miles we rattled through the valley, skirting the eastern foot-hills; then we struck off to the right, through bough-land; and presently, crossing a dry water-course, entered the Toll road, or, to be more local, entered on "the grade." The road mounts the near shoulder of Mount Saint Helena, bound northward into Lake County. It is a private speculation, and must have cost a pretty penny to make, nor has it yet done costing. In one place, it skirts along the edge of a narrow and deep cañon filled with trees; and I was glad, indeed, not to be driven at this point by the dashing Foss. Kelmar, with his unvarying smile, jogging to the motion of the trap, drove for all the world like a good, plain country clergyman at home; and I thought that style the most suitable for the occasion.

Vineyards and deep meadows, islanded and framed with thicket, gave place more and more, as we ascended, to woods of oak and madrona, dotted with enormous pines. It was these pines, as they shot above the lower wood, that produced that penciling of single trees I had so often remarked from the valley. The oak is no baby; even the madrona, upon these spurs of Mount Saint Helena, comes to a fine bulk and ranks among forest trees; but the pines look down upon the rest for underwood. As Mount Saint Helena among her foot-hills, so these dark giants outtop their fellow vegetables. Alas, if they had left the redwoods, the pines, in turn, would have been dwarfed. But the redwoods, fallen from their high estate, are serving as family bedsteads, or yet more humbly as field-fences along all Napa Valley.

A rough smack of resin was in the air, and a crystal mountain purity. It came pouring over these green slopes by the oceanful. The woods sang aloud, and gave largely of their healthful breath. Gladness seemed to inhabit these upper zones, and we had left indiffer-

ence behind us in the valley. I to the hills will lift mine eyes! There are days in a life when thus to climb out of the lowlands seems like scaling heaven.

Some way beyond the cañon, there stands a white house, with *Saloon* painted on it, and a horse-trough with a spray of diamond water. On the other side of the road, we could see a few brown houses dotted in the bottom of the dell, and a great brown mill big as a factory, two stories high, and with tanks and ladders along the roof. This was Silverado mill and mill town: Lower Silverado, if you like; now long deserted and yielded up to squatters. Even the saloon was a saloon no longer; only its tenant, old Wash, kept up the character of the place by the amount and strength of his potatoes.

As we continued to ascend, the wind fell upon us with increasing strength. It was a wonder how the two stout horses managed to pull us up that steep incline and still face the athletic opposition of the wind, or how their great eyes were able to endure the dust. Ten minutes after we went by, a tree fell, blocking the road; and even before us, leaves were thickly strewn, and boughs had fallen, large enough to make the passage difficult. But now we were hard by the summit. The road crosses the ridge, just in the nick that Kelmar showed me from below, and then, without pause, plunges down a deep, thickly wooded glen on the farther side. At the highest point, a trail strikes up the main hill to the leftward; and that leads to Silverado. A hundred yards beyond, and in a kind of elbow of the glen, stands the Toll House Hotel. We came up the one side, were caught upon the summit by the whole weight of the wind as it poured over into Napa Valley, and a minute after had drawn up in shelter, but all buffeted and breathless, at the Toll House door.

A water-tank, and stables, and a gray house of two stories, with gable ends and a veranda, are jammed hard against the hill-side, just where a stream has cut for itself a narrow cañon, filled with pines. The pines go right up overhead; a little more, and the stream might have played, like a fire-hose, on the Toll House roof. In front, the ground drops as sharply as it rises behind. There is just room for the road and a sort of promontory of croquet-ground, and then you can lean over the edge and look deep below you through the wood. I said *croquet-ground*, not *green*; for the surface was of brown, beaten earth. The toll-bar itself was the only other note of originality: a long beam, turning on a post, and kept slightly horizontal by a counter-weight of stones. Regularly about sundown this rude barrier was swung, like a

derrick, across the road and made fast, I think, to a tree on the other side.

On our arrival, there followed a gay scene in the bar. I was presented to Mr. Corwin, the landlord; to Mr. Jennings, the engineer, who lives there for his health; to Mr. Hoddy, a most pleasant little gentleman, once a member of the Ohio Legislature, again the editor of a local paper, and now, with undiminished dignity, keeping the Toll House bar. I had a number of drinks and cigars bestowed on me, and enjoyed a famous opportunity of seeing Kelmar in his glory, friendly, radiant, smiling, steadily edging one of the ship's kettles on the reluctant Mr. Corwin. Corwin, plainly aghast, resisted gallantly, and for that bout victory crowned his arms.

At last we set forth for Silverado on foot. Kelmar and his jolly Jew girls were full of the sentiment of Sunday outings, and breathed geniality and vagueness. Kelmar suffered a little vile boy from the hotel to lead him here and there about the woods, without even explaining where he wished to go. So long as he might now and then draw up and descant upon the scenery, to get his wind again, it was identically the same to that Ebrew Jew whether we ever arrived anywhere or not.

For three people, all so old, so bulky in body, and belonging to a race so venerable, they could not but surprise us by their extreme and almost imbecile youthfulness of spirit. They were only going to stay ten minutes at the Toll House; had they not twenty long miles of road before them on the other side? Stay to dinner? Not they! Put up the horses? Never; let us attach them to the veranda by a wisp of straw rope, such as would not have held a person's hat that blustering day. And with all these protestations of hurry, they proved irresponsible, like children. Kelmar himself, shrewd old Russian Jew, with a smirk that seemed just to have concluded a bargain to its satisfaction, intrusted himself and us devoutly to that boy. Yet the boy was patently fallacious; and for that matter, a most unsympathetic urchin, raised apparently on gingerbread. He was bent on his own pleasure, nothing else, and Kelmar followed him to his ruin, with the same shrewd smirk. If the boy said there was "a hole there in the hill,"—a hole, pure and simple, neither more nor less,—Kelmar and his Jew girls would follow him a hundred yards to look complacently down that hole. For two hours we looked for houses, and for two hours they followed us, smelling trees, picking flowers, foisting false botany on the unwary; had we taken five, with that vile lad to lead them off on meaningless divagations, for five they would have smiled and stumbled through the woods.

However, we came forth at length upon a lawn, sparse-planted, like an orchard, but with forest instead of fruit trees. And that was the site of Silverado mining town. There was a piece of ground leveled up where Kelmar's store had been; and there was Rufe Hanson's house, still bearing on its front the legend, "Silverado Hotel." Not another sign of habitation. Silverado town had all been carted from the scene; one of the houses was now the school-house far down the road; one was gone here, one there, but all were gone away. It was now a sylvan solitude, and the silence was unbroken but by the great, vague voice of the wind. Some days before our visit, a cinnamon bear had been sporting around the Hanson's chicken-house.

Mrs. Hanson was at home alone, we found. Rufe had been out late after a "bar," had risen late, and was now gone, it did not clearly appear whither. Perhaps he had had wind of Kelmar's coming, and was now ensconced among the underwood, or watching us from the shoulder of the mountain. We, hearing there were no houses to be had, were for immediately giving up all hopes of Silverado. But this, somehow, was not to Kelmar's fancy. He first proposed that we should "camp someveres around, aint it?" waving his hand cheerily as though to weave a spell; and when that was firmly rejected, he decided that we must take up house with the Hansons. Mrs. Hanson had been, from the first, flustered, subdued, and a little pale; but from this proposition she recoiled with haggard indignation. So did we, who would have preferred, in a manner of speaking, death. But Kelmar was not to be put by. He edged Mrs. Hanson into a corner, where for a long time he threatened her with his forefinger, like a character in Dickens; and the poor woman, driven to her entrenchments, at last remembered with a shriek that there were still some houses at the tunnel.

Thither we went; the Jews, who should already have been miles into Lake County, still cheerily accompanying us. For about a furlong we followed a good road along the hill-side through the forest, until suddenly that road widened out and came abruptly to an end. A cañon, woody below, red, rocky, and naked overhead, was here walled across by a dump of rolling stones, dangerously steep, and from twenty to thirty feet in height. A rusty iron chute, on wooden legs, came flying, like a monstrous gargoyle, across the parapet. It was down this that they poured the precious ore; and below here, the carts stood to wait their lading, and carry it millward down the mountain.

The whole cañon was so entirely blocked, as if by some rude guerrilla fortification, that

we could only mount by lengths of wooden ladder, fixed in the hill-side. These led us round the further corner of the clump; and when they were at an end, we still persevered, over loose rubble and wading deep in poison oak, till we struck a triangular platform, filling up the whole glen, and shut in, on either hand, by bold projections of the mountain. Only in front the place was open like the proscenium of a theater, and we looked forth into a great realm of air, and down upon tree-tops and hill-tops, and far and near on wild and varied country. The place still stood as on the day it was deserted; a line of iron rails with a bifurcation, a truck in working order, a world of lumber, old wood, old iron; a blacksmith's forge on one side, half buried in the leaves of dwarf madronas; and on the other, an old brown wooden house.

Fanny and I dashed at the house. It consisted of three rooms, and was so plastered against the hill, that one room was right atop of another, that the upper floor was more than twice as large as the lower, and that all three apartments must be entered from a different side and level. Not a window-sash remained. The door of the lower room was smashed, and one panel hung in splinters. We entered it, and found a fair amount of lumber; sand and gravel that had been sifted in there by the mountain winds; straw, sticks and stones; a table, a barrel, a plate-rack on the wall; two home-made boot-jacks—signs of miners and their boots; and a pair of papers pinned on the boarding, headed respectively "Funnel No. 1" and "Funnel No. 2," but with the tails torn away. The window, sashless, of course, was choked with the green and sweetly smelling foliage of a bay; and through a chink in the floor, a spray of poison-oak had shot up, and was handsomely prospering in the interior. It was my first care to cut away that poison-oak, Fanny standing by at a respectful distance. That was our first improvement by which we took possession.

The room immediately above could only be entered by a plank propped against the threshold, along which the intruder must foot it gingerly, clutching for support to sprays of poison-oak, the proper product of the country. Herein was, on either hand, a triple tier of beds, where miners had once lain; and the other gable was pierced by a sashless window and a doorless door-way opening on the air of heaven, five feet above the ground. As for the third room, which entered squarely from the ground-level, only higher up the hill and further up the cañon, it contained only rubbish and the uprights for another triple tier of beds.

The whole building was overhung by a bold,

lion-like, red rock. Poison-oak, sweet bay-trees, calcanthus, brush and chaparral grew freely but sparsely all about it. In front, in the strong sunshine, the platform lay overstrewn with busy litter, as though the labors of the mine might begin again to-morrow in the morning.

Following back into the cañon, among the mass of rotting plant and through the flowering bushes, we came to a great crazy staging, with a windlass on the top; and clambering up, we could look into an open shaft, leading edgeways down into the bowels of the mountain, trickling with water, and lit by some stray sun-gleams, whence I know not. In that quiet place, the still, far-away tinkle of the water drops was loudly audible. Close by, another shaft led edgeways up into the superincumbent shoulder of the hill. It lay partly open, and, sixty or a hundred feet above our head, we could see the strata propped apart by solid wooden wedges, and a pine, half undermined, precariously nodding on the verge. Here also a rugged horizontal tunnel ran to I know not what depth. This secure angle in the mountain's flank was, even on this wild day, as still as my lady's chamber. But in the tunnel a cold, wet draught tempestuously blew. Nor have I ever known that place otherwise than cold and windy.

A little way back from there, some clear cold water lay in a pool at the foot of a choked trough; and forty or fifty feet higher up, through a thick jungle and hard by another house where Chinamen had slept in the days of the prosperity of Silverado, we were shown the intake of the pipe and the same bright water welling from its spring.

Such was our first prospect of Juan Silverado. I own I had looked for something different—a clique of neighborly houses on a village green, we shall say, all empty to be sure, but swept and varnished; a trout-stream brawling by; great elms or chestnuts, humming with bees and nested in by song-birds; and the mountains standing round about, as at Jerusalem. Here, mountain and house and the old tools of industry were all alike rusty and downfalling. The hill was here wedged up, and there poured forth its bowels in a spout of broken mineral; man, with his picks and powder, and nature, with her own great blasting tools of sun and rain, laboring together at the ruin of that proud mountain. The view of the cañon was a glimpse of devastation; dry red minerals sliding together, here and there a crag, here and there dwarf thicket clinging in the general glissade, and over all a broken outline trenching on the blue of heaven. Downward, indeed, from our rock eyrie we beheld the greener side of nature; and the bearing of the pines and the sweet smell

of bays and nutmegs commended themselves gratefully to our senses. One way and another, now the die was cast. Silverado be it!

After we had got back to the Toll House the Jews were not long of striking forward. But I observed that one of the Hanson lads came down before their departure and returned with a ship's kettle. Happy Hansons! Nor was it until after Kelmar was gone, if I remember rightly, that Rufe put in an appearance to arrange the details of our installation.

The latter part of the day Fanny and I sat in the veranda of the Toll House, utterly stunned by the uproar of the wind among the trees on the other side of the valley. Sometimes, we would have it, it was like a sea; but it was not various enough for that. And, again, we thought it like the roar of a cataract, but it was too changeful for the cataract; and then we would decide, speaking in sleepy voices, that it could be compared with nothing but itself. My mind was entirely preoccupied by the noise. I hearkened to it by the hour, gapingly hearkened, and let my cigarette go out. Sometimes the wind would make a sally nearer hand, and send a shrill, whistling crash among the foliage on our side of the glen; and sometimes a back-draught would strike into the elbow where we sat and cast the gravel and torn leaves into our faces. But, for the most part, this great, streaming gale passed unweariedly by us into Napa Valley, not two hundred yards away, visible by the tossing boughs, stunningly audible, and yet not moving a hair upon our heads. So it blew all night long while I was writing up my journal and after we were in bed, under a cloudless, star-set heaven; and so it was blowing still next morning when we rose.

It was a laughable thought to us what had become of our cheerful, wandering Hebrews. We could not suppose they had reached a destination. The meanest boy could lead them miles out of their way to see a gopher-hole. Boys, we felt to be their special danger. None others were of that exact pitch of cheerful irrelevancy to exercise a kindred sway upon their minds; but before the attractions of a boy, their most settled resolutions would be as wax. We thought we could follow in fancy these three aged Hebrew truants, wandering in and out on hill-top and in thicket, a demon boy trotting far ahead, their will-o'-the-wisp conductor; and at last, about midnight, the wind still roaring in the darkness, we had a vision of all three on their knees upon a mountain-top around a glow-worm.

Next morning we were up by half-past five, according to agreement; and it was ten by the clock before our Jew boys returned to pick us up: Kelmar, Mrs. Kelmar, and Abra-

mina, all smiling from ear to ear, and full of tales of the hospitality they had found on the other side. It had not gone unrewarded; for I observed with interest that the ship's kettles, all but one, had been "placed." Three Lake County families, at least, endowed for life with a ship's kettle: come, this was no mis-spent Sunday. The absence of the kettles told its own story.

Take them for all in all, few people have done my heart more good. They seemed so thoroughly entitled to happiness, and to enjoy it in so large a measure and so free from after-thought. Almost they persuaded me to be a Jew. There was, indeed, a chink of money in their talk. They particularly commended people who were well to do. "*He* don't care, aint it?" was their highest word of commendation to an individual fate; and here I seem to grasp the root of their philosophy. It was to be free from care, to be free to make these Sunday wanderings, that they so eagerly pursued after wealth; and all their carefulness was to be careless. The fine good humor of all three seemed to declare they had attained their end.

So ended our excursion with the village usurers; and now that it was done, we had no more idea of the nature of the business, nor of the part we had been playing in it, than the child unborn. That all the people we had met were the slaves of Kelmar, though in various degrees of servitude; that we ourselves had been sent up the mountain in the interests of none but Kelmar; that the money we laid out, dollar by dollar, cent by cent, and through the hands of various intermediaries, should all hop ultimately into Kelmar's till—these were facts that we only grew to recognize in the course of time and by the accumulation of evidence.

THE ACT OF SQUATTING.

THERE were four of us squatters, myself and my wife, the King and Queen of Silverado; Sam, the Crown Prince; and Chuchu, the Grand Duke. Chuchu, a setter crossed with spaniel, was the most unsuited for a rough life. He had been nurtured tenderly in the society of ladies. His heart was large and soft. He regarded the sofa-cushion as a bed-rock necessary of existence. Though about the size of a sheep, he loved to sit in ladies' laps. He never said a bad word in all his blameless days; and if he had seen a flute, I am sure he could have played upon it by nature. It may seem hard to say it of adog, but Chuchu was a tame cat.

The King and Queen, the Grand Duke, and a basket of cold provender for immediate

use, set forth from Calistoga in a double buggy; the Crown Prince, on horseback, led the way like an outrider. Bags and boxes and a second-hand stove were to follow close upon our heels by Hanson's team. It was a beautiful still day. The sky was one field of azure. Not a leaf moved, not a speck appeared in heaven. Only from the summit of the mountain one little snowy wisp of cloud after another kept detaching itself, like smoke from a volcano, and blowing southward in some high stream of air, Mount Saint Helena still at her interminable task, making the weather, like a Lapland witch.

By noon we had come in sight of the mill, which, as a pendicle of Silverado mine, we held to be an outlying province of our own. Thither, then, we went, crossing the valley by a grassy trail, and there lunched out of the basket, sitting in a kind of portico and wondering, while we ate, at this great bulk of useless building. Through a chink we could look far down into the interior and see sunbeams floating in the dust and striking on tier after tier of silent, rusty machinery. It cost six thousand dollars, twelve hundred English sovereigns; and now here it stands, deserted, like the temple of a forgotten religion, the busy millers toiling somewhere else. All the time we were there, mill and mill town showed no sign of life. That part of the mountain-side, which is very open and green, was tenanted by no living creature but ourselves and the insects; and nothing stirred but the cloud manufactory upon the mountain summit. It was odd to compare this with the former days, when the engine was in full blast, the mill palpitating to its strokes, and the carts came rattling down from Silverado charged with ore.

By two we had been landed at the mine, the buggy was gone again, and we were left to our own reflections and the basket of cold provender until Hanson should arrive. Hot as it was by the sun, there was something chill in such a home-coming, in that world of wreck and rust, splinter and rolling gravel, where, for so many years, no fire had smoked.

Silverado platform filled the whole width of a cañon. Above, as I have said, this was a wild, red, stony gully in the mountains. But below, it was a woody dingle, and through this I was told there had gone a path between the mine and the Toll House, our natural north-west passage to civilization. I found and followed it, clearing my way as I went through fallen branches and dead trees. It went straight down that steep cañon till it brought you out abruptly over the roofs of the hotel. There was nowhere any break in the descent. It almost seemed as if, were you to drop a stone down the old iron chute at our

platform, it would never rest until it hopped upon the Toll House shingles. The whole ravine is choked with madrona and low brush; thence spring great old pines, and, high as are the banks, plant their black spires against the sky. Signs were not wanting of the ancient greatness of Silverado. The foot-path was well marked, and had been well trodden in the old days by thirsty miners. And far down, buried in foliage, deep out of sight of Silverado, I came on a last outpost of the mine, a mound of gravel, some wreck of a wooden aqueduct, and the mouth of a tunnel, like a treasure grotto in a fairy story. A stream of water, fed by the invisible leakage from our shaft, and dyed red with cinnabar or iron, ran trippingly forth out of the bowels of the cave; and, looking far under the arch, I could see something like an iron lantern fastened on the rocky wall. It was a promising spot for the imagination. No boy could have left it unexplored.

The stream thenceforward stoie along the bottom of the dingle, and made, for that dry land, a pleasant warbling in the leaves. Once, I suppose, it ran splashing down the whole length of the cañon; but now its head-waters had been tapped by the shaft at Silverado, and for a great part of its course it wandered sunless among the joints of the mountain. No wonder that it should better its pace when it sees, far before it, daylight whitening in the arch; or that it should come trotting forth into the sunlight with a song.

The two stages had gone by when I got down; and the Toll House stood dozing in sun and dust and silence, like a place enchanted. My mission was after hay for bedding; and that I was readily promised. But when I mentioned that we were waiting for Rufe, the people shook their heads. Rufe was not a regular man, anyway, it seemed; and if he got playing poker—well, poker was too many for Rufe. I had not yet heard them bracketed together; but it seemed a natural conjunction, and commended itself swiftly to my fears; and as soon as I returned to Silverado, and had told my story, we practically gave Hanson up, and set ourselves to do what we could find do-able in our desert island state.

The lower room had been the assayer's office. The floor was thick with débris: part human, from the former occupants; part natural, sifted in by mountain winds. In a sea of red dust, there swam or floated sticks, boards, hay, straw, stones, and paper; ancient newspapers, above all, for the newspaper, especially when torn, soon becomes an antiquity; and bills of the Silverado boarding-house, some dated Silverado, some Calistoga mine. Here is one verbatim; and if any one

can calculate the scale of charges, they have my envious admiration :

" CALISTOGA MINE, May 3d, 1875.

" JOHN STANLEY.

" To S. CHAPMAN, DR.

" To board from April 1st to April 30th.....\$25.75
 " " " May 1st to 3rd 2.00

\$27.75

Where is John Stanley mining now ? Where is S. Chapman, within whose hospitable walls we were to lodge ? The date was but five years old ; but in that time the world had changed for Silverado ; like Palmyra in the desert, it had outlived its people and its purpose ; we camped, like Layard, amid ruins ; and these names spoke to us of pre-historic time. A boot-jack, a pair of boots, a dog-hutch, and these bills of Mr. Chapman's were the only speaking relics that we disinterred from all that vast Silverado rubbish-heap ; but what would I not have given to unearth a letter, a pocket-book, a diary, only a ledger, or a roll of names, to take me back, in a more personal manner, to the past ? It pleases me, besides, to fancy that Stanley or Chapman or one of their companions may light upon this chronicle, and be struck by the name, and read some news of their anterior home, coming, as it were, out of a subsequent epoch of history in that quarter of the world.

As we were tumbling the mingled rubbish on the floor, kicking it with our feet, and groping for these written evidences of the past, Sam, with a somewhat whitened face, produced a paper bag. " What's this ? " said he. It contained a granulated powder, something the color of Gregory's mixture, but rosier ; and as there were several of the bags, and each more or less broken, the powder was spread widely on the floor. Had any of us ever seen giant powder ? No, nobody had ; and instantly there grew up in my mind a shadowy belief, verging with every moment nearer to certitude, that I had somewhere heard somebody describe it as just such a powder as the one around us. I have learnt since that it is a substance not unlike tallow, and is made up in rolls for all the world like tallow candles.

Fanny, to add to our happiness, told us a story of a gentleman who had camped one night, like ourselves, by a deserted mine. He was a handy, thrifty fellow, and looked right and left for plunder ; but all he could lay his hands on was a can of oil. After dark he had to see to the horses with a lantern ; and not to miss an opportunity, filled up his lamp from the oil-can. Thus equipped, he set forth into the forest. A little after, his friends heard a loud explosion ; the mountain echoes bellowed, and then all was still. On examination, the can

proved to contain oil with the trifling addition of nitro-glycerine ; but no research disclosed a trace of either man or lantern.

It was a pretty sight, after this anecdote, to see us sweeping out the giant powder. It seemed never to be far enough away. And, after all, it was only some rock pounded for assay.

So much for the lower room. We scraped some of the rougher dirt off the floor, and left it. That was our sitting-room and kitchen, though there was nothing to sit upon but the table, and no provision for a fire except a hole in the roof of the room above, which had once contained the pipe of a stove.

To that upper room we now proceeded. There were the eighteen bunks in a double tier, nine on either hand, where from eighteen to thirty-six miners had once snored together all night long, John Stanley perhaps snoring loudest. There was the roof, with a hole in it, through which the sun now shot an arrow. There was the floor in much the same state as the one below, though perhaps there was more hay, and certainly there was the added ingredient of broken glass, the man who stole the window-panes having apparently made a miscarriage with this one. Without a broom, without hay or bedding, we could but look about us with a beginning of despair. The one bright arrow of day, in that gaunt and shattered barrack, made the rest look dirtier and darker ; and the sight drove us at last into the open.

Here, also, the handiwork of man lay ruined ; but the plants were all alive and thriving. The view below was fresh with the colors of nature, and we had exchanged a dim human garret for a corner, even although it were untidy, of the blue hall of heaven. Not a bird, not a beast, not a reptile. There was no noise in that part of the world, save when we passed beside the staging and heard the water musically falling in the shaft.

We wandered to and fro. We searched among that drift of lumber-wood and iron, nails and rails, and sleepers, and the wheels of trucks. We gazed up the cleft into the bosom of the mountain. We sat by the margin of the dump and saw, far below us, the green tree-tops standing still in the clear air. Beautiful perfumes, breaths of bay, resin, and nutmeg, came to us more often and grew sweeter and sharper as the afternoon declined. But still there was no word of Hanson.

I set to with pick and shovel and deepened the pool behind the shaft till we were sure of sufficient water for the morning ; and, by the time I had finished, the sun had begun to go down behind the mountain shoulder, the platform was plunged in quiet shadow, and a chill descended from the sky. Night began

early in our cleft. Before us, over the margin of the dump, we could see the sun still striking slant into the wooded nick below and on the battlemented, pine-besattered ridges on the further side.

There was no stove, of course, and no hearth, in our lodging; so we betook ourselves to the blacksmith's forge across the platform. If the platform be taken as a stage, and the out-curving margin of the dump to represent the line of the foot-lights, then our house would be the first wing on the actor's left, and this blacksmith's forge, although no match for it in size, the foremost on the right. It was a low, brown cottage, planted close against the hill and overhung by the foliage and peeling boughs of a madrona thicket. Within, it was full of dead leaves and mountain dust and rubbish from the mine. But we soon had a good fire brightly blazing, and sat close about it on impromptu seats. Chuchu, the slave of sofa-cushions, whimpered for a softer bed; but the rest of us were greatly revived and comforted by that good creature, fire, which gives us warmth and light and companionable sounds, and colors up the emptiest building with better than frescoes. For awhile it was even pleasant in the forge, with a blaze in the midst, and a look over our shoulders on the woods and mountains where the day was dying like a dolphin.

It was between seven and eight before Hanson arrived, with a wagonful of our effects and two of his wife's relatives to lend him a hand. The elder showed surprising strength. He would pick up a large packing-case, full of books, of all things, swing it on his shoulder, and away up the two crazy ladders and the break-neck spout of rolling mineral, familiarly termed a path, that led from the cart-track to our house. Even for a man unburdened, the ascent was toilsome and precarious; but Irvine scaled it with a light foot, carrying box after box, as the hero whisks the stage child up the practicable foot-way beside the water-fall of the fifth act. With so strong a helper, the business was speedily transacted. Soon the assayer's office was thronged with our belongings, piled higgledy-piggledy and upside down about the floor. There were our boxes, indeed, but my wife had left her keys in Calistoga. There was the stove; but alas! our carriers had forgotten the stove-pipe, and lost one of the plates along the road. The Silverado problem was scarce solved.

Rufe himself was grave and good-natured over his share of blame; he even, if I remember right, expressed regret. But his crew, to my astonishment and anger, grinned from ear

to ear and laughed aloud at our distress. They thought it "real funny" about the stove-pipe they had forgotten, "real funny" that they should have lost a plate. As for hay, the whole party refused to bring us any till they should have supped. See how late they were! Never had there been such a job as coming up that grade—nor often, I suspect, such a game of poker as that before they started. But about nine, as a particular favor, we should have some hay.

So they took their departure, leaving me still staring; and we resigned ourselves to wait for their return. The fire in the forge had been suffered to go out, and we were one and all too weary to kindle another. We dined, or—not to take that word in vain—we ate after a fashion, in the nightmare disorder of the assayer's office, perched among boxes. A single candle lighted us. It could scarce be called a house-warming, for there was, of course, no fire; and with the two open doors and the open window gaping on the night like breaches in a fortress, it began to grow rapidly chill. Talk ceased; nobody moved but the unhappy Chuchu, still in quest of sofa-cushions, who tumbled complainingly among the trunks. It required a certain happiness of disposition to look forward hopefully from so dismal a beginning, across the brief hours of night, to the warm shining of to-morrow's sun.

But the hay arrived at last; and we turned, with our last spark of courage, to the bedroom. We had improved the entrance; but it was still a kind of rope-walking, and it would have been droll to see us mounting, one after another, by candle-light, under the open stars.

The western door, that which looked up the cañon, and through which we entered by our bridge of flying plank, was still entire, a handsome, paneled door, the most finished piece of carpentry in Silverado. And the two lowest bunks next to this we roughly filled with hay for that night's use. Through the opposite or eastern-looking gable, with its open door and window, a faint, diffused starshine came into the room like mist; and when we were once in bed, we lay, awaiting sleep, in a haunted, incomplete obscurity. At first the silence of the night was utter. Then a high wind began in the distance among the tree-tops, and, for hours, continued to grow higher; it seemed to me much such a wind as we had found on our visit. Yet here in our open chamber we were fanned only by gentle and refreshing draughts, so deep was the cañon, so close our house was planted under the overhanging rock.

THE SCENES OF CABLE'S ROMANCES.

WHEN I first viewed New Orleans from the deck of the great steam-boat that had carried me from gray north-western mists into the tepid and orange-scented air of the South, my impressions of the city, drowsing under the violet and gold of a November morning, were oddly connected with memories of "Jean-ah Poquelin." That strange little tale had appeared in this magazine a few months previously; and its exotic picturesqueness had considerably influenced my anticipations of the Southern metropolis, and prepared me to idealize everything peculiar and semi-tropical that I might see. Even before I had left the steam-boat my imagination had already flown beyond the wilderness of cotton-bales, the sierra-shaped roofs of the sugar-sheds, the massive fronts of refineries and store-houses, to wander in search of the old slave-trader's mansion, or at least of something resembling it—"built of heavy cypress, lifted up on pillars, grim, solid, and spiritless." I did not even abandon my search for the house after I had learned that Tchoupitoulas "Road" was now a great business street, fringed not by villas but by warehouses; that the river had receded from it considerably since the period of the story; and that where marsh lands used to swelter under the sun, pavements of block stone had been laid, enduring as Roman causeways, though they will tremble a little under the passing of cotton-floats. At one time, I tried to connect the narrative with a peculiar residence near the Bayou Road—a silent wooden mansion with vast verandas, surrounded by shrubbery which had become fantastic by long neglect. Indeed, there are several old houses in the more ancient quarters of the city which might have served as models for the description of Jean-ah Poquelin's dwelling, but none of them is situated in his original neighborhood,—old plantation homes whose broad lands have long since been cut up and devoured by the growing streets. In reconstructing the New Orleans of 1810, Mr. Cable might have selected any one of these to draw from, and I may have found his model without knowing it. Not, however, until the last June CENTURY appeared, with its curious article upon the "Great South Gate," did I learn that in the early years of the nineteenth century such a house existed precisely in the location described by Mr. Cable. Readers of "The Great South Gate" must have been impressed

by the description therein given of "Doctor" Gravier's home, upon the bank of the long-vanished Poydras Canal,—a picture of desolation more than justified by the testimony of early municipal chronicles; and the true history of that eccentric "Doctor" Gravier no doubt inspired the creator of "Jean-ah Poquelin." An ancient city map informs us that the deserted indigo fields, with their wriggling amphibious population, extended a few blocks north of the present Charity Hospital; and that the plantation-house itself must have stood near the juncture of Poydras and Freret streets,—a region now very closely built and very thickly peopled.

The sharp originality of Mr. Cable's description should have convinced the readers of "Old Creole Days" that the scenes of his stories are in no sense fanciful; and the strict perfection of his creole architecture is readily recognized by all who have resided in New Orleans. Each one of those charming pictures of places—veritable pastels—was painted after some carefully selected model of French or Franco-Spanish origin,—typifying fashions of building which prevailed in colonial days. Greatly as the city has changed since the eras in which Mr. Cable's stories are laid, the old creole quarter still contains antiquities enough to enable the artist to restore almost all that has vanished. Through those narrow, multicolored, and dilapidated streets, one may still wander at random with the certainty of encountering eccentric façades and suggestive Latin appellations at every turn; and the author of "Madame Delphine" must have made many a pilgrimage into the quaint district, to study the wrinkled faces of the houses, or perhaps to read the queer names upon the signs,—as Balzac loved to do in old-fashioned Paris. Exceptionally rich in curiosities is the *Rue Royale*, and it best represents, no doubt, the general physiognomy of the colonial city. It appears to be Mr. Cable's favorite street, as there are few of his stories which do not contain references to it; even the scenery of incidents laid elsewhere has occasionally been borrowed from that "region of architectural decrepitude," which is yet peopled by an "ancient and foreign-seeming domestic life." For Louisiana dreamers, Mr. Cable has peopled it also with many delightful phantoms; and the ghosts of Madame Délicieuse, of Delphine Carraze, of 'Sieur George, will surely continue to haunt it until of all the dear

old buildings there shall not be left a stone upon a stone.

From the corner of Canal street at Royal, —ever perfumed by the baskets of the flower-sellers,—to the junction of Royal with Bien-ville, one observes with regret numerous evidences of modernization. American life is invading the thoroughfare,—uprearing concert-halls, with insufferably pompous names, multiplying flashy saloons and cheap restau-

arabesque work in wrought iron,—graceful tendrils and curling leaves of metal, framing some monogram of which the meaning is forgotten. Much lattice-work also will be observed about verandas, or veiling the ends of galleries, or suspended like green cage-work at the angle formed by a window-balcony with some lofty court-wall. And far down the street, the erratic superimposition of wire-hung signs, advertising the presence

MADAME JOHN'S LEGACY.

rants, cigar stores and oyster-rooms. Gambling indeed survives, but only through metamorphosis;—it is certainly not of that aristocratic kind wherein Colonel De Charleu, owner of “Belles Demoiselles Plantation,” could have been wont to indulge. Already a line of electric lights mocks the rusty superannuation of those long-disused wrought-iron lamp frames set into the walls of various creole buildings. But from the corner of Conti street,—where Jules St. Ange idled one summer morning “some seventy years ago,”—*Rue Royale* begins to display a picturesqueness almost unadulterated by innovation, and opens a perspective of roof lines astonishingly irregular, that jag and cut into the blue strip of intervening sky at every conceivable angle, with gables, eaves, dormers, triangular peaks of slate, projecting corners of balconies or verandas,—overtopping or jutting out from houses of every imaginable tint: canary, chocolate, slate-blue, speckled gray, ultramarine, cinnamon red, and even pale rose. All have sap-green batten shutters; most possess balconies balustraded with elegant

of many quiet, shadowy little shops that hide their faces from the sun behind slanting canvas awnings, makes a spidery confusion of lines and angles in the very center of the vista.

I think that only by a series of instantaneous photographs, tinted after the manner of Goupil, could the physiognomy of the street be accurately reproduced,—such is the confusion of projecting show-windows, the kaleidoscopic medley of color, the jumble of infinitesimal stores. The characteristics of almost any American street may usually be taken in at one glance; but you might traverse this creole thoroughfare a hundred times without being able to ordinate the puzzling details of its perspective.

But when the curious pilgrim reaches the corner of Royal and St. Peter streets (*Rue Saint Pierre*), he finds himself confronted by an edifice whose oddity and massiveness compel special examination,—a four-story brick tenement house with walls deep as those of a mediæval abbey, and with large square windows having singular balconies, the iron-work of which is wrought into scrolls and initials.

'SIEUR GEORGE'S.

Unlike any other building in the quarter, its form is that of an irregular pentagon, the smallest side of which looks down Royal and up St. Peter street at once and commands, through its windows, in a single view, three street angles. This is the house where 'Sieur George so long dwelt. It is said to have been the first four-story building erected in New Orleans; and it certainly affords a singular example of the fact that some very old buildings obstinately rebel against innovations of fashion, just as many old men do. Despite a desperate effort recently made to compel its acceptance of a new suit of paint and whitewash, the venerable structure persists in remaining almost precisely as Mr. Cable first described it. The cornices are still dropping plaster; the stucco has not ceased to peel off; the rotten staircases, "hugging the sides of the court," still seem "trying to climb up out of the rubbish"; the court itself is always "hung with many lines of wet clothes"; and the rooms are now, as ever, occupied by folk "who dwell there simply for lack of activity to find better and cheaper quarters elsewhere." Cheaper it would surely be easy to find, inasmuch as 'Sieur George's single-windowed room rents unfurnished at ten dollars per month. There

is something unique in the spectacle of this ponderous, dilapidated edifice, with its host of petty shops on the *rez-de-chaussée*,—something which recalls an engraving I once saw in some archæological folio, picturing a swarm of Italian fruit-booths seeking shelter under the crumbling arches of a Roman theater.

Upon the east side of *Rue Royale*, half a square farther up, the eye is refreshed by a delicious burst of bright green—a garden inclosed on three sides by spiked railings, above which bananas fling out the watered-satin of their splendid leaves, and bounded at its eastern extremity by the broad, blanched, sloping-shouldered silhouette of the cathedral. Here linger memories of Padre Antonio de Sedella (Père Antoine), first sent to Louisiana as a commissary of the Holy Inquisition, immediately shipped home again by sensible Governor Miro. But Padre Antonio returned to Louisiana, not as an inquisitor, but as a secular priest, to win the affection of the whole creole population, by whom he was venerated as a saint even before his death. Somewhere near this little garden, the padre used to live in a curious wooden hut; and the narrow, flagged alley on the southern side of the cathedral and its garden still bears the appellation, *Passage Saint Antoine*, in honor

of the old priest's patron. The name is legibly inscribed above the show-windows of the Roman Catholic shop on the corner, where porcelain angels appear to be perpetually ascending and descending a Jacob's-ladder formed of long communion candles. The "Pères Jérômes" of our own day reside in the dismal brick houses bordering the alley farther toward Chartres street,—buildings which protrude, above the heads of passers-by, a line of jealous-looking balconies, screened with lattice-work, in which wicket lookouts have been contrived. On the northern side of garden and cathedral runs another flagged alley, which affects to be a continuation of Orleans street. Like its companion passage, it opens into Chartres street; but on the way it forks into a grotesque fissure in the St. Peter street block—into a marvelous mediæval-looking by-way, craggy with balconies and peaked with dormers. As this picturesque opening is still called Exchange alley, we must suppose it to have once formed part of the much more familiar passage of that name, though now widely separated therefrom by architectural reforms effected in *Rue Saint Louis* and other streets intervening. The northern side-entrance of the cathedral commands it,—a tall, dark, ecclesiastically severe archway, in whose shadowed recess Madame Delphine might safely have intrusted her anxieties to "God's own banker"; and Catholic quadroom women on their daily morning way to market habitually enter it with their baskets, to murmur a prayer in patois before the shrine of *Notre Dame de Lourdes*. Jackson square, with its rococo flower-beds and clipped shrubbery, might be reached in a moment by either of the flagged alleys above described; but it retains none of its colonial features, and has rightly been deprived of the military titles it once bore: *Place d'Armes*, or *Plaza de Armas*.

There stands, at the corner of St. Anne and Royal streets, a one-story structure with Spanish tile roof, a building that has become absolutely shapeless with age, and may be torn away at any moment. It is now a mere hollow carcass—a shattered brick skeleton to which plaster and laths cling in patches only, like shrunken hide upon the bones of some creature left to die and to mummify under the sun. An obsolete directory, printed in 1845, assures us that the construction was considered immemorially old even then; but a remarkable engraving of it, which accompanies the above remark, shows it to have at that time possessed distinct Spanish features and two neat entrances with semicircular stone steps. In 1835 it was the *Café des Réfugiés*, frequented by fugitives from the Antilles, West Indian strangers, filibusters, *révolutionnaires*,—all that sin-

gular class of Latin-Americans so strongly portrayed in Mr. Cable's "*Café des Exilés*."

At the next block, if you turn down Du-maine street from Royal, you will notice, about half-way toward Chartres a very peculiar house, half brick, half timber. It creates the impression that its builder commenced it with the intention of erecting a three-story brick, but changed his mind before the first story had been completed, and finished the edifice with second-hand lumber,—supporting the gallery with wooden posts that resemble monstrous balusters. This is the house bequeathed by "Mr. John," of the Good Children's Social Club, to the beautiful quadroom Zalli and her more beautiful reputed daughter, 'Tite Poulette. As Mr. Cable tells us, and as one glance can verify, it has now become "a den of Italians, who sell fuel by day, and by night are up to no telling what extent of deviltry." On the same side of Du-maine, but on the western side of Royal street, is another remarkable building, more imposing, larger,—“whose big, round-arched windows in the second story were walled up, to have smaller windows let into them again with odd little latticed peep-holes in their batten shutters.” It was to this house that Zalli and 'Tite Poulette removed their worldly goods, after the failure of the bank; and it was from the most westerly of those curious windows in the second story that Kristian Koppig saw the row of cigar-boxes empty their load of earth and flowers upon the head of the manager of the Salle Condé. Right opposite you may see the good Dutchman's one-story creole cottage. The resemblance of 'Tite Poulette's second dwelling-place to the old Spanish barracks in architectural peculiarity has been prettily commented upon by Mr. Cable; and, in fact, those barracks, which could shelter six thousand troops in O'Reilly's time, and must, therefore, have covered a considerable area, were situated not very far from this spot. But the only fragments of the barrack buildings that are still positively recognizable are the arched structures at Nos. 270 and 272 Royal street, occupied now, alas! by a prosaic seltzer factory. The spacious cavalry stables now shelter vulgar mules, and factory wagons protrude their shafts from the mouths of low, broad archways under which once glimmered the brazen artillery of the King of Spain.

A square west of Royal, at the corner of Bourbon and St. Philip streets, formerly stood the famed smithy of the Brothers Lafitte; but it were now useless to seek for a vestige of that workshop, whose chimes of iron were rung by African muscle. Passing St. Philip street, therefore, the visitor who follows the

MADAME DELPHINE'S HOUSE.

east side of Royal might notice upon the opposite side an elegant and lofty red-brick mansion, with a deep archway piercing its *rez-de-chaussée* to the court-yard, which offers a glimpse of rich foliage whenever the *porte cochère* is left ajar. This is No. 253 Royal street, the residence of "Madame Délicieuse"; and worthy of that honor, it seems, with its superb tiara of green verandas. A minute two-story cottage squats down beside it—a miniature shop having tiny show-windows that project like eyes. The cottage is a modern affair; but it covers the site of Dr. Mossy's office, which, you know, was a lemon-yellow creole construction, roofed with red tiles. What used to be "the Café de Poésie on the corner" is now a hat store. Further on, at the intersection of Royal and Hospital streets (*Rue d'Hôpital*, famous in creole ballads), one cannot fail to admire a dwelling solid and elegant as a Venetian palazzo. It has already been celebrated in one foreign novel; and did I not feel confident that Mr. Cable will tell us all about it one of these days, I should be tempted to delay the reader on this corner, although Madame Delphine's residence is already within sight.

No one can readily forget Mr. Cable's description of "the small, low, brick house of a story and a half, set out upon the sidewalk, as weather-beaten and mute as an aged beggar fallen asleep." It stands near Barracks street, on Royal; the number, I think, is 294. Still are its solid wooden shutters "shut with a grip that makes one's nails and knuckles feel lacerated"; and its coat of decaying plaster, patched with all varieties of neutral

tints, still suggests the raggedness of mendicancy. Even the condition of the garden gate, through which Monsieur Vignevielle first caught a glimpse of Olive's maiden beauty, might be perceived to-day as readily as ever by "an eye that had been in the blacksmithing business." But since the accompanying sketch was drawn, the picturesqueness of the upper part of the cottage has been greatly diminished by architectural additions made with a view to render the building habitable. Over the way may still be seen that once pretentious three-story residence "from whose front door hard times have removed all vestiges of paint," a door shaped like old European hall doors, and furnished with an iron knocker. It has not been repainted since Mr. Cable wrote his story, nor does it seem likely to be.

Only a few paces farther on yawns the dreamy magnificence of aristocratic Esplanade street, with its broad, central band of grass all shadow-flecked by double lines of trees. There Royal street terminates, Esplanade forming the southern boundary line of the old French quarter.

If the reader could now follow me westwardly along one of the narrow ways leading to the great *Rue des Remparts*, he would soon find himself in that quadron quarter, whose denizens still "drag their chairs down to the narrow gate-ways of their close-fenced gardens, and stare shrinkingly at you as you pass, like a nest of yellow kittens." He would be at once charmed and astonished by the irregularity of the perspective and the eccentricity of the houses: houses whose foreheads are fantastically encircled by

wooden parapets, striped like the *foulards* of the negresses; houses yellow-faced and sphinx-featured, like certain mulatto women; houses which present their profiles to the fence, so that as you approach they seem to

the Café des Exilés will bring you to Congo square, the last green remnant of those famous Congo plains, where the negro slaves once held their bamboulas. Until within a few years ago, the strange African dances were

CAFÉ DES EXILÉS.

turn away their faces with studied prudery, like young creole girls; houses that appear felinely watchful, in spite of closed windows and doors, gazing sleepily at the passer-by through the chinks of their green shutters, as through vertical pupils. Five minutes' walk over *banquettes* of disjointed brick-work, through which knots of tough grass are fighting their upward way, brings one to Rampart street, where Mr. Cable found the model for his "Café des Exilés." It was situated on the west side, No. 219, and THE CENTURY'S artist sketched it under a summer glow that brought out every odd detail in strong relief. But hereafter, alas! the visitor to New Orleans must vainly look for the window of Pauline, "well up in the angle of the broad side-gable, shaded by its rude awning of clapboards, as the eyes of an old dame are shaded by her wrinkled hand." Scarcely a week ago, from the time at which I write, the antiquated cottage that used to "squat right down upon the sidewalk, as do those Choctaw squaws who sell bay and sassafras and life-everlasting," was ruthlessly torn away, together with its oleanders, and palmettoes, and pomegranates, to make room, no doubt, for some modern architectural platitude.

A minute's walk from the vacant side of

still danced and the African songs still sung by negroes and negresses who had been slaves. Every Sunday afternoon the bamboula dancers were summoned to a wood-yard on Dumaine street by a sort of drum-roll, made by rattling the ends of two great bones upon the head of an empty cask; and I remember that the male dancers fastened bits of tinkling metal or tin rattles about their ankles, like those strings of copper *gris-gris* worn by the negroes of the Soudan. Those whom I saw taking part in those curious and convulsive performances—subsequently suppressed by the police—were either old or beyond middle age. The veritable Congo dance, with its extraordinary rhythmic chant, will soon have become as completely forgotten in Louisiana as the signification of those African words which formed the hieratic vocabulary of the Voodooos.

It was where Congo square now extends that Bras-Coupé was lassoed while taking part in such a dance; it was in the same neighborhood that Captain Jean Grandissime of the Attakapas lay hiding—secure in his white man's skin "as if cased in steel"—to foil the witchcraft of Clemence; and it was there also that a crowd of rowdy American flat-boatmen, headed by "Posson Jone'," of

Bethesdy Church, stormed the circus and slew the tiger and the buffalo. Now, "Cayetano's circus" was not a fiction of Mr. Cable's imagining: such a show actually visited New Orleans in 1816 or thereabouts, and remained a popular "fixture" for several seasons. The creole-speaking negroes of that day celebrated its arrival in one of their singular ditties.*

And whosoever cares to consult certain musty newspaper files which are treasured up among the city archives may find therein

railings and gate-ways have been removed; the weeds that used to climb over the moldering benches have been plucked up; new graveled walks have been made; the grass, mown smooth, is now refreshing to look at; the trunks of the shade-trees are freshly white-washed; and, before long, a great fountain will murmur in the midst. Two blocks westward, the somber, sinister, Spanish façade of the Parish Prison towers above a huddling flock of dingy frame dwellings, and exhales

A CREOLE COTTAGE OF THE COLONIAL TIME.

the quaint advertisements of Señor Gaëtano's circus and the story of its violent disruption.

But Congo square has been wholly transformed within a twelvemonth. The high

far around it the heavy, sickly, musky scent that betrays the presence of innumerable bats. At sundown, they circle in immense flocks above it, and squeak like ghosts about its

* Some years ago, when I was endeavoring to make a collection, of patois songs and other curiosities of the oral literature of the Louisiana colored folk, Mr. Cable kindly lent me his own collection, with permission to make selections for my private use, and I copied therefrom this *chanson créole*:

C'est Michié Cayétane
Qui sorti la Havane
Avec so chouals et so macacs!
Li gagnin ein homme qui dansé dans sac;
Li gagnin qui dansé si yé la main;
Li gagnin zaut' à choual qui boi' di vin;
Li gagnin oussi ein zeine zolie mamzelle
Qui monté choual sans bride et sans selle;—
Pou di tou' ça mo pas capabe,—
Mais mo souvien ein qui valé sab'.
Yé n'en oussi tout sort bétail:
Yé pas montré pou' la négrail
Qui ya pou' dochans,—dos-brulés
Qui fé tapaze,—et pou' birlé
Ces gros mesdames et gros michiés
Qui ménein là tous p'tis yé
'Oir Michié Cayétane

Qui vivé la Havane
Avec so chouals et so macacs.†

† "'Tis Monsieur Gaëtano
Who comes out from Havana
With his horses and his monkeys!
He has a man who dances in a sack;
He has one who dances on his hands;
He has another who drinks wine on horseback;
He has also a young pretty lady
Who rides a horse without bridle or saddle:
To tell you all about it I am not able,—
But I remember one who swallowed a sword.
There are all sorts of animals, too;—
They did not show to nigger-folk
What they showed to the trash,—the burnt-backs
[poor whites]
Who make so much noise,—nor what they had to
amuse
All those fine ladies and gentlemen,
Who take all their little children along with them
To see Monsieur Gaëtano
Who lives in Havana
With his horses and his monkeys!"

naked sentry towers. I have been told that this grim building will soon be numbered among those antiquities of New Orleans forming the scenery of Mr. Cable's romances.

The scene of perhaps the most singular tale in "Old Creole Days"—"Belles Demoiselles Plantation"—remains to be visited; but if the reader recollects the observation made in the very first paragraph of the story, that "the old Creoles never forgive a public mention," he will doubtless pardon me for leaving the precise location of "Belles Demoiselles" a mystery, authentic though it is, and for keeping secret its real and ancient name. I can only tell him that to reach it, he must journey far from the creole faubourg and beyond the limits of New Orleans to a certain unfamiliar point on the river's bank, whence a ferryman, swarthy and silent as Charon, will row him to the farther side of the Mississippi, and aid him to land upon a crumbling levee erected to prevent the very catastrophe anticipated in Mr. Cable's tale. Parallel with this levee curves a wagon-road whose farther side is bounded by a narrow and weed-masked ditch, where all kinds of marvelous wild things are growing, and where one may feel assured that serpents hide. Beyond this little ditch is a wooden fence, now overgrown and rendered superfluous by a grand natural barrier of trees and shrubs, all chained together by interlacements of wild vines and thorny creepers. This forms the boundary of the private grounds surrounding the "Belles Demoiselles" residence; and the breeze comes to you heavily-sweet with blossom-scents, and shrill with vibrant music of cicadas and of birds.

Fancy the wreck, of a vast garden created by princely expenditure,—a garden once filled with all varieties of exotic trees, with all species of fantastic shrubs, with the rarest floral products of both hemispheres, but left utterly uncared for during a generation, so that the groves have been made weird with hanging moss, and the costly vines have degenerated into parasites, and richly cultured plants returned to their primitive wild forms. The alley-walks are soft and sable with dead leaves; and all is so profoundly beshadowed by huge trees that a strange twilight prevails there even under a noonday sun. The lofty hedge is becrimsoned with savage roses, in whose degenerate petals still linger traces of former high cultivation. By a little gate set into that hedge, you can enter the opulent wilderness within, and pursue a winding path between mighty trunks that lean at a multitude of angles, like columns of a decaying cathedral about to fall. Crackling of twigs under foot, leaf whispers, calls of birds and

cries of tree-frogs are the only sounds; the soft gloom deepens as you advance under the swaying moss and snaky festoons of creepers: there is a dimness and calm, as of a place consecrated to prayer. But for their tropical and elfish drapery, one might dream those oaks were of Dodona. And even with the passing of the fancy, lo! at a sudden turn of the narrow way, in a grand glow of light, *even the Temple appears*, with splendid peripteral of fluted columns rising boldly from the soil. Four pillared façades,—east, west, north, and south,—four superb porches, with tiers of galleries suspended in their recesses; and two sides of the antique vision ivory-tinted by the sun. Impossible to verbally describe the effect of this matchless relic of Louisiana's feudal splendors, that seems trying to hide itself from the new era amid its neglected gardens and groves. It creates such astonishment as some learned traveler might feel, were he suddenly to come upon the unknown ruins of a Greek temple in the very heart of an equatorial forest; it is so grand, so strangely at variance with its surroundings! True, the four ranks of columns are not of chiseled marble, and the stucco has broken away from them in places, and the severe laws of architecture have not been strictly obeyed; but these things are forgotten in admiration of the building's majesty. I suspect it to be the noblest old plantation-house in Louisiana; I am sure there is none more quaintly beautiful. When I last beheld the grand old mansion, the evening sun was resting upon it in a Turneresque column of yellow glory, and the oaks reaching out to it their vast arms through ragged sleeves of moss, and beyond, upon either side, the crepuscular dimness of the woods, with rare golden luminosities spattering down through the serpent knot-work of lianas, and the heavy mourning of mosses, and the great drooping and clinging of multitudinous disheveled things. And all this subsists only because the old creole estate has never changed hands, because no speculating utilitarian could buy up the plantation to remove or remodel its proud homestead and condemn its odoriferous groves to the saw-mill. The river is the sole enemy to be dreaded, but a terrible one: it is ever gnawing the levee to get at the fat cane-fields; it is devouring the road-way; it is burrowing nearer and nearer to the groves and the gardens; and while gazing at its ravages, I could not encourage myself to doubt that, although his romantic anticipation may not be realized for years to come, Mr. Cable has rightly predicted the ghastly destiny of "Belles Demoiselles Plantation."

Ivan Turgenev

TOURGUÉNEFF IN PARIS.*

REMINISCENCES BY DAUDET.

It was ten or twelve years ago, at Gustave Flaubert's, in the Rue Murillo,—an apartment of small dainty rooms with Algerian upholstery, opening on the Parc Monceaux, the resort of good breeding and propriety, whose masses of verdure stretched across the windows, with the effect of green blinds.

We used to meet there every Sunday, always the same, and with something exquisite in our intimacy,—the doors being closed to supernumeraries and bores.

One Sunday, as I came back as usual to the old master and the rest of us, Flaubert took possession of me on the threshold.

"You don't know Tourguéneff?" And without waiting for my answer, he pushed me into the little drawing-room.

There, on a divan, was stretched a great Slavic figure with a white beard, who rose to his height as he saw me come in, unfolding on the pile of cushions a kind of serpentine prolongation, and raising a pair of surprised, enormous eyes.

We Frenchmen live in extraordinary ignorance of everything in the way of foreign literature. With us, the national mind stays at home as much as the body, and, with our aversion to traveling, we read beyond our borders as little as we colonize.

It so happened, however, that I knew, and knew well, what Tourguéneff had done. I had read with deep emotion the "Memoirs of a Russian Squire"; and this book of the great novelist, on which I had lighted by chance, led me to an intimate acquaintance with the others. We were united before we met by our love of nature in its grander aspects, and the fact that we felt it in the same way.

In general, the descriptive genius has only its eyes, and contents itself with a picture. Tourguéneff has his olfactories and his ears. All his senses have doors that swing open and place each in communication with the others. He is full of the odors of the country, of the sounds of water, of the transpar-

encies of the sky, and gives himself up, without calculation of effect, to this music-making of his sensations.

It is a music that doesn't reach every ear. The cockney organization, deafened from childhood by the uproar of great cities, never perceives it, and never will; never hears the voices that speak in that false silence of the woods, when Nature believes that she is alone, and man, holding his peace, is forgotten for awhile. These delicate perceptions of sound are a part of the training of primeval woods or of the desert places of nature. In some novel of Fenimore Cooper, which I have forgotten, we hear at a distance a pair of paddles dipped from a boat, amid the stillness of a great lake. The boat is three miles off, and of course out of sight; but the sleeping plain of water, and the woods on its shores, are made larger by this far-away sound of oars, and we feel something of the shudder of solitude. For myself, who have worked so much in the forest of Sénart, I shall never forget the canter of the rabbits over the foot-path that led to the pools, and the visit of the squirrels, whom a gesture would send off, and whom I used to hear for hours passing from one tree-top to another.

It is the Russian steppe that has given its expansion to the senses and the heart of Tourguéneff. People grow better for listening to Nature, and those who love her do not lose their interest in men. From such a source as this springs that pitying sweetness, as sad as the song of a *moujik*, which sobs in the depths of the Slavic novelist's work. It is the human sigh of which the Creole song speaks, the open valve that prevents the world from suffocating. "*Si pas té gagné soupi n'en mouné, mouné t'a touffé.*"† And this sigh, repeated again and again, in the long story and the short tale, arrived at last at imperial ears. The late Czar said of Tourguéneff's novels, "They are my own books"; and the "Memoirs of a Russian Squire" helped on largely the cause of the poor serfs. It is

* The following reminiscences were received from M. Daudet during the past summer. Tourguéneff's death took place September 3, 1883. The engraving here given is from a monochrome oil study from life, by the young American artist, Mr. E. R. Butler. It represents the author as he appeared in his last years, with broken health; an earlier portrait, from a photograph, will be found on page 200 of Vol. XIV., in connection with an article on his life and works by Professor Boyesen. Translations of Tourguéneff's "Living Mummy" and "Nobleman of the Steppe" appeared in our Vol. XII., page 563, and Vol. XIV., page 313. See also Vol. XIV., page 257.—Ed.

† "If the world couldn't sigh, the world would suffocate."

another "Uncle Tom," with a less overt attempt to point a moral.

I knew all this. Tourguéneff had a throne in my Olympus,—a chair of ivory among my gods. But far from suspecting that he was in Paris, I had not even asked myself whether he were living or dead. My astonishment may therefore be guessed when I found myself in presence of this strange personage, in a Parisian drawing-room, on a third floor looking into the Parc Monceaux.

I told him gayly how the matter stood, and expressed my admiration with the exuberance of my enthusiasm and of the South that is in me. I told him that I had read him in those woods of mine. There I had found out the soul that was in him; and the double remembrance of the scenery and the story was so effectually interfused that a certain tale of his had remained in my mind under the color of a small field of pink heather, a little withered by autumn.

Tourguéneff could not get over this.

"Really, now, you have read me?"

And he gave me various details on the small sale of his books in Paris, the obscurity of his name in France. The publisher Hetzel brought him out for charity. His popularity had not passed his own borders. He suffered, from remaining unknown in a country that was dear to him. He confessed his disappointments rather sadly, but without rancor; on the contrary, our disasters in 1870 had attached him more strongly to France. He was unwilling for the future to leave it. Before the war, he used to pass his summers cheerfully at Baden-Baden; but now he would not return there; he would content himself with Bougival and the banks of the Seine.

It happened on that Sunday that Flaubert had no other guests, and our mutual talk grew long. I questioned Tourguéneff on his manner of work, and expressed my surprise that he should not himself be his translator; for he spoke French with great purity, with a trace of slowness caused by the subtlety of his mind. He admitted to me that the Academy and its dictionary simply froze him. He turned over this terrible dictionary with a tremor, as if it had been a code declaring the law of words and the punishment of him who should dare. He emerged from these researches with his conscience rankling with literary scruples which were fatal to his spontaneity. I remember that, in a tale that he wrote at this time, he had not thought it well to risk "her pale eyes" [*ses yeux pâles*], for fear of the Academic forty and their definition of the epithet.

It was not the first time that I had encountered these alarms; I had already found

them in the Provençal Mistral, who had also suffered the blighting fascination of the cupola of the Institute, that macaronic monument which, in a circular medallion, ornaments the covers of the editions of the house of Didot. On this matter I said to Tourguéneff what I had upon my heart: that the French language is not a dead language, to be written with a dictionary of settled expressions, classed in order, as in a *gradus*. For myself, I feel it to be all quivering with life, all swelling and surging. It is a great river which rolls full to the brink; it picks up refuse on the way, and everything is thrown into it. But let it run; it will filter its waters itself.

Hereupon, as the day was waning, Tourguéneff said he was to go and fetch "the ladies" from the Padeloup concert, and I went down with him. On our way we talked of music; I was delighted to find that he was fond of it. In France, it is the fashion among men of letters to detest music; painting has invaded everything. Théophile Gautier, Paul de Saint-Victor, Victor Hugo, Edmond de Goncourt, Zola, Leconte de Lisle are so many music-phobists. To my knowledge, I am the first who has confessed aloud his ignorance of colors and his passion for notes. That belongs doubtless to my southern temperament and my near-sightedness; one sense has developed itself to the detriment of another. With Tourguéneff the musical sense had been educated in Paris; he had acquired it in the circle in which he lived. This circle had been formed by an intimacy of thirty years with Madame Viardot, the great singer, sister of the Malibran. Independent and a bachelor, Tourguéneff occupied an apartment in the detached house, 50 Rue de Douai, of which this lady and her family inhabited the remainder. "The ladies," of whom he had spoken to me at Flaubert's, were Madame Viardot and her daughters, whom Tourguéneff loved as his own children. It was in this hospitable dwelling that I presently called on him.

The mansion was furnished with a refinement of luxury; it denoted a care for art and a love of comfort. As I passed across the entrance floor, I perceived through an open door a bright gallery of pictures. Fresh voices, of young girls, pierced through the hangings. They alternated with the passionate contralto of Orpheus, which filled the stair-case and ascended with me.

Above, on the third floor, was a little curtained and cushioned apartment as encumbered with furniture as a boudoir. Tourguéneff had borrowed from his friends their tastes in art—music from the wife and painting from the husband.

He was lying on a sofa, according to his

habit. I seated myself near him, and we immediately took up our conversation where we had left it. He had been struck with my observations, and promised to bring, the next Sunday we should be at Flaubert's, a tale which we should all translate together, under his eyes. Then he spoke to me of a book that he wished to write—"Virgin Soil," a dark picture of the new social strata that grumble together in the depths of Russian life and are rising to the light; the history of those poor votaries of "simplification" which a dreadful mistake drives into the arms of the people. The people has no understanding of them, and mocks and repudiates them. And while he talked, I reflected that Russia is indeed a virgin soil,—a soil still soft, where the least step leaves its trace,—a soil where all is new, is yet to be done and to be discovered. Whereas, with us, there is now not an alley untrodden, not a path on which the crowd has not trampled. To speak only of the novel, the shade of Balzac is at the end of every avenue.

Dating from this interview, our relations became more frequent. Among all the moments we passed together, I remember but an afternoon in spring, a Sunday in the Rue Murillo, which has remained in my mind as luminous and rare.

We had spoken of Goethe at one of our dinners, and Tourguéneff had said: "My friends, you don't know him."

The next Sunday he brought the "Prometheus" and the "Satyr," which, with its tone of revolt and impiety, might have been a tale of Voltaire enlarged to a poem by a mind inspired.

The Parc Monceaux sent us up the cries of its children, its clear sunshine, the freshness of its watered greenery; and we four, shaken by this rich improvisation, listened to genius translated by genius. In a tremor, while he held the pen, Tourguéneff had, as he stood there, all the daring of the poet; and it was not the usual mendacity of a translation that stiffens and petrifies, it was the soul of Goethe waked and speaking to us.

Often, too, Tourguéneff used to come and find me in the depths of the Marais, in the old mansion of the time of Henry II., which I occupied at that time. He was amused by the strange exhibition of that stately court, a royal, gabled habitation, littered with the petty industries of Parisian commerce: a manufacture of spinning-tops, of Seltzer water, of sugared almonds.

One day, as he came into my apartment on Flaubert's arm, my little boy, much daunted, cried out:

"Why, papa, they are giants!"

Yes, indeed, giants; good giants: large brains, great hearts, in proportion to chest and shoulders. There was a bond, an affinity of unconscious goodness in these two genial natures. It was George Sand who had married them. Flaubert, a talker and a free-lance,—Don Quixote with the voice of a trumpeter of the guards, with the powerful irony of his observation, the semblance of a Norman (as he was) of the Conquest,—was certainly the virile half in this spiritual matrimony. Yet who, in that other Colossus, with his white beard and his fleecy eyebrows, would have suspected the feminine nature, the nature of that woman of acute sensibilities whom Tourguéneff has painted in his books,—that nervous, languorous, passionate Russian, slumbering like an Oriental, and tragic like a loosened force? So true it is that souls sometimes take up the wrong envelope—souls of men embodied in slender women, souls of women incarnate in Cyclopean form. One might think that, in the great human workshop, an ironical "hand" had taken pleasure in misleading our judgment by the falsity of the label.

It was at this period that we conceived the idea of a monthly gathering at which we friends should meet: it was to be called "the Flaubert dinner," or "the dinner of hissed authors." Flaubert belonged to it by right of his "Candidat," I by that of my "Arlésienne," Zola with "Bouton de Rose," De Goncourt with "Henriette Maréchal." Émile de Girardin wished to slip into our group; but though he had been heartily hissed at the theater, he was not a writer in our sense of the word, and we excluded him. As for Tourguéneff, he gave us his word that he had been hissed in Russia; and as it was very far off, none of us went to see.

Nothing can be more delightful than these friendly feasts, where you talk in perfect freedom, with your wits all present and your elbows on the cloth. Like men of experience, we were all enlightened diners. Naturally, there were as many forms of this enlightenment as there were different temperaments, and as many receipts for dishes as different provinces. Flaubert had to have his Norman butter-pats, and his ducks from Rouen à l'étouffade. De Goncourt pushed refinement and criticism to the point of demanding preserved ginger! I did honor to my *bouillabaisse*, as well as to sea-urchins and shell-fish; and Tourguéneff kept on tasting his caviare.

Ah, we were not easy to feed, and the restaurants of Paris must remember us well! We tried a great many. At one time we were with Adolphe & Pelé, behind the Opéra; then in the Place de l'Opéra Comique; then

with Voisin, whose cellar pacified all our exactions and reconciled all our appetites.

We sat down at seven o'clock, and at two in the morning we were still at table. Flaubert and Zola dined in their shirt-sleeves, Tourguéneff stretched himself on the divan; we turned the waiters out of the room,—a needless precaution, as the mighty "jaw" of Flaubert was heard from the top to the bottom of the house,—and then we talked of literature. Some one of us always had a book just out; it was the "Tentation de Saint-Antoine" and the "Trois Contes" of Flaubert, the "Fille Élixa" of De Goncourt, the "Abbé Mouret" and the "Assommoir" of Zola. Tourguéneff brought the "Living Relics" and "Virgin Soil"; I, "Fromont Jeune," "Jack," "The Nabab." We talked to each other openheartedly, without flattery, without the complicity of mutual admiration.

I have here, before my eyes, a letter of Tourguéneff, in a large foreign hand, the hand of an old manuscript, and I transcribe it completely, as it gives the tone of our relations:

"Monday, 24th May, '77.

"MY DEAR FRIEND: If I haven't spoken to you yet of your book, it is because I wished to do it at length, and not content myself with a few matter-of-course phrases. I will put all that off to our interview, which will soon take place, I hope; for Flaubert will be coming back one of these days, and our dinners will begin again.

"I will confine myself to saying one thing. 'Le Nabab' is the most remarkable and the most unequal book you have written. If 'Fromont et Risler' is represented by a straight line, ———, 'Le Nabab' ought to be figured thus, ; and the summits of the zigzags can be attained only by a talent of the first order.

"I have had a very long and very violent attack of gout. I went out for the first time yesterday, and I have the legs and the knees of a man of ninety. I am very much afraid I have become what the English call a 'confirmed invalid.'

"A thousand remembrances to Madame Daudet; I give you a cordial hand-shake. Yours,

"IVAN TOURGUÉNEFF."

When we had finished with the books and the preoccupations of the day, our talk took a wider scope: we came back to those themes, those ideas which are always with us; we spoke of love, of death, particularly of death.

Every one said his word. The Russian, on his divan, was silent.

"And you, Tourguéneff?"

"Oh, me? I don't think of death. In my country, no one has it as an image in his mind; it remains distant, covered—the Slavic mist."

That word spoke volumes on the nature of his race and of his own genius. The Slavic mist floats over all his work, blurs its edges, makes it waver; and his conversation as well was suffused with it. What he said always

began with difficulty, with uncertainty; then, suddenly, the cloud was dissipated, pierced by a shaft of light, by a decisive word. He talked to us of Russia—not of the Russia of Napoleon's winter, icy, historic, and conventional, but of a Russia of summer-time, and of wheat and flowers that have nestled out of the snow-flurries—Little Russia, a land of bursting herbage and of the hum of bees. Accordingly, as we must always locate somewhere the stories that are told us, Russian life has appeared to me through Tourguéneff as a manorial existence on an Algerian estate surrounded with huts.

Tourguéneff lifted the veil which covered this queer, quaint, stupefied people. He spoke to us of its deep alcoholism, of its benumbed, inactive conscience, of its ignorance of liberty! Or else, he opened some fresher page—a glimpse of an idyl, the recollection of a little mill-servant whom he met once on his hunting-ground and fell in love with for three days. He had asked her what she would like to have, and the fair maid had answered: "You must bring me a piece of soap from town, so that I may make my hands smell sweet and you may kiss them, as you do to ladies!"

After love and death, we talked about forms of illness, about one's slavery to the body, that is dragged after us like a chained bull. Sad avowals of men who have entered their forties! For me, who had not yet begun to be gnawed with rheumatism, I rather chaffed my friends and made merry at the expense of poor Tourguéneff, who was tortured by gout and used to hobble to our dinners. Since then I have lowered my pitch!

Death, alas, of which we used to talk, came to us. It took Flaubert, who was the soul, the link. With his departure, life changed for us, and we met only at longish intervals; for none of us had the courage to take up our little parties again, after the break made by our mourning.

Months afterward Tourguéneff tried to bring us together. Flaubert's place was to remain marked at our table. But his big voice and his large laugh were too deeply missed; they were no longer the dinners of the old time, and we gave them up.

Since then I have met Tourguéneff at a party at the house of Madame Adam. He had brought the Grand-Duke Constantine, who, passing through Paris, wished to see some of the celebrities of the day—a Tussaud-museum of living and supping figures. I hasten to say that he saw nothing but attitudes—attitudes of people who pretended to turn their back and of others who presented themselves as fully as possible. Alexandre Dumas,

furious at being taken for a curious animal, refused to say good things. Carolus Duran, the painter, sang; Munkácsy whistled; M. de Beust played a pretty valse, which was rather long.

Tourguéneff and I talked together in a corner. He was sad and ill. Always his gout! It laid him flat on his back for weeks together, and he asked his friends to come and see him.

Two months ago was the last time I have seen him. The house was still full of flowers; the sound of singing was still in the hall; my friend was still upstairs, on his divan, but much weakened and changed.

He was suffering from an *angina pectoris*, and, in addition, from a horrible wound in the abdomen, the result of the extraction of a cyst. Not having taken chloroform, he described to me the operation with a perfect lucidity of memory. First, there had been the sharp pain of the blade in the flesh; then a circular sensation, as of a fruit being peeled. And he added:

"I analyzed my suffering so as to be able to relate it to you, thinking it would interest you."

As he was still able to walk a little, he came down the staircase to accompany me to the door.

At the bottom, he took me into the gallery of pictures and showed me the works of his national painters,—a halt of Cossacks, a cornfield swept by a gust, landscapes from that warm Russia which he has described.

Old Viardot was there, rather out of health; Garcia was singing in the neighboring room; and Tourguéneff, surrounded by the arts that he loved, smiled as he bade me farewell.

A month later, I learned that Viardot was dead and that Tourguéneff had been taken to the country, very ill.

I cannot believe in the fatal issue of this malady. There must be, for beautiful and sovereign minds, so long as they have not said all that they have to say, a respite—a commutation. Time and the mildness of Bougival will give Tourguéneff back to us; but he will know no more of those friendly meetings to which he was so happy to come.

Ah, the Flaubert dinner! We tried it again the other day: there were only three of us left!

Alphonse Daudet.

YOUTH AND DEATH.

WHAT hast thou done to this dear friend of mine,
Thou cold, white, silent Stranger? From my hand
Her clasped hand slips to meet the grasp of thine;
Her eyes that flamed with love, at thy command
Stare stone-blank on blank air; her frozen heart
Forgets my presence. Teach me who thou art,
Vague shadow sliding 'twixt my friend and me.

I never saw thee till this sudden hour.

What secret door gave entrance unto thee?

What power is thine, o'er-mastering Love's own power?

AGE AND DEATH.

COME closer, kind, white, long-familiar friend,

Embrace me, fold me to thy broad, soft breast.

Life has grown strange and cold, but thou dost bend

Mild eyes of blessing wooing to my rest.

So often hast thou come, and from my side

So many hast thou lured, I only bide

Thy beck, to follow glad thy steps divine.

Thy world is peopled for me; this world's bare.

Through all these years my couch thou didst prepare.

Thou art supreme Love—kiss me—I am thine!

Emma Lazarus.

DR. SEVIER.*

BY GEORGE W. CABLE,

Author of "Old Creole Days," "The Grandissimes," "Madame Delphine," etc.

I.

THE DOCTOR.

THE main road to wealth in New Orleans has long been Carondelet street. There you see the most alert faces; noses—it seems to one—with more and sharper edge, and eyes smaller and brighter and with less distance between them than one notices in other streets. It is there that the stock and bond brokers hurry to and fro and run together promiscuously—the cunning and the simple, the headlong and the wary—at the four clanging strokes of the Stock Exchange gong. There rises the tall façade of the Cotton Exchange. Looking in from the sidewalk as you pass, you see its main hall, thronged but decorous, the quiet engine-room of the surrounding city's most far-reaching occupation, and at the hall's farther end you descry the "Future Room," and hear the unearthly ramping and bellowing of the bulls and bears. Up and down the street, on either hand, are the ship-brokers and insurers, and in the upper stories foreign consuls among a multitude of lawyers and notaries.

In 1856 this street was just assuming its present character. The cotton merchants were making it their favorite place of commercial domicile. The open thoroughfare served in lieu of the present exchanges; men made fortunes standing on the curb-stone, and during bank hours the sidewalks were perpetually crowded with cotton factors, buyers, brokers, weighers, reweighers, classers, pickers, pressers, and samplers, and the air was laden with cotton quotations and prognostications.

Number 3½, second floor, front, was the office of Dr. Sevier. This office was convenient to everything. Immediately under its windows lay the sidewalks where congregated the men who, of all in New Orleans, could best afford to pay for being sick, and least desired to die. Canal street, the city's leading artery, was just below at the near left-hand corner. Beyond it lay the older town, not yet impoverished in those days,—the French quarter. A single square and a half off at the right, and in plain view from the front windows, shone the dazzling white walls of the St. Charles Hotel, where the nabobs of the river plantations came and dwelt

with their fair-handed wives in seasons of peculiar anticipation, when it is well to be near the highest medical skill. In the opposite direction, a three minutes' quick drive around the upper corner and down Common street carried the Doctor to his ward in the great Charity Hospital, and to the school of medicine where he filled the chair set apart to the holy ailments of maternity. Thus, as it were, he laid his left hand on the rich and his right on the poor; and he was not left-handed.

Not that his usual attitude was one of benediction. He stood straight up in his austere pure-mindedness, tall, slender, pale, sharp of voice, keen of glance, stern in judgment, aggressive in debate, and fixedly untender everywhere, except—but always except—in the sick chamber. His inner heart was all of flesh; but his demands for the rectitude of mankind pointed out like the muzzles of cannon through the embrasures of his virtues. To demolish evil! That seemed the finest of aims; and even as a physician, that was, most likely, his motive until later years and a better self-knowledge had taught him that to do good was still finer and better. He waged war—against malady. To fight; to stifle; to cut down; to uproot; to overwhelm; these were his springs of action. That their results were good proved that his sentiment of benevolence was strong and high; but it was well-nigh shut out of sight by that impatience of evil which is very fine and knightly in youngest manhood, but which we like to see give way to kindlier moods as the earlier heat of the blood begins to pass.

He changed in later years; this was in 1856. To "resist not evil" seemed to him then only a rather feeble sort of knavery. To face it in its nakedness and to inveigh against it in high places and low, seemed the consummation of all manliness; and manliness was the key-note of his creed. There was no other necessity in this life.

"But a man must live," said one of his kindred, to whom, truth to tell, he had refused assistance.

"No, sir; that is just what he can't do. A man must die! So, while he lives, let him be a man!"

How inharmonious a setting, then, for Dr. Sevier, was 3½ Carondelet street. As he drove, each morning, down to that point,

* Copyright, 1883, by George W. Cable. All rights reserved.

he had to pass through long, irregular files of fellow-beings thronging either sidewalk, a sadly unchivalric grouping of men whose daily and yearly life was subordinated only and entirely to the getting of wealth, and whose every eager motion was a repetition of the sinister old maxim that "Time is money."

"It's a great deal more, sir; it's life!" the Doctor always retorted.

Among these groups, moreover, were many who were all too well famed for illegitimate fortune. Many occupations connected with the handling of cotton yielded big harvests in perquisites. At every jog of the Doctor's horse, men came to view whose riches were the outcome of semi-respectable larceny. It was a day of reckless operation; much of the commerce that came to New Orleans was simply, as one might say, beached in Carondelet street. The sight used to keep the long, thin, keen-eyed doctor in perpetual indignation.

"Look at the wreckers," he would say.

It was breakfast at eight, indignation at nine, dyspepsia at ten.

So his setting was not merely inharmonious; it was damaging. He grew sore on the whole matter of money-getting.

"Yes, I have money. But I don't go after it. It comes to me because I seek and render service for the service's sake. It will come to anybody else the same way; and why should it come any other way?"

He not only had a low regard for the motives of most seekers of wealth; he went further and fell into much disbelief of poor men's needs. For instance, he looked upon a man's inability to find employment, or upon a poor fellow's run of bad luck, as upon the placarded woes of a hurdy-gurdy beggar.

"If he wants work, he will find it. As for begging, it ought to be easier for any true man to starve than to beg."

The sentiment was ungentle, but it came from the bottom of his belief concerning himself, and a longing for moral greatness in all men.

"However," he would add, thrusting his hand into his pocket and bringing out his purse, "I'll help any man to make himself useful. And the sick—well, the sick, as a matter of course. Only I must know what I'm doing."

Have some of us known Want? To have known her—though to love her was impossible—is "a liberal education." The Doctor was learned, but this acquaintanceship, this education, he had never got. Hence his untenderness. Shall we condemn the fault? Yes. And the man? We have not the face. To be *just*, which he never knowingly failed to be, and at the same time to feel tenderly for

the unworthy, to deal kindly with the erring,—it is a double grace that hangs not always in easy reach even of the tallest. The Doctor attained to it—but in later years; meantime, this story—which, I believe, had he ever been poor, would never have been written.

II.

A YOUNG STRANGER.

IN 1856, New Orleans was in the midst of the darkest ten years of her history. Yet she was full of new-comers from all parts of the commercial world,—strangers seeking livelihood. The ravages of cholera and yellow fever, far from keeping them away, seemed actually to draw them. In the three years 1853, '54, and '55, the cemeteries had received over thirty-five thousand dead; yet here in 1856, besides shiploads of European immigrants, came hundreds of unacclimated youths, from all parts of the United States, to fill the wide gaps which they imagined had been made in the ranks of the great exporting city's clerking force.

Upon these pilgrims Dr. Sevier cast an eye full of interest and often of compassion hidden under outward impatience. "Who wants to see," he would demand, "men—and women—increasing the risks of this uncertain life?" But he was also full of respect for them. There was a certain nobility rightly attributable to emigration itself in the abstract. It was the cutting loose from friends and aid,—those sweet-named temptations,—and the going forth into self-appointed exile and into dangers known and unknown, trusting to the help of one's own right hand to exchange honest toil for honest bread and raiment. His eyes kindled to see the goodly, broad, red-cheeked fellows. Sometimes, though, he saw women, and sometimes tender women, by their side, and that sight touched the pathetic chord of his heart with a rude twangle that vexed him.

It was on a certain bright, cool morning early in October that, as he drove down Carondelet street toward his office, and one of those little white omnibuses of the old Apollo street line, crowding in before his carriage, had compelled his driver to draw close in by the curbstone and slacken speed to a walk, his attention chanced to fall upon a young man of attractive appearance, glancing stranger-wise and eagerly at signs and entrances while he moved down the street. Twice, in the moment of the Doctor's enforced delay, he noticed the young stranger make inquiry of the street's more accustomed frequenters, and that in each case he was directed farther on. But the way opened, the Doctor's horse switched

his tail and was off, the stranger was left behind, and the next moment the Doctor stepped across the sidewalk and went up the stairs of Number 3½ to his office. Something told him — we are apt to fall into thought on a stair-way — that the stranger was looking for a physician.

He had barely disposed of the three or four waiting messengers that arose from their chairs against the corridor wall, and was still reading the anxious lines left in various hand-writings on his slate, when the young man entered. He was of fair height, slenderly built, with soft auburn hair a little untrimmed, neat dress, and a diffident yet expectant and courageous face.

"Dr. Sevier?"

"Yes, sir."

"Doctor, my wife is very ill. Can I get you to call at once and see her?"

"Who is her physician?"

"I have not called any; but we must have one now."

"I don't know about going at once. This is my hour for being in the office. How far is it, and what's the trouble?"

"We are only three squares away, just here in Custom-house street." The speaker began to add a faltering enumeration of some very grave symptoms. The Doctor noticed that he was slightly deaf; he uttered his words as though he did not hear them.

"Yes," interrupted Dr. Sevier, speaking half to himself as he turned around to a standing case of cruel-looking silver-plated things on shelves, "that's a small part of the penalty women pay for the doubtful honor of being our mothers. I'll go. What is your number? But you had better drive back with me if you can." He drew back from the glass case, shut the door, and took his hat.

"Narcisse."

On the side of the office nearest the corridor a door let into a hall-room that afforded merely good space for the furniture needed by a single accountant. The Doctor had other interests besides those of his profession, and, taking them all together, found it necessary, or at least convenient, to employ continuously the services of a person to keep his accounts and collect his bills. Through the open door the book-keeper could be seen sitting on a high stool at a still higher desk — a young man of handsome profile and well-knit form. At the call of his name, he unwound his legs from the rounds of the stool and leaped into the Doctor's presence with a superlatively high-bred bow.

"I shall be back in fifteen minutes," said the Doctor. "Come, Mr. —," and went out with the stranger.

Narcisse had intended to speak. He stood a moment, then lifted the last half inch of a cigarette to his lips, took a long, meditative inhalation, turned half round on his heel, dashed the remnant with fierce emphasis into a spittoon, ejected two long streams of smoke from his nostrils, and, extending his fist toward the door by which the Doctor had gone out, said:

"All right, ole hoss!" No, not that way. It is hard to give his pronunciation by letter. In the word "right" he substituted an *a* for the *r*, sounding it almost in the same instant with the *i*, yet distinct from it: "All *a*-ight, ole hoss!"

Then he walked slowly back to his desk, with that feeling of relief which some men find in the renewal of a promissory note, twined his legs again among those of the stool, and, adding not a word, resumed his pen.

The Doctor's carriage was hurrying across Canal street.

"Dr. Sevier," said the physician's companion, "I don't know what your charges are —"

"The highest," said the Doctor, whose dyspepsia was gnawing him just then with fine energy. The curt reply struck fire upon the young man.

"I don't propose to drive a bargain, Dr. Sevier!" He flushed angrily after he had spoken, breathed with compressed lips, and winked savagely, with the sort of indignation that school-boys show to a harsh master.

The physician answered with better self-control.

"What do you propose?"

"I was going to propose — being a stranger to you, sir — to pay in advance." The announcement was made with a tremulous but triumphant *hauteur*, as though it must cover the physician with mortification. The speaker stretched out a rather long leg and, drawing a pocket-book, produced a twenty-dollar piece.

The Doctor looked full in his face with impatient surprise, then turned his eyes away again as if he restrained himself, and said, in a subdued tone:

"I would rather you had haggled about the price."

"I don't hear—" said the other, turning his ear. The Doctor waved his hand:

"Put that up, if you please."

The young stranger was disconcerted. He remained silent for a moment, wearing a look of impatient embarrassment. He still extended the piece, turning it over and over with his thumb-nail as it lay on his fingers.

"You don't know me, Doctor," he said. He got another cruel answer:

"We're getting acquainted," replied the physician.

The victim of the sarcasm bit his lip, and

protested, by an unconscious, sidewise jerk of the chin :

"I wish you'd ——" and he turned the coin again.

The physician dropped an eagle's stare on the gold.

"I don't practice medicine on those principles."

"But, Doctor," insisted the other, appeasingly, "you can make an exception if you will. Reasons are better than rules, my old professor used to say. I am here without friends, or letters, or credentials of any sort; this is the only recommendation I can offer."

"Don't recommend you at all; anybody can do that."

The stranger breathed a sigh of overtaken patience, smiled with a baffled air, seemed once or twice about to speak but doubtful what to say, and let his hand sink.

"Well, Doctor,"—he rested his elbow on his knee, gave the piece one more turn over, and tried to draw the physician's eye by a look of boyish pleasantness,—“I'll not ask you to take pay in advance, but I will ask you to take care of this money for me. Suppose I should lose it, or have it stolen from me, or—Doctor, it would be a real comfort to me if you would."

"I can't help that. I shall treat your wife and then send in my bill." The Doctor folded arms and appeared to give attention to his driver. But at the same time he asked :

"Not subject to epilepsy, eh?"

"No, sir!" The indignant shortness of the retort drew no sign of attention from the Doctor; he was silently asking himself what this nonsense meant. Was it drink, or gambling, or a confidence game? Or was it only vanity, or a mistake of inexperience? He turned his head unexpectedly and gave the stranger's facial lines a quick, thorough examination. It startled them from a look of troubled meditation. The physician as quickly turned away again.

"Doctor," began the other, but added no more.

The physician was silent. He turned the matter over once more in his mind. The proposal was absurdly unbusinesslike. That his part in it might look ungenerous was nothing; so his actions were right, he rather liked them to bear a hideous aspect; that was his war-paint. There was that in the stranger's attitude that agreed fairly with his own theories of living. A fear of debt, for instance; if that was genuine it was good. And beyond and better than that, a fear of money. He began to be more favorably impressed.

"Give it to me," he said, frowning; "mark you, this is your way,"—he dropped the gold into his vest pocket,—“it isn't mine."

VOL. XXVII.—7.

The young man laughed with visible relief, and rubbed his knee with his somewhat too delicate hand. The doctor examined him again with a milder glance.

"I suppose you think you've got the principles of life all right, don't you?"

"Yes, I do," replied the other, taking his turn at folding arms.

"H-m-m, I dare say you do. What you lack is the practice." The Doctor sealed his utterance with a nod.

The young man showed amusement; more, it may be, than he felt, and presently pointed out his lodging place.

"Here, on this side; Number 40," and they alighted.

III.

HIS WIFE.

In former times, the presence in New Orleans, during the cooler half of the year, of large numbers of mercantile men from all parts of the world, who did not accept the fever-plagued city as their permanent residence, made much business for the renters of furnished apartments. At the same time, there was a class of persons whose residence was permanent, and to whom this letting of rooms fell by an easy and natural gravitation; and the most respectable and comfortable rented rooms of which the city could boast were those *chambres garnies* in Custom-house and Bienville streets, kept by worthy free or freed mulatto or quadroon women.

In 1856, the gala days of this half-caste people were quite over. Difference was made between virtue and vice, and the famous quadroon balls were shunned by those who aspired to respectability, whether their whiteness was nature or only toilet powder. Generations of domestic service under ladies of Gallic blood had brought many of them to a supreme pitch of excellence as housekeepers. In many cases, money had been inherited; in other cases, it had been saved up. That Latin feminine ability to hold an awkward position with impregnable serenity, and like the yellow Mississippi to give back no reflection from the overhanging sky, emphasized this superior fitness. That bright, womanly business ability that comes of the same blood added again to their excellence. Not to be home itself, nothing could be more like it than were the apartments let by Madame Cécile, or Madame Sophie, or Madame Athalie, or Madame Polyxène, or whatever the name might be.

It was in one of these houses, that presented its dull brick front directly upon the sidewalk of Custom-house street, with the unfailing little square sign of *Chambres à*

louer (Rooms to let), dangling by a string from the overhanging balcony and twirling in the breeze, that the sick wife lay. A waiting slave-girl opened the door as the two men approached it, and both of them went directly upstairs and into a large, airy room. On a high, finely carved, and heavily hung mahogany bed, to which the remaining furniture corresponded in ancient style and massiveness, was stretched the form of a pale, sweet-faced little woman.

The proprietress of the house was sitting beside the bed, a quadron of good, kind face, forty-five years old or so, tall and broad. She rose and responded to the Doctor's silent bow with that pretty dignity of greeting which goes with all French blood, and remained standing. The invalid stirred.

The physician came forward to the bedside. The patient could not have been much over nineteen years of age. Her face was very pleasing; a trifle slender in outline; the brows somewhat square, not wide; the mouth small. But it is needless to be minute; she would not have been called beautiful, even in health, by those who lay stress on correctness of outlines. Yet she had one thing that to some is better. Whether it was in the dark blue eyes that were lifted to the Doctor's with a look which changed rapidly from inquiry to confidence, or in the fine, scarcely perceptible strands of pale-brown hair that played about her temples, he did not make out; but for one cause or another her face was of that kind which almost any one has seen once or twice, and no one has seen often,—that seems to give out a soft but veritable light.

She was very weak. Her eyes quickly dropped away from his and turned wearily but peacefully to those of her husband.

The Doctor spoke to her. His greeting and gentle inquiry were full of a soothing quality that was new to the young man. His long fingers moved twice or thrice softly across her brow, pushing back the thin, waving strands, and then he sat down in a chair, continuing his kind, direct questions. The answers were all bad.

He turned his glance to the quadron; she understood it; the patient was seriously ill. The nurse responded with a quiet look of comprehension. At the same time, the Doctor disguised from the young strangers this interchange of meanings by an audible question to the quadron.

"Have I ever met you before?"

"No, seh."

"What is your name?"

"Zénobie."

"Madame Zénobia," softly whispered the invalid, turning her eyes, with a glimmer of

feeble pleasantry, first to the quadron and then to her husband.

The physician smiled at her an instant, and then gave a few concise directions to the quadron. "Get me"—thus and so.

The woman went and came. She was a superior nurse, like so many of her race. So obvious, indeed, was this, that when she gently pressed the young husband an inch or two aside and murmured that "*de doctah*" wanted him to "*go h-out*," he left the room, although he knew the physician had not so indicated.

By and by he returned, but only at her beckon, and remained at the bedside while Madame Zénobie led the Doctor into another room to write his prescription.

"Who are these people?" asked the physician, in an undertone, looking up at the quadron and pausing with the prescription half torn off.

She shrugged her large shoulders and smiled perplexedly.

"Mizzez—Reechin?" The tone was one of query rather than assertion. "Dey ses so," she added.

She might nurse the lady like a mother, but she was not going to be responsible for the genuineness of a stranger's name.

"Where are they from?"

"I dunno? — Some pless? — I nevva yeh dat nem biff?"

She made a timid attempt at some word ending in "*walk*," and smiled, ready to accept possible ridicule.

"Milwaukee?" asked the Doctor.

She lifted her palm, smiled brightly, pushed him gently with the tip of one finger, and nodded. He had hit the nail on the head.

"What business is he in?"

The questioner rose.

She cast a sidelong glance at him with a slight enlargement of her eyes, and compressing her lips gave her head a little decided shake. The young man was not employed.

"And has no money either, I suppose," said the physician as they started again toward the sick-room.

She shrugged again and smiled; but it came to her mind that the Doctor might be considering his own interests, and she added in a whisper:

"Dey pay me."

She changed places with the husband, and the physician and he passed down the stairs together in silence.

"Well, Doctor?" said the young man as he stood, prescription in hand, before the carriage-door.

"Well," responded the physician, "you should have called me sooner."

The look of agony that came into the stranger's face caused the Doctor instantly to repent his hard speech.

"You don't mean ——" exclaimed the husband.

"No, no; I don't think it's too late. Get that prescription filled and give it to Mrs. ——"

"Richling," said the young man.

"Let her have perfect quiet," continued the Doctor. "I shall be back this evening."

And when he returned she had improved.

She was better again the next day, and the next; but on the fourth she was in a very critical state. She lay quite silent during the Doctor's visit, until he, thinking he read in her eyes a wish to say something to him alone, sent her husband and the quadroom out of the room on separate errands at the same moment. And immediately she exclaimed:

"Doctor, save my life! You mustn't let me die! Save me for my husband's sake! To lose all he's lost for me, and then to lose me too,—save me, Doctor, save me!"

"I'm going to do it!" said he. "You shall get well!"

And what with his skill and her endurance, it turned out so.

IV.

CONVALESCENCE AND ACQUAINTANCE.

A MAN'S clothing is his defense; but with a woman all dress is adornment. Nature decrees it; adornment is her instinctive delight. And above all the adorning of a bride; it brings out so charmingly the meaning of the thing. Therein centers the gay consent of all mankind and womankind to an innocent, sweet apostasy from the ranks of both. The value of living—which is loving; the sacreddest wonders of life; all that is fairest and of best delight in thought, in feeling, yea, in substance,—all are apprehended under the floral crown and hymeneal veil. So, when at length one day Mrs. Richling said, "Madame Zénobie, don't you think I might sit up?" it would have been absurd to doubt the quadroom's willingness to assist her in dressing. True, here was neither wreath nor veil, but here was very young wifehood, and its re-attiring would be like a proclamation of victory over the malady that had striven to put two hearts asunder. Her willingness could hardly be doubted,—though she smiled irresponsibly and said:

"If you thing ——?" She spread her eyes and elbows suddenly in the manner of a crab, with palms turned upward and thumbs outstretched—"Well?"—and so dropped them. "You don't want wait till de doctah comin'?" she asked.

"I don't think he's coming; it's after his time."

"Yass?"

The woman was silent a moment, and then threw up one hand again with the forefinger lifted alertly forward.

"I make a lill fi' biffio."

She made a fire. Then she helped the convalescent to put on a few loose drapings. She made no concealment of the enjoyment it gave her, though her words were few and generally were answers to questions; and when at length she brought from the wardrobe, pretending not to notice her mistake, a loose and much too ample robe of woolen and silken stuffs to go over all, she moved as though she trod on holy ground, and distinctly felt, herself, the thrill with which the convalescent, her young eyes beaming their assent, let her arms into the big sleeves, and drew about her small form the soft folds of her husband's morning-gown.

"He goin' to fine that droll," said the quadroom.

The wife's face confessed her pleasure.

"It's as much mine as his," she said.

"Is you mek dat?" asked the nurse as she drew its silken cord about the convalescent's waist.

"Yes. Don't draw it tight; leave it loose; so; but you can tie the knot tight. That will do; there." She smiled broadly. "Don't tie me in as if you were tying me in forever."

Madame Zénobie understood perfectly and, smiling in response, did tie it as if she were tying her in forever.

Half an hour or so later the quadroom, being—it may have been by chance—at the street door, ushered in a person who simply bowed in silence.

But as he put one foot on the stair he paused and, bending a severe gaze upon her, asked:

"Why do you smile?"

She folded her hands limply on her bosom, and drawing a cheek and shoulder toward each other, replied:

"Nuttin'—?"

The questioner's severity darkened.

"Why do you smile at nothing?"

She laid the tips of her fingers upon her lips to compose them.

"You din come in you' carridge. She goin' to thing 'tis Miché Reechin." The smile forced its way through her fingers. The visitor turned in quiet disdain and went upstairs, she following.

At the top he let her pass. She led the way and, softly pushing open the chamber door, entered noiselessly, turned and, as the other stepped across the threshold, nestled

her hands one on the other at her waist, shrank inward with a sweet smile, and waved one palm toward the huge, blue-hung mahogany four-poster,—empty.

The visitor gave a slight double nod and moved on across the carpet. Before a small coal fire, in a grate too wide for it, stood a broad, cushioned rocking-chair with the corner of a pillow showing over its top. The visitor went on around it. The girlish form lay in it, with eyes closed, very still; but his professional glance quickly detected the false pretense of slumber. A slippered foot was still slightly reached out beyond the bright colors of the long gown, and toward the brazen edge of the hearth-pan, as though the owner had been touching her tiptoe against it to keep the chair in gentle motion. One cheek was on the pillow; down the other curled a few light strands of hair that had escaped from her brow.

Thus for an instant. Then a smile began to wreath about the corner of her lips, she faintly stirred, opened her eyes—and lo! Dr. Sevier, motionless, tranquil, and grave.

"Oh, Doctor!" The blood surged into her face and down upon her neck. She put her hands over her eyes and her face into the pillow. "Oh, Doctor!"—rising to a sitting posture—"I thought, of course, it was my husband."

The Doctor replied while she was speaking:

"My carriage broke down." He drew a chair toward the fire-place and asked, with his face toward the dying fire:

"How are you feeling to-day, madam,—stronger?"

"Yes, I can almost say I'm well." The blush was still on her face as he turned to receive her answer, but she smiled with a bright courageousness that secretly amused and pleased him. "I thank you, Doctor, for my recovery; I certainly should thank you." Her face lighted up with that soft radiance which was its best quality, and her smile became half introspective as her eyes dropped from his and followed her outstretched hand as it re-arranged the farther edges of the dressing-gown one upon another.

"If you will take better care of yourself hereafter, madam," responded the Doctor, thumping and brushing from his knee some specks of mud that he may have got when his carriage broke, "I will thank you. But"—brush—brush—"I—doubt it."

"Do you think you should?" she asked, leaning forward from the back of the great chair and letting her wrists drop over the front of its broad arms.

"I do," said the Doctor, kindly. "Why shouldn't I? This present attack was by your

own fault." While he spoke, he was looking into her eyes, contracted at their corners by her slight smile. The face was one of those that show not merely that the world is all unknown to them, but that it always will be so. It beamed with inquisitive intelligence, and yet had the innocence almost of infancy. The doctor made a discovery; it was this that made her beautiful. "She *is* beautiful," he insisted to himself when his critical faculty dissented.

"You needn't doubt me, Doctor. I'll try my best to take care. Why of course I will,—for John's sake." She looked up into his face from the tassel she was twisting around her finger, touching the floor with her slippers' toe and faintly rocking.

"Yes, there's a chance there," replied the grave man, seemingly not overmuch pleased; "I dare say everything you do or leave undone is for his sake."

The little wife betrayed for a moment a pained perplexity, and then exclaimed,—

"Well, of course!" and waited his answer with bright eyes.

"I have known women to think of their own sakes," was the response.

She laughed, and with unprecedented sparkle replied,—

"Why,—whatever's his sake is my sake. I don't see the difference. Yes, I see, of course, how there might be a difference; but I don't see how a woman——" She ceased, still smiling, and, dropping her eyes to her hands, slowly stroked one wrist and palm with the tassel of her husband's robe.

The Doctor rose, turned his back to the mantelpiece, and looked down upon her. He thought of the great, wide world: its thorny ways, its deserts, its bitter waters, its unrighteousness, its self-seeking greeds, its weaknesses, its under and over reaching, its unfaithfulness; and then again of this—child, thrust all at once a thousand miles into it, with never—so far as he could see—an implement, a weapon, a sense of danger, or a refuge; well pleased with herself as it seemed, lifted up into the bliss of self-obliterating wifeness, and resting in her husband with such an assurance of safety and happiness as a saint might pray for grace to show to Heaven itself. He stood silent, feeling too grim to speak, and presently Mrs. Richling looked up with a sudden liveliness of eye and a smile that was half apology and half persistence.

"Yes, Doctor, I'm going to take care of myself."

"Mrs. Richling, is your father a man of fortune?"

"My father is not living," said she, gravely. "He died two years ago. He was the pastor of

a small church. No, sir; he had nothing but his small salary—except that for a few years he taught a few scholars. He taught me.” She brightened up again. “I never had any other teacher.”

The Doctor folded his hands behind him and gazed abstractedly through the upper sash of the large French windows. The street door was heard to open.

“There’s John,” said the convalescent quickly, and the next moment her husband entered. A tired look vanished from his face as he saw the doctor. He hurried to grasp his hand, then turned and kissed his wife. The physician took up his hat.

“Doctor,” said the wife, holding the hand he gave her, and looking up playfully, with her cheek against the chair-back, “you surely didn’t suspect me of being a rich girl, did you?”

“Not at all, madam.” His emphasis was so pronounced that the husband laughed.

“There’s one comfort in the opposite condition, Doctor,” said the young man.

“Yes?”

“Why, yes; you see, it requires no explanation.”

“Yes, it does,” said the physician; “it is just as binding on people to show good cause why they are poor as it is to show good cause why they’re rich. Good-day, madam.” The two men went out together. His word would have been good-bye, but for the fear of fresh acknowledgments.

V.

HARD QUESTIONS.

DR. SEVIER had a simple abhorrence of the expression of personal sentiment in words. Nothing else seemed to him so utterly hollow as the attempt to indicate by speech a regard or affection which was not already demonstrated in behavior. So far did he keep himself aloof from insincerity that he had barely room enough left to be candid.

“I need not see your wife any more,” he said, as he went down the stairs with the young husband at his elbow; and the young man had learned him well enough not to oppress him with formal thanks, whatever might have been said or omitted upstairs.

Madame Zénobie contrived to be near enough, as they reached the lower floor, to come in for a share of the meager adieu. She gave her hand with a dainty grace and a bow that might have been imported from Paris.

Dr. Sevier paused on the front step, half turned toward the open door where the husband still tarried. That was not speech; it was scarcely action; but the young man understood it and was silent. In truth, the Doctor

himself felt a pang in this sort of farewell. A physician’s way through the world is paved, I have heard one say, with these broken bits of others’ lives, of all colors and all degrees of beauty. In his reminiscences, when he can do no better, he gathers them up, and turning them over and over in the darkened chamber of his retrospection, sees patterns of delight lit up by the softened rays of by-gone time. But even this renews the pain of separation, and Dr. Sevier felt, right here at this door-step, that, if this was to be the last of the Richlings, he would feel the twinge of parting every time they came up again in his memory.

He looked at the house opposite—where there was really nothing to look at—and at a woman who happened to be passing, and who was only like a thousand others with whom he had nothing to do.

“Richling,” he said, “what brings you to New Orleans, any way?”

Richling leaned his cheek against the door-post:

“Simply seeking my fortune, Doctor.”

“Do you think it is here?”

“I’m pretty sure it is; the world owes me a living.”

The Doctor looked up.

“When did you get the world in your debt?”

Richling lifted his head pleasantly, and let one foot down a step.

“It owes me a chance to earn a living, doesn’t it?”

“I dare say, replied the other: “that’s what it generally owes.”

“That’s all I ask of it,” said Richling; “if it will let us alone, we’ll let it alone.”

“You’ve no right to allow either,” said the physician. “No sir; no,” he insisted, as the young man looked incredulous. There was a pause. “Have you any capital?” asked the Doctor.

“Capital! No,”—with a low laugh.

“But surely you have something to——?”

“Oh, yes,—a little.”

The Doctor marked the southern “Oh.” There is no “O” in Milwaukee.

“You don’t find as many vacancies as you expected to see, I suppose, h-m-m?”

There was an under-glow of feeling in the young man’s tone as he replied,—

“I was misinformed.”

“Well,” said the Doctor, staring down street, “you’ll find something. What can you do?”

“Do? Oh, I’m willing to do anything.”

Dr. Sevier turned his gaze slowly, with a shade of disappointment in it. Richling rallied to his defenses:

“I think I could make a good book-keeper, or correspondent, or cashier, or any such——”

The Doctor interrupted, with the back of his head toward his listener looking this time up the street, riverward :

"Yes?—or a shoe,—or a barrel,—h-m-m?"

Richling bent forward with the frown of defective hearing, and the physician raised his voice—

"Or a cartwheel—or a coat?"

"I can make a living," rejoined the other, with a needlessly resentful-heroic manner that was lost, or seemed to be, on the physician.

"Richling,"—the Doctor suddenly faced around and fixed a kindly severe glance on him,—“why didn't you bring letters?"

"Why,"—the young man stopped, looked at his feet, and distinctly blushed. "I think," he stammered,—“it seems to me"—he looked up with a faltering eye—"don't you think—I think a man ought to be able to recommend *himself*."

The Doctor's gaze remained so fixed that the self-recommended man could not endure it silently.

"I think so," he said, looking down again and swinging his foot. Suddenly he brightened. "Doctor, isn't this your carriage coming?"

"Yes; I told the boy to drive by here when it was mended, and he might find me." The vehicle drew up and stopped. "Still, Richling," the physician continued, as he stepped toward it, "you had better get a letter or two, yet; you might need them."

The door of the carriage clapped to. There seemed a touch of vexation in the sound. Richling, too, closed his door, but in the soft way of one in troubled meditation. Was this a proper farewell? The thought came to both men.

"Stop a minute!" said Dr. Sevier to his driver. He leaned out a little at the side of the carriage and looked back. "Never mind; he has gone in."

The young husband went upstairs slowly and heavily;—more slowly and heavily than might be explained by his all-day unsuccessful tramp after employment. His wife still rested in the rocking-chair. He stood against it, and she took his hand and stroked it.

"Tired?" she asked, looking up at him. He gazed into the languishing fire.

"Yes."

"You're not discouraged, are you?"

"Discouraged? N-no. And yet," he said, slowly shaking his head, "I can't see why I don't find something to do."

"It's because you don't hunt for it," said the wife.

He turned upon her with flashing countenance only to meet her laugh and to have his head pulled down to her lips. He dropped into the seat left by the physician, laid his

head back in his knitted hands, and crossed his feet under the chair.

"John, I do *like* Dr. Sevier."

"Why?" The questioner looked at the ceiling.

"Why, don't you like him?" asked the wife, and as John smiled she added,—“You know you like him."

The husband grasped the poker in both hands, dropped his elbows upon his knees, and began touching the fire, saying slowly,—“I believe the Doctor thinks I'm a fool."

"That's nothing," said the little wife, "that's only because you married me."

The poker stopped rattling between the grate-bars; the husband looked at the wife. Her eyes, though turned partly away, betrayed their mischief. There was a deadly pause; then a rush to the assault, a shower of Cupid's arrows, a quick surrender—

But we refrain. Since ever the world began it is Love's real, not his sham battles, that are worth the telling.

VI.

NESTING.

A FORTNIGHT passed. What with calls on his private skill, and appeals to his public zeal, Dr. Sevier was always loaded like a dromedary. Just now he was much occupied with the affairs of the great American people. For all, he was the furthest remove from a mere party contestant or spoilsman; neither his righteous pugnacity nor his human sympathy would allow him to "let politics alone." Often across this preoccupation there flitted a thought of the Richlings.

At length one day he saw them. He had been called by a patient, lodging near Madame Zénobie's house. The proximity of the young couple occurred to him at once, but he instantly realized the extreme poverty of the chance that he should see them. To increase the improbability, the short afternoon was near its close, an hour when people generally were sitting at dinner.

But what a coquette is that same Chance! As he was driving up at the sidewalk's edge before his patient's door, the Richlings came out of theirs, the husband talking with animation, and the wife, all sunshine, skipping up to his side and taking his arm with both hands, and attending eagerly to his words.

"Heels!" muttered the Doctor to himself, for the sound of Mrs. Richling's gaiters betrayed that fact. Heels were an innovation still new enough to rouse the resentment of masculine conservatism. But for them, she would have pleased his sight entirely. Bonnets, for years microscopic, had again be-

come visible, and her girlish face was prettily set in one whose flowers and ribbon, just joyous and no more, were reflected again in the double-skirted silk *barège*, while the dark mantilla that drooped away from the broad lace collar, shading, without hiding, her "Parodi" waist, seemed made for that very street of heavy-grated archways, iron-railed balconies, and high lattices. The Doctor even accepted patiently the free northern step, which is commonly so repugnant to the southern eye.

A heightened gladness flashed into the faces of the two young people as they desecrated the physician.

"Good-afternoon," they said, advancing.

"Good-evening," responded the Doctor, and shook hands with each. The meeting was an emphatic pleasure to him. He quite forgot the young man's lack of credentials.

"Out taking the air?" he asked.

"Looking about," said the husband.

"Looking up new quarters," said the wife, knitting her fingers about her husband's elbow and drawing closer to it.

"Were you not comfortable?"

"Yes; but the rooms are larger than we need."

"Ah!" said the Doctor; and there the conversation sank. There was no topic suited to so fleeting a moment, and when they had smiled all round again, Dr. Sevier lifted his hat. Ah, yes, there was one thing.

"Have you found work?" asked the Doctor of Richling.

The wife glanced up for an instant into her husband's face, and then down again.

"No," said Richling, "not yet. If you should hear of anything, Doctor——" He remembered the Doctor's word about letters, stopped suddenly, and seemed as if he might even withdraw the request; but the Doctor said:

"I will; I will let you know." He gave his hand to Richling. It was on his lips to add—"and should you need," etc.; but there was the wife at the husband's side. So he said no more. The pair bowed their cheerful thanks; but beside the cheer, or behind it, in the husband's face, was there not the look of one who feels the odds against him? And yet, while the two men's hands still held each other, the look vanished, and the young man's light grasp had such firmness in it that, for this cause also, the Doctor withheld his patronizing utterance. He believed he would himself have resented it had he been in Richling's place.

The young pair passed on, and that night as Dr. Sevier sat at his fireside, an uncompanioned widower, he saw again the young wife look quickly up into her husband's face, and across

that face flit and disappear its look of weary dismay, followed by the air of fresh courage with which the young couple had said good-bye.

"I wish I had spoken," he thought to himself; "I wish I had made the offer."

And again:

"I hope he didn't tell her what I said about the letters. Not but I was right, but it'll only wound her."

But Richling had told her; he always "told her everything"; she could not possibly have magnified wifehood more, in her way, than he did in his. May be both ways were faulty; but they were extravagantly, youthfully confident that they were not.

UNKNOWN to Dr. Sevier, the Richlings had returned from their search unsuccessful. Finding prices too much alike in Custom-house street, they turned into Burgundy. From Burgundy they passed into Du Maine. As they went, notwithstanding disappointments, their mood grew gay and gayer. Everything that met the eye was quaint and droll to them: men, women, things, places, all were more or less outlandish. The grotesqueness of the African, and especially the French-tongued African, was to Mrs. Richling particularly irresistible. Multiplying upon each and all of these things was the ludicrousness of the pecuniary strait that brought themselves and these things into contact. Everything turned to fun.

Mrs. Richling's mirthful mood prompted her by and by to begin letting into her inquiries and comments covert double meanings intended for her husband's private understanding. Thus they crossed Bourbon street.

About there, their mirth reached a climax; it was in a small house, a sad, single-story thing cowering between two high buildings, its eaves, four or five feet deep, overshadowing its one street door and window.

"Looks like a shade for weak eyes," said the wife.

They had debated whether they should enter it or not. He thought no, she thought yes; but he would not insist and she would not insist; she wished him to do as he thought best, and he wished her to do as she thought best, and they had made two or three false starts and retreats before they got inside. But they were in there at length and busily engaged inquiring into the availability of a small, lace-curtained, front room, when Richling took his wife so completely off her guard by addressing her as "Madame," in the tone and manner of Dr. Sevier, that she laughed in the face of the householder, who had been trying to talk English with a French accent and a harelip, and they fled with haste to the

sidewalk and around the corner, where they could smile and smile without being villains.

"We must stop this," said the wife, blushing. "We *must* stop it. We're attracting attention."

And this was true at least as to one ragamuffin who stood on a neighboring corner staring at them. Yet there is no telling to what higher pitch their humor might have carried them if Mrs. Richling had not been weighted down by the constant necessity of correcting her husband's statement of their wants. This she could do, because his exactions were all in the direction of her comfort.

"But, John," she would say each time as they returned to the street and resumed their quest, "those things cost; you can't afford them; can you?"

"Why, you can't be comfortable without them," he would answer.

"But that's not the question, John; we *must* take cheaper lodgings, mustn't we?"

Then John would be silent, and by little's their gayety would rise again.

One landlady was so good-looking, so manifestly and entirely Caucasian, so melodious of voice, and so modest in her account of the rooms she showed, that Mrs. Richling was captivated. The back room on the second floor, overlooking the inner court and numerous low roofs beyond, was suitable and cheap.

"Yes," said the sweet proprietress, turning to Richling, who hung in doubt whether it was quite good enough, "Yessch, I think you be pretty well in that room yeh.* Yessch, I'm shoe you be *very* well; yessch."

"Can we get them at once?"

"Yes? At once? Yes? Oh, yes?"

No downward inflections from her.

"Well,"—the wife looked at the husband—he nodded—"well, we'll take it."

"Yes?" responded the landlady; "well?" leaning against a bedpost and smiling with infantile diffidence, "you dunt want no refence?"

"No," said John, generously, "Oh, no; we can trust each other that far, eh?"

"Oh, yes?" replied the sweet creature. Then suddenly changing countenance as though she remembered something. "But daz de troub'—de room not goin' be vacate for t'ree mont'."

She stretched forth her open palms and smiled, with one arm still around the bedpost.

"Why," exclaimed Mrs. Richling, the very statue of astonishment, "you said just now we could have it at once!"

"Dis room? Oh, no; nod *dis* room."

"I don't see how I could have misunderstood you."

The landlady lifted her shoulders, smiled, and clasped her hands across each other

* "Heah"—*ye*, as in *yearn*.

under her throat. Then throwing them apart she said brightly:

"No, I say, at Madame La Rose. Me, my room's all fill'. At Madame La Rose, I say, I think you be pritty well. I'm shoe you be verrie well at Madame La Rose. I'm sorry. But you kin paz yondeh—'tiz juz ad the cawneh? And I am shoe I think you be pritty well at Madame La Rose."

She kept up the repetition, though Mrs. Richling, incensed, had turned her back, and Richling was saying good-day.

"She did say the room was vacant!" exclaimed the little wife, as they reached the sidewalk. But the next moment there came a quick twinkle from her eye, and waving her husband to go on without her, she said: "You kin paz yondeh; at Madame La Rose I am shoe you be pritty sick." Thereupon she took his arm,—making everybody stare and smile to see a lady and gentleman arm in arm by daylight,—and they went merrily on their way.

The last place they stopped at was in Royal street. The entrance was bad. It was narrow even for those two. The walls were stained by dampness, and the smell of a totally undrained soil came up through the floor. The stairs ascended a few steps, came too near a low ceiling, and shot forward into cavernous gloom to find a second rising place farther on. But the rooms, when reached, were a tolerably pleasant disappointment, and the proprietress a person of reassuring amiability.

She bestirred herself in an obliging way that was the most charming thing yet encountered. She gratified the young people every moment afresh with her readiness to understand or guess their English queries and remarks, hung her head archly when she had to explain away little objections, delivered her no sirs with gravity and her yes sirs with bright eagerness, shook her head slowly with each negative announcement, and accompanied her affirmations with a gracious bow and a smile full of rice powder.

She rendered everything so agreeable, indeed, that it almost seemed impolite to inquire narrowly into matters, and when the question of price had to come up it was really difficult to bring it forward, and Richling quite lost sight of the economic rules to which he had silently acceded in the *Rue Du Maine*.

"And you will carpet the floor?" he asked, hovering off of the main issue.

"Put coppit? Ah! certtainlee!" she replied, with a lovely bow and a wave of the hand toward Mrs. Richling, whom she had already given the same assurance.

"Yes," responded the little wife, with a captivated smile, and nodded to her husband.

"We want to get the decentest thing that

is cheap," he said, as the three stood close together in the middle of the room.

The landlady flushed.

"No, no, John," said the wife, quickly, "don't you know what we said?" Then, turning to the proprietress, she hurried to add, "We want the cheapest thing that is decent."

But the landlady had not waited for the correction.

"*Dissent!* You want somesin *dissent!*" She moved a step backward on the floor, scoured and smeared with brick-dust, her ire rising visibly at every heart-throb, and pointing her outward-turned open hand energetically downward, added:

"'Tis yeh!" She breathed hard. "*Mais*, no; you don't *want* somesin dissent. No!" She leaned forward interrogatively: "You want somesin tchip?" She threw both elbows to the one side, cast her spread hands off in the same direction, drew the cheek on that side down into the collar-bone, raised her eyebrows, and pushed her upper lip with her lower, scornfully.

At that moment her ear caught the words of the wife's apologetic amendment. They gave her fresh wrath and new opportunity. For her new foe was a woman, and a woman trying to speak in defense of the husband against whose arm she clung.

"Ah-h-h!" Her chin went up; her eyes shot lightning; she folded her arms fiercely, and drew herself to her best height; and, as Richling's eyes shot back in rising indignation, cried:

"Ziss pless? 'Tis not ze pless! Ziss pless—is diss'nt pless! I am diss'nt woman, me! Fo' w'at you come in yeh?"

"My dear madam! My husband——"

"Dass you' uzban'?" pointing at him.

"Yes!" cried the two Richlings at once.

The woman folded her arms again, turned half aside, and, lifting her eyes to the ceiling, simply remarked, with an ecstatic smile:

"Humph?" and left the pair, red with exasperation, to find the street again through the darkening cave of the stair-way.

It was still early the next morning, when Richling entered his wife's apartment with an air of brisk occupation. She was pinning her brooch at the bureau glass.

"Mary," he exclaimed, "put something on and come see what I've found! The queerest, most romantic old thing in the city; the most comfortable—and the cheapest! Here, is this the wardrobe key? To save time I'll get your bonnet."

"No, no, no!" cried the laughing wife, confronting him with sparkling eyes, and throwing herself before the wardrobe; "I can't let you touch my bonnet!"

There is a limit, it seems, even to a wife's subserviency.

However, in a very short time afterward, by the feminine measure, they were out in the street, and people were again smiling at the pretty pair to see her arm in his, and she actually *keeping step*. 'Twas very funny.

As they went, John described his discovery: A pair of huge, solid green gates immediately on the sidewalk, in the dull façade of a tall, red brick building, with old carved vinework on its window and door frames. Hinges a yard long on the gates; over the gates a semicircular grating of iron bars an inch in diameter; in one of these gates a wicket, and on the wicket a heavy, battered, highly burnished brass knocker. A short-legged, big-bodied, and very black slave to usher one through the wicket into a large, wide, paved corridor, where from the middle joist overhead hung a great iron lantern. Big double doors at the far end, standing open, flanked with diamond-paned side-lights of colored glass, and with an arch of the same, fan-shaped, above. Beyond these doors, showing through them a flagged court, bordered all around by a narrow, raised parterre under pomegranate and fruit-laden orange, and overtopped by vine-covered and latticed walls, from whose ragged eaves vagabond weeds laughed down upon the flowers of the parterre below, robbed of late and early suns. Stairs old-fashioned, broad; rooms their choice of two; one looking down into the court, the other into the street; furniture faded, capacious; ceilings high; windows, each opening upon its own separate small balcony, where, instead of balustrades, was graceful iron scroll-work, centered by some long-dead owner's monogram two feet in length; and on the balcony next the division wall, close to another on the adjoining property, a quarter circle of iron-work set like a blind-bridle, and armed with hideous prongs for house-breakers to get impaled on.

"Why, in there," said Richling, softly, as they hurried in, "we'll be hid from the whole world, and the whole world from us."

The wife's answer was only the upward glance of her blue eyes into his, and a faint smile.

The place was all it had been described to be, and more,—except in one particular.

"And my husband tells me—" The owner of said husband stood beside him, one foot a little in advance of the other, her folded parasol hanging down the front of her skirt from her gloved hands, her eyes just returning to the landlady's from an excursion around the ceiling, and her whole appearance as fresh as the pink flowers that nestled between her

brow and the rim of its precious covering. She smiled as she began her speech, but not enough to spoil what she honestly believed to be a very business-like air and manner. John had quietly dropped out of the negotiations, and she felt herself put upon her metal as his agent. "And my husband tells me the price of this front room is ten dollars a month."

"Munse?"

The respondent was a very white, corpulent woman, who constantly panted for breath, and was everywhere sinking down into chairs, with her limp, unfortified skirt dropping between her knees, and her hands pressed on them exhaustedly.

"Munse?" She turned from husband to wife and back again a glance of alarmed inquiry.

Mary tried her hand at French.

"Yes; *oui, madame*. Ten dollah the month — *le mois*."

Intelligence suddenly returned. Madame made a beautiful, silent O with her mouth and two others with her eyes.

"Ah, *non!* By munse? No, madame. Ah-h! impossybl'! By *wick*, yes; ten dollah de wick! Ah!"

She touched her bosom with the wide-spread fingers of one hand and threw them toward her hearers.

The room-hunters got away, yet not so quickly but they heard behind and above them her scornful laugh, addressed to the walls of the empty room.

A day or two later they secured an apartment, cheap, and — morally — decent; but otherwise — ah!

VII.

DISAPPEARANCE.

It was the year of a presidential campaign. The party that afterward rose to overwhelming power was, for the first time, able to put its candidate fairly abreast of his competitors. The South was all afire. Rising up or sitting down, coming or going, week-day or Sabbath-day, eating or drinking, marrying or burying, the talk was all of slavery, abolition, and a disrupted country.

Dr. Sevier became totally absorbed in the issue. He was too unconventional a thinker ever to find himself in harmony with all the declarations of any party, and yet it was a necessity of his nature to be in the *mêlée*. He had his own array of facts, his own peculiar deductions; his own special charges of iniquity against this party and of criminal forbearance against that; his own startling political economy; his own theory of rights; his own interpretations of the Constitution; his own threats and warnings; his own exhortations, and his own prophecies, of which one

cannot say all have come true. But he poured them forth from the mighty heart of one who loved his country, and sat down with a sense of duty fulfilled and wiped his pale forehead while the band played a polka.

It hardly need be added that he proposed to dispense with politicians, or that, when "the boys" presently counted him into their party team for campaign haranguing, he let them clap the harness upon him and splashed along in the mud with an intention as pure as snow.

"Hurrah for —"

Whom, is no matter now. It was not Fremont. Buchanan won the race. Out went the lights, down came the platforms, rockets ceased to burst; it was of no use longer to "Wait for the wagon"; "Old Dan Tucker" got "out of the way," small boys were no longer fellow-citizens, dissolution was postponed, and men began again to have an eye single to the getting of money.

A mercantile friend of Dr. Sevier had a vacant clerkship which it was necessary to fill. A bright recollection flashed across the Doctor's memory.

"Narcisse!"

"Yessseh!"

"Go to Number 40 Custom-house street and inquire for Mr. Fledgeling; or, if he isn't in, for Mrs. Fledge — humph! Richling, I mean; I —"

Narcisse laughed aloud.

"Ha-ha-ha! daz de way, sometime! My hant she got a honcl' — he says, once 'pon a time —"

"Never mind! Go at once!"

"All a-ight, seh!"

"Give him this card —"

"Yessseh!"

"These people —"

"Yessseh!"

"Well, wait till you get your errand, can't you? These —"

"Yessseh!"

"These people want to see him."

"All a-ight, seh!"

Narcisse threw open and jerked off a worsted jacket, took his coat down from a peg, transferred a snowy handkerchief from the breast pocket of the jacket to that of the coat, felt in his pantaloons to be sure that he had his match-case and cigarettes, changed his shoes, got his hat from a high nail by a little leap, and put it on a head as handsome as Apollo's.

"Doctah Seveeah," he said, "in fact, I fine that a ve'y gen'lemanly young man, that Mistoo Itchlin, weely, Doctah."

The Doctor murmured to himself from the letter he was writing.

"Well; *au 'evoi*, Doctah; I'm goin'."

Out in the corridor he turned and jerked

his chin up and curled his lip, brought a match and cigarette together in the lee of his hollowed hand, took one first, fond draw, and went down the stairs as if they were on fire.

At Canal street, he fell in with two noble fellows of his own circle, and the three went around by way of Exchange alley to get a glass of soda at McCloskey's old down-town stand. His two friends were out of employment—at the moment,—making him, consequently, the interesting figure in the trio as he inveighed against his master.

"Ah, phoo!" he said, indicating the end of his speech by dropping the stump of his cigarette into the sand on the floor and softly spitting upon it,—"*le Shylock de la rue Carondelet!*"—and then in English, not to lose the admiration of the Irish waiter—

"He don't want to haugment me! I din hass 'im, because the 'lection. But you juz wait till dat firce of Jannawerry!"

The waiter rubbed the zinc counter and inquired why Narcisse did not make his demands at the present moment.

"W'y I don't hass 'im now? Because w'en I hass 'im he know' he's got to *do* it! You thing I'm goin' to kill myseff workin'?"

Nobody said yes, and by and by he found himself alive in the house of Madame Zénobie. The furniture was being sold at auction, and the house was crowded with all sorts and colors of men and women. A huge sideboard was for sale as he entered, and the crier was crying:

"Faw-ty-fi' dollah! faw-ty-fi' dollah, ladies an' gentymen! On'y faw-ty-fi' dollah fo' thad magniffyzan sidebode! *Quarante-cinq piastres, seulement, messieurs! Les knobs vaut bien cette prix!* Gentymen, de knobs is worse de money! Ladies, if you don' stop dat talk-in', I will not sell one thing mo'! *Et quarante-cinq piastres*—faw-ty-fi' dollah——"

"Fifty!" cried Narcisse, who had not owned that much at one time since his father was a constable; realizing which fact, he slipped away upstairs and found Madame Zénobie half crazed at the slaughter of her assets.

She sat in a chair against the wall of the room the Richlings had occupied, a spectacle of agitated dejection. Here and there about the apartment, either motionless in chairs or moving noiselessly about and pulling and pushing softly this piece of furniture and that, were numerous vulture-like persons of either sex, waiting the up-coming of the auctioneer. Narcisse approached her briskly.

"Well, Madame Zénobie!"—he spoke in French—"is it you who lives here? Don't you remember me? What! No? You don't remember how I used to steal figs from you?" The vultures slowly turned their heads. Madame Zénobie looked at him in a dazed way.

No, she did not remember. So many had robbed her—all her life.

"But you don't look at me, Madame Zénobie. Don't you remember, for example, once pulling a little boy—as little as *that*—out of your fig-tree, and taking the half of a shingle, split lengthwise, in your hand, and his head under your arm,—swearing you would do it if you died for it,—and bending him across your knee"—he began a vigorous but graceful movement of the right arm which few members of our fallen race could fail to recognize,—“and you don't remember me, my old friend?"

She looked up into the handsome face with a faint smile of affirmation. He laughed with delight.

"The shingle was *that* wide! Ah! Madame Zénobie, you did it well!" He softly smote the memorable spot first with one hand and then with the other, shrinking forward spasmodically with each contact, and throwing utter woe into his countenance. The general company smiled. He suddenly put on great seriousness.

"Madame Zénobie, I hope your furniture is selling well?" He still spoke in French.

She cast her eyes upward pleadingly, caught her breath, threw the back of her hand against her temple, and dashed it again to her lap, shaking her head.

Narcisse was sorry.

"I have been doing what I could for you down-stairs—running up the prices of things. I wish I could stay to do more, for the sake of old times. I came to see Mr. Richling, Madame Zénobie; is he in? Dr. Sevier wants him."

Richling? Why, the Richlings did not live there. The Doctor must know it. Why should she be made responsible for this mistake? It was his oversight. They had moved long ago. Dr. Sevier had seen them looking for apartments. Where did they live now? Ah, me! *she* could not tell. Did Mr. Richling owe the doctor something?

"Owe? Certainly not. The Doctor—on the contrary——"

Ah! well, indeed, she didn't know where they lived, it is true; but the fact was, Mr. Richling happened to be there just then!—*à-c't'eure!* He had come to get a few trifles left by his madame.

Narcisse made instant search. Richling was not on the upper floor. He stepped to the landing and looked down. There he went!

"Mistoo 'Itchlin!"

Richling failed to hear. Sharper ears might have served him better. He passed out by the street door. Narcisse stopped the auction by the noise he made coming down-stairs after

him. He had some trouble with the front door,—lost time there; but got out.

Richling was turning a corner. Narcisse ran there and looked; looked up—looked down—looked into every store and shop on either side of the way clear back to Canal street; crossed it, went back to the Doctor's office, and reported. If he omitted such details as his having seen and then lost sight of the man he sought, it may have been in part from the Doctor's indisposition to give him speaking license. The conclusion was simple; the Richlings could not be found.

THE months of winter passed. No sign of them.

"They've gone back home," the Doctor often said to himself. How much better that was than to stay where they had made a mistake in venturing, and become the nurselings of patronizing strangers! He gave his

admiration free play, now that they were quite gone. True courage that Richling had—courage to retreat when retreat is best! And his wife—ah! what a reminder of—hush, memory!

"Yes, they must have gone home!" The Doctor spoke very positively, because, after all, he was haunted by doubt.

One spring morning he uttered a soft exclamation as he glanced at his office-slate. The first notice on it read:

Please call as soon as you can at number 292 St. Mary street: corner of Prytania. Lower corner—opposite the asylum.

John Richling.

The place was far up in the newer part of the American quarter. The signature had the appearance as if the writer had begun to write some other name and had changed it to Richling.

(To be continued.)

QUEEN VICTORIA.*

IF there is a difficulty in writing an account of the life of any notable person still living, the difficulty is increased when the subject is a woman, and scarcely diminished by the fact that this woman is a queen,—for though we hold it one of the most absurd of poetical fallacies that "love" in the ordinary sense of the word is "woman's whole existence," yet it is very true that the history of a woman is chiefly the history of her affections and the close relationships in which her dearest interests are always concentrated. It is true also of a man that in these lie the real records of his happiness or misery; but there is more of the external in his life, and we can more easily satisfy the attention of the spectator with his work or his amusements, or even the accidents that happen to him and diversify his existence. A king's life is very much the life of his kingdom, with brief references to the consort and children, about whom the "Almanach de Gotha" is the easy authority.

The life of the Queen of England, for so long a reigning sovereign, and in whose reign so many great things have happened, might be written in the same way; but this would satisfy no one, and it would be all the less satisfactory, because our Queen, we are proud to think, has made herself quite a distinct position in the world,—a phrase which, in her case, does not mean, as in ours, the little society in which we are known, but is really the world, and includes the great Republican continent of the west, besides all the European nations and, transcending even the bounds of Christendom, includes unknown myriads in the East. Her Majesty has been to multitudes the most eminent type of feminine character in this vast world; she has been the wife *par excellence*, an emblem of the simplest and most entire devotion; her fame, in this respect, has penetrated more deeply than the fame of poet or of general; she has helped to give luster to those virtues

*The portrait of Queen Victoria, printed as a frontispiece to this number of THE CENTURY, is from the original oil study made from life by the young American artist, Thomas Sully, in the year 1838, now in the possession of Francis T. Sully Darley, Esq., by whose kind permission it is here engraved. This study was preliminary to a full-length and life-size portrait of the Queen in full regalia, painted at Buckingham Palace, for the St. George's Society of Philadelphia. In his "Recollections of an Old Painter," in "Hours at Home" for November, 1869, Mr. Sully states that he gave a copy of the large portrait to the Thistle Society of Charleston, in acknowledgment of their kindness to him. The painter says in these recollections that he told the Queen that he would get his daughter to sit with the regalia, if there would be no impropriety—in order to save her majesty the trouble. The latter replied that there would be no impropriety—but that he must not spare her; if she could be of service, she would sit. "After that," he adds, "my daughter sat with the regalia, which weighed thirty or forty pounds. * * * One day the Queen sent word that she would come in if my daughter would remain where she was. But, of course, Blanche stepped down, and the two girls, who were almost the same age, chatted together quite familiarly."—The portrait on p. 73 was engraved by permission, by T. Johnson, from a photograph by Alex. Bassano.—Ed.]

on which the happiness of the universe depends, but which wit and fashion have often held lightly. In the days when her young example became first known, and the beauty of the domestic interior in which she presented herself, smiling, before her people, it was thought that fashionable vice was slain, in England at least, by the pure eyes of the wedded Una,—as it was thought, in those halcyon days, that war too was slain, and would never again lift its hydra head against mankind; and if some shadow has fallen upon these hopes, it is because human nature is too strong for any individual, and the purest influence has not yet been able to conquer the lower instincts of the mass. But wherever the Queen has stood, there has been the standard of goodness, the head-quarters of honor and purity. It is this, above all the peculiar attractions of her position, which has given her the hold she has always retained upon the interest—we might almost say the affections—of the world.

That position at its outset, however, was one of especial picturesqueness and attraction. After a distracted period, during which the history of the royal family is not one to cheer the loyal, or recommend the institution to those educated in other theories of national life, the advent of the young Queen, eighteen years old, brought up in a stainless retirement under the close care of a good mother, and unconnected, even in the most distant way, with any of the royal scandals or miseries, was like a sudden breath of fresh air let into the vitiated atmosphere. No one knew anything but good of the young lady destined to such a charge; but there were, no doubt, many alarms among the statesmen to whom it was committed to guide her first steps in life, and who had been accustomed to the obstinacy and caprice of princes, and knew that the house of Guelf had no more natural love for constitutionalism than any other reigning house. There is a picture in the corridor at Windsor Castle (a gallery full of beautiful and costly things, but where the state pictures that clothe the walls *laisent beaucoup à désirer* in the way of art) in which is represented the first council of the young Queen; and it would be a hard heart which could look without some tenderness of sympathy at the young creature, with her fair, braided locks, and the extremely simple dress of the period, a dress which increases her youthful aspect, seated alone among so many remarkable men, no one of them less than double her age, and full of experience of that world which it was impossible she could know anything of. A hundred years hence, in all likelihood, this incident will attract the

imagination of both painter and poet with all the enchantment added that distance lends, and the young Victoria, in her early introduction to life, will refresh the student of those arid fields of diplomacy and politics with the sudden introduction of human interest, tenderness, and hope. How finely she responded to the lessons of her early mentors, and how thoroughly in accordance with all the highest tenets of constitutionalism her life has been, it is not necessary here to tell. Queen Victoria is indeed the ideal of the constitutional monarch. No one before her has fulfilled the duties of this exalted and difficult post with the same devotion, with so much self-denial, and so little self-assertion. She has made the machine of state work easily when it was in her power to create a hundred embarrassments, and has suppressed her own prepossessions and dislikes in a manner which has been little less than heroic. She is the first of English sovereigns who has never been identified with any political party, nor ever hesitated to accept the man whom the popular will or the exigencies of public affairs have brought to the front. It is known that in some cases this has been a real effort; but it has always been done with a dignified abstinence from unnecessary protest or complaint. The very few early mistakes of her girlish career are just enough to prove that it is to no want of spirit or natural will that this fine decorum is to be attributed. A tame character might have obeyed the logic of circumstances, but this has never been the characteristic of the house of Brunswick, which without much demonstration of talent has always had abundant character both in the English and French sense of the word. No one should be able to understand this better than the great American nation, which might have been another vast England, as loyal as Canada, had King George been as wise, as self-restrained, and as constitutional as his granddaughter. Perhaps the world will say that, so far as this goes, it was well that the hot-headed old monarch was not constitutional, but obstinate as any Bourbon.

It is an additional charm to the general heart which in all bosoms beats so much alike, that the Queen acquired this noble self-command, as she has herself most ingeniously told us, by the teaching of love. A girl full of animation, very warm in her friendships, and disposed, perhaps, to take up with equal warmth the prepossessions of those about her, it was her good fortune to find in her husband one of those rare characters which appear, like great genius, only now and then in the world's history. A mind so perfectly balanced,

so temperate, so blameless, so impartial as that of the Prince Consort, is almost as rare as a Shakspeare, and its very perfection gives it an aspect of coldness, which stands between it and the appreciation of the crowd. Thus, it was not till after his death that England was at all duly conscious of the manner of man he had been; but from the date of the marriage, this wonderful, calm, and passionless, but strong and pure personality enfolded and inspired the quicker instincts and less guarded susceptibilities of the Queen. The story of their courtship has been given by herself to the world, and forms a little romance of the most perfect originality, in which something of the Arabian Nights, or the old courtly fairy tale, mingles with the perennial enchantment which is in the eyes of the simplest youth and maiden. The rarity of the circumstances,—the touching and childlike dignity of the young Queen, conscious how much she has to bestow, and how large a circle of spectators are watching, breathless, for her decision, yet, full of a girl's sweet sense of secondariness to the object of her love and proud delight in his superiority,—gives such a reading of the well-known subject as fiction dares not venture upon. There are many who think the position of the young monarch, for whom it was necessary to make her own choice and signify it, a most unnatural one; but we venture to say these critics would change their opinion after reading that pretty chapter of royal wooing. Had either the young Queen or the Prince been of the wayward kind, which choose perversely and will not see what is most befitting for them, the story might have been very different; but happily, this was not so, and it is the Prince Charmant, gallant and modest, approaching his Fairy Queen, whom we see in the handsome young German bowing low before those blue eyes, regal in their full and open regard, which veil themselves only before him. There was a story current at the time, that at a state ball, very near the period of their betrothal, the young lady gave her princely suitor a rose, which he, without a button-hole in his close-fitting uniform, slit the breast of his coat to find a place for, and that this was a token to all the court of the final determination of the great event,—her Majesty, as it is pleasant to hear, having shown herself a little coy and disposed to put off the explanation, as happy girls are wont to do. No more perfect marriage has ever been recorded; the Queen herself attributes the formation of her character to it, and all that is most excellent in her life. The spectator will naturally add that, even were this true to its fullest extent, the mind which took so high an impress, and has

preserved it for so many years after the forming influence was gone, must have been very little inferior to it. As a matter of fact, her Majesty's less perfect balance of mental qualities has always furnished the little variety that ordinary people love, and she was at all times more popular than her husband, better understood and more beloved.

The first time I saw the Queen was on the occasion of some great public ceremonial in Liverpool, when she must have been in the fullness of her early prime, somewhere about thirty. She was then much like the portrait which the readers of this magazine have now presented to them.* Her eyes seemed to me her most remarkable feature: they were blue, of the clearest color, not dark enough ever to be mistaken for black, but with nothing of the washy grayness into which blue eyes occasionally fall on the other side. This beauty was very much enhanced by the straightforward, all-embracing look, which, to my fancy,—that of an admiring girl some ten years younger,—was queenly in the highest degree. It was the look of one who knew, with all modesty and composure, yet with full conviction, that she could encounter no glance so potent, so important, as her own. She met the thousand faces turned toward her with a royal serenity which it is impossible to describe. By nature the Queen is shy, and shrinks from the gaze of the crowd, but her look was sovereign over all such natural tendencies,—the true gaze of a Queen. This is less remarkable now, perhaps, than it was in her younger days; but the reader will see something of this open-eyed serenity in the eyes of the portrait, though they are those of a girl of nineteen.

With this royal look is conjoined the faculty, most important to a royal personage, of never forgetting any one who has been presented to her, a piece of princely courtesy which is most captivating to the unremarkable individuals who know no reason why their homely personality should be remembered by the Queen. Considering the numbers of people who are brought under her notice, this is a very remarkable gift, and it is essentially a royal one. Perhaps it is the kind of endowment which we can most readily imagine to have been transmitted through generations of royal persons, trained to this quickness of discrimination and retentiveness of memory: it is, we believe, a quality of all her family, and it is one of the special politenesses of princes. The Queen's extraordinary memory is evidenced in other ways. It is said there is no such genealogist in her kingdom, no one who remembers so clearly who is who,

* [See frontispiece.]

and by what alliances and descent he came to be what he is. I remember a story told by a court lady of a question which arose at the royal table between herself and Lord Beaconsfield as to some obscure Italian duke who had brought himself into notice on account of a piece of public business. Who was he? "There is one person who could give us the information," said the astute statesman, and when an occasion offered he asked his question. "The Duca di——? Oh, yes, I remember perfectly," the Queen is reported to have said, and forthwith gave a sketch of his family history, whom he had married, and whom his father had married, and how his importance came about. The humblest person who has this gift becomes a most amusing companion, and considering that the Queen has in her life received almost everybody of importance in the civilized world, the extent of her information in this particular only must be prodigious, as well as of the deepest interest. She has acquired many other kinds of knowledge during the long period of her reign, and, it is said, is more deeply learned in the noble craft of statesmanship than any of her councillors. She knows precedents and examples as a lawyer who has pleaded half the cases in the records knows those that belong to his trade. Every public document, and all the correspondences and negotiations going on throughout the world, have to pass through her hands; and if the Blue Books afford occupation for all the spare time of an assiduous member of Parliament, it may be supposed what the Queen has to work through, whose office does not permit her to dwell upon one point that may interest her and slur over the others, but who must give her attention to all. We have it on the authority of a cabinet minister that this work has never been retarded by a post, never failed at the period appointed, throughout years of uninterrupted diligence; for, whatever holidays the rest of us may indulge in, there are no holidays for the Queen. There is always something going on in one part or other of her great dominions, always some foreign event to keep attention vigilant, even when the most profound tranquillity may reign at home. A prime minister even is occasionally out of office, though not perhaps with his own will; but the sovereign is constantly in office and, wherever she goes, has always a messenger in waiting and dispatches and state papers pursuing her. Thus, of all the laborious professions in the world, that of constitutional monarch may be reckoned among the most arduous; nor are the pageants of the court the lighter parts of the work,—the shows and cere-

monies to which the presence of the Queen lends dignity, are not at all matters of play to the principal figures. If ever the Queen risked her popularity for a moment, it was when she intermitted these regal appearances and gave up the shows of state. No one can be more popular than the Princess of Wales, of whose beauty the English people are proud, and whose amiability is one of the dogmas of the national creed: yet when that fair and beloved Princess takes for her Majesty the fatiguing and unmeaning duty of a drawing-room, there is a general sense of disappointment. The English public is without bowels in this respect, and would have the Queen do everything. To stand for hours and see the fair procession file past, and extend a hand to be kissed, or acknowledge a courtesy in monotonous succession,—to form the most important part in a state procession, marshaled and regulated by anxious care as if it were an affair of the most vital national importance,—even to drive at a foot's pace through innumerable streets, and bow to cheering throngs for hours together,—involve a strain of nerves and muscles and an amount of bodily fatigue which would break down many a humbler woman. But all this is in the day's work, in addition to her far more important duties, for the Queen. The most severe critic has never asserted that she neglected the greater affairs of state; but she has shrunk, as we all know, from some of the lighter ones, though never with the consent of her people. There were many younger and more beautiful in the procession which passed up the noble nave of St. George's, ushered by gorgeous mediæval heralds, on the last occasion of a royal marriage, but none that fixed the crowd like the one small figure walking alone, with the miniature crown (not the one worn in the frontispiece, but a model of the *couronne fermée*, the royal crown of a reigning sovereign) in a white blaze of diamonds upon her head, above the wedding veil which she had worn at her own marriage, and which now, folded back from her mature maternal countenance, fell over the black dress of her widowhood, which she never changes for any ceremonial.

"On her each courtier's eye was bent,
To her each lady's look was lent."

Much of the divinity which hedged a king has disappeared in these days; loyalty as a sentiment is rather laughed at than otherwise (though we believe it exists as strong and genuine as ever, at least in England); but yet there is something beyond the mere respect for a good woman which inspires this universal feeling.

When the period which will be known in

history as the reign of Queen Victoria is as the reign of Queen Anne, and the historical critic, looking back, sums up her character with the same impartiality, it will probably be upon the great grief, which has made two distinct chapters of her existence, that the regard of posterity will chiefly fall. Queen Anne was a much less interesting woman in her own personality, although her surroundings and her favorites have afforded large scope for animadversion; but the tragedy of her life, the loss of her children, though a dumb and dull one according to her nature, must always create a certain sympathy for her. The tragedy of Queen Victoria's life is more clearly upon the records. As it recedes into the distance and, apart from all gossip, the spectator of the future looks back upon the story, with what interest will he see the triumphant, prosperous, happy career interrupted in its midst: one of these two royal companions suddenly falling in his prime, and the other unprepared, unwarned, stricken to the heart, lifting up her hands in an appeal to heaven and earth with that astonishment of grief which is one of its bitterest ingredients,—then rising, as every mourner must, going on again with reluctant steps, shrouded and silenced in that calamity which has taken half of herself away, for a long time stumbling along the darkened path, and never, though serenity and calm come with the years, putting aside for a moment the sense of her loss, nor ever feeling that this is more than a part of her which fulfills the duties and shrinks from the pageants of life. When, in the calm of the future, this picture rises against the horizon, it will be the point upon which all attention will concentrate. How we remember, among the confusing records of battles and conquests, the few words in which it is recorded of a great king Henry, that after his son's loss he never smiled again. The Queen has smiled again: she is too natural, too simple-hearted to shroud herself in an artificial solemnity; but the two parts of her life are distinctly marked, and the calamity which separated them cannot, by any who contemplate her history, ever be forgotten.

Her touching and brief contribution to the literature of this history will never cease to interest the historical student. There she tells the story of her love with a simplicity which is above criticism. I am aware that a great many adventitious circumstances must be taken into consideration when we estimate the immediate effect produced by such a work. A Princess publishes a birthday book in which there is nothing of the least importance, and it has a success beyond that of any

work of genius, because the Princess has done it. That is one thing, but the Queen's work is another. It is not a great literary achievement, but it has all the truth and genuine feeling and unadorned sincerity which make any human record valuable. The historian in after days will resort to it with eagerness; he will quote it entire; it will be to him the most wonderful material, the most valuable addition to his work. We will not ask to judge it as we judge George Eliot; but we may be permitted to say of it, in its perfect simplicity, something like what has been said of Rafael's sonnets and Dante's angel by a great poet,—and he never wrote any lines more beautiful and more true:

"This: no artist lives and loves, that longs not
Once, and only once, and for one only,
(Ah, the prize!) to find his love a language
Fit and fair and simple and sufficient—
Using nature that 's an art to others,
Not, this one time, art that 's turned his nature.
Ay, of all the artists living, loving,
None but would forego his proper dowry,—
Does he paint? he fain would write a poem,—
Does he write? he fain would paint a picture,
Put to proof art alien to the artist's,
Once, and only once, and for one only."

This is what, without any pretensions, or claim to excellence in the "art alien to the artist's," has been done by the Queen.

She has reached the calm of distance, and the soothing influence of age has, perhaps, begun to touch the unbroken vigor of her life. And it is of itself at once amusing and touching to conclude the few pages which are intended to accompany the portrait of a girl of nineteen by repeating, that the position of Queen Victoria is now that of one of the most experienced and instructed statesmen of the age; one of the natural governors and sovereigns—not by absolute power, but by knowledge and the force of judicious counsel, and large acquaintance with the practical working of human affairs for very nearly half a century.*

M. O. W. Oliphant.

* The writer of this short sketch would be glad to be permitted to make a personal explanation. She was persuaded some years ago to write a sort of biography of the Queen, to accompany a number of pictures in a popular newspaper, of which, as it was written only in that view as a newspaper article, she prevented any republication in England. But in America, owing to the state of the law, an English writer is helpless, and accordingly, without her sanction, the newspaper article, intended for the mere use of the moment and to form the accompanying letter-press to a number of engravings, has been republished in America under the formal title of the *Life of the Queen*. It is one of the most unfortunate contingencies of the absence of any copyright law, that a writer is thus prevented from determining which of his productions are to be given in a permanent form to the public.

GLIMPSES OF PARIS.

Go where you may, I defy you to find any scene more exhilarating than the Paris boulevards. Naples is not to be compared to them, although that Italian capital has advantages in bay, sky, landscape, and in the animation and loquacity of its streets, which Paris does not possess. But then Naples has its Vesuvius, which is continually intruding upon the feast of life with a *memento mori*. Now, the charm of Paris is, that on the boulevards life seems eternal. You remember the story of the brawny young English girl under sentence of death. Baring her arms and breast on the eve of her execution-day, and striking them with conscious health and strength, she exclaimed: "It is not possible I shall be a corpse to-morrow! I don't—I can't believe it!" This is the sort of feeling engendered on the boulevards. You cannot believe there that Death has entered the world. You could as easily expect people to tremble at a ghost story told in summer's noon. Life reigns there. Mammon is its god. In Paris you hear of nothing but earth. At funerals the dirges transport you to the opera-houses. There is nothing in the streets which challenges reflection. Vice floats as the malaria lurks above the Pontine marshes. You see nothing but objects of admiration—the lovely sky, the splendid houses, the broad avenues filled with idle animation.

There is no prettier sight in Paris, unless perhaps the Place de la Concorde should be excepted, than the Avenue de l'Observatoire. Southward lies the massive Observatory, preceded by an avenue of horse-chestnuts, so thickly planted one is chilled under them even in the dog-days. East is the new broad Boulevard du Port-Royal, with all that is left of the famous convent associated with memories of the great family of Arnauld, with Pascal, Racine, Nicole. It is now a lying-in hospital, and has the unenviable reputation of being the hospital of Paris with the greatest mortality. The boulevard is a gentle declivity to the river. West is the Boulevard Denfert Rochereau, ended by the colossal bronze Belfort Lion, and with the Foundling Hospital and Visitation Convent near its commencement at the Avenue de l'Observatoire. North lies Carpeaux's last public monument, at the end of the Luxembourg Garden; back of it are four lines of horse-chestnuts, with grass, flowers, statues, marble vases, marble pillars between them, all the walks animated by people seated,

by people walking, by children at play,—a great public drawing-room in the open air, a garden-party given daily, an ever-changing, revolving kaleidoscope; all these sights, together with Carpeaux's fountain, madly tossing torrents of water in every direction till they break in silver spray, make this scene one of the prettiest in Paris. I have never admired the group which surmounts Carpeaux's fountain. The catalogue of the Fine Arts Exhibition of 1872 describes it as the four parts of earth upholding the sphere; but it is generally called the four seasons bearing the sphere, and is the only piece of sculpture in the world which represents women as beasts of burden.

Who has not seen an engraving of Rosa Bonheur's "Horse Market," the great mart at the corner of the Boulevards St. Marcel and de l'Hôpital? It is not as animated as it was when she depicted it. The better horses are taken to the French Tattersalls in the Rue de Ponthieu. Now, a buyer in broad-cloth is rarely seen in the corner market; blue smock-shirts have it all to themselves. The scene, however, is still animated. Long strings of horses come and go, all with a wisp of straw under their tails (a sign they are to be sold),—these with orange, those with red, others with blue blankets, as the owner thinks this or that color best sets off his horse. Mules are rare. Donkeys and ponies are plenty. I have seen Newfoundland dogs larger than some of the ponies. Second-hand harness, saddlery, and vehicles of every description are also on sale. All this trade is in the hands of Normans, who are famed throughout France for sharpness.

Many people find Paris a labyrinth which makes no impression at first; but try to leave it! Wasn't it Madame de Staël who said: "Paris is of all places on earth the place where one can best do without happiness." Of course, Necker's daughter had money in her purse. There is no part of Paris which I pace with more delight than the out-of-the-way quarter east of the Rue Pascal, south of the Boulevard St. Marcel. It was still more picturesque before this boulevard came, sweeping away narrow, tortuous streets and their old houses, all wall on the street, save one or two windows with iron bars, and a thick oaken door with a *judas*, and a knocker which none but men strong enough to bear armor could lift. Is not the "*judas*" well named? It was designed to protect the in-

mates of a house from traitors who came in friendly disguise. A judas is a square iron lattice with such small spaces in the metal that no weapon could be thrust through them while the warder was reconnoitering

thirty inches wide filled with lazy slime, whose surface is all white with foam, save where larger bubbles of noxious gas drowsily float. There is no visible current. If there be no tanners or tawers, with long poles beating

A FOUNTAIN IN THE LUXEMBOURG.

the visitor. Some "judases" have a double lattice; all have an iron flap inside to keep inquisitive eyes from prying into the house and yard. In this part of Paris live all tanners and tawers and their kindred. Here, too, slink all of the shipwrecked who wish to hide from eyes which once saw them, all sails set, sailing on summer seas. Who visits those streets? Nobody who is anybody. There are the haunts of Italian models, itinerant musicians, monkey-masters, organ-grinders, chimney-sweeps. It is a picturesque sight to see them in winter, soon after nightfall, huddled around the fitful fires of some stithy (they are common in this quarter), now all aglow with the fanned coals, presently softened to shadows during the nap of the bellows. It is picturesque by day, looking for all the world like some nook of Venice or some corner of Amsterdam. Just behind the stone wall on the right, near which an Italian model is standing (her costume betrays nativity and calling) basking in the sun, and on which a laundress is resting as she chews the cud of sweet and bitter fancy,—just behind this wall sleeps the Bièvre "river," an open sewer about

measures of St. Vitus's dance and making the skins tied to those *bâtons* keep the frantic time, be sure the "river's" banks are filled with laundresses, sunken to the waist in stone holes or in wooden barrels, that their arms may be nearer the water's level. Presently we get a glimpse of the Panthéon, looming high above houses which rise terrace-like. It seems to fill all the north-western horizon. Here are no sidewalks. Vehicles never enter, except wagons with green hides, or tan-bark, or leather. In the street's middle is the kennel filled with inky water. Stone posts, such as are seen in our picture, keep vehicles at a respectful distance from houses. Though policemen now closely scan well-dressed men seen in this quarter, it had its days of splendor. The palace in which Queen Blanche lived and died is here, and is still standing,—a noble edifice, now divided into lodgings and let to tanners' clerks. It must be cold and damp, for it is sunless, as it faces north, and is at the back of a yard. Here and there are massive carved stone portals mantled with traditions of high-born lords and ladies and their revelries. Now it is the

HORSE-DEALERS.

most savage quarter of Paris. The Faubourg St. Marcel is now what the Faubourg St. Antoine was in the first French Revolution. Nowhere was the fighting more merciless than here in the days of June and during the Commune. Their beau ideal of government is anarchy. Their model society is nihilism. While the Faubourg St. Marcel is full of poor people and of the working classes, it has not many beggars. It holds more men who would knock you down, more women who would throttle you, to strip you of watch and purse, than people who would outstretch a hand for alms. The latter abound in the Faubourg St. Antoine. Few beggars are to be met in Paris, except at church doors when a costly funeral or marriage is to take place within the sacred edifice. Fewer still are ill-dressed: a Frenchman's first thought is for show; substance comes afterward. Beggars of offensive appearance are rare. They are to be seen in the remoter quarters, in neighborhoods where the working classes live, and where charity is not roused unless some gong is sounded. Moans, like "out of work," "no bread at home," "illness in the house," find deaf ears in those neighborhoods, for there such trying times come often, and are not thought to warrant piteous cry and outstretched hand. But rags, hands

which have lost their cunning, legs which refuse their office, melt hearts and loosen purse-strings in labor's haunts, for there all know that when toil ends wretchedness begins. The poor man's mite is rarely denied such woe as is represented in our woodcut, crouching under a door of the Rue du Faubourg St. Antoine, where nine-tenths of the Parisian cabinet-makers and upholsterers live and work, and to whom "Uncle" Lazarus's dumb-show is rarely a vain appeal.

Paris exercises its fascination still more on the French, even of the lower classes, than on the foreigner. The French are fond of company. You see this in a map of their country. It has more villages than any other land. Nobody lives in the champaign. Everybody is huddled in hamlets. The plowman plods miles to his furrow that both elbows may touch elbows when the hours of toil are ended. The stage directions Molière added to one of his plays exhibit his countrymen's opinion of the country: "The stage represents a rural scene, but nevertheless agreeable." This was the scene-painter's business. Paris is fascinating to the French because it offers a ceaseless round of company. Again, in Paris there are none of those social restrictions, vestiges of more aristocratic days, which chained the

working-girl to cap and woollen dress, the workman to smock-shirt and cap. In Paris the former may wear the coveted bonnet and silk dress, the latter may don what clothes his purse can provide, without challenging any emotion but envy. Besides, the see-saw of fortune, is observed by no eye, which is a great relief to vanity. Moreover, hospital and almonry open portal and purse with a facility which the provinces never know.

of dust out of the window upon the luckless servant of the first floor.

There is more unhappiness, less happiness, in Paris than in any other place on earth. There can be no happiness where houses are built as dove-cotes and families are huddled like pigeons. Did you ever read Dickens's description of a London rookery tenanted by Irish? It is a true picture of the incessant warfare waged in Paris houses.

ST. ANTOINE BEGGARS.

This fascination of Paris will be still greater to the French as the revolution of progress goes on. The Parisians themselves are getting tired of their many-storied houses.* The people of the provinces, and especially those of French Flanders and of the counties on the German and Swiss borders, say (it is a proverb with them): "A Paris house is a hell." Life is one long quarrel in most of them. Tenants must put up with a great many annoyances, if they would not be constantly in hot water. A Frenchman once told me that a servant of the story below him complained that his footman threw dust out of the window, and appealed to the hall-porter to stop it. The servants of the higher stories heard the complaint and resented it. All of them threw bushels

Frenchmen and Frenchwomen have a way of insulting people which makes chastisement impossible. One day, a well-dressed woman of eighteen entered the train for Versailles. The coach was two-thirds full of Frenchmen and Frenchwomen. I was the only foreigner. As the new-comer entered, a scrawny, brazen-faced, faded, ill-dressed woman, seated in the farthest corner of the coach, looked out of the window next her and said, in a very loud tone: "Another chick-weed seller!" Had she been taken to task for her insolence, she would have sworn by everything held sacred that her ejaculation was called forth by seeing a chick-weed seller walking on the farther side of the station, and that, so far from intending to apply it to the new-comer, she had not so much as seen the latter enter the coach. The Frenchmen and Frenchwomen giggled; it was a cowardly insult, just after their hearts, for it could not be avenged. Parisian streets are filled with decayed women, who, in the heyday of their prosperity, gave no heed to darker days

* "Everybody who has any talent of observation and any knowledge of Parisian manners and customs knows that now house-rent has become the greatest expense of wealthy people, in consequence of the general and *very moral* taste, which is daily become wider spread, for having a house of one's own, and with no tenants but one's own family."—"Journal des Débats," 8 Dec., 1878.

(their coming undreamt of), and who, at life's twilight, are obliged to sell chick-weed or to become rag-pickers to fill mouth and cover back till borne to the hospital for the last time. The insolent hag's meaning was that the new-

lapin), coming from the Champs Elysées, as she crosses the Place de la Concorde meets a music-teacher on her way to the Faubourg St. Germain to give lessons. As is a red pennon to a bull, so is a tidy dress to a hag.

IN THE STREET.

comer was doomed to this fate, for she put all her money on her back. The cowardly shaft struck, and the poor young woman turned crimson. I left the train at Asnières. It was her destination, too. I gave her my hand as she alighted. When out of the station and in the street, she showed a green cushion, such as lace-makers use, held up the delicate "woven wind" on it, and said, in a voice still trembling with emotion: "As long as I have these lissome fingers I need fear no chick-weed basket!" Our wood-cut represents just such another scene. The hag on the left, a buyer of rabbit-skins and odds and ends (there is no cry of Paris so unintelligible to foreign ears as her *Peaudpain* for *Peaux de*

She vents her spite by whispering an insult. The music-teacher casts an indignant glance at her; nothing more can be done. Who can touch pitch and not be defiled?

The Place de la Concorde is one of the most beautiful squares of Paris. The reader sees in front of him the Rue Royale, with the Madeleine Church in the distance; on the right corner of the Rue Royale is the Navy Department; on the left, its very counterpart, let out as lodgings. On the right is the Tuileries Garden; on the left, the Champs Elysées. The Place de la Concorde itself is beautiful, with its fountains, obelisk, allegorical statues of chief French cities, rostral and other lamp-posts, on which gilding has been lavished, its

throng of promenaders and greater throng of vehicles. At night it fairly glows, so many are its lighted lamps.

Would you know to whom we owe a great part of this beauty? Glance at the engraving on page 80. It represents "a fairy." The lovely arrangement of trees, the incessant round of flowers which delight us from one year's end to another, their skillful grouping, the wonderful or beautiful mosaic of plants with colored leaves, the well-trimmed lawns, broken only by Pampas grass in tufts,—all these pleasures we owe to the gardener. He is seated on a marble bench in what was once the private garden of the Tuileries. He forgets the beds of monthly roses, the violets, rhododendrons, and other floral wealth of this garden. He is gazing on the workmen busy in tearing down the palace of the Tuileries and the vehicles passing along the street, for a broad street has been made through the private garden.

There have always been in Paris many more houses occupied by only one family than foreigners commonly suppose. Again, many other families are housed substantially as if they were the only tenants under the roof which covers them. Shop-keepers, for instance, who live on the ground-floor, with the half-floor above as lodgings and the cellar below for wine-vault and coal-cellar, are as completely independent as if the whole house were tenanted by them alone. They go, they come, they receive whom they please, without attracting anybody's attention. A great many artists enjoy similar independence. Their studio occupies two-thirds of the space rented. Their lodgings are back of it. The studio is so high-pitched it reaches to the ceiling of the half-floor above; back of the studio the artist has kitchen and dining-room on the ground-floor, bed-chambers on the half-floor above. These studios, like shops, are rented on condition that six months' rent be paid in advance, and subsequent quarters' rent on the usual rent days, as collateral security that the tenant will not disappear with all his household goods some dark night. In all the uncommercial streets the ground-floor is let for lodgings. These have no door on the street (as shops and studios have); their windows are grated; so there is no danger of the tenants' disappearance against the landlord's will; hence, their rent is not paid in advance. Their tenants are almost as independent as if they were sole occupants of the house of six stories.

The number of private houses tenanted by one family is also much greater than foreigners imagine. These houses are of all classes, from the mansions of the Faubourg St.

A TYPE.

Germain and avenues near the Triumphal Arch to the cozy Anglo-American houses (planned by Napoleon III.) of the Rue de l'Elysée, down to the petty lodges in the Rue Bézout and its neighborhood. I have been offered a house of the latter class for \$160 a year. The house has a yard, plentiful water, excellent cellars, a ground-floor, a "first" floor, and a garret,—really a very snug abode, within two minutes of Montparnasse station, where pass five lines of tramways and innumerable omnibuses.

Railways and tramways, which now reach almost every suburban village, have led a great many people to move to the country. Here a whole cottage may be had for less than the cost of lodgings in Paris. Families where children are numerous are almost goaded to these suburban villages, for Parisian landlords are most inhospitable to infants. One is constantly told as one negotiates for lodgings: "If you have a dog, or a cat, or a bird, or a piano, or children, or a sewing-machine, we cannot let to you." Grass asks no questions.

Another way to secure almost all the independence enjoyed in our American houses is to take lodgings in a small house. There are thousands of houses which contain only three families; and as these houses are sought by

THE "FAIRY" OF THE TUILERIES GARDEN.

people fond of a quiet and independent life, they are noiseless. Moreover, being small in every way, no large family can live in them. I have for years lived in a house where we were only six persons all told. These small houses are really like clubs. Their tenants rarely change. My lodgings, for instance, have had only two tenants in forty years. My predecessor took them when the house was built, and quitted them solely because the landlord doubled the rent. In these small houses tenants have known each other for years, and show a forbearance toward each other never found in larger houses, where every three months somebody leaves and a new neighbor comes. Again, this union of tenants makes them all-powerful in the house, and keeps the hall-porter their very humble

servant; he holds office at their good-will and pleasure.

A great many of these small houses are rented by two families. I have time and again been asked to join another tenant as co-tenant of one of these houses. The arrangement would have added only \$60 a year to my house-rent. The hall-porter is discarded. A common letter-box is added to the front door. Each tenant has his own door-bell. One may live very cheaply and comfortably in this way.

One now constantly sees in Paris newspapers this advertisement: "To be let, a large set of rooms on the first floor, forming a private mansion; five large bed-chambers, five dressing-rooms, a smoking-room, a dining-room, two drawing-rooms, ball-room, stable,

STREET IN OLD PARIS.

coach-house, cellars, water, gas, private yard, for \$1200 a year." This privacy is secured by a very simple artifice, which may be indicated roughly as follows, though not in the proper proportions:

- A Carriage-way and street door of first floor.
 B Carriage-way and street door common to all other floors.
 C Staircase to first floor with hall-porter's lodge.
 D Common staircase and common hall-porter's lodge.
 E First floor's stable and coach-house.
 F First floor's private yard. G Common yard.

By this arrangement, all ground-floor, *entresol*, and first-floor lodgings are substantially as private as if they were respectively so many private houses.

VOL. XXVII.—9.

In mansions, each floor is a complete house in itself. Each floor contains two or three drawing-rooms, many bed-chambers (each with its own dressing-room), a billiard-room, a study, a dining-room, a bath-room, a kitchen, a state staircase and a servants' staircase (these are common to the whole house). Breakfast is invariably served in the bed-chamber. All the members of the family meet only at lunch and at dinner.

When I came to observe the conditions of Paris life, I was amazed at the better air and greater privacy the rich enjoy here. The wealthier classes of New York possess no such advantages. I could mention street after street where householders (by which I mean tenants on each floor) may throw front and back windows wide open without fear of peering eyes opposite.

In front of these houses is a large yard with buildings (stables, offices, coach-houses) a story and a half high. The houses on the other side of the street have similar yards and buildings in front of them. The houses on each side of the street are so far removed

from this thoroughfare, that the low buildings in the front yard completely intercept the view. The carriage-way is always closed by massive doors eighteen or twenty feet high. It is impossible to conceive how completely

neath them, rarely grass, still more rarely flowers. You see nothing but sodden earth covered with weeds.

This quiet and privacy are pleasing. You seem to be buried in some rural park. And

PUBLIC BENCHES.

all street noises are shut out by this arrangement. The streets where these mansions are to be found are not noisy; but even in the Bibliothèque Nationale, when the Rue Richelieu was twenty times more noisy than it now is (then the Avenue de l'Opéra was unopened), I have often been astonished at the rural quiet students enjoyed in its reading-room. There was not heard the least rumble of the street's ceaseless traffic. Marshal Von Moltke, in his recently published letters to his wife, makes a similar remark about the quiet of the Tuileries.

Back of all houses in the Faubourg St. Germain, garden abuts on garden on three sides. I ought rather to say grove than garden. There is nothing but trees. They are planted as thickly as they can be. They are put there not for shade or for ornament, but simply as screens. There is rarely a walk be-

yet the operas, theaters, museums, libraries, boulevards, and the Bois de Boulogne, are near by.

Few people imagine the wealth and splendor of Paris mansions. I should not like to estimate the market value of the two marble palaces owned by the Rothschilds,—these palaces are in the very heart of Paris, in the Rue Laffitte, have large front yards, and still larger gardens,—or of the late Duke de Galliera's mansion in the Rue de Varenne, familiar to Americans as the residence of one of our ministers here, and of Colonel Thorne years afterward. But I do know that the Baroness de Pontalba spent a million of dollars on her mansion forty years ago, and every year added something to its beauty. At her death, which recently occurred, the Baron Gustave de Rothschild gave a million of dollars for it, and has spent \$300,-

ooo more in fitting it for habitation. When the late Mr. Hope bought his mansion, forty-five years ago (now well known as the Princess de Sagan's home), the "Black Band" made sure of getting it, and subscribed \$50,000 among themselves to strip the house of its works of art and keep them in their hands for speculation. The "Black Band" were a set of speculators who clubbed together to buy valuable houses throughout France, strip them of every work of art, then sell the houses and divide the works of art among themselves for resale. Baron Seillière bought this mansion at Mr. Hope's death; it is understood he gave \$800,000 for it, and got it at a bargain at this price; even the floors of that mansion are works of art. Mme. Lehon paid \$27,000 for the paving of the yard of her mansion in the Rond-Point des Champs Elysées (it is now the Italian embassy). Mme. de Paiva spent above a million on her mansion in the same neighborhood. In her house, every door-knob, window-knob, each banister of the staircase, is of bronze, designed especially for her, and the mold broken after the piece was cast. The stairs and mantel-pieces of this house are of malachite.

It is extremely interesting to wander among these splendid mansions, built at different periods of time, and to note the changes which civilization has made in their arrangements. The older houses reveal the insecurity of the age in which they were built. A man's house is now his castle much more truly than when it was defended by battlements and protected by moat and portcullis. Isaac of York now puts his valuables behind plate glass, under a gas-jet.

I saw with pleasure the hospitable stone benches let into the wall on each side of the portal of nearly all of these houses. 'Tis something to give the weary rest. 'Tis a beginning of hospitality—or, may be, the last vestige left of an earlier hospitality when every door was open, a chamber for silk, offices for rags, and a hall with endless, generous board for all.

In the newer and "improved" parts of Paris, iron railings now bar these antique seats from the wayfarer. The Rothschilds' mansions alone give the olden hospitality. Elsewhere, the public provide for the public. Free seats are everywhere to be found. They are always full. Nothing in Paris astonishes a stranger more than the number of idlers, of both sexes, found at every turn. One expects to see soldiers sauntering everywhere; for, despite Prince von Schwartzenberg's warning to Louis Napoleon when the latter made his *coup d'état*, "You can

ANGLERS.

do everything with bayonets but sit upon them," no Continental government has yet been able to make for itself any other than this very expensive and extremely uncomfortable seat. But the other idlers must eat, at least sometimes; must lodge, even though in garret; must cover themselves with smock-shirt and trowsers if with nothing else. Garret, food, and clothes cost money; and even nickels cannot be had without labor. How do all these idlers live? Many of them are thieves. Nine-tenths of Parisian workmen ply their trades only four or five of the days of the week, just enough to earn a scanty support. Hence it has been found that the enormous increase of wages of Parisian workmen (it is at least fifty per cent.) has in no manner bettered their condition. On the contrary, they are worse off. The larger their daily pay, the fewer days they work; idleness lessens their skill; toil becomes distasteful; expensive habits are contracted; home, wife, and children are deserted; the hospital is reckoned on in illness, the poor-house in old age. Many a Frenchman's ideal of earthly bliss is to be idle, to stroll the streets. During the siege, in 1871, the Parisians led their ideal life. They had no rent to pay; they had eighteen cents a day and no work to do. When the war was ended, and it became necessary to pay house-rent and to set to work, they flew to arms rather than accept the harsh alternative. Our illustration represents one of these idlers. She is a maid-

LE CONCIERGE.

of-all-work who has retired from service. If she have twenty cents a day to live on, she is more than satisfied. She lives in a garret closet without a chimney, with sky-light for a window, which she gets cheap in some old house in a narrow street of the Latin Quarter. She is her own laundress. She buys her clothes, even her shoes and stockings, second-hand. She breakfasts on bread and cheese, buys a few cents' worth of beef-tea in which she soaks bread for dinner, eats dry bread rubbed with garlic or onion, and followed by two cents' worth of fire-water as corrosive as modern chemistry can make it, and consents to vegetate in this wretched way that she may live in idleness, sitting all day long on a public bench of the Luxembourg Garden if the weather be fair, or in a chair of some church or chapel if the day be inclement. She might still get occupation, have chamber free, a plenty of good food and wine; but she would have to work for them. She prefers to starve in idleness. The river's banks, too, are lined with idlers. They are not on the bank alone. If you think a patient Frenchman is not to be found, go to the river and use your

eyes. You will find there in mid-stream bipeds with long hoes scraping up river sand, to gather from it gleanings of all the objects crime or accident or flood tosses into the stream. There are shops in the Quai de l'Horloge where these objects may be seen and bought. There are some of them in the Hôtel de Cluny; more in the Hôtel Carnavalet. You will find on the river's banks gatherers of corks, which are always found in eddies; these corks are recut and made to do duty again. But of all the patient Frenchmen to be seen, there are none so patient as the fishermen represented in our wood-cut. They are at the foot of the Louvre, half-way between the Pont Neuf and Pont des Arts (the bridge seen in our wood-cut, with the Palais de l'Institut across the river beyond it). There they stand all day, though the only object which sinks their bob be floating weed. Fish they never catch. What fish could live in those polluted waters? Nevertheless they are happy, for they are idle.

Old architects sacrificed everything to security. The value of sun and air was unknown. Science has let light and pure air into all these abodes, where the lattice had

more lead than glass, where not a casement opened save on a court, and no draught changed the air on the court. See the mediæval houses on streets narrower than lanes, with the well in the central court (the sole supply of water), receiving with the aid of wind and rain all the refuse of roof and yard, and with their ground-floor rooms chilling in August, and you will not wonder at the story of the plague; your wonder will be that people could have lived amid all these foes to life.

But even now the full value of sun and air is unknown to Frenchmen. You are made very sensible of this when you go hunting lodgings. The first question asked is invariably, "What is the rent?" And you may ask what question you please, the hall-porter always answers, "The rent is so much a year"; until you let him know that the price suits your purse, it is vain for you to ply him with queries. The reason is plain. In Paris, lodging is a mere episode of life. The epic is dress. The necessities of life are marshaled in this order: Dress, Dress, Dress, Theaters, Cafés, Eating, Lodgings. And do you suppose that "plaster-wipers" appreciate the full value of sun and pure air? "Plaster-wipers" are people who have discovered the art of living in Paris rent-free. The Italians have a saying: "When I build a house, the first year after its completion I give it to my enemy; I rent it to my friend the second year; I myself tenant it the third year." The first year after a house has been built the dampness and drying of the walls make it fatal to the tenant; a twelvemonths' habitation, with fires all winter, open windows all summer, greatly lessens its dangers; in twenty-four months all peril has disappeared. The French hold the same opinion. People who care or who can afford to care for their health shun new houses. So a new house cannot be let except to "plaster-wipers." They flock wherever they see a new house built. They have no furniture, except the objects which the law exonerates from levy of distress warrant. No inquiries are made about them. While a bill for rent is sent to them on quarter-day, it is rather to assert authority than with hope of payment. When the third quarter comes around, notice to quit is served on them, but never enforced until a tenant appears who wants the lodgings they occupy. Then adieu! No rent is expected of them. They have done all that was asked of them: they have wiped the plaster dry; they have given the house an inhabited look; they have decoyed to it respectable tenants. At what cost to themselves! They are lucky if they have only rheumatism, and have lost only

teeth and hair. Diseases of the throat and chest decimate them. But they can pay rent with life easier than with money, for they can lay down life; they cannot lay down coin.

How lenient Paris is to these tall houses built to be rented! Paris refuses to admit that there is a single house within its walls more than five stories high. What knowledge of human nature it reveals in the nomenclature of stories! Here is "the level-with-the-street." No story, mind you! Above it, is "the between-ground" (and first floor understood). Then when you are fairly three stories above ground comes the first floor. Next—second, third, fourth, fifth. Here the stories end. If the landlord's purse is buoyant enough to bear the tenant up still higher, he reaches the *mansarde*, or, higher still, *combles*. If you have a poor acquaintance perched half-way to Uranus, call on him and ask the hall-porter to direct your ascent. The hall-porter will not use even these words, but will say, "Go to the fifth floor, turn to your left, and then *mount!*" If you ask, "Mansard?" "Attic?" he will notice no other reply. They lie beyond Hercules' Pillars.

Our wood-cut shows the hall-porter, his family, and his lodge. He is a tailor. This trade is preferred to the shoemaker's as being less noisy. But the lodge is not quiet. Frenchmen cannot live without noise. Bird in cage, infant in arms, child old enough to play letter-carrier to the household, and especially Madame Cerbère, supply all necessary noise. According to tradition, when Hugh Cape determined to make La Cité his home, somewhere nigh a thousand years ago, he added two immense buildings to the palace. One of these wings was (and is to this day) called *Conciergerie*, and served both for barracks and for jail. The command and management of the *Conciergerie* were confided to a captain of noble birth, who received the title (from which the building took its name) of Comte des Cierges (the Earl of Wax-Tapers), and was invested with many prerogatives and privileges. It continued to be an office of lucre and importance even so late as 1712, when it was shorn of its judicial powers.

It has not been many years since the hall-porters of Paris assumed the venerable title of Comte des Cierges. When Sterne visited Paris they were called Suisses. The familiar proverb, "*Point d'argent, point de Suisse*," means, "If you be penniless, you can't have a hall-porter"; or, in other words, "If you be penniless, you yourself must answer the door-bell."

The Swiss were for centuries, indeed down to July, 1830, the king's body-guard. The Swiss nearly monopolized the places of hall-

porters, messengers, and bank-collectors. They owed this monopoly to their sterling integrity of character. Down to the revolution of 1848, ninety-seven of every hundred collectors of the Bank of France were Swiss. During those stormy days a mob insisted that the Bank of France should employ none but Frenchmen, and the Bank was obliged to discard its Swiss until quieter times returned. The lesson was not lost on the Bank. As the Swiss collectors died or retired, Frenchmen were appointed to the vacancies. In the English embassy, and in some of the old noble mansions of the Faubourg St. Germain, you may still see the direction over the hall-porter's lodge, "Speak to the Swiss!" The beadle in churches is still called the Swiss. In new houses the old direction has been discarded for "Speak to the *concierge*," and the tendency now is to omit everything except the word *concierge*. After Swiss went out of use, *portier* came into vogue; but its favor was ephemeral, and it is now to be seen only in some of the older houses near the great markets, and even here I have noticed it only on two or three lodges. The more aristocratic term, *Comte des Cierges*, is now generally in currency, having been corrupted into *concierge*, just as *Chère Reine Croix* has become Charing-Cross.

Most travelers tell how, in Paris, one may live for years in a house without knowing anything about neighbors. These travelers could not have spoken French. I am not, I believe, very inquisitive, and find little charm in gossip. Nevertheless, I not only have never lived in a Paris house without knowing the name, history, and occupation of each tenant

and his family, but the same information about everybody in the neighborhood. The more secluded, the more retired a street is, the less seclusion the inhabitants enjoy.

The hall-porter's lodge is the place where the skeletons that haunt the families overhead are kept. He knows all their secrets,—butcher, baker, coal-dealer, tailor, milliner, mantua-maker, servants, all tell their tales to him. A thousand stealthy figures come and go over his threshold, asking a thousand questions, and by these very questions throwing a flood of light on his tenants' history. There, creditors obtain, by palm-crossing, ink-lings of their debtor's true position. There, tenants in debt, by still more generous palm-crossing, throw dust into creditors' eyes. There, the police ascertain the hours when their prey may be caught and carried to jail. Arrests usually take place between 2 and 3 o'clock A. M., the only hour of the four-and-twenty when the tides of Paris life know slack water. You hear the door-bell sharply rung. The portal is no sooner suddenly closed with a slam, which makes the whole house quiver, than the law's intruders strike a light. The short, abrupt questions, the heavy, imperious tread on the staircase, confirm your suspicion that they are the police. The door they seek is reached—its bell is jerked till answered. A woman's shriek is followed by hasty steps on the staircase. A door is slammed—a carriage driven rapidly away. The staircase is filled with the sobs and shrieks of a woman. Another incident is added to the hall-porter's store of gossip.

J. D. Osborne.

THOUGHT-FALL.

WHEN south-winds are richest with wealth of the rose,
And sweetness increases, each breath that blows;
When that human obscure of the sky bends above me
Like a dark eye saying its silent "I love thee!"
When his music sings on tho' the bird be at rest,
And there's light on the lily and none in the west;
When the star and the hill have gone under cover,
To the dwelling of dreams, like loved one and lover;
When passionate earth has her will with the sky,
And the black clouds stop tho' the brooks go by,—
There's a falling of thought like drops from the eaves,
And it rests in my heart like the rain in the leaves.

John Vance Cheney.

THE BREAD-WINNERS.*

XII.

A HOLIDAY NOT IN THE CALENDAR.

THE next morning while Farnham was at breakfast he received a note from Mr. Temple in these words :

"Strikes will begin to-day, but will not be general. There will be no disturbance, I think. They don't seem very gritty."

After breakfast he walked down to the City Hall. On every street corner he saw little groups of men in rather listless conversation. He met an acquaintance crossing the street.

"Have you heard the news?" The man's face was flushed with pleasure at having something to tell. "The firemen and stokers have all struck, and run their engines into the round-house at Riverley, five miles out. There won't be a train leave or come in for the present."

"Is that all?"

"No, that aint a start. The Model Oil men have struck, and are all over the North End, shutting up the other shops. They say there won't be a lick of work done in town the rest of the week."

"Except what Satan finds for idle hands," Farnham suggested, and hastened his steps a little to the municipal buildings.

He found the chief of police in his office, suffering from nervousness and a sense of importance. He began by reminding him of the occurrence of the week before in the wood. The chief waited with an absent expression for the story to end, and then said, "My dear sir, I cannot pay any attention to such little matters with anarchy threatening our city. I must protect life and property, sir—life and property."

"Very well," rejoined Farnham, "I am informed that life and property are threatened in my own neighborhood. Can you detail a few policemen to patrol Algonquin avenue, in case of a serious disturbance?"

"I can't tell you, my dear sir; I will do the best I can by all sections. Why, man," he cried, in a voice which suddenly grew a shrill falsetto in his agitation, "I tell you I haven't a policeman for every ten miles of street in this town. I can't spare but two for my own house!"

Farnham saw the case was hopeless, and

went to the office of the mayor. That official had assumed an attitude expressive of dignified and dauntless energy. He sat in a chair tilted back on its hind feet; the boots of the municipal authority were on a desk covered with official papers; a long cigar adorned his eloquent lips; a beaver hat shaded his eyes.

He did not change his attitude as Farnham entered. He probably thought it could not be changed for the better.

"Good-morning, Mr. Quinlin."

"Good-morning, sorr, to you." This salutation was uttered through teeth shut as tightly as the integrity of the cigar would permit.

"There is a great deal of talk of possible disturbance to-night, in case the strikes extend. My own neighborhood, I am told, has been directly threatened. I called to ask whether, in case of trouble, I could rely on any assistance from the city authorities, or whether we must all look out for ourselves."

The mayor placed his thumbs in the arm-holes of his waistcoat, and threw his head back so that he could stare at Farnham from below his hat brim. He then said, in a measured voice, as if addressing an assembly: "Sir! I would have you to know that the working-men of Buffland are not thaves and robbers. In this struggle with capital they have my profound sympathy. I expect their conduct to be that of perr-fect gentlemen. I, at least, will give no orders which may tend to array one class of citizens against another. That is my answer, sir; I hope it does not disappoint you."

"Not in the least," said Farnham, putting on his hat. "It is precisely what I should have expected of you."

"Thank you, sir. Call again, sir."

As Farnham disappeared, the chief magistrate of the city tilted his hat to one side, shut an eye with profoundly humorous significance, and said to the two or three loungers who had been enjoying the scene:

"That is the sort of T-rail I am. That young gentleman voted agin me, on the ground I wasn't high-toned enough."

Farnham walked rapidly to the office of the evening newspaper. He found a man in the counting-room, catching flies and trimming their wings with a large pair of office shears. He said, "Can you put an advertisement for me in your afternoon editions?"

* Copyright, 1883, by THE CENTURY CO. All rights reserved.

The man laid down his shears, but held on to his fly, and looked at his watch.

"Have you got it ready?"

"No, but I will not be a minute about it."

"Be lively! You haven't got but a minute."

He picked up his scissors and resumed his surgery, while Farnham wrote his advertisement. The man took it, and threw it into a tin box, blew a whistle, and the box disappeared through a hole in the ceiling. A few minutes later the boys were crying the paper in the streets. The advertisement was in these words:

"Veterans, Attention! All able-bodied veterans of the Army of the Potomac, and especially of the Third Army Corps, are requested to meet at seven this evening, at No. — Public Square."

From the newspaper office Farnham went to a gunsmith's. The dealer was a German and a good sportsman, whom Farnham knew very well, having often shot with him in the marshes west of the city. His name was Leopold Grosshammer. There were two or three men in the place when Farnham entered. He waited until they were gone, and then said:

"Bolty, have you two dozen repeating rifles?"

"Ja wohl! Aber, Herr Gott, was machen Sie denn damit?"

"I don't know why I shouldn't tell you. They think there may be a riot in town, and they tell me at the City Hall that everybody must look out for himself. I am going to try to get up a little company of old soldiers for patrol duty."

"All right, mine captain, and I will be the first freiwilliger. But I don't dink you wants rifles. Revolvers and clubs—like the pleecemen—dat's de dicket."

"Have you got them?"

"Oh, yes, and the belts thereto. I got der gonduct to furnish 'em to de city."

"Then you will send them, wrapped up in bundles, to my office in the Square, and come yourself there at seven."

"Freilich," said Leopold, his white teeth glistening through his yellow beard at the prospect of service.

Farnham spent an hour or two visiting the proprietors of the large establishments affected by the strikes. He found, as a rule, great annoyance and exasperation, but no panic. Mr. Temple said, "The poor — fools! I felt sorry for them. They came up here to me this morning,—their committee, they called it,—and told me they hated it, but it was orders! 'Orders from where?' I asked. 'From the chiefs of sections,' they said; and

that was all I could get out of them. Some of the best fellows in the works were on the committee. They put 'em there on purpose. The sneaks and lawyers hung back."

"What will they do if the strike should last?" asked Farnham.

"They will be supported for awhile by the other mills. Our men are the only ones that have struck so far. They were told off to make the move, just as they march out a certain regiment to charge a battery. If we give in, then another gang will strike."

"Do you expect to give in?"

"Between us, we want nothing better than ten days' rest. We want to repair our furnaces, and we haven't a — thing to do. What I told you this morning holds good. There wont be any riot. The whole thing is solemn fooling, so far."

The next man Farnham saw was in a far less placid frame of mind. It was Jimmy Nelson, the largest grocer in the city. He had a cargo of perishable groceries at the station, and the freight hands would not let them be delivered. "I talked to the rascals," he said. "I asked them what they had against *me*; that they was injuring Trade!" a deity of which Mr. Nelson always spoke with profound respect. "They laughed in my face, sir. They said, 'That's just our racket. We want to squeeze you respectable merchants till you get mad and hang a railroad president or two!' Yes, sir; they said that to me, and five thousand dollars of my stuff rotting in the depot."

"Why don't you go to the mayor?" asked Farnham, though he could not suppress a smile as he said it.

"Yes, I like that!" screamed Jimmy. "You are laughing at me. I suppose the whole town has heard of it. Well, it's a fact. I went and asked that infernal scoundrel what he was going to do. He said his function was to keep the peace, and there wasn't a word in the statutes about North Carliny water-melons. If I live till he gits out of office, I'll lick him."

"Oh, I think you wont do that, Jimmy."

"You think I wont!" said Nelson, absolutely incandescent with the story of his wrongs. "I'll swear by Matthew, Mark, Luke, and John, that I will thrash the hide off him next spring — if I don't forget it."

Farnham went home, mounted his horse, and rode about the city to see what progress the strike was making. There was little disorder visible on the surface of things. The "sections" had evidently not ordered a general cessation of labor; and yet there were curious signs of demoralization, as if the spirit of work was partially disintegrating

and giving way to something not precisely lawless, but rather listless. For instance, a crowd of workmen were engaged industriously and, to all appearance, contentedly upon a large school-building in construction. A group of men, not half their number, approached them and ordered them to leave off work. The builders looked at each other and then at their exhorters in a confused fashion for a moment, and ended by obeying the summons in a sullen and indifferent manner. They took off their aprons, went to the hydrant and washed their hands, then put on their coats and went home in silence and shamefacedness, amid the angry remonstrances of the master-builder. A little farther on Farnham saw what seemed like a burlesque of the last performance. Several men were at work in a hole in the street; the tops of their heads were just visible above the surface. A half-grown, ruffianly boy, with a boot-black's box slung over his shoulder, came up and shouted, "You — — rats, come out of that, or we'll knock the scalps off'n you." The men, without even looking to see the source of the summons, threw down their tools and got out of the hole. The boy had run away; they looked about for a moment, as if bewildered, and then one of them, a gray-headed Irishman, said, "Well, we'd better be a lavin' off, if the rest is," and they all went away.

In this fashion it came about that by nightfall all the squares and public places were thronged with an idle and expectant crowd, not actively mischievous or threatening, but affording a vast mass of inflammable material in case the fire should start in any quarter. They gathered everywhere in dense groups, exchanging rumors and surmises, in which fact and fiction were fantastically mingled.

"The rolling-mills all close to-morrow," said a sallow and hollow-eyed tailor. "That'll let loose twenty thousand men on the town, — big, brawny fellows. I'm glad my wife is in Clevalo."

"All you know about it! Clevalo is twice as bad off as here. The machine shops has all struck there, and the men went through the armory this afternoon. They're camped all along Delaware street, every man with a pair of revolvers and a musket."

"You don't say so!" said the schneider, turning a shade more sallow. "I'd better telegraph my wife to come home."

"I wouldn't hurry," was the impassive response. "You don't know where we'll be to-morrow. They have been drilling all day at Riverley, three thousand of 'em. They'll come in to-morrow, mebbe, and hang all the railroad presidents. That may make trouble."

Through these loitering and talking crowds Farnham made his way in the evening to the office which he kept, on the public square of the town, for the transaction of the affairs of his estate. He had given directions to his clerk to be there, and when he arrived found that some half-dozen men had already assembled in answer to his advertisement. Some of them he knew; one, Nathan Kendall, a powerful young man, originally from the north of Maine, now a machinist in Buffland, had been at one time his orderly in the army. Bolty Grosshammer was there, and in a very short time some twenty men were in the room. Farnham briefly explained to them his intention. "I want you," he said, "to enlist for a few days' service under my orders. I cannot tell whether there will be any work to do or not; but it is likely we shall have a few nights of patrol at least. You will get ten dollars apiece anyhow, and ordinary day's wages besides. If any of you get hurt, I will try to have you taken care of."

All but two agreed to the proposition. These two said "they had families and could not risk their skins. When they saw the advertisement they had thought it was something about pensions, or the county treasurer's office. They thought soldiers ought to have the first chance at good offices." They then grumblingly withdrew.

Farnham kept his men for an hour longer, arranging some details of organization, and then dismissed them for twenty-four hours, feeling assured that there would be no disturbance of public tranquillity that night. "I will meet you here to-morrow evening," he said, "and you can get your pistols and sticks and your final orders."

The men went out one by one, Bolty and Kendall waiting for awhile after they had gone and going out on the sidewalk with Farnham. They had instinctively appointed themselves a sort of body-guard to their old commander, and intended to keep him in sight until he got home. As they reached the door, they saw a scuffle going on upon the sidewalk. A well-dressed man was being beaten and kicked by a few rough fellows, and the crowd was looking on with silent interest. Farnham sprang forward and seized one of the assailants by the collar; Bolty pulled away another. The man who had been cuffed turned to Kendall, who was standing by to help where help was needed, and cried, "Take me away somewhere; they will have my life;" an appeal which only excited the jeers of the crowd.

"Kendall, take him into my office," said Farnham, which was done in an instant, Farnham and Bolty following. A rush was

made,—not very vicious, however,—and the three men got safely inside with their prize, and bolted the door. A few kicks and blows shook the door, but there was no movement to break it down; and the rescued man, when he found himself in safety, walked up to a mirror there was in the room and looked earnestly at his face. It was a little bruised and bloody, and dirty with mud, but not seriously injured.

He turned to his rescuers with an air more of condescension than gratitude. "Gentlemen, I owe you my thanks, although I should have got the better of those scoundrels in a moment. Can you assist me in identifying them?"

"Oh! it is Mayor Quinlin, I believe," said Farnham, recognizing that functionary more by his voice than by his rumpled visage. "No, I do not know who they were. What was the occasion of this assault?"

"A most cowardly and infamous outrage, sir," said the Mayor. "I was walking along the sidewalk to me home, and I came upon this gang of ruffians at your door. Impatient at being delayed,—for me time is much occupied,—I rebuked them for being in my way. One of them turned to me and insolently inquired, 'Do you own this street, or have you just got a lien on it?' which unendurable insult was greeted with a loud laugh from the other ruffians. I called them by some properly severe name, and raised my cane to force a passage,—and the rest you know. Now, gentlemen, is there anything I can do?"

Farnham did not scruple to strike while the iron was hot. He said: "Yes, there is one thing your Honor may do, not so much for us as for the cause of order and good government, violated to-night in your own person. Knowing the insufficiency of the means at your disposal, a few of us propose to raise a subsidiary night-patrol for the protection of life and property during the present excitement. We would like you to give it your official sanction."

"Do I understand it will be without expense to my—to the city government?" Mr. Quinlin was anxious to make a show of economy in his annual message.

"Entirely," Farnham assured him.

"It is done, sir. Come to-morrow morning and get what papers you want. The spirit of disorder must be met and put down with a bold and defiant hand. Now, gentlemen, if there is a back door to this establishment, I will use it to make my way home."

Farnham showed him the rear entrance, and saw him walking homeward up the quiet street; and, coming back, found Bolty and Kendall writhing with merriment.

"Well, that beats all," said Kendall. "I guess I'll write home like the fellow did from Iowa to his daddy, 'Come out here quick. Mighty mean men gits office in this country.'"

"Yes," assented Bolty. "Dot burgermeister ish better as a circus mit a drick mule."

"Don't speak disrespectfully of dignitaries," said Farnham. "It's a bad habit in soldiers."

When they went out on the sidewalk the crowd had dispersed. Farnham bade his recruits good night and went up the avenue. They waited until he was a hundred yards away, and then, without a word to each other, followed him at that distance till they saw him enter his own gate.

XIII.

A BUSY SUNDAY FOR THE MATCHINS.

MATTERS were not going on pleasantly in the Matchin cottage. Maud's success in gaining an eligible position, as it was regarded among her friends, made her at once an object of greater interest than ever; but her temper had not improved with her circumstances, and she showed herself no more accessible than before. Her father, who naturally felt a certain satisfaction at having, as he thought, established her so well, regarded himself as justified in talking to her firmly and seriously respecting her future. He went about it in the only way he knew. "Mattie," he said one evening, when they happened to be alone together, "when are you and Sam going to make a match?"

She lifted her eyes to him, and shot out a look of anger and contempt from under her long lashes that made her father feel very small and old and shabby.

"Never!" she said, quietly.

"Come, come, now," said the old man; "just listen to reason. Sam is a good boy, and with what he makes and what you make——"

"That has nothing to do with it. I won't discuss the matter any further. We have had it all out before. If it is ever mentioned again, Sam or I will leave this house."

"Hoity-toity, Missy! is that the way you take good advice——" but she was gone before he could say another word. Saul walked up and down the room a few moments, taking very short steps, and solacing his mind by muttering to himself: "Well, that's what I get by having a scholar in the family. Learning goes to the head and the heels—makes 'em proud and skittish."

He punctually communicated his failure to Sam, who received the news with a sullen quietness that perplexed still more the puzzled carpenter.

On a Sunday afternoon, a few days later, he received a visit from Mr. Bott, whom he welcomed, with great deference and some awe, as an ambassador from a ghostly world of unknown dignity. They talked in a stiff and embarrassed way for some time about the weather, the prospect of a rise in wages, and other such matters, neither obviously taking any interest in what was being said. Suddenly Bott drew nearer and lowered his voice, though the two were alone in the shop.

"Mr. Matchin," he said, with an uneasy grin, "I have come to see you about your daughter."

Matchin looked at him with a quick suspicion.

"Well, who's got anything to say against my daughter?"

"Oh, nobody that I know of," said Bott, growing suspicious in his turn. "Has anything ever been said against her?"

"Not as I know," said Saul. "Well, what have you got to say?"

"I wanted to ask how you would like me as a son-in-law?" said Bott, wishing to bring matters to a decision.

Saul stood for a moment without words in his astonishment. He had always regarded Bott as "a professional character," even as a "litrary man"; he had never hoped for so lofty an alliance. And yet he could not say that he wholly liked it. This was a strange creature—highly gifted, doubtless, but hardly comfortable. He was too "thick" with ghosts. One scarcely knew whether he spent most of his time "on earth or in hell," as Saul crudely phrased it. The faint smell of phosphorus that he carried about with him, which was only due to his imperfect ablutions after his séances, impressed Saul's imagination as going to show that Bott was a little too intimate with the under-ground powers. He stood chewing a shaving and weighing the matter in his mind a moment before he answered. He thought to himself, "After all, he is making a living. I have seen as much as five dollars at one of his seeunes." But the only reply he was able to make to Bott's point-blank question was:

"Well, I dunno."

The words were hardly encouraging, but the tone was weakly compliant. Bott felt that his cause was gained, and thought he might chaffer a little.

"Of course," he said, "I would like to have a few things understood, to start with. I am very particular in business matters."

"That's right," said Saul, who began to think that this was a very systematic and methodical man.

"I am able to support a wife, or I would not ask for one," said Bott.

"Exactly," said Saul, with effusion; "that's just what I was saying to myself."

"Oh, you was!" said Bott, scowling and hesitating. "You was, was you?" Then, after a moment's pause, in which he eyed Saul attentively, he continued, "Well—that's so. At the same time, I am a business man, and I want to know what you can do for your girl."

"Not much of anything, Mr. Bott, if you must know. Mattie is makin' her own living."

"Yes. That's all right. Does she pay you for her board?"

"Look here, Mr. Bott, that aint none of your business yet, anyhow. She don't pay no board while she stays here; but that aint nobody's business."

"Oh, no offense, sir, none in the world. Only I am a business man, and don't want misunderstandings. So she don't. And I suppose you don't want to part with your last child—now, do you? It's like breaking your heart-strings, now, aint it?" he said, in his most sentimental lecture voice.

"Well, no, I can't say it is. Mattie's welcome in my house while I live, but of course she'll leave me some day, and I'll wish her joy."

"Why should that be? My dear sir, why should that be?" Bott's voice grew greasy with sweetness and persuasion. "Why not all live together? I will be to you as a son. Maud will soothe your declining years. Let it be as it is, Father Saul."

The old carpenter looked up with a keen twinkle of his eye.

"You and your wife would like to board with us when you are married? Well, mebbe we can arrange that."

This was not quite what Bott expected, but he thought best to say no more on that subject for the moment.

Saul then asked the question that had all along been hovering on his lips.

"Have you spoke to Mattie yet?"

The seer blushed and simpered, "I thought it my duty to speak first to you; but I do not doubt her heart."

"Oh! you don't," said Saul, with a world of meaning. "You better find out. You'll find her in the house."

Bott went to the house, leaving Saul pondering. Girls were queer cattle. Had Mattie given her word to this slab-sided, lanky fellow? Had she given Sam Sleeney the mitten for him? Perhaps she wanted the glory of being Mrs. Professor Bott. Well, she could do as she liked; but Saul swore softly to himself, "If Bott comes to live offen me, he's got to pay his board."

Meanwhile, the seer was walking, not without some inward perturbation, to the house, where his fate awaited him. It would have been hard to find a man more confident and more fatuous; but even such fools as he have their moments of doubt and faltering when they approach the not altogether known. He had not entertained the slightest question of Maud's devotion to him, the night she asked from him the counsel of the spirits. But he had seen her several times since that, and she had never renewed the subject. He was in two minds about it. Sometimes he imagined she might have changed her purpose; and then he would comfort himself with the more natural supposition that maiden modesty had been too much for her, and that she was anxiously awaiting his proffer. He had at last girded up his loins like a man and determined to know his doom. He had first ascertained the amount of Maud's salary at the library, and then, as we see, had endeavored to provide for his subsistence at Saul's expense; and now nothing was wanting but the maiden's consent. He trembled a little, but it was more with hope than fear. He could not make himself believe that there was any danger—but he wished it were over and all were well. He paused as he drew near the door. He was conscious that his hands were disagreeably cold and moist. He took out his handkerchief and wiped them, rubbing them briskly together, though the day was clear and warm, and the perspiration stood beaded on his forehead. But there was no escape. He knocked at the door, which was opened by Maud in person, who greeted him with a free and open kindness that restored his confidence. They sat down together, and Maud chatted gayly and pleasantly about the weather and the news. A New York girl, the daughter of a wealthy furrier, was reported in the newspaper as about to marry the third son of an English earl. Maud discussed the advantages of the match on either side as if she had been the friend from childhood of both parties.

Suddenly, while she was talking about the forthcoming wedding, the thought occurred to Bott, "Mebbe this is a hint for me," and he plunged into his avowal. Turning hot and cold at once, and wringing his moist hands as he spoke, he said, taking everything for granted:

"Miss Maud, I have seen your father and he gives his consent, and you have only to say the word to make us both happy."

"What?"

Anger, surprise, and contempt were all in the one word and in the flashing eyes of the young woman, as she leaned back in her rocking-chair and transfixed her unhappy suitor.

"Why, don't you understand me? I mean ——"

"Oh, yes, I see what you mean. But I *don't* mean; and if you had come to me, I'd have saved you the trouble of going to my father."

"Now, look here," he pleaded, "you aint a-going to take it that way, are you? Of course, I'd have come to you first if I had 'a' thought you'd preferred it. All I wanted was ——"

"Oh," said Maud, with perfect coolness and malice,—for in the last moment she had begun heartily to hate Bott for his presumption,—"*I* understand what *you* want. But the question is what *I* want—and I don't want you."

The words, and still more the cold monotonous tone in which they were uttered, stung the dull blood of the conjurer to anger. His mud-colored face became slowly mottled with red.

"Well, then," he said, "what did you mean by coming and consulting the sperrits, saying you was in love with a gentleman ——"

Maud flushed crimson at the memory awakened by these words. Springing from her chair, she opened the door for Bott, and said, "Great heavens! the impudence of some men! You thought I meant *you*?"

Bott went out of the door like a whipped hound, with pale face and hanging head. As he passed by the door of the shop, Saul hailed him and said with a smile, "What luck?"

Bott did not turn his head. He growled out a deep imprecation and walked away. Matchin was hardly surprised. He mused to himself, "I thought it was funny that Mattie should sack Sam Sleeney for that fellow. I guess he didn't ask the sperrits how the land lay," chuckling over the discomfiture of the seer. Spiritualism is the most convenient religion in the world. You may disbelieve two-thirds of it and yet be perfectly orthodox. Matchin, though a pillar of the faith, always keenly enjoyed the defeat and rout of a medium by his tricky and rebellious ghosts.

He was still laughing to himself over the retreat of Bott, thinking with some paternal fatuity of the attractiveness and spirit of his daughter, when a shadow fell across him, and he saw Offitt standing before him.

"Why, Offitt, is that you? I did not hear you. You always come up as soft as a spook!"

"Yes, that's me. Where's Sam?"

"Sam's gone to Shady Creek on an excursion with his lodge. My wife went with him."

"I wanted to see him. I think a heap of Sam."

"So do I. Sam is a good fellow."

"Excuse my making so free, Mr. Matchin,

but I once thought Sam was going to be a son-in-law of yours."

"Well, betwixt us, Mr. Offitt, I hoped so myself. But you know what girls is. She jest wouldn't."

"So it's all done, is it? No chance for Sam?" Offitt asked eagerly.

"Not as much as you could hold sawdust in your eye," the carpenter answered.

"Well, now, Mr. Matchin, I have got something to say." ("Oh, Lordy," groaned Saul to himself, "here's another one.") "I wouldn't take no advantage of a friend; but if Sam's got no chance, as you say, why shouldn't I try? With your permission, sir, I will."

"Now look ye here, Mr. Offitt. I don't know as I have got anything against you, but I don't know nothing *fur* you. If it's a fair question, how do you make your livin'?"

"That's all right. First place, I have got a good trade. I'm a locksmith."

"So I have heard you say. But you don't work at it."

"No," Offitt answered; and then, assuming a confidential air, he continued, "As I am to be one of the family, I'll tell you. I don't work at my trade, because I have got a better thing. I am a Reformer."

"You don't say!" exclaimed Saul. "I never heard o' your lecturin'."

"I don't lecture. I am secretary of a grand section of Labor Reformers, and I git a good salary for it."

"Oh, I see," said Saul, not having the least idea of what it all meant. But, like most fathers of his kind, he made no objection to the man's proposal, and told him his daughter was in the house. As Offitt walked away on the same quest where Bott had so recently come to wreck, Saul sat smiling, and nursing his senile vanity with the thought that there were not many mechanics' daughters in Buffland that could get two offers in one Sunday from "professional men." He sat with the contented inertness of old men on his well-worn bench, waiting to see what would be the result of the interview.

"I don't believe she'll have him," he thought. "He aint half the man that Sam is, nor half the scholar that Bott is."

It was well he was not of an impatient temperament. He sat quietly there for more than an hour, as still as a knot on a branch, wondering why it took Offitt so much longer than Bott to get an answer to a plain question; but it never once occurred to him that he had a right to go into his own house and participate in what conversation was going on. To American fathers of his class, the parlor is sacred when the daughter has company.

There were several reasons why Offitt staid longer than Bott.

The seer had left Maud Matchin in a state of high excitement and anger. The admiration of a man so splay and ungainly was in itself insulting, when it became so enterprising as to propose marriage. She felt as if she had suffered the physical contact of something not clean or wholesome. Besides, she had been greatly stirred by his reference to her request for ghostly counsel, which had resulted in so frightful a failure and mortification. After Bott had gone, she could not dismiss the subject from her mind. She said to herself, "How can I live, hating a man as I hate that Captain Farnham? How can I breathe the same air with him, blushing like a peony whenever I think of him, and turning pale with shame when I hear his name? That ever I should have been refused by a living man! What *does* a man want," she asked, with her head thrown back and her nostrils dilated, "when he don't want me?"

As she was walking to and fro, she glanced out of the window and saw Offitt approaching from the direction of the shop. She knew instantly what his errand would be, though he had never before said a word to her out of the common. "I wonder if father has sent him to me—and how many more has he got in reserve there in the shop? Well, I will make short work of this one."

But when he had come in and taken his seat, she found it was not so easy to make short work of him. Dealing with this one was very different from dealing with the other—about the difference between handling a pig and a panther. Offitt was a human beast of prey—furtive, sly, and elusive, with all his faculties constantly in hand. The sight of Maud excited him like the sight of prey. His small eyes fastened upon her; his sinewy hands tingled to lay hold of her. But he talked, as any casual visitor might, of immaterial things.

Maud, while she chatted with him, was preparing herself for the inevitable question and answer. "What shall I say to him? I do not like him. I never did. I never can. But what shall I do? A woman is of no use in the world by herself. He is not such a dunce as poor Sam, and is not such a gawk as Bott. I wonder whether he would make me mind? I am afraid he would, and I don't know whether I would like it or not. I suppose if I married him I would be as poor as a crow all my days. I couldn't stand that. I wont have him. I wish he would make his little speech and go."

But he seemed in no hurry to go. He was talking volubly about himself, lying with the marvelous fluency which interest and practice

give to such men, and Maud presently found herself listening intently to his stories. He had been in Mexico, it seemed. He owned a silver mine there. He got a million dollars out of it, but took it into his head one day to overturn the Government, and was captured and his money taken; barely escaped the garrote by strangling his jailer; owned the mine still, and should go back and get it some day, when he had accomplished certain purposes in this country. There were plenty of people who wished he was gone now. The President had sent for him to come to Washington; he went, and was asked to breakfast; nobody there but them two; they ate off gold plates like he used to in Mexico; the President then offered him a hundred thousand to leave, was afraid he would make trouble; told the President to make it a million and then he wouldn't. His grandfather was one of the richest men in Europe; his father ran away with his mother out of a palace. "You must have heard of my father, General Offitt, of Georgy? No? He was the biggest slaveholder in the State. I have got a claim against the Government, now, that's good for a million if it's worth a cent; going to Washington next winter to prosecute it."

Maud was now saying to herself, "Why, if half this is true, he is a remarkable man," like many other credulous people, not reflecting that, when half a man says is false, the other half is apt to be also. She began to think it would be worth her while, a red feather in her cap, to refuse such a picturesque person; and then it occurred to her that he had not proposed to marry her, and possibly had no such intention. As his stream of talk, dwelling on his own acts of valor and craft, ran on, she began to feel slightly piqued at its lack of reference to herself. Was this to be a mere afternoon call after all, with no combat and no victory? She felt drawn after awhile to bring her small resources of coquetry into play. She interrupted him with saucy doubts and questions; she cast at him smiles and glances, looking up that he might admire her eyes, and down that her lashes might have their due effect.

He interpreted all these signs in a favorable sense, but still prudently refrained from committing himself, until directly challenged by the blush and simper with which she said:

"I suppose you must have seen a great many pretty ladies in Mexico?"

He waited a moment, looking at her steadily until her eyelids trembled and fell, and then he said, seriously and gravely:

"I used to think so; but I never saw there or anywhere else as pretty a lady as I see at this minute."

This was the first time in her life that Maud had heard such words from a man. Sam Sleeney, with all his dumb worship, had never found words to tell her she was beautiful, and Bott was too grossly selfish and dull to have thought of it. Poor Sleeney, who would have given his life for her, had not wit enough to pay her a compliment. Offitt, whose love was as little generous as the hunger of a tiger, who wished only to get her into his power, who cared not in the least by what means he should accomplish this, who was perfectly willing to have her find out all his falsehoods the day after her wedding, relying upon his brute strength to retain her then,—this conscienceless knave made more progress by these words than Sam by months of the truest devotion. Yet the impression he made was not altogether pleasant. Thirsting for admiration as she did, there was in her mind an indistinct consciousness that the man was taking a liberty; and in the sudden rush of color to her cheek and brow at Offitt's words, there was at first almost as much anger as pleasure. But she had neither the dignity nor the training required for the occasion, and all the reply she found was:

"Oh, Mr. Offitt, how can you say so?"

"I say so," he answered, with the same unsmiling gravity, "because it's the fact. I have been all over the world. I have seen thousands of beautiful ladies, even queens and markisses, and I never yet saw and I never expect to see such beauty as yours, Miss Maud Matchin, of Buffland."

She still found no means to silence him or defend herself. She said, with an uneasy laugh, "I am sure I don't see where the wonderful beauty is."

"That's because your modesty holds over your beauty. But I see where it is. It's in your eyes, that's like two stars of the night; in your forehead, that looks full of intellect and sense; in your rosy cheeks and smiling lips; in your pretty little hands and feet——" Here she suddenly rolled up her hands in her frilled white apron, and, sitting up straight, drew her feet under her gown. At this performance, they both laughed loud and long, and Maud's nerves were relieved.

"What geese we are," she said at last. "You know I don't believe a word you say."

"Oh, yes, you do. You've got eyes and a looking-glass. Come now, be honest. You know you never saw a girl as pretty as yourself, and you never saw a man that didn't love you on sight."

"I don't know about that."

"Don't all the men you know love you?"

"There is one man I know hates me, and I hate him"

"Who is it? This is very interesting."

Maud was suddenly seized with a desire to tell an adventure, something that might match Offitt's tales of wonder.

"You'll never tell?"

"Hope I may die."

"It's Arthur Farnham!" She had succeeded in her purpose, for Offitt stared at her with looks of amazement. "He once wanted to be rather too attentive to me, and I did not like it. So he hates me, and has tried to injure me"

"And you don't like him very well?"

"I don't. I would owe a good deal to the man who would give him a beating."

"All right. You give me—what?—a kiss, or a lock of your hair, and he shall have his thrashing."

"You do it and bring me the proofs, and we will talk about it."

"Well, I must be off," he said, picking up his hat. He saw on her face a slight disappointment. He put out his hand to take leave. She folded her arms.

"You needn't be in such a hurry," she said, poutingly. "Mother won't be back for ever so long, and I was half asleep over my book when you came in."

"Oh, very well," he said. "That suits me."

He walked deliberately across the room, picked up a chair, and seated himself very near to Maud. She felt her heart beat with something like terror, and regretted asking him to stay. He had been very agreeable, but she was sure he was going to be disagreeable now. She was afraid that if he grew disagreeable she could not manage him as she could the others. Her worst fears were realized with his first words.

"Miss Matchin, if you ask me to stay longer, you must take the consequences. I am going to say to you what I never said to mortal woman before: I love you, and I want you for my wife."

She tried to laugh. "Oh, you do?" but her face grew pale, and her hands trembled.

"Yes, I do; and I am going to have you, too."

He tried to speak lightly, but his voice broke in spite of him.

"Oh, indeed!" she replied, recovering herself with an effort. "Perhaps I'll have something to say about that, Mr. Confidence."

"Of course; excuse me for talking like a fool. It shall be as you say. Only have me, and you shall have everything else. All that wealth can buy shall be yours. We'll leave this dull place and go around the world seeking pleasure where it can be found, and everybody will envy me my beautiful bride."

"That's very pretty talk, Mr. Offitt; but where is all this wealth to come from?"

He did not resent the question, but heard

it gladly, as imposing a condition he might meet. "The money is all right. If I lay the money at your feet, will you go with me? Only give me your promise."

"I promise nothing," said Maud; "but when you are ready to travel, perhaps you may find me in a better humor."

The words seemed to fire him. "That's promise enough for me," he cried, and put out his arms toward her. She struck down his hands, and protested with sudden, cattish energy:

"Let me alone. Don't you come so near me. I don't like it."

"Now you can go," she added. "I have got a lot to think about."

He thought he would not spoil his success by staying. "Good-bye, then," he said, kissing his fingers to her. "Good-bye for a little while, my own precious."

He turned at the door. "This is between us, ain't it?"

"Yes, what there is of it," she said, with a smile that took all sting from the words.

He walked to the shop, and wrung the old man's hand. His look of exultation caused Saul to say, "All settled, eh?"

"No," said Offitt; "but I have hopes. And now, Mr. Matchin, you know young ladies and the ways of the world. I ask you, as a gentleman, not to say nothing about this, for the present, to nobody."

Saul, proud of his secret, readily promised.

XIV.

CAPTAIN FARNHAM SEES ACTIVE SERVICE AGAIN.

FARNHAM lost no time in calling upon the Mayor to fulfill his engagement. He found his Honor a little subdued by the news of the morning. None of the strikers of the day before had gone back to work, and considerable accessions were reported from other trades. The worst symptom seemed to be that many shops were striking without orders. The cessation of work was already greater than seemed at first contemplated by the leading agitators themselves. They seemed to be losing their own control of the working-men, and a few tonguy vagrants and convicts from the city and from neighboring towns, who had come to the surface from nobody knew where, were beginning to exercise a wholly unexpected authority. They were going from place to place, haranguing the workmen, preaching what they called socialism, but what was merely riot and plunder. They were listened to without much response. In some places the men stopped work; in others they drove out the agitators; in others they would listen awhile, and then shout,

"Give us a rest!" or "Hire a hall!" or "Wipe off your chin!" But all the while the crowds gradually increased in the streets and public places; the strike, if it promised nothing worse, was taking the dimensions of a great, sad, anxious holiday. There was not the slightest intention on the part of the authorities to interfere with it, and to do them justice, it is hard to see what they could have done, with the means at their disposal. The Mayor, therefore, welcomed Farnham with great cordiality, made him a captain of police, for special duty, on the spot, and enrolled his list of recruits of the night before as members of the police force of the city, expressly providing that their employment should cost the city nothing, now or hereafter.

Farnham again made his rounds of the city, but found nothing especially noteworthy or threatening. The wide town, in spite of the large crowds in the streets, had a deserted look. A good many places of business were closed. There was little traffic of vehicles. The whistle of the locomotives and the rush of trains—sounds which had grown so familiar in that great railroad center that the ear ceased to be affected by them—being suddenly shut off, the silence which came in their place was startling to the sense. The voices of the striking employees, who retained possession of the Union Passenger Depot, resounded strangely through the vast building, which was usually a babel of shrill and strident sounds.

On the whole, the feature which most struck him in this violent and unnatural state of things was the singular good-nature of almost all classes. The mass of the workingmen made no threats; the greater number of employers made no recriminations. All hoped for an arrangement, though no one could say how it was to come. The day passed away in fruitless parleys, and at night the fever naturally rose, as is the way of fevers.

When nightfall came, the crowd had become so great in the public square that Farnham thought it might be better not to march his improvised policemen in a body up-town. He therefore dispatched orders to Kendall to send them up with their arms, singly or by twos and threes, to his house. By eight o'clock they were all there, and he passed an hour or so in putting them through a rude form of drill and giving them the instructions which he had prepared during the day. His intention was to keep them together on his own place during the early part of the night, and if, toward midnight, all seemed quiet, to scatter them as a patrol about the neighborhood; in case of serious disturbance anywhere else, to be ready to take part in restoring order.

About nine o'clock a man was seen coming rapidly from the house to the rear garden, where Farnham and his company were. The men were dispersed about the place; some on the garden seats, some lying on the grass in the clear moonlight. Farnham was a little apart, talking with Kendall and Grosshammer. He started up to meet the intruder; it was Mr. Temple.

"What's all this?" said Temple.

"The manly art of self-defense," said Farnham, smiling.

"I see, and I am glad to see it, too," answered Temple, warmly. "One of my men told me an hour ago that in the Tramps' Lodging House, last night, it was the common talk that there would be a rush on the houses in this region to-night. I went to the Mayor and tried to see him, but he was hiding, I think. I went to the Chief of Police, and he was in a blue funk. So I thought I would come up myself and see you. I knew you could raise a few men among your servants over here, and I would bring half a dozen, and we could answer for a few tramps, anyhow. But you are all right, and there is nothing to do but wait for them."

"Yes, thank you!" said Farnham, "though I am a thousand times obliged to you for your good-will. I won't forget it in a hurry, old man. Are you going home now? I will walk a block or two with you."

"No, I am not going home—not by"—[we draw the veil over Temple's language at this point]. "I have come to spend the evening. Have you any tools for me?"

"Nonsense, my dear fellow! there is not the least use of it. There is not one chance in a million that there will be anything to do."

The two men were walking toward the house. Temple said: "Don't be too sure of it. As I passed by the corner of the Square ten minutes ago, there was a fellow in front of Mouchem's gin-mill, a long-haired, sal-low-looking pill, who was making as ugly a speech to a crowd of ruffians as I ever heard. One phrase was something like this: 'Yes, my fellow-toilers'—he looked like he had never worked a muscle in his life except his jaw-tackle,—'the time has come. The hour is at hand. The people rule. Tyranny is down. Enter in and take possession of the spoilers' gains. Algonquin Avenue is heaped with riches wrung from the sweat of the poor. Clean out the abodes of blood guiltiness.' And you ought to have heard the ki-yi's that followed. That encouraged him, and he went on: 'Algonquin Avenue is a robbers' cave. It's very handsome, but it needs one thing more.' 'What's that?' some fellows yelled. 'An aristocrat hung to every lamp-post.'

This was very popular, too, you can bet your boots. On that I toddled off, so as to get you a chance to say your peccavy, anyhow."

Walking and talking together, they had passed the house and come to the gate opening on the avenue.

"You might shut these wide gates," said Temple.

"I do not think they have been shut in ten years," Farnham answered. "Let's try it."

The effort was unsuccessful. The heavy gates would not budge. Suddenly a straggling, irregular cheer was heard from the direction of the Square. "There!" said Temple, "my friend the orator has got off another good thing."

But Farnham, who had stepped outside at the sound and gazed on the moon-lighted avenue, said, "There they come now!"

They both ran back to the house, Farnham blowing his watchman's whistle. "See here," said Temple, "I must have some tools. You have a club and revolver. Give me the club," which he took without more ceremony. The men came up from the garden in an instant, and fell in at Farnham's word of command in a moment. Masked by the shadows of the trees and the shrubbery, they were not discernible from the street.

"Remember," said Farnham. "Use your clubs as much as you see fit, if you come to close quarters; but do not fire without orders, unless to save your own lives. I don't think it is likely that these fellows are armed."

The clattering of feet grew louder on the sidewalk, and in a moment the leaders of the gang—it could hardly be called a mob—stopped by the gates. "Here's the place. Come along, boys!" one of them shouted, but no one stirred until the whole party came up. They formed a dense crowd about the gates and half-filled the wide avenue. There was evidently a moment of hesitation, and then three or four rushed through the gate, followed by a larger number, and at last by the bulk of the crowd. They had come so near the porch that it could now be seen by the light of the moon that few of them carried arms. Some had sticks; one or two men carried heavy stones in their hands; one young man brandished an axe; one had a hammer. There was evidently no attempt at organization whatever.

Farnham waited until they were only a few feet away, and then shouted:

"Forward! Guide right! Double time! March!"

The men darted out from the shadow and began to lay about them with their clubs. A yell of dismay burst from the crowd. Those in front turned and met those behind, and

the whole mass began striking out wildly at each other. Yelling and cursing, they were forced back over the lawn to the gate. Farnham, seeing that no shots had been fired, was confirmed in his belief that the rioters were without organization and, to a great extent, without arms. He therefore ordered his men to the right about and brought them back to the house. This movement evidently encouraged the mob. Loud voices were distinctly heard.

"Who's afraid of half a dozen cops?" said a burly ruffian, who carried a slung-shot. "There's enough of us to eat 'em up."

"That's the talk, Bowersox," said another. "You go in and get the first bite."

"That's my style," said Bowersox. "Come along, Offitt. Where's Bott? I guess he don't feel very well. Come along, boys! We'll slug 'em this time!" And the crowd, inspired by this exhortation and the apparent weakness of the police force, made a second rush for the house.

Temple was standing next to Farnham. "Arthur," he whispered, "let's change weapons a moment," handing Farnham his club and taking the revolver from his hand. Farnham hardly noticed the exchange, so intently was he watching the advance of the crowd, which he saw, in a moment, was far more serious than the first. They were coming up more solidly, and the advantage of the surprise was now gone. He waited, however, until they were almost as near as they had been before, and then gave the order to charge, in the same words as before, but in a much sharper and louder tone, which rang out like a sudden blast from a trumpet.

The improvised policemen darted forward and attacked as vigorously as ever, but the assailants stood their ground. There were blows given as well as taken this time. There was even a moment's confusion on the extreme right of the line, where the great bulk of Bowersox bore down one of the veterans. Farnham sprang forward and struck the burly ruffian with his club; but his foot slipped on the grass, and he dropped on one knee. Bowersox raised his slung-shot; a single report of a pistol rang out, and he tumbled forward over Farnham, who sprang to his feet and shouted, "Now, men, drive 'em!" Taking the right himself and profiting by the momentary shock of the shot, they got the crowd started again, and by vigorous clubbing drove them once more into the street.

Returning to the shadow by the house, Farnham's first question was, "Is anybody hurt?"

"I've got a little bark knocked off," said one quiet fellow, who came forward showing a ghastly face bathed in blood from a wound

in his forehead. Farnham looked at him a moment, and then, running to his door, opened it and called Budsey, who had been hiding in the cellar, praying to all his saints.

"Here, Budsey, take this man down to the coachman's house, and then go round the corner and bring Dr. Cutts. If he isn't there, get somebody else. It does not amount to much, but there will be less scar if it is attended to at once."

The man was starting away with Budsey, when Temple said, "Look here! You wont need that arsenal any more to-night. Pass it over," and took the man's belt, with club and pistol, and buckled them around his own slim waist. Handing Farnham his own pistol, he said: "Thanks, Arthur. I owe you one cartridge."

"And I owe you, God knows how much!"

Farnham then briefly announced to his men that the shot which had just been fired was not by a member of the company, and was, therefore, not a disobedience of orders. Catching sight of Bowersox lying motionless on the grass, he ordered,

"Two file-closers from the right, go and bring in that man!"

But at that moment Bowersox moved, sat up and looked about him, and, suddenly remembering where he was, struggled to his feet and half-ran, half-staggered to his friends in the street. They gathered about him for a moment, and then two of them were seen supporting him on his way into the town.

Farnham was standing behind his men, and a little apart. He was thinking whether it might not be best to take them at once into the street and disperse the crowd, when he felt a touch at his elbow. He turned, and saw his gardener, Ferguson.

"If I might speak a word, sir!"

"Certainly—what is it? But be quick about it."

"I think all is not right at the Widow Belding's. I was over there but now, and a dozen men—I did not count them,—but—"

"Heavens! why did I not think of that? Kendall, you take command of these men for a moment. Bolty, you and the three files on the left come with me. Come, Temple,—the back way." And he started at a pace so rapid that the others could hardly keep him in sight.

After the first repulse of the crowd, Offitt, Bott, and a few more of the Bread-winners, together with some of the tramps and jail-birds who had come for plunder, gathered together across the street and agreed upon a diversion. It was evident, they said, that Farnham had a considerable police force with him to protect his property; it was useless to waste any more time there; let the

rest stay there and occupy the police; they could have more fun and more profit in some of the good houses in the neighborhood. "Yes," one suggested, "Jairus Belding's widdler lives just a step off. Lots o' silver and things. Less go there."

They slipped away in the confusion of the second rush, and made their way through the garden to Mrs. Belding's. They tried the door, and, finding it locked, they tore off the shutters and broke the windows, and made their way into the drawing-room, where Mrs. Belding and Alice were sitting.

They had been alarmed by the noise and tumult in front of Farnham's house, and had locked and bolted their own doors in consequence. Passing through the kitchen in their rounds, they found Ferguson there in conversation with the cook. "Why, Fergus!" said the widow: "why are you not at home? They are having lively times over there, are they not?"

"Yes," said the gardener; "but they have a plenty of men with arms, and I thought I'd e'en step over here and hearten up Bessie a bit."

"I'm sure she ought to be very much obliged," responded Mrs. Belding, dryly, though, to speak the truth, she was not displeased to have a man in the house, however little she might esteem his valor.

"I have no doubt he sneaked away from the fuss," she said to Alice; "but I would rather have him in the kitchen than nothing."

Alice assented. "That is what they mean by moral support, I suppose."

She spoke with a smile, but her heart was ill at ease. The man she loved was, for all she knew, in deadly danger, and she could not show that she cared at all for him, for fear of showing that she cared too much.

"I am really anxious about Arthur Farnham," continued Mrs. Belding. "I hope he will not get himself into any scrape with those men."

The tumult on the street and on the lawn had as yet presented itself to her in no worse light than as a labor demonstration, involving cheers and rude language. "I am afraid he wont be polite enough to them. He might make them a little speech, complimenting Ireland and the American flag, and then they would go away. That's what your father did, in that strike on the Wabash. It was in the papers at the time. But these soldiers—I'm afraid Arthur mayn't be practical enough."

"Fortunately, we are not responsible for him," said Alice, whose heart was beating violently.

"Why, Alice! what a heartless remark!"

At this instant the windows came crashing in, and a half-dozen ruffians burst into the room. Alice sprang, pale and silent, to the

side of her mother, who sat, paralyzed with fright, in her rocking-chair.

A man came forward from the group of assailants. His soft hat was drawn down over his eyes, and a red handkerchief concealed the lower part of his face. His voice was that of Offitt, as he said, "Ladies, we don't want to do no violence; but, in the name of the Revolutionary Committee, we have called to collect an assessment on you." This machinery was an invention of the moment, and was received with great satisfaction by the Bread-winners.

"That's what's the matter," they said, in chorus. "Your assessment, and be lively about it. All you've got handy."

"I have no money in the house," Mrs. Belding cried. "What shall I do?"

"You forget, mamma," said Alice. "There is some upstairs. If these gentlemen will wait here a moment, I will go and get it."

Offitt looked at her sharply. "Well, run and get it. Bott, you go with her."

Bott turned angrily upon his chief. "What's the use of calling names? What if I said your name was ——"

"There, there, don't keep the lady waiting."

Alice turned from the room, closely followed by Bott. Reaching the stairs, she swept up the long flight with the swift grace of a swallow. Bott hurried after her as fast as he could; but she gained her bedroom door enough in advance to shut and lock it between them, leaving him kicking and swearing in the hall. She ran to her open window, which looked toward Farnham's, and sent the voice of her love and her trouble together into the clear night in one loud cry, "Arthur!"

She blushed crimson as the word involuntarily broke from her lips, and cried again as loudly as she could, "Help!"

"I hope he did not hear me at first," she said, covering her face with her hands, and again she cried, "Help!"

"Shut up that noise," said Bott, who was kicking violently at the door, but could not break it down. "Shut up, or I'll wring your neck."

She stopped, not on account of his threats, which suddenly ceased, but because she heard the noise of footsteps on the porch, and of a short but violent scuffle, which showed that aid of some sort had arrived. In a few moments she heard Bott run away from her door. He started toward the stairs, but finding his retreat cut off ran to the front window, closely pursued. She heard a scramble. Then a voice which made her heart beat tumultuously said, "Look out below there."

A moment after, the same voice said, "Have

you got him?" and then, "All right! keep him."

A light knock on her door followed, and Farnham said, "Miss Belding."

Alice stood by the door a moment before she could open it. Her heart was still thumping, her voice failed her, she turned white and red in a moment. The strongest emotion of which she was conscious was the hope that Arthur had not heard her call him by his name.

She opened the door with a gravity which was almost ludicrous. Her first words were wholly so.

"Good evening, Captain Farnham," was all she could find to say. Then, striving desperately to add something more gracious, she stammered, "Mamma will be very ——"

"Glad to see me in the drawing-room," Farnham laughed. "I have no doubt of it. She is quite safe there, and your visitors have gone. Will you join her now?"

She could not help perceiving the slight touch of sarcasm in his tone. She saw he was hurt by her coldness and shyness, and that made her still more cold and shy. Without another word she walked before him to the drawing-room, where Mrs. Belding still sat in her rocking-chair, moaning and wringing her hands. Mr. Temple was standing beside her, trying to soothe her, telling her it was all over. Bolt was tying the arms of one of the ruffians behind him, who lay on the floor on his face. There was no one else in the room.

Alice knelt on the floor by her mother and took her in her arms. "You are not hurt, are you, mamma dear?" she said, in a soft, tender tone, as if she were caressing a crying child.

"Oh, no! I suppose not," said the widow; "but I am not used to such doings at this time of night, and I don't like them. Captain Farnham, how shall I ever thank you? and you, Mr. Temple? Goodness knows what we should have done without you. Alice, the moment you left the room, some of them ran to the sideboard for the silver, another one proposed to set the house afire, and that vile creature with the red handkerchief asked me for my ear-rings and my brooch. I was trying to be as long as I could about getting them off, when these gentlemen came in. I tell you they looked like angels, and I'll tell your wife so when I see her, Mr. Temple; and as for Arthur ——"

At this moment Bolt, having finished the last knot to his satisfaction, rose and touched his prisoner with his foot. "Captain," he said, saluting Farnham, "vot I shall do mit dis schnide?"

"They have got the one I dropped from the window?"

"Jawohl! on de gravel-walk draussen!"

"Very well. Take them both to the stable behind my house for the present, and make them fast together. Then come back here and stand guard awhile with the men on the porch, till I relieve you."

"All right. Git up mid yourself," he said, touching his prostrate foe not so gently, "and vorwaerts."

As they went out, Farnham turned to Mrs. Belding and said, "I think you will have no more trouble. The men I leave as a guard will be quite sufficient, I have no doubt. I must hurry back and dismiss the friends who have been serenading me."

She gazed at him, not quite comprehending, and then said, "Well, if you must go, good-night, and thank you a thousand times. When I have my wits about me I will thank you better."

Arthur answered laughingly as he shook hands, "Oh, that is of no consequence. It was merely neighborly. You would have done as much for me, I am sure." And the gentlemen took their leave.

When the ladies were alone, Mrs. Belding resumed her story of the great transaction. "Why, it will be something to tell about as long as I live," she said. "You had hardly got upstairs when I heard a noise of fighting outside on the walk and the porch. Then Arthur and Mr. Temple came through that window as if they were shot out of a cannon. The thief who stood by me, the red handkerchief one, did not stop, but burst through the hall into the kitchen and escaped the back way. Then Mr. Temple took another one and positively threw him through the win-

dow, while Arthur, with that policeman's club, knocked the one down whom you saw the German tying up. It was all done in an instant, and I just sat and screamed for my share of the work. Then Arthur came and caught me by the shoulder and almost shook me and said, 'Where is Alice?' Upon my word, I had almost forgotten you. I said you were upstairs and one of those wretches was there too. He looked as black as a fury and went up in about three steps. I always thought he had such a sweet temper, but to-night he seemed just to *love* to fight. Now I think of it, Alice, you hardly spoke to him to-night. You must not let him think we are ungrateful. You must write him a nice note to-morrow."

Alice laid her head upon her mother's shoulder, where her wet eyes could not be seen. "Mamma," she asked, "did he say 'Where is Alice?' Did he say nothing but 'Alice'?"

"Now, don't be silly," said Mrs. Belding. "Of course he said 'Alice.' You wouldn't expect a man to be Miss Beldinging you at such a time. You are quite too particular."

"He called me Miss Belding when he came upstairs," said Alice, still hiding her face.

"And what did you say to him—for saving this house and all our lives?"

The girl's overwrought nerves gave way. She had only breath enough to say, "I said 'Good evening, Captain Farnham!' Wasn't it too perfectly ridiculous?" and then burst into a flood of mingled laughter and tears which nothing could check, until she had cried herself quiet upon her mother's bosom.

(To be continued.)

THE PINES' THOUGHT.

WITHIN the shadow of ourselves we stand,
 And see a thousand brilliancies unfold
 Where autumn woods, in gorgeous ruin, hold
 One late, last revel. Upon every hand
 Riot of color, death in pomp and state,
 Decay magnificent, inconstant blaze,—
 We have no part or splendor in these days.
 They shall be changed,—we are inviolate;
 Their voices shall be hushed on every hill,
 Their lights be quenched—all color fade and die,
 And when they stand like specters gaunt and still,
 With naked boughs against the far, cold sky,
 Lo! we shall hide the flying moon from sight,
 And lead the wind on many a roaring night.

Juliet C. Marsh.

NATURE IN ENGLAND.

THE first whiff we got of transatlantic nature was the peaty breath of the peasant chimneys of Ireland while we were yet many miles at sea. What a home-like, fireside smell it was; it seemed to make something long forgotten stir within one. One recognizes it as a characteristic Old World odor, it savors so of the soil and of a ripe and mellow antiquity. I know no other fuel that yields so agreeable a perfume. Unless the Irishman in one has dwindled to a very

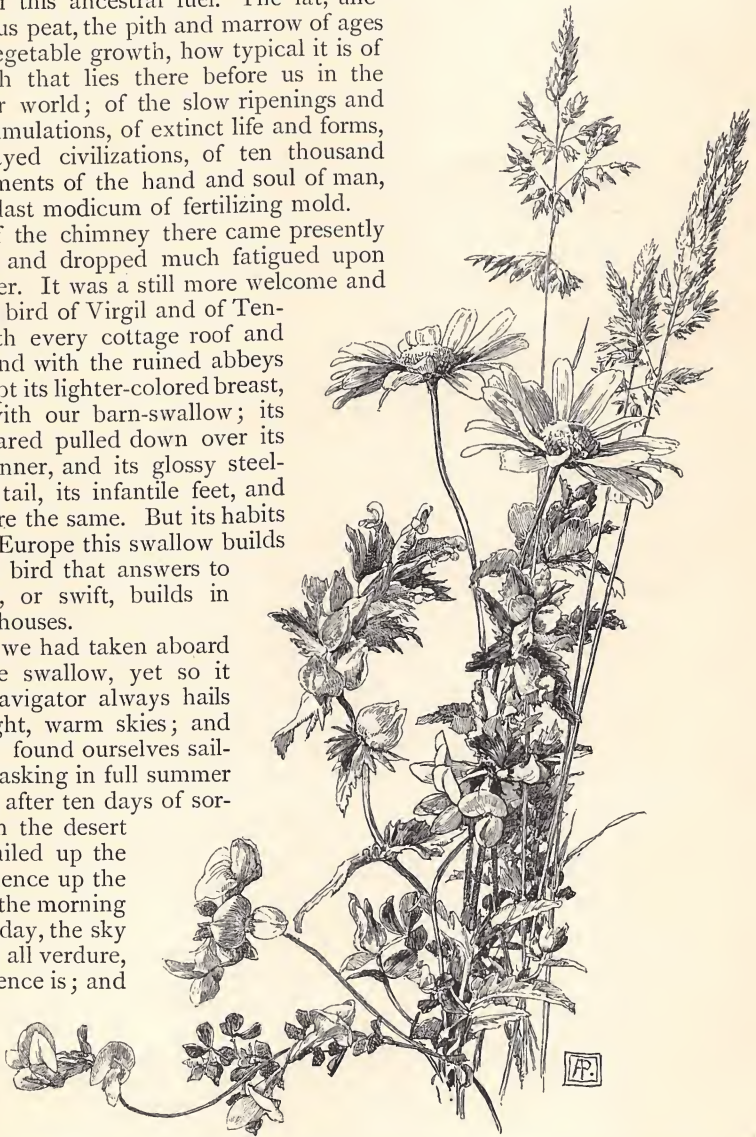

small fraction, he will be pretty sure to dilate his nostrils and feel some dim awakening of memory on catching the scent of this ancestral fuel. The fat, un-

ctuous peat, the pith and marrow of ages of vegetable growth, how typical it is of much that lies there before us in the elder world; of the slow ripenings and accumulations, of extinct life and forms, decayed civilizations, of ten thousand

growths and achievements of the hand and soul of man, now reduced to their last modicum of fertilizing mold.

With the breath of the chimney there came presently the chimney-swallow, and dropped much fatigued upon the deck of the steamer. It was a still more welcome and suggestive token: the bird of Virgil and of Tennyson, acquainted with every cottage roof and chimney in Europe, and with the ruined abbeys and castle walls. Except its lighter-colored breast, it seemed identical with our barn-swallow; its little black cap appeared pulled down over its eyes in the same manner, and its glossy steel-blue coat, its forked tail, its infantile feet, and its cheerful twitter were the same. But its habits are different; for in Europe this swallow builds in chimneys, and the bird that answers to our chimney-swallow, or swift, builds in crevices in barns and houses.

We did not suspect we had taken aboard our pilot in the little swallow, yet so it proved; this light navigator always hails from the port of bright, warm skies; and the next morning we found ourselves sailing between shores basking in full summer sunshine. Those who after ten days of sorrowing and fasting in the desert of the ocean have sailed up the frith of Clyde, and thence up the Clyde to Glasgow, on the morning of a perfect mid-May day, the sky all sunshine, the earth all verdure, know what this experience is; and only those can know it. It takes a good many foul days in Scotland to breed one fair one; but when the fair day does come, it is

SOME MEADOW FLOWERS—LADIES' FINGERS, YELLOW RATTLE, MOON DAISIES, AND SOFT GRASS.

worth the price paid for it. The soul and sentiment of all fair weather is in it; it is the flowering of the meteorological influences, the rose on this thorn of rain and mist. These fair days, I was told, may be quite confidently looked for in May; we were so fortunate as to strike a series of them, and the day we entered port was such a one as you would select from a hundred.

The traveler is in a mood to be pleased after clearing that Atlantic gulf, the eye in its exuberance is full of caresses and flattery, and the deck of a steamer is a rare vantage-ground on any occasion of sight-seeing; it affords just the isolation and elevation needed. Yet fully discounting these favorable conditions, the fact remains that Scotch sunshine is bewitching, and that the scenery of the Clyde is unequaled by any other approach to Europe. It is Europe, abridged and assorted and passed before you in the space of a few hours: the highlands and lochs and castle-crowned crags on the one hand; and the lowlands, with their parks and farms, their manor halls and matchless verdure, on the other. The eye is conservative, and loves a look of permanence and order, of peace and contentment; and these Scotch shores, with their stone houses, compact masonry, clean fields, grazing herds, ivied walls, massive foliage, perfect roads, verdant mountains, etc., fill all the conditions. We pause an hour in front of Greenock, and then, on the crest of the tide, make our way slowly upward. The landscape closes around us. We can almost hear the cattle ripping off the lush grass in the fields. One feels as if he could eat grass himself. It is a pastoral paradise. We can see the daisies and buttercups; and from above a meadow on the right, a part of the song of a sky-lark reaches my ear. Indeed, not a little of the charm and novelty of this part of the voyage was the impression it made as of going afield in an ocean steamer. We had suddenly passed from a wilderness of waters into a verdurous, sunlit landscape, where scarcely any water was visible. The Clyde, soon after you leave Greenock, becomes little more than a large, deep canal, inclosed between meadow banks, and from the deck of the great steamer only the most charming rural sights and sounds greet you. You are at sea amid verdant parks and fields of clover and grain. You behold farm occupations—sowing, planting, plowing—as from the middle of the Atlantic. Playful heifers and skipping lambs take the place of the leaping dolphins and the basking sword-fish. The ship steers her way amid turnip-fields and broad acres of newly planted potatoes. You are not surprised that she needs piloting. A little tug with a rope at her

bow pulls her first this way and then that, while one at her stern nudges her right flank and then her left. Presently we come to the ship-building yards of the Clyde, where rural, pastoral scenes are strangely mingled with those of quite another sort. "First a cow and then an iron ship," as one of the voyagers observed. Here a pasture, or a meadow, or a field of wheat or oats, and close beside it, without an inch of waste or neutral ground between, rise the skeletons of innumerable ships, like a forest of slender growths of iron, with the workmen hammering amid it like so many noisy woodpeckers. It is doubtful if such a scene can be witnessed anywhere else in the world—an enormous mechanical, commercial, and architectural interest, alternating with the quiet and simplicity of inland farms and occupations. You could leap from the deck of a half-finished ocean steamer into a field of waving wheat or Winchester beans. These vast ship-yards are set down here upon the banks of the Clyde with as little interference with the scene as possible; one would say the vessels had come up out of the water like seals to sun themselves here on the grassy bank.

Of the factories and founderies that put this iron in shape you get no hint; here the ships rise as if they sprouted from the soil, without waste or litter, but with an incessant din. They stand as thickly as a row of cattle in stanchions, almost touching each other, and in all stages of development. Now and then a stall will be vacant, the ship having just been launched, and others will be standing with flags flying and timbers greased or soaped, ready to take to the water at the word. Two such, both large ocean steamers, waited for us to pass. We looked back, saw the last block or wedge knocked away from one of them, and the monster ship sauntered down to the water and glided out into the current in the most gentle, nonchalant way imaginable. I wondered at her slow pace, and at the grace and composure with which she took to the water; the problem nicely studied and solved—just power enough, and not an ounce to spare. The vessels are launched diagonally up or down stream, on account of the narrowness of the channel. But to see such a brood of ships, the largest in the world, hatched upon the banks of such a placid little river, amid such quiet country scenes, is a novel experience. But this is Britain: a little island, with little lakes, little rivers, quiet, bosky fields, but mighty interests and power that reach round the world. I was conscious that the same scene at home would have been less pleasing. It would not have been so compact and tidy. There

GRASSY MOUNTAINS.

would not have been a garden of ships and a garden of turnips side by side; hay-makers and ship-builders in adjoining fields; milch-cows and iron steamers seeking the water within sight of each other. We leave wide margins and ragged edges in this country, and both man and nature sprawl about at greater lengths than in the Old World.

I was perhaps least prepared for the utter tranquillity, and shall I say domesticity, of the mountains. At a distance they appear to be covered with a tender green mold that one could brush away with his hand. On nearer approach it is seen to be grass. They look nearly as rural and pastoral as the fields. Goat Fell is steep and stony, but even it does not have a wild and barren look. At home, one thinks of a mountain as either a vast pile of barren, frowning rocks and precipices, or else a steep acclivity covered with a tangle of primitive forest timber. But here, the mountains are high, grassy sheep-walks, smooth, treeless, rounded, and as green as if dipped in a fountain of perpetual spring. I did not wish my Catskills any different; but I wondered what would need to be done to them to make them look like these Scotch highlands. Cut away their forests, rub down all inequalities in their surfaces, pulverizing their loose boulders, turf them over, leaving the rock to show through here and there; then, with a few large black patches to represent the heather, and the softening and ameliorating effect of a mild, humid climate, they might in time come to bear some resemblance to these shepherd mountains. Then over all the landscape is that new look—that mellow,

legendary, half-human expression which nature wears in these ancestral lands, an expression familiar in pictures and in literature, but which a native of this side of the Atlantic has never before seen in gross, material objects and open-air spaces,—the added charm of the sentiment of time and human history, the ripening and ameliorating influence of long ages of close and loving occupation of the soil,—naturally a deep, fertile soil under a mild, very humid climate.

There is an unexpected, an unexplained lure and attraction in the landscape, a pensive, reminiscent feeling in the air itself. Nature has grown mellow under these humid skies, as in our fiercer climate she grows harsh and severe. One sees at once why this fragrant Old World has so dominated the affections and the imagination of our artists and poets: it is saturated with human qualities; it is unctuous with the ripeness of ages, the very marrow-fat of time.

II.

I HAD come to Great Britain less to see the noted sights and places, than to observe the general face of nature. I wanted to steep myself long and well in that mellow, benign landscape, and put to further tests the impressions I had got of it during a hasty visit one autumn, eleven years before. Hence I was mainly intent on roaming about the country, it mattered little where. Like an attic stored with relics and heir-looms, there is no place in England where you cannot instantly turn from nature to scenes and

places of deep historical or legendary or artistic interest. With a suitable companion, I should probably have made many long pedestrian tours. As it was, I took many short but delightful walks both in England

ment to the smell. When I plucked the flowers, which seemed precisely like our own, the odor was rank and disagreeable; but at the distance of a few yards it floated upon the moist air, a spicy and pleasing perfume. The

OLD ELDER-TREES.

and Scotland, with a half day's walk in the north of Ireland about Moville. 'Tis an admirable country to walk in,—the roads are so dry and smooth and of such easy grade, the foot-paths so numerous and so bold, and the climate so cool and tonic. One night, with a friend, I walked from Rochester to Maidstone, part of the way in a slow rain and part of the way in the darkness. We had proposed to put up at some one of the little inns on the road, and get a view of the weald of Kent in the morning; but the inns refused us entertainment, and we were compelled to do the eight miles at night, stepping off very lively the last four in order to reach Maidstone before the hotels were shut up, which takes place at eleven o'clock. I learned this night how fragrant the English elder is while in bloom, and that distance lends enchant-

ment to the smell. When I plucked the flowers, which seemed precisely like our own, the odor was rank and disagreeable; but at the distance of a few yards it floated upon the moist air, a spicy and pleasing perfume. The elder here grows to be a veritable tree: I saw specimens seven or eight inches in diameter and twenty feet high. In the morning we walked back by a different route, taking in Boxley Church, where the pilgrims used to pause on their way to Canterbury, and getting many good views of Kent grain-fields and hop-yards. Sometimes the road wound through the landscape like a foot-path, with nothing between it and the rank growing crops. An occasional newly plowed field presented a curious appearance. The soil is upon the chalk formation, and is full of large fragments of flint. These work out upon the surface, and, being white and full of articulations and processes, give to the ground the appearance of being thickly strewn with bones—with thigh-bones greatly foreshortened. Yet these old bones in skillful hands

make a most effective building material. They appear in all the old churches and ancient buildings in the south of England. Broken squarely off, the flint shows a fine semi-transparent surface that, in combination with coarser material, has a remarkable crystalline effect. One of the most delicious bits of architectural decoration I saw in England was produced, in the front wall of one of the old buildings attached to the cathedral at Canterbury, by little squares of these flints in brick panel-work. The cool, pellucid, illuminating effect of the flint was just the proper foil to the warm, glowing, livid brick.

From Rochester we walked to Gravesend, over Gad's Hill; the day soft and warm, half sunshine, half shadow; the air full of the songs of sky-larks; a rich, fertile landscape all about us; the waving wheat just in bloom, dashed with scarlet poppies; and presently, on the right, the Thames in view dotted with vessels. Seldom any cattle or grazing herds in Kent; the ground is too valuable; it is all given up to wheat, oats, barley, hops, fruit, and various garden-produce.

A few days later we walked from Feversham to Canterbury, and from the top of Harbledown hill saw the magnificent cathedral suddenly break upon us as it did upon the foot-sore and worshipful pilgrims centuries ago. At this point, it is said, they knelt down, which seems quite probable, the view is so imposing. The cathedral stands out from and

above the city, as if the latter were the foundation upon which it rested. On this walk we passed several of the famous cherry orchards of Kent—the thriftiest trees and the finest fruit I ever saw; not stung by insects, as with us. About the best glimpses I had of the cathedral—after the first view from Harbledown hill—were obtained while lying upon my back on the grass, under the shadow of its walls, and gazing up at the jackdaws flying about the central tower and going out and in weather-worn openings three hundred feet above me. There seemed to be some wild, pinnacled mountain peak or rocky ledge up there toward the sky, where the fowls of the air had made their nests, secure from molestation. The way the birds make themselves at home about these vast architectural piles is very pleasing. Doves, starlings, jackdaws, swallows, sparrows take to them as to a wood or to a cliff. If there were only something to give a corresponding touch of nature or a throb of life inside! But their interiors are only impressive sepulchers—tombs within a tomb. Your own footfalls seem like the echo of past ages. These cathedrals belong to the pleistocene period of man's religious history—the period of gigantic forms. How vast, how monstrous, how terrible in beauty and power! but as empty and dead as the shells upon the shore. The cold, thin ecclesiasticism that now masquerades in them hardly disturbs the dust in their central aisles. I saw five wor-

RED AND WHITE CLOVER.

ous spectators. For my part, I could not take my eyes off the remnants of some of the old stained windows up aloft. If I worshiped at all, it was my devout admiration of those superb relics. There could be no doubt about the faith that inspired those. Below them were some gorgeous modern memorial windows: stained glass, indeed! loud, garish, thin, painty; while these were like a combination of precious stones and gems, full of depth and richness of tone, and, above all, serious, not courting your attention. My eye was not much taken with them at first, and not till after it had recoiled from the hard, thin glare in my immediate front.

From Canterbury I went to Dover, and spent part of a day walking along the cliffs to Folkestone. There is a good foot-path that skirts the edge of the cliffs, and it is much frequented. It is characteristic of the compactness and neatness of this little island that there is not an inch of waste land along this sea margin; the fertile rolling landscape, waving with wheat and barley, and with grass just ready for the scythe, is cut squarely off by the sea; the plow and the reaper come to the very brink of the chalky cliffs. As you sit down on Shakspeare's Cliff, with your feet dangling in the air at a height of three hundred and fifty feet, you can reach back and pluck the grain heads and the scarlet poppies. Never have I seen such quiet pastoral beauty take such a sudden leap into space. Yet the scene is tame, in one sense: there is no hint of the wild and the savage; the rock is soft and friable, a kind of chalky bread, which the sea devours readily; the hills are like freshly cut loaves; slice after slice has been eaten away by the

hungry elements.

Sitting here, I saw

no "crows and choughs" winging "the mid-way air," but a species of hawk, "haggards of the rocks," were disturbed in the niches beneath me, and flew along from point to point.

—"The murmuring surge,
That on the unnumber'd idle pebbles chafes,
Cannot be heard so high."

I had wondered why Shakspeare had made his sea-shores pebbly instead of sandy, and now I saw why: they are pebbly, with not a grain of sand to be found. This chalk formation, as I have already said, is full of flint nodules; and as the shore is eaten away by the sea, these rounded masses remain. They soon become worn into smooth pebbles, that beneath the pounding of the surf give out a strange rattling, clinking sound. Across the Channel, on the French side, there is more sand, but it is of the hue of mud and not pleasing to look upon.

Of other walks I had in England, I recall with pleasure a Sunday up the Thames toward Windsor: the day perfect, the river alive with row-boats, the shore swarming with pedestrians and picnickers; young athletic London, male and female, rushing forth as hungry for the open air and the water as young mountain herds for salt. One shore of the Thames, sometimes the right, sometimes the left, it seems, belongs to the public. No private grounds, however lordly, are allowed to monopolize both sides.

Another salutary walk was along the borders of Surrey and Sussex, and through Gilbert White's country, in quest of the night-ingale. I was everywhere a day or a half day, or else a few hours, too late to hear the famous bird in full song, so sharply and abruptly does their musical period end. Another walk was about Winchester and Salisbury, with more cathedral viewing. One of the most human things to be seen

in the great cathedrals is the carven image of some old knight or warrior prince resting above his tomb, with his feet upon his faithful dog. I was touched by this remembrance of the dog. In all cases he looked alert and watchful, as if guarding his master while he slept. I noticed that Cromwell's soldiers were less apt to batter off the nose and ears of the dog than they were those of the knight.

the yellow-hammer, two or three being within ear-shot. The song is much like certain sparrow songs, only inferior: *Sip, sip, sip, see-e-e-e*; or, *If, if, if, you pleas-e-e-e*. Honey-bees on the white clover. Turf very thick and springy, supporting two or three kinds of grass resembling redtop and bearded rye-grass. Narrow-leaved plantain, a few buttercups, a small yellow flower unknown to me (probably ladies' fingers), also a species of dan-

IN KENT—NEAR GRAVESEND.

At Stratford I did more walking. After a row on the river, we strolled through the low, grassy field in front of the church, redolent of cattle and clover, and sat for an hour on the margin of the stream and enjoyed the pastoral beauty and the sunshine. In the afternoon (it was Sunday) I walked across the fields to Shottery, and then followed the road as it wound amid the quaint little thatched cottages till it ended at a stile from which a foot-path led across broad, sunny fields to a stately highway. To give a more minute account of English country scenes and sounds in midsummer, I will here copy some jottings in my note-book, made then and there:

"July 16. In the fields beyond Shottery. Bright and breezy, with appearance of slight showers in the distance. Thermometer probably 66 or 68 degrees; a good working temperature. Clover—white, red, and yellow (white predominating)—in the fields all about me. The only noticeable bird voice that of

delion and prunella. The land thrown into marked swells twenty feet broad. Two Sunday-school girls lying on the grass in the other end of the field. A number of young men playing some game, perhaps cards, seated on the ground in an adjoining field. Scarcely any signs of midsummer to me; no ripeness or maturity in Nature yet. The grass very tender and succulent, the streams full and roily. Yarrow and cinque-foil also in the grass where I sit. The plantain in bloom and fragrant. Along the Avon, the meadow-sweet in full bloom, with a fine cinnamon odor. A wild rose here and there in the hedge-rows. The wild clematis nearly ready to bloom. The wheat and oats full-grown, but not yet turning. The clouds soft and fleecy. Prunella dark purple. The red clover very ruddy; the white large. A few paces farther on I enter a highway, one of the broadest I have seen, the road-bed hard and smooth as usual, about sixteen feet wide, with grassy margins

twelve feet wide, redolent with white and red clover. A rich farming landscape spreads around me, with blue hills in the far west. Cool and fresh like June. Bumble-bees here and there, more hairy than at home. A plow

islands of shade in a sea of grass. Drovers of sheep grazing, and herds of cattle reposing in the succulent fields. Now the just felt breeze brings me the rattle of a mowing machine, a rare sound here. The great motion-

COTTAGES AT SHOTTERY.

in a field by the road-side is so heavy I can barely move it—at least three times as heavy as an American plow; beam very long, tails four inches square, the mold-board a thick plank. The soil like putty; where it dries crumbling into small, hard lumps, but sticky and tough when damp,—Shakspeare's soil, the finest and most versatile wit of the world, the product of a sticky, stubborn clay-bank. Here is a field where every alternate swell is small. The large swells heave up in a very molten-like way—real turfy billows, crested with white clover-blossoms."

"July 17. On the road to Warwick, two miles from Stratford. Morning bright, with sky full of white, soft, high-piled thunderheads. Plenty of pink blackberry blossoms along the road; herb Robert in bloom, and a kind of Solomon's-seal as at home, and what appears to be a species of golden-rod with a midsummery smell. The note of the yellow-hammer and the wren here and there. Beech-trees loaded with mast and humming with bumble-bees, probably gathering honeydew, which seems to be more abundant here than with us. The landscape like a well-kept park dotted with great trees, which make

less arms of a windmill rising here and there above the horizon. A gentleman's turn-out goes by, with glittering wheels and spanking team; the footman in livery behind, the gentleman driving. I hear his brake scrape as he puts it on down the gentle descent. Now a lark goes off. Then the mellow horn of a cow or heifer is heard. Then the bleat of sheep. The crows caw hoarsely. Few houses by the road-side, but here and there behind the trees in the distance. I hear the greenfinch, stronger and sharper than our goldfinch, but less pleasing. The matured look of some fields of grass alone suggests midsummer. Several species of mint by the road-side, also certain white, umbelliferous plants. Everywhere that royal weed of Britain, the nettle. Shapely piles of road material and pounded stone at regular distances, every fragment of which will go through a two-inch ring. The roads are mended only in winter, and are kept as smooth and hard as a rock. No swells or 'thank-y'-ma'ms' in them to turn the water; they shed the water like a rounded pavement. On the hill, three miles from Stratford, where a finger-post points you to Hampton Lucy, I turn and see the spire of Shak-

MEADOW BY AVON.

spere's church between the trees. It lies in a broad, gentle valley, and rises above many trees. 'I hope and praise God it will keep foine,' said the old woman at whose little cottage I stopped for ginger-beer, attracted by a sign in the window. 'One penny, sir, if you please. I made it myself, sir. I do not leave the front door unfastened' (undoing it to let me out) 'when I am down in the garden.' A weasel runs across the road in front of me, and is scolded by a little bird. The body of a dead hedgehog festering beside the hedge. A species of St. Johnswort in bloom, teasels, and a small convulvulus. Also a species of plantain with a head large as my finger, purple tinged with white. Road margins wide, grassy, and fragrant with clover. Privet in bloom in the hedges, panicles of small white flowers faintly sweet-scented. 'As clean and white as privet when it flowers,' says Tennyson in 'Walking to the Mail.' The road an avenue between noble trees, beech, ash, elm, and oak. All the fields are bounded by lines of stately trees; the distance is black with them. A large thistle by the road-side, with homeless bumble-bees on the heads as at home, some of them white-faced and stingless. Thistles rare in this country. Weeds of all kinds rare except the nettle. The place to see the Scotch thistle is not in Scotland or England, but in America."

III.

ENGLAND is like the margin of a spring-run, near its source—always green, always cool, always moist, comparatively free from frost in winter and from drought in summer. The spring-run to which it owes this character is the Gulf stream, which brings out of the pit of the southern ocean what the fountain brings out of the bowels of the earth—a uniform temperature, low but constant; a fog in winter, a cloud in summer. The spirit of gentle, fertilizing summer rain perhaps never took such tangible and topographical shape before. Cloud-evolved, cloud-enveloped, cloud-protected, it fills the eye of the American traveler with a vision of greenness such as he has never before dreamed of; a greenness born of perpetual May, tender, untarnished, ever renewed, and as uniform and all-pervading as the rain-drops that fall, covering mountain, cliff, and vale alike. The softened, rounded, full outlines given to our landscape by a deep fall of snow is given to the English by this depth of vegetable mold and this all-prevailing verdure which it supports. Indeed, it is caught upon the shelves and projections of the rocks as if it fell from the clouds,—a kind of green snow,—and it clings to their rough or slanting sides like moist flakes. In the little valleys and chasms it appears to lie deepest. Only the peaks and broken rocky crests of the highest Scotch

SOME HEDGE-ROW FLOWERS—PRIVET, DOGROSE, BRAMBLE, HONEYSUCKLE.

sides the moist, fresh greenness fairly drips. Grass, grass, grass, and evermore grass. Is there another country under the sun so be-cushioned, becarpeted, and becurtained with grass? Even the woods are full of grass, and I have seen them mowing in a forest. Grass grows upon the rocks, upon the walls, on the tops of the old castles, on the roofs of the houses. Turf used as capping to a stone fence thrives and blooms as if upon the ground. There seems to be a deposit from the atmosphere,—a slow but steady accumulation of a black, peaty mold upon all reposed surfaces,—that by and by supports some of the lower or cryptogamous forms of vegetation. These decay and add to the soil, till thus in time grass and other plants will grow. The walls of the old castles and cathedrals support a variety of plant life. On Rochester Castle I saw two or three species of large wild flowers growing one hundred feet from the ground, and tempting the tourist to perilous reachings and climbings to get them. The very stones seem to sprout. My companion made a sketch of a striking group of red and white flowers blooming far up on one of the buttresses of Rochester Cathedral. The soil will climb to any height. Indeed, there seems to be a kind of finer soil floating in the air. How else can one account for the general smut of the human face and hands in this country, and the impossibility of keeping his own

and Cumberland mountains are bare. A down their treeless

clean? The unwashed hand here quickly leaves a deposit on whatever it touches. A prolonged neglect of soap and water, and I think one would be presently covered with a fine green mold, like that upon the boles of the trees in the woods. If the rains were not occasionally heavy enough to clean them off, I have no doubt that the roofs of all buildings in England would in a few years be covered with turf, and that daisies and buttercups would bloom upon them. How quickly all new buildings take on the prevailing look of age and mellowness. One needs to have seen the great architectural piles and monuments of Britain to appreciate Shakspeare's line—

"That unswept stone, besmeared with sluttish Time."

He must also have seen those Scotch or Cumberland mountains to appreciate the descriptive force of this other line—

"The turfy mountains where live the nibbling sheep."

The turfy mountains are the unswept stones that have held and utilized their ever increasing capital of dirt. These vast rocky eminences are stuffed and padded with peat; it is the sooty soil of the house-tops and of the grimy human hand, deepened and accumulated till it nourishes the finest, sweetest grass.

It was this turfy and grassy character of these mountains—I am tempted to say their cushiony character—that no reading or picture viewing of mine had prepared me for. In the cut or on canvas they appeared like hard and frowning rocks; and here I beheld them as

green and succulent as any meadow-bank in April or May,—vast, elevated sheep-walks and rabbit-warrens, treeless, shrubless, generally without loose bowlders, shelving rocks, or sheer precipices; often rounded, feminine, dimpled, or impressing one as if the rock had been thrust up beneath an immense stretch of the finest lawn, and had carried the turf with it heavenward, rending it here and there, but preserving acres of it intact.

larklike tail. No sound of wind in the trees; there were no trees, no seared branches and trunks that so enhance and set off the wildness of our mountain-tops. On the summit the wind whistled around the outcropping rocks and hummed among the heather, but the great mountain did not purr or roar like one covered with forests.

I lingered for an hour or more, and gazed upon the stretch of mountain and vale

OLD BRIDGE ON AVON.

In Scotland I ascended Ben Venue, not one of the highest or ruggedest of the Scotch mountains, but a fair sample of them, and my foot was seldom off the grass or bog, often sinking into them as into a saturated sponge. Where I expected a dry course, I found a wet one. The thick, springy turf was oozing with water. Instead of being balked by precipices, I was hindered by swamps. Where a tangle of brush or a chaos of bowlders should have detained me, I was picking my way as through a wet meadow-bottom tilted up at an angle of forty-five degrees. My feet became soaked when my shins should have been bruised. Occasionally, a large deposit of peat in some favored place had given way beneath the strain of much water, and left a black chasm a few yards wide and a yard or more deep. Cold spring-runs were abundant, wild flowers few, grass universal. A loping hare started up before me; a pair of ringed ousels took a hasty glance at me from behind a rock; sheep and lambs, gray as the outcropping rock, were scattered here and there; the wheat-ear uncovered its white rump as it flitted from rock to rock, and the mountain pipit displayed its

about me. The summit of Ben Lomond, eight or ten miles to the west, rose a few hundred feet above me. On four peaks I could see snow or miniature glaciers. Only four or five houses, mostly humble shepherd dwellings, were visible in that wide circuit. The sun shone out at intervals; the driving clouds floated low, their keels scraping the rocks of some of the higher summits. The atmosphere was filled with a curious white film, like water tinged with milk, an effect only produced at home by a fine mist. "A certain tameness in the view, after all," I recorded in my note-book on the spot, "perhaps because of the trim and grassy character of the mountain; not solemn and impressive; no sense of age or power. The rock crops out everywhere, but it can hardly look you in the face; it is crumbling and insignificant; shows no frowning walls, no tremendous cleavage; nothing overhanging and precipitous; no wrath and revel of the elder gods."

Even in rugged Scotland, nature is scarcely wilder than a mountain sheep, certainly a good way short of the ferity of the moose and caribou. There is everywhere marked

STRATFORD—FROM BARDON HILL.

repose and moderation in the scenery, a kind of aboriginal Scotch canniness and propriety that gives one a new sensation. On and about Ben Nevis there is barrenness, cragginess, and desolation; but the characteristic feature of wild Scotch scenery is the moor, lifted up into mountains, covering low, broad hills, or stretching away in undulating plains, black, silent, melancholy, it may be, but never savage or especially wild. "The vast and yet not savage solitude," Carlyle says, referring to these moorlands. The soil is black and peaty, often boggy; the heather short and uniform as prairie grass; a shepherd's cottage or a sportsman's "box" stuck here and there amid the hills. The highland cattle are shaggy and picturesque, but the

moors and mountains are close cropped and uniform. The solitude is not that of a forest full of still forms and dim vistas, but of wide, open, somber spaces. Nature did not look alien or unfriendly to me; there must be barrenness or some savage threatening feature in the landscape to produce this impression; but the heather and whin are like a permanent shadow, and one longs to see the trees stand up and wave their branches. The torrents leaping down off the mountains are very welcome to both eye and ear. And the lakes—nothing can be prettier than Loch Lomond and Loch Katrine, though one wishes for some of the superfluous rocks of the New World to give their beauty a granite setting.

IV

It is characteristic of nature in England that most of the stone with which the old bridges, churches, and cathedrals are built is so soft that people carve their initials in it with their jackknives, as we do in the bark of a tree or in a piece of pine timber. At Stratford they have posted a card upon the outside of the old church, imploring visitors to refrain from this barbarous practice. One sees names and dates there more than a century old. Often, in leaning over the parapets of the bridges along the highways, I would find them covered with letters and figures. Tourists have made such havoc chipping off fragments from the old Brig o' Doon in Burns's country, that the parapet has had to be repaired. One could cut out the key of the arch with his pocket-knife. And yet these old structures outlast empires. A few miles from Glasgow I saw the remains of an old Roman bridge, the arch apparently as perfect as when the first Roman chariot passed over it, probably fifteen centuries ago. No wheels but those of time pass over it in these later centuries, and these seem to be driven slowly and gently in this land, with but little wear and tear to the ancient highways.

England is not a country of granite and marble, but of chalk, marl, and clay. The old Plutonic gods do not assert themselves; they are buried and turned to dust, and the more modern humanistic divinities bear sway. The land is a green cemetery of extinct rude forces. Where the highway or the railway gashed the hills deeply, I could seldom tell where the soil ended and the rock began, as they gradually assimilated, blended, and became one.

And this is the key to nature in England: 'tis granite grown ripe and mellow and issuing in grass and verdure; 'tis aboriginal force and fecundity become docile and equable and mounting toward higher forms,—the harsh, bitter rind of the earth grown sweet and edible. There is such body and substance in the color and presence of things that one thinks the very roots of the grass must go deeper than usual. The crude, the raw, the discordant, where are they? It seems a comparatively short and easy step from nature to the canvas or to the poem in this cozy land. Nothing need be added; the idealization has already taken place. A much sterner problem confronts the artist in America: a greater gulf has to be bridged, a gulf like that between the animal and the mineral. Life is less picturesque, and nature less moral, less mindful of man. The Old World is deeply covered with a kind of human leaf-mold, while the New is for the most part yet raw, undigested hard-

pan. This is why these scenes haunt one like a memory. One seems to have youthful associations with every field and hill-top he looks upon. The complete humanization of nature has taken place. The soil has been mixed with human thought and substance. These fields have been alternately Celt, Roman, British, Norman, Saxon; they have moved and walked and talked and loved and suffered; hence one feels kindred to them and at home among them. The mother-land, indeed. Every foot of its soil has given birth to a human being and grown tender and conscious with time.

England is like a seat by the chimney-corner, and is as redolent of human occupancy and domesticity. It satisfies to the full one's utmost craving for the home-like and for the fruits of affectionate occupation of the soil. It does not satisfy one's craving for the wild, the savage, the aboriginal, what our poet describes as his

"Hungering, hungering, hungering, for primal energies and Nature's dauntlessness."

But probably in the matter of natural scenes we hunger most for that which we most do feed upon. At any rate, I can conceive that one might be easily contented with what the English landscape affords him.

Nature, with us, is a harsh, unloving step-mother. She has the continental swing and stride and the continental indifference. Things are on a large scale, and not so readily appropriated and domesticated as in England. Except here and there in New England, we have cropped and shorn the earth without taming her.

In the British island the whole physiognomy of the land bespeaks the action of slow, uniform, conservative agencies. There is an elemental composure and moderation in things that leave their mark everywhere,—a sort of aboriginal sweetness and docility that are a surprise and a charm. One does not forget that the evolution of man probably occurred in this hemisphere, and time would seem to have proved that there is something here more favorable to his perpetuity and longevity.

The dominant impression of the English landscape is repose. Never was such a restful land to the eye, especially to the American eye, sated as it is very apt to be with the mingled squalor and splendor of its own landscape, its violent contrasts, and general spirit of unrest. But the completeness and composure of this outdoor nature is like a dream. It is like the poise of the tide at its full: every hurt of the world is healed, every shore

covered, every unsightly spot is hidden. The circle of the horizon is brimming with the green equable flood. (I did not see the fens of Lincolnshire nor the wolds of York.) This look of repose is partly the result of the maturity and ripeness brought about by time and ages of patient and thorough husbandry, and partly the result of the gentle, continent spirit of Nature herself. She is contented, she is happily wedded, she is well clothed and fed. Her offspring swarm about her, her paths have fallen in pleasant places. The foliage of the trees, how dense and massive! The turf of the fields, how thick and uniform! The streams and rivers, how placid and full, showing no devastated margins, no widespread sandy wastes and unsightly heaps of drift bowlders! To the returned traveler the foliage of the trees and groves of New England and New York looks thin and disheveled when compared with the foliage he has just left. This effect is probably owing to our cruder soil and sharper climate. In mid-summer the hair of our trees seems to stand on end; the woods have a wild, frightened look, or as if they were just recovering from a debauch. In our intense light and heat, the leaves, instead of spreading themselves full to the sun and crowding out upon the ends of the branches as they do in England, retreat, as it were, hide behind each other, stand edgewise, perpendicular, or at any angle, to avoid the direct rays. In Britain, from the slow, dripping rains and the excessive moisture, the leaves of the trees droop more, and the branches are more pendent. The rays of light are fewer and feebler, and the foliage disposes itself so as to catch them all, and thus presents a fuller and broader surface to the eye of the beholder. The leaves are massed upon the outer ends of the branches, while the interior of the tree is comparatively leafless. The European plane-tree is like a tent. The foliage is all on the outside. The bird voices in it reverberate as in a chamber.

"The pillar'd dusk of sounding sycamores,"

says Tennyson. At a little distance, it has the mass and solidity of a rock. A number of European maples growing in a park near me still keep up their foreign habit under our fierce skies, and sometimes get their leaves scorched. They spread the greatest possible leaf-surface to the light, and no ray penetrates their interiors. When their foliage begins to turn in the fall, the trees appear as if they had been lightly and hastily brushed with gold. The outer edges of the branches become a light yellow, while, a little deeper,

the body of the foliage is still green. It is this solid and sculpturesque character of the English foliage that so fills the eye of the artist. The feathery, formless, indefinite, not to say thin, aspect of our leafage is much less easy to paint, and much less pleasing when painted.

The same is true of the turf in the fields and upon the hills. The sward with us, even in the oldest meadows, will wear more or less a ragged, uneven aspect. The frost heaves it, the sun parches it; it is thin here and thick there, crabbed in one spot and fine and soft in another. Only by the frequent use of a heavy roller, copious waterings and top-dressings, can we produce sod that approaches in beauty even that of the elevated sheep ranges in England and Scotland.

The greater activity and abundance of the earth-worm, as disclosed by Darwin, probably has much to do with the smoothness and fatness of those fields when contrasted with our own. This little yet mighty engine is much less instrumental in leavening and leveling the soil in New England than in Old. The greater humidity of the mother-country, the deep clayey soil, its fattening for ages by human occupancy, the abundance of food, the milder climate, etc., are all favorable to the life and activity of the earth-worm. Indeed, according to Darwin, the gardener that has made England a garden is none other than this little obscure creature. It plows, drains, airs, pulverizes, fertilizes, and levels. It cannot transport rocks and stone, but it can bury them; it cannot remove the ancient walls and pavements, but it can undermine them and deposit its rich castings above them. On each acre of land, he says, "in many parts of England, a weight of more than ten tons of dry earth annually passes through their bodies and is brought to the surface." "When we behold a wide, turf-covered expanse," he further observes, "we should remember that its smoothness, on which so much of its beauty depends, is mainly due to all the inequalities having been slowly leveled by worms."

The small part which worms play in this direction in our landscape is, I am convinced, more than neutralized by our violent or disrupting climate; but England looks like the product of some such gentle, tireless, and beneficent agent. I have referred to that effect in the face of the landscape as if the soil had snowed down; it seems the snow came from the other direction, namely, from below, but was deposited with equal gentleness and uniformity.

The repose and equipoise of nature of which I have spoken appears in the fields

of grain no less than in the turf and foliage. One may see vast stretches of wheat, oats, barley, beans, etc., as uniform as the surface of a lake, every stalk of grain or bean the size and height of every other stalk. This, of course, means good husbandry; it means a mild, even-tempered nature back of it, also. Then the repose of the English landscape is enhanced, rather than marred, by the part man has played in it. How those old arched bridges rest above the placid streams; how easily they conduct the trim, perfect highways over them! Where the foot finds an easy way, the eye finds the same; where the body finds harmony, the mind finds harmony. Those ivy-covered walls and ruins, those finished fields, those rounded hedge-rows, those embowered cottages, and that gray, massive architecture, all contribute to the harmony and to the repose of the landscape. Perhaps in no other country are the grazing herds so much at ease. One's first impression, on seeing British fields in spring or summer, is that the cattle and sheep have all broken into the meadow and have not yet been discovered by the farmer; they have taken their fill, and are now reposing upon the grass or dreaming under the trees. But you presently perceive that it is all meadow or meadow-like, that there are no wild, weedy, or barren pastures about which the herds toil, but that they are in grass up to their eyes everywhere. Hence their contentment; hence another element of repose in the landscape.

The softness and humidity of the English

climate act in two ways in promoting that marvelous greenness of the land, namely, by growth and by decay. As the grass springs quickly, so its matured stalk or dry leaf decays quickly. No field growths are desiccated and preserved as with us; there are no dried stubble and seared leaves remaining over the winter to mar and obscure the verdancy of spring. Every dead thing is quickly converted back to vegetable mold. In the woods, in May, it is difficult to find any of the shed leaves of the previous autumn; in the fields and copses and along the highways, no stalk of weed or grass remains; while our wild, uplying pastures and mountain-tops always present a more or less brown and seared appearance from the dried and bleached stalks of the growth of the previous year, through which the fresh springing grass is scarcely visible. Where rain falls on nearly three hundred days in the year, as in the British islands, the conversion and reconversion of the mold into grass, and *vice versa*, take place very rapidly.

I have not been at all afraid of over-praising the beauty and the geniality of the face of the mother-country, and have not consciously exaggerated my impressions of any feature. 'Tis the old homestead; 'tis grandfather's and grandmother's land. Nature has been kind to it; man has been kind to it; 'tis the seat of the dominant race. The American feels at home there; the press of his foot to the soil, in Whitman's phrase, springs a hundred affections—affections and admirations he need not be ashamed to give free rein to.

John Burroughs.

SEMITONES.

Ah me, the subtle boundary between
 What pleases and what pains! The difference
 Between the word that thrills our every sense
 With joy, and one which hurts, although it mean
 No hurt! It is the things that are unseen,
 Invisible, not things of violence,
 For which the mightiest are without defense.
 On kine most fair to see one may grow lean
 With hunger. Many a snowy bread is doled
 Which is far harder than the hardest stones.
 'Tis but a narrow line divides the zones
 Where suns are warm from those where suns are cold.
 'Twixt harmonies divine as chords can hold
 And torturing discords, lie but semitones!

H. H.

THE IMPRESSIONS OF A COUSIN.*

BY HENRY JAMES,

Author of "The Portrait of a Lady," "Roderick Hudson," "Daisy Miller," etc.

PART I.

NEW YORK, April 3, 1873.—There are moments when I feel that she has asked too much of me—especially since our arrival in this country. These three months have not done much toward making me happy here. I don't know what the difference is—or rather I do; and I say this only because it's less trouble. It is no trouble, however, to say that I like New York less than Rome; that, after all, *is* the difference. And then there's nothing to sketch! For ten years I have been sketching, and I really believe I do it very well. But how can I sketch Fifty-third street? There are times when I even say to myself, How can I even endure Fifty-third street? When I turn into it from the Fifth Avenue, the vista seems too hideous: the narrow, impersonal houses, with the dry, hard tone of their brown-stone, a surface as uninteresting as that of sand-paper; their steep, stiff stoops, giving you such a climb to the door; their lumpish balustrades, porticoes, and cornices, turned out by the hundred and adorned with heavy excrescences,—such an eruption of ornament and such a poverty of effect! I suppose my superior tone would seem very pretentious if anybody were to read this shameless record of personal emotion; and I should be asked why an expensive up-town residence is not as good as a slimy Italian palazzo. My answer, of course, is that I can sketch the palazzo and can do nothing with the up-town residence. I can live in it; of course, and be very grateful for the shelter; but that doesn't count. Putting aside that odious fashion of popping into the "parlors" as soon as you cross the threshold,—no interval, no approach,—these places are wonderfully comfortable. This one of Eunice's is perfectly arranged; and we have so much space that she has given me a sitting-room of my own—an immense luxury. Her kindness, her affection, are the most charming, delicate, natural thing I ever conceived. I don't know what can have put it into her head to like me so much; I suppose I should say into her heart, only I don't like to write about Eunice's heart—that tender, shrinking, shade-loving, and above all fresh

and youthful organ. There is a certain self-complacency, perhaps, in my assuming that her generosity is mere affection; for her conscience is so inordinately developed that she attaches the idea of duty to everything,—even to her relations to a poor, plain, unloved and unlovable third cousin. Whether she is fond of me or not, she thinks it right to be fond of me; and the effort of her life is to do what is right. In matters of duty, in short, she is a real little artist; and her masterpiece (in that way) is coming back here to live. She can't like it; her tastes are not here. If she did like it, I am sure she would never have invented such a phrase as the one of which she delivered herself the other day,—“I think one's life has more dignity in one's own country.” That's a phrase made up after the fact. No one ever gave up living in Europe because there is a want of dignity in it. Poor Eunice talks of “one's own country” as if she kept the United States in the back-parlor. I have yet to perceive the dignity of living in Fifty-third street. This, I suppose, is very treasonable; but a woman isn't obliged to be patriotic. I believe I should be a good patriot if I could sketch my native town. But I can't make a picture of the brown-stone stoops in the Fifth Avenue, or the platform of the elevated railway in the Sixth. Eunice has suggested to me that I might find some subjects in the Park, and I have been there to look for them. But somehow, the blistered *sentiers* of asphalt, the rock-work caverns, the huge iron bridges spanning little muddy lakes, the whole crowded, cockneyfied place, making up so many faces to look pretty, don't appeal to me—haven't, from beginning to end, a discoverable “bit.” Besides, it's too cold to sit on a camp-stool under this clean-swept sky, whose depths of blue air do very well, doubtless, for the floor of heaven, but are quite too far away for the ceiling of earth. The sky over here seems part of the world at large; in Europe it's part of the particular place. In summer, I dare say, it will be better; and it will go hard with me if I don't find somewhere some leafy lane, some cottage-roof, something in some degree mossy or mellow. Nature here, of course, is

very fine, though I am afraid only in large pieces; and with my little yard-measure (it used to serve for the Roman Campagna!) I don't know what I shall be able to do. I must try to rise to the occasion.

The Hudson is beautiful; I remember that well enough; and Eunice tells me that when we are in *villeggiatura* we shall be close to the loveliest part of it. Her cottage, or villa, or whatever they call it (Mrs. Ermine, by the way, always speaks of it as a "country-seat"), is more or less opposite to West Point, where it makes one of its grandest sweeps. Unfortunately, it has been let these three years that she has been abroad, and will not be vacant till the first of June. Mr. Caliph, her trustee, took upon himself to do that;—very impertinently, I think, for certainly if I had Eunice's fortune I shouldn't let my houses—I mean, of course, those that are so personal. Least of all should I let my "country-seat." It's bad enough for people to appropriate one's sofas and tables, without appropriating one's flowers and trees and even one's views. There is nothing so personal as one's horizon,—the horizon that one commands, whatever it is, from one's window. Nobody else has just that one. Mr. Caliph, by the way, is apparently a person of the incalculable, irresponsible sort. It would have been natural to suppose that, having the greater part of my cousin's property in his care, he would be in New York to receive her at the end of a long absence and a boisterous voyage. Common civility would have suggested that, especially as he was an old friend, or rather a young friend of both her parents. It was an odd thing to make him sole trustee; but that was Cousin Letitia's doing: "she thought it would be so much easier for Eunice to see only one person." I believe she had found that effort the limit of her own energy; but she might have known that Eunice would have given her best attention, every day, to twenty men of business, if such a duty had been presented to her. I don't think poor Cousin Letitia knew very much; Eunice speaks of her much less than she speaks of her father, whose death would have been the greater sorrow if she dared to admit to herself that she preferred one of her parents to the other. The number of things that the poor girl doesn't dare to admit to herself! One of them, I am sure, is that Mr. Caliph is acting improperly in spending three months in Washington, just at the moment when it would be most convenient to her to see him. He has pressing business there, it seems (he is a good deal of a politician—not that I know what people do in Washington), and he writes to Eunice every week or two that he will "finish it up"

in ten days more, and then will be completely at her service; but he never finishes it up,—never arrives. She has not seen him for three years; he certainly, I think, ought to have come out to her in Europe. She doesn't know that, and I haven't cared to suggest it, for she wishes (very naturally) to think that he is a pearl of trustees. Fortunately, he sends her all the money she needs; and the other day he sent her his brother,—a rather agitated (though not in the least agitating) youth, who presented himself about lunch-time, Mr. Caliph having (as he explained) told him that this was the best hour to call. What does Mr. Caliph know about it, by the way? It's little enough he has tried! Mr. Adrian Frank had, of course, nothing to say about business; he only came to be agreeable, and to tell us that he had just seen his brother in Washington—as if that were any comfort! They are brothers only in the sense that they are children of the same mother; Mrs. Caliph having accepted consolations in her widowhood, and produced this blushing boy, who is ten years younger than the accomplished Caliph. (I say accomplished Caliph for the phrase. I haven't the least idea of his accomplishments. Somehow, a man with that name ought to have a good many.) Mr. Frank, the second husband, is dead, as well as herself, and the young man has a very good fortune. He is shy and simple, colors immensely, and becomes alarmed at his own silences; but is tall and straight and clear-eyed, and is, I imagine, a very estimable youth. Eunice says that he is as different as possible from his step-brother; so that, perhaps, though she doesn't mean it in that way his step-brother is not estimable. I shall judge of that for myself, if he ever gives me a chance.

Young Frank, at any rate, is a gentleman, and in spite of his blushes has seen a great deal of the world. Perhaps that is what he is blushing for: there are so many things we have no reason to be proud of. He staid to lunch, and talked a little about the far East,—Babylon, Palmyra, Ispahan, and that sort of thing,—from which he is lately returned. He also is a sketcher, though evidently he doesn't show. He asked to see my things, however; and I produced a few old water-colors, of other days and other climes, which I have luckily brought to America,—produced them with my usual calm assurance. It was clear he thought me very clever; so I suspect that in not showing he himself is rather wise. When I said there was nothing here to sketch, that rectangular towns wont do, etc., he asked me why I didn't try people. What people? the people in the Fifth Avenue? They are even less pictorial than their houses. I don't perceive

that those in the Sixth are any better, or those in the Fourth and Third, or in the Seventh and Eighth. Good heavens! what a nomenclature! The city of New York is like a tall sum in addition, and the streets are like columns of figures. What a place for me to live, who hate arithmetic! I have tried Mrs. Ermine; but that is only because she asked me to: Mrs. Ermine asks for whatever she wants. I don't think she cares for it much, for though it's bad, it's not bad enough to please her. I thought she would be rather easy to do, as her countenance is made up largely of negatives—no color, no form, no intelligence; I should simply have to leave a sort of brilliant blank. I found, however, there was difficulty in representing an expression which consisted so completely of the absence of that article. With her large, fair, featureless face, unilluminated by a ray of meaning, she makes the most incoherent, the most unexpected remarks. She asked Eunice, the other day, whether she should not bring a few gentlemen to see her—she seemed to know so few, to be so lonely. Then when Eunice thanked her, and said she needn't take that trouble: she was not lonely, and in any case did not desire her solitude to be peopled in that manner,—Mrs. Ermine declared blandly that it was all right, but that she supposed this was the great advantage of being an orphan, that you might have gentlemen brought to see you. "I don't like being an orphan, even for that," said Eunice; who, indeed, does not like it at all, though she will be twenty-one next month, and has had several years to get used to it. Mrs. Ermine is very vulgar, yet she thinks she has high distinction. I am very glad our cousinship is not on the same side. Except that she is an idiot and a bore, however, I think there is no harm in her. Her time is spent in contemplating the surface of things,—and for that I don't blame her, for I myself am very fond of the surface. But she doesn't see what she looks at, and, in short, is very tiresome. That is one of the things poor Eunice won't admit to herself,—that Lizzie Ermine will end by boring us to death. Now that both her daughters are married, she has her time quite on her hands; for the sons-in-law, I am sure, can't encourage her visits. She may, however, contrive to be with them as well as here, for, as a poor young husband once said to me, a *belle-mère*, after marriage, is as inevitable as stickiness after eating honey. A fool can do plenty of harm without deep intentions. After all, intentions fail; and what you know an accident by is that it doesn't. Mrs. Ermine doesn't like me;

she thinks she ought to be in my shoes—that when Eunice lost her old governess, who had remained with her as "companion," she ought, instead of picking me up in Rome, to have come home and thrown herself upon some form of kinship more cushiony. She is jealous of me, and vexed that I don't give her more opportunities; for I know she has made up her mind that I ought to be a Bohemian: in that case she could persuade Eunice that I am a very unfit sort of person. I am single, not young, not pretty, not well off, and not very desirous to please; I carry a palette on my thumb, and very often have stains on my apron—though except for those stains I pretend to be immaculately neat. What right have I *not* to be a Bohemian, and not to teach Eunice to make cigarettes? I am convinced Mrs. Ermine is disappointed that I don't smoke. Perhaps, after all, she is right, and that I am too much a creature of habits, of rules. A few people have been good enough to call me an artist; but I am not. I am only, in a small way, a worker. I walk too straight; it's ten years since any one asked me to dance! I wish I could oblige you, Mrs. Ermine, by dipping into Bohemia once in awhile. But one can't have the defects of the qualities one doesn't possess. I am not an artist, I am too much of a critic. I suppose a she-critic is a kind of monster; women should only be criticised. That's why I keep it all to myself—myself being this little book. I grew tired of myself some months ago, and locked myself up in a desk. It was a kind of punishment, but it was also a great rest, to stop judging, to stop caring, for awhile. Now that I have come out, I suppose I ought to take a vow not to be ill-natured.

As I read over what I have written here, I wonder whether it was worth while to have re-opened my journal. Still, why not have the benefit of being thought disagreeable,—the luxury of recorded observation? If one is poor, plain, proud—and in this very private place I may add, clever,—there are certain necessary revenges!

April 10.—Adrian Frank has been here again, and we rather like him. (That will do for the first note of a more genial tone.) His eyes are very blue, and his teeth very white,—two things that always please me. He became rather more communicative, and almost promised to show me his sketches—in spite of the fact that he is evidently as much as ever struck with my own ability. Perhaps he has discovered that I am trying to be genial! He wishes to take us to drive—that is, to take Eunice; for, of course, I shall go only for propriety. She doesn't go with young men

alone; that element was not included in her education. She said to me yesterday, "The only man I shall drive alone with will be the one I marry." She talks so little about marrying that this made an impression on me. That subject is supposed to be a girl's inevitable topic; but no young women could occupy themselves with it less than she and I do. I think I may say that we never mention it at all. I suppose that if a man were to read this, he would be greatly surprised and not particularly edified. As there is no danger of any man's reading it, I may add that I always take tacitly for granted that Eunice will marry. She doesn't in the least pretend that she won't; and if I am not mistaken, she is capable of conjugal affection. The longer I live with her, the more I see that she is a dear girl. Now that I know her better, I perceive that she is perfectly natural. I used to think that she tried too much—that she watched herself, perhaps, with a little secret admiration. But that was because I couldn't conceive of a girl's motives being so simple. She only wants not to suffer—she is immensely afraid of that. Therefore, she wishes to be universally tender—to mitigate the general sum of suffering, in the hope that she herself may come off easily. Poor thing! she doesn't know that we can diminish the amount of suffering for others only by taking to ourselves a part of their share. The amount of that commodity in the world is always the same; it is only the distribution that varies. We all try to dodge our portion; and some of us succeed. I find the best way is not to think about it, and to make little water-colors. Eunice thinks that the best way is to be very generous, to condemn no one unheard.

A great many things happen that I don't mention here; incidents of social life, I believe they call them. People come to see us, and sometimes they invite us to dinner. We go to certain concerts, many of which are very good. We take a walk every day; and I read to Eunice, and she plays to me. Mrs. Ermine makes her appearance several times a week, and gives us the news of the town—a great deal more of it than we have any use for. She thinks we live in a hole; and she has more than once expressed her conviction that I can do nothing socially for Eunice. As to that, she is perfectly right; I am aware of my social insignificance. But I am equally aware that my cousin has no need of being pushed. I know little of the people and things of this place; but I know enough to see that, whatever they are, the best of them are at her service. Mrs. Ermine thinks it a great pity that Eunice should have come too late in the season to "go out" with her; for after this,

there are few entertainments at which my protecting presence is not sufficient. Besides, Eunice isn't eager; I often wonder at her indifference. She never thinks of the dances she has missed, nor asks about those at which she still may figure. She isn't sad, and it doesn't amount to melancholy; but she certainly is rather detached. She likes to read, to talk with me, to make music, and to dine out when she supposes there will be "real conversation." She is extremely fond of real conversation; and we flatter ourselves that a good deal of it takes place between us. We talk about life and religion and art and George Eliot; all that, I hope, is sufficiently real. Eunice understands everything, and has a great many opinions; she is quite the modern young woman, though she hasn't modern manners. But all this doesn't explain to me why, as Mrs. Ermine says, she should wish to be so dreadfully quiet. That lady's suspicion to the contrary notwithstanding, it is not I who make her so. I would go with her to a party every night if she should wish it, and send out cards to proclaim that we "receive." But her ambitions are not those of the usual girl; or at any rate, if she is waiting for what the usual girl waits for, she is waiting very patiently. As I say, I can't quite make out the secret of her patience. However, it is not necessary I should; it was no part of the bargain on which I came to her that we were to conceal nothing from each other. I conceal a great deal from Eunice; at least I hope I do: for instance, how fearfully I am bored. I think I am as patient as she; but then I have certain things to help me—my age, my resignation, my ability, and, I suppose I may add, my conceit. Mrs. Ermine doesn't bring the young men, but she talks about them, and calls them Harry and Freddy. She wants Eunice to marry, though I don't see what she is to gain by it. It is apparently a disinterested love of matrimony,—or rather, I should say, a love of weddings. She lives in a world of "engagements," and announces a new one every time she comes in. I never heard of so much marrying in all my life before. Mrs. Ermine is dying to be able to tell people that Eunice is engaged: that distinction should not be wanting to a cousin of hers. Whoever marries her, by the way, will come into a very good fortune. Almost for the first time, three days ago, she told me about her affairs.

She knows less about them than she believes,—I could see that; but she knows the great matter, which is, that in the course of her twenty-first year, by the terms of her mother's will, she becomes mistress of her property, of which for the last seven years Mr. Caliph

has been sole trustee. On that day Mr. Caliph is to make over to her three hundred thousand dollars, which he has been nursing and keeping safe. So much on every occasion seems to be expected of this wonderful man! I call him so because I think it was wonderful of him to have been appointed sole depository of the property of an orphan by a very anxious, scrupulous, affectionate mother, whose one desire, when she made her will, was to prepare for her child a fruitful majority, and whose acquaintance with him had not been of many years, though her esteem for him was great. He had been a friend—a very good friend—of her husband, who, as he neared his end, asked him to look after his widow. Eunice's father didn't, however, make him trustee of his little estate; he put that into other hands, and Eunice has a very good account of it. It amounts, unfortunately, but to some fifty thousand dollars. Her mother's proceedings with regard to Mr. Caliph were very feminine—so I may express myself in the privacy of these pages. But I believe all women are very feminine in their relations with Mr. Caliph. "Haroun-al-Raschid" I call him to Eunice; and I suppose he expects to find us in a state of Oriental prostration. She says, however, that he is not the least of a Turk, and that nothing could be kinder or more considerate than he was three years ago, before she went to Europe. He was constantly with her at that time, for many months; and his attentions have evidently made a great impression on her. That sort of thing naturally would on a girl of seventeen; and I have told her she must be prepared to think him much less brilliant a personage to-day. I don't know what he will think of some of her plans of expenditure,—laying out an Italian garden at the house on the river, founding a cot at the children's hospital, erecting a music-room in the rear of this house. Next winter Eunice proposes to receive; but she wishes to have an originality, in the shape of really good music. She will evidently be rather extravagant, at least at first. Mr. Caliph, of course, will have no more authority; still, he may advise her as a friend.

April 23.—This afternoon, while Eunice was out, Mr. Frank made his appearance, having had the civility, as I afterward learned, to ask for me, in spite of the absence of the *padronina*. I told him she was at Mrs. Ermine's, and that Mrs. Ermine was her cousin.

"Then I can say what I should not be able to say if she were here," he said, smiling that singular smile which has the effect of showing his teeth and drawing the lids of his eyes together. If he were a young countryman, one would call it a grin. It is not exactly a grin, but it is very simple.

"And what may that be?" I asked, with encouragement.

He hesitated a little, while I admired his teeth, which I am sure he has no wish to exhibit; and I expected something wonderful. "Considering that she is fair, she is really very pretty," he said at last.

I was rather disappointed, and I went so far as to say to him that he might have made that remark in her presence.

This time his blue eyes remained wide open. "So you really think so?"

"Considering that she's fair, that part of it, perhaps, might have been omitted; but the rest surely would have pleased her."

"Do you really think so?"

"Well, 'really very pretty' is, perhaps, not quite right; it seems to imply a kind of surprise. You might have omitted the 'really.'"

"You want me to omit everything," he said, laughing, as if he thought me wonderfully amusing.

"The gist of the thing would remain, 'You are very pretty'; that would have been unexpected and agreeable."

"I think you are laughing at me!" cried poor Mr. Frank, without bitterness. "I have no right to say that till I know she likes me."

"She does like you; I see no harm in telling you so." He seemed to me so modest, so natural, that I felt as free to say this to him as I would have been to a good child; more, indeed, than to a good child, for a child to whom one would say that would be rather a prig; and Adrian Frank is not a prig. I could see that by the way he answered; it was rather odd.

"It will please my brother to know that!"

"Does he take such an interest in the impressions you make?"

"Oh, yes; he wants me to appear well."

This was said with the most touching innocence; it was a complete confession of inferiority. It was, perhaps, the tone that made it so; at any rate, Adrian Frank has renounced the hope of ever appearing as well as his brother. I wonder if a man must be really inferior, to be in such a state of mind as that. He must at all events be very fond of his brother, and even, I think, have sacrificed himself a good deal. This young man asked me ever so many questions about my cousin; frankly, simply, as if, when one wanted to know, it was perfectly natural to ask. So it is, I suppose; but why should he want to know? Some of his questions were certainly idle. What can it matter to him whether she has one little dog or three; or whether she is an admirer of the music of the future? "Does she go out much, or does she like a quiet evening at home?" "Does she like living in

Europe, and what part of Europe does she prefer?" "Has she many relatives in New York, and does she see a great deal of them?" On all these points I was obliged to give Mr. Frank a certain satisfaction; and after that, I thought I had a right to ask why he wanted to know. He was evidently surprised at being challenged, blushed a good deal, and made me feel for a moment as if I had asked a vulgar question. I saw he had no particular reason; he only wanted to be civil, and that is the way best known to him of expressing an interest. He was confused; but he was not so confused that he took his departure. He sat half an hour longer, and let me make up to him, by talking very agreeably, for the shock I had administered. I may mention here—for I like to see it in black and white—that I *can* talk very agreeably. He listened with the most flattering attention, showing me his blue eyes and his white teeth in alternation, and laughing largely, as if I had a command of the comical,—I am not conscious of that. At last, after I had paused a little, he said to me, apropos of nothing: "Do you think the realistic school are—a—to be admired?" Then I saw that he had already forgotten my earlier check,—such was the effect of my geniality,—and that he would ask me as many questions about myself as I would let him. I answered him freely, but I answered him as I chose. There are certain things about myself I never shall tell, and the simplest way not to tell is to say the contrary. If people are indiscreet, they must take the consequences. I declared that I held the realistic school in horror; that I found New York the most interesting, the most sympathetic of cities; and that I thought the American girl the finest result of civilization. I am sure I convinced him that I am a most remarkable woman. He went away before Eunice returned. He is a charming creature—a kind of Yankee Donatello. If I could only be his Miriam, the situation would be almost complete, for Eunice is an excellent Hilda.

April 26.—Mrs. Ermine was in great force to-day; she described all the fine things Eunice can do when she gets her money into her own hands. A set of Mechlin lace, a *rivière* of diamonds which she saw the other day at Tiffany's, a set of Russian sables that she knows of somewhere else, a little English phaeton with a pair of ponies and a tiger, a family of pugs to waddle about in the drawing-room—all these luxuries Mrs. Ermine declares indispensable. "I should like to know that you have them—it would do me real good," she said to Eunice. "I like to see people with handsome things. It would give me more pleasure to know you have

that set of Mechlin than to have it myself. I can't help that—it's the way I am made. If other people have handsome things I see them more; and then I do want the good of others—I don't care if you think me vain for saying so. I sha'n't be happy till I see you in an English phaeton. The groom oughtn't to be more than three foot six. I think you ought to show for what you are."

"How do you mean, for what I am?" Eunice asked.

"Well, for a charming girl, with a very handsome fortune."

"I shall never show any more than I do now."

"I will tell you what you do—you show Miss Condit." And Mrs. Ermine presented me her large, foolish face. "If you don't look out, she'll do you up in Morris papers, and then all the Mechlin lace in the world won't matter!"

"I don't follow you at all—I never follow you," I said, wishing I could have sketched her just as she sat there. She was quite grotesque.

"I would rather go without you," she repeated.

"I think that after I come into my property I shall do just as I do now," said Eunice. "After all, where will the difference be? I have to-day everything I shall ever have. It's more than enough."

"You won't have to ask Mr. Caliph for everything."

"I ask him for nothing now."

"Well, my dear," said Mrs. Ermine, "you don't deserve to be rich."

"I am not rich," Eunice remarked.

"Ah, well, if you want a million!"

"I don't want anything," said Eunice.

That's not exactly true. She does want something, but I don't know what it is.

May 2.—Mr. Caliph is really very delightful. He made his appearance to-day, and carried everything before him. When I say he carried everything, I mean he carried me; for Eunice had not my prejudices to get over. When I said to her, after he had gone, "Your trustee is a very clever man," she only smiled a little, and turned away in silence. I suppose she was amused with the air of importance with which I announced this discovery. Eunice had made it several years ago, and could not be excited about it. I had an idea that some allusion would be made to the way he has neglected her—some apology, at least, for his long absence. But he did something better than this. He made no definite apology; he only expressed, in his manner, his look, his voice, a tenderness, a kind of charming benevolence, which included and exceeded all apologies. He

looks rather tired and preoccupied; he evidently has a great many irons of his own in the fire, and has been thinking these last weeks of larger questions than the susceptibilities of a little girl in New York, who happened several years ago to have an exuberant mother. He is thoroughly genial, and is the best talker I have seen since my return. A totally different type from the young Adrian. He is not in the least handsome—is, indeed, rather ugly; but with a fine, expressive, pictorial ugliness. He is forty years old, large and stout, may even be pronounced fat; and there is something about him that I don't know how to describe except by calling it a certain richness. I have seen Italians who have it, but this is the first American. He talks with his eyes as well as with his lips, and his features are wonderfully mobile. His smile is quick and delightful; his hands are well shaped, but distinctly fat; he has a pale complexion and a magnificent brown beard—the beard of Haroun-al-Raschid. I suppose I must write it very small; but I have an intimate conviction that he is a Jew, or of Jewish origin. I see that in his plump, white face, of which the tone would please a painter, and which suggests fatigue, but is nevertheless all alive; in his remarkable eye, which is full of old expressions—expressions which linger there from the past, even when they are not active to-day; in his profile, in his anointed beard, in the very rings on his large pointed fingers. There is not a touch of all this in his step-brother; so I suppose the Jewish blood is inherited from his father. I don't think he looks like a gentleman; he is something apart from all that. If he is not a gentleman, he is not in the least a *bourgeois*,—neither is he of the artist type. In short, as I say, he is a Jew; and Jews of the upper class have a style of their own. He is very clever, and I think genuinely kind. Nothing could be more charming than his way of talking to Eunice—a certain paternal interest mingled with an air of respectful gallantry (he gives her good advice, and at the same time pays her compliments); the whole thing being not in the least overdone. I think he found her changed—"more of a person," as Mrs. Ermine says;—I even think he was a little surprised. She seems slightly afraid of him, which rather surprised me—she was, from her own account, so familiar with him of old. He is decidedly florid, and was very polite to me—that was a part of the floridity. He asked if we had seen his step-brother; begged us to be kind to him, and to let him come and see us often. He doesn't know many people in New York, and at that age it is everything (I quote Mr. Caliph) for a

young fellow to be at his ease with one or two charming women. "Adrian takes a great deal of knowing; is horribly shy; but is most intelligent, and has one of the sweetest natures! I'm very fond of him—he's all I've got. Unfortunately, the poor boy is cursed with a competence. In this country there is nothing for such a young fellow to do; he hates business, and has absolutely no talent for it. I shall send him back here the next time I see him." Eunice made no answer to this, and, in fact, had little answer to make to most of Mr. Caliph's remarks, only sitting looking at the floor, with a smile. I thought it proper, therefore, to reply that we had found Mr. Frank very pleasant, and hoped he would soon come again. Then I mentioned that the other day I had had a long visit from him alone; we had talked for an hour, and become excellent friends. Mr. Caliph, as I said this, was leaning forward with his elbow on his knee and his hand uplifted, grasping his thick beard. The other hand, with the elbow out, rested on the other knee; his head was turned toward me, askance. He looked at me a moment with his deep bright eye—the eye of a much older man than he; he might have been posing for a water-color. If I had painted him, it would have been in a high-peaked cap and an amber-colored robe, with a wide girdle of pink silk wound many times round his waist, stuck full of knives with jeweled handles. Our eyes met, and we sat there exchanging a glance. I don't know whether he's vain, but I think he must see I appreciate him; I am sure he understands everything.

"I like you when you say that," he remarked, at the end of a minute.

"I'm glad to hear you like me!" This sounds horrid and pert as I relate it.

"I don't like every one," said Mr. Caliph.

"Neither do Eunice and I; do we, Eunice?"

"I am afraid we only try to," she answered, smiling her most beautiful smile.

"Try to? Heaven forbid! I protest against that," I cried. I said to Mr. Caliph that Eunice was too good.

"She comes honestly by that. Your mother was an angel, my child," he said to her.

Cousin Letitia was not an angel, but I have mentioned that Mr. Caliph is florid. "You used to be very good to her," Eunice murmured, raising her eyes to him.

He had got up; he was standing there. He bent his head, smiling like an Italian. "You must be the same, my child."

"What can I do?" Eunice asked.

"You can believe in me—you can trust me."

"I do, Mr. Caliph. Try me and see!"

This was unexpectedly gushing, and I instinctively turned away. Behind my back, I don't know what he did to her—I think it possible he did kiss her. When you call a girl "my child," I suppose you may kiss her; but that may be only my bold imagination. When I turned round he had taken up his hat and stick, to say nothing of buttoning a very tightly fitting coat around a very spacious person, and was ready to offer me his hand in farewell.

"I am so glad you are with her. I am so glad she has a companion so accomplished—so capable."

"So capable of what?" I said, laughing; for the speech was absurd, as he knows nothing about my accomplishments.

There is nothing solemn about Mr. Caliph: but he gave me a look which made it appear to me that my levity was in bad taste. Yes, humiliating as it is to write it here, I found myself rebuked by a Jew with fat hands! "Capable of advising her well!" he said, softly.

"Ah, don't talk about advice," Eunice exclaimed. "Advice always gives an idea of trouble, and I am very much afraid of trouble."

"You ought to get married," he said, with his smile coming back to him.

Eunice colored and turned away, and I observed—to say something—that this was just what Mrs. Ermine said.

"Mrs. Ermine? ah, I hear she's a charming woman!" And shortly after that he went away.

That was almost the only weak thing he said—the only thing for mere form, for, of course, no one can really think her charming; least of all a clever man like that. I don't like Americans to resemble Italians, or Italians to resemble Americans; but putting that aside, Mr. Caliph is very prepossessing. He is wonderfully good company; he will spoil us for other people. He made no allusion to business, and no appointment with Eunice for talking over certain matters that are pending; but I thought of this only half an hour after he had gone. I said nothing to Eunice about it, for she would have noticed the omission herself, and that was enough. The only other point in Mr. Caliph that was open to criticism is his asking Eunice to believe in him—to trust him. Why shouldn't she, pray? If that speech was curious,—and, strange to say, it almost appeared so,—it was incredibly naïf. But this quality is insupposable of Mr. Caliph; who ever heard of a naïf Jew? After he had gone I was on the point of saying to Eunice, "By the way, why did you never mention that he is a Hebrew? That's an important detail." But an impulse that I am not able to define stopped me, and now I am glad I didn't speak. I don't believe Eunice ever

made the discovery, and I don't think she would like it if she did make it. That I should have done so on the instant only proves that I am in the habit of studying the human profile!

May 9.—Mrs. Ermine must have discovered that Mr. Caliph has heard she is charming, for she is perpetually coming in here with the hope of meeting him. She appears to think that he comes every day; for when she misses him, which she has done three times (that is, she arrives just after he goes), she says that if she doesn't catch him on the morrow she will go and call upon him. She is capable of that, I think; and it makes no difference that he is the busiest of men and she the idlest of women. He has been here four times since his first call, and has the air of wishing to make up for the neglect that preceded it. His manner to Eunice is perfect; he continues to call her "my child," but in a superficial, impersonal way, as a Catholic priest might do it. He tells us stories of Washington, describes the people there, and makes us wonder whether we should care for K street and 14½ street. As yet, to the best of my knowledge, not a word about Eunice's affairs; he behaves as if he had simply forgotten them. It was, after all, not out of place the other day to ask her to "believe in him"; the faith wouldn't come as a matter of course. On the other hand he is so pleasant that one would believe in him just to oblige him. He has a great deal of trust-business, and a great deal of law-business of every kind. So at least he says; we really know very little about him but what he tells us. When I say "we," of course I speak mainly for myself, as I am perpetually forgetting that he is not so new to Eunice as he is to me. She knows what she knows, but I only know what I see. I have been wondering a good deal what is thought of Mr. Caliph "down-town," as they say here, but without much result, for naturally I can't go down-town and see. The appearance of the thing prevents my asking questions about him; it would be very compromising to Eunice, and make people think that she complains of him—which is so far from being the case. She likes him just as he is, and is apparently quite satisfied. I gather, moreover, that he is thought very brilliant, though a little peculiar, and that he has made a great deal of money. He has a way of his own of doing things, and carries imagination and humor, and a sense of the beautiful, into Wall street and the Stock Exchange. Mrs. Ermine announced the other day that he is "considered the most fascinating man in New York"; but that is the romantic up-town view of him, and not what I want. His brother has gone out of town for a few days,

but he continues to recommend the young Adrian to our hospitality. There is something really touching in his relation to that rather limited young man.

May 11.—Mrs. Ermine is in high spirits; she has met Mr. Caliph,—I don't know where,—and she quite confirms the up-town view. She thinks him the most fascinating man she has ever seen, and she wonders that we should have said so little about him. He is so handsome, so high-bred; his manners are so perfect; he's a regular old dear. I think, of course ill-naturedly, several degrees less well of him since I have heard Mrs. Ermine's impressions. He is not handsome, he is not high-bred, and his manners are not perfect. They are original, and they are expressive; and if one likes him, there is an interest in looking for what he will do and say. But if one should happen to dislike him, one would detest his manners and think them familiar and vulgar. As for breeding, he has about him, indeed, the marks of antiquity of race; yet I don't think Mrs. Ermine would have liked me to say, "Oh, yes, all Jews have blood!" Besides, I couldn't before Eunice. Perhaps I consider Eunice too much; perhaps I am betrayed by my old habit of trying to see through millstones; perhaps I interpret things too richly—just as (I know) when I try to paint an old wall I attempt to put in too much "character"; character being in old walls, after all, a finite quantity. At any rate, she seems to me rather nervous about Mr. Caliph: that appeared after a little when Mrs. Ermine came back to the subject. She had a great deal to say about the oddity of her never having seen him before, of old; "for after all," as she remarked, "we move in the same society—he moves in the very best." She used to hear Eunice talk about her trustee, but she supposed a trustee must be some horrid old man with a lot of papers in his hand, sitting all day in an office. She never supposed he was a prince in disguise. "We've got a trustee somewhere, only I never see him; my husband does all the business. No wonder he keeps him out of the way if he resembles Mr. Caliph." And then, suddenly, she said to Eunice, "My dear, why don't you marry him? I should think you would want to." Mrs. Ermine doesn't look through millstones; she contents herself with giving them a poke with her parasol. Eunice colored, and said she hadn't been asked; she was evidently not pleased with Mrs. Ermine's joke, which was, of course, as flat as you like. Then she added in a moment—"I should be very sorry to marry Mr. Caliph, even if he were to ask me. I like him, but I don't like him enough for that."

"I should think he would be quite in your style,—he's so literary. They say he writes," Mrs. Ermine went on.

"Well, I don't write," Eunice answered, laughing.

"You could if you would try. I'm sure you could make a lovely book." Mrs. Ermine's amiability is immense.

"It's safe for you to say that—you never read."

"I have no time," said Mrs. Ermine, "but I like literary conversation. It saves time, when it comes in that way. Mr. Caliph has ever so much."

"He keeps it for you. With us he is very frivolous," I ventured to observe.

"Well, what you call frivolous! I believe you think the prayer-book frivolous."

"Mr. Caliph will never marry any one," Eunice said, after a moment. "That I am very sure of."

Mrs. Ermine stared; there is never so little expression in her face as when she is surprised. But she soon recovered herself. "Don't you believe that! He will take some quiet little woman, after you have all given him up."

Eunice was sitting at the piano, but had wheeled round on the stool when her cousin came in. She turned back to it and struck a few vague chords, as if she were feeling for something. "Please don't speak that way; I don't like it," she said, as she went on playing.

"I will speak any way you like!" Mrs. Ermine cried, with her vacant laugh.

"I think it very low." For Eunice this was severe. "Girls are not always thinking about marriage. They are not always thinking of people like Mr. Caliph—that way."

"They must have changed then, since my time! Wasn't it so in yours, Miss Condit?" She's so stupid that I don't think she meant to make a point.

"I had no 'time,' Mrs. Ermine. I was born an old maid."

"Well, the old maids are the worst. I don't see why it's low to talk about marriage. It's thought very respectable to marry. You have only to look round you."

"I don't want to look round me; it's not always so beautiful, what you see," Eunice said, with a small laugh and a good deal of perversity, for a young woman so reasonable.

"I guess you read too much," said Mrs. Ermine, getting up and setting her bonnet-ribbons at the mirror.

"I should think he would hate them!" Eunice exclaimed, striking her chords.

"Hate who?" her cousin asked.

"Oh, all the silly girls."

"Who is 'he,' pray?" This ingenious inquiry was mine.

"Oh, the Grand Turk!" said Eunice, with her voice covered by the sound of her piano. Her piano is a great resource.

May 12.—This afternoon, while we were having our tea, the Grand Turk was ushered in, carrying the most wonderful bouquet of Boston roses that seraglio ever produced. (That image, by the way, is rather mixed; but as I write for myself alone, it may stand.) At the end of ten minutes he asked Eunice if he might see her alone—"on a little matter of business." I instantly rose to leave them, but Eunice said that she would rather talk with him in the library; so she led him off to that apartment. I remained in the drawing-room, saying to myself that I had at last discovered the *fin mot* of Mr. Caliph's peculiarities, which is so very simple that I am a great goose not to have perceived it before. He is a man with a system; and his system is simply to keep business and entertainment perfectly distinct. There may be pleasure for him in his figures, but there are no figures in his pleasure—which has hitherto been to call upon Eunice as a man of the world. To-day he was to be the trustee; I could see it, in spite of his bouquet, as soon as he came in. The Boston roses didn't contradict that, for the excellent reason that as soon as he had shaken hands with Eunice, who looked at the flowers and not at him, he presented them to Catherine Condit. Eunice then looked at this lady; and as I took the roses I met her eyes, which had a charming light of pleasure. It would be base in me, even in this strictly private record, to suggest that she might possibly have been displeased; but if I cannot say that the expression of her face was lovely without appearing in some degree to point to an ignoble alternative, it is the fault of human nature. Why Mr. Caliph should suddenly think it necessary to offer flowers to Catherine Condit—that is a line of inquiry by itself. As I said some time back, it's a part of his floridity. Besides, any presentation of flowers seems sudden; I don't know why, but it's always rather a *coup de théâtre*. I am writing late at night; they stand on my table, and their fragrance is in the air. I don't say it for the flowers; but no one has ever treated poor Miss Condit with such consistent consideration as Mr. Caliph. Perhaps she is morbid: this is probably the Diary of a Morbid Woman; but in such a matter as that she admires consistency. That little glance of Eunice comes back to me as I write; she is a pure, enchanting soul. Mrs. Ermine came in while she was in the library with Mr. Caliph, and immediately noticed the Boston roses, which effaced all the other flowers in the room.

"Were they sent from her seat?" she

asked. Then, before I could answer, "I am going to have some people to dinner to-day; they would look very well in the middle."

"If you wish me to offer them to you, I really can't; I prize them too much."

"Oh, are they yours? Of course you prize them! I don't suppose you have many."

"These are the first I have ever received—from Mr. Caliph."

"From Mr. Caliph? Did he give them to you?" Mrs. Ermine's intonations are not delicate. That "*you*" should be in enormous capitals.

"With his own hand—a quarter of an hour ago." This sounds triumphant, as I write it; but it was no great sensation to triumph over Mrs. Ermine.

She laid down the bouquet, looking almost thoughtful. "He *does* want to marry Eunice," she declared in a moment. This is the region in which, after a flight of fancy, she usually alights. I am sick of the irrepressible verb; just at that moment, however, it was unexpected, and I answered that I didn't understand.

"That's why he gives you flowers," she explained. But the explanation made the matter darker still, and Mrs. Ermine went on: "Isn't there some French proverb about paying one's court to the mother in order to gain the daughter? Eunice is the daughter, and you are the mother."

"And you are the grandmother, I suppose! Do you mean that he wishes me to intercede?"

"I can't imagine why else!" and smiling, with her wide lips, she stared at the flowers.

"At that rate, you, too, will get your bouquet," I said.

"Oh, I have no influence! You ought to do something in return—to offer to paint his portrait."

"I don't offer that, you know; people ask me. Besides, you have spoiled me for common models!"

It strikes me, as I write this, that we had gone rather far—farther than it seemed at the time. We might have gone farther yet, however, if at this moment Eunice had not come back with Mr. Caliph, who appeared to have settled his little matter of business briskly enough. He remained the man of business to the end, and, to Mrs. Ermine's evident disappointment, declined to sit down again. He was in a hurry; he had an engagement.

"Are you going up or down? I have a carriage at the door," she broke in.

"At Fifty-third street one is usually going down"; and he gave his peculiar smile, which always seems so much beyond the scope of the words it accompanies. "If you will give me a lift, I shall be very grateful."

He went off with her, she being much divided between the prospect of driving with him and her loss of the chance to find out what he had been saying to Eunice. She probably believed that he had been proposing to her, and I hope he mystified her well in the carriage.

He had not been proposing to Eunice; he had given her a check, and made her sign some papers. The check was for a thousand dollars, but I have no knowledge of the papers. When I took up my abode with her, I made up my mind that the only way to preserve an appearance of disinterestedness was to know nothing whatever of the details of her pecuniary affairs. She has a very good little head of her own, and if she shouldn't understand them herself, it would be quite out of my power to help her. I don't know why I should care about *appearing* disinterested, when I have in quite sufficient measure the consciousness of being so; but, in point of fact, I do, and I value that purity as much as any other. Besides, Mr. Caliph is her supreme adviser, and of course makes everything clear to her. At least I hope he does. I couldn't help saying as much as this to Eunice.

"My dear child, I suppose you understand what you sign. Mr. Caliph ought to be—what shall I call it?—crystalline."

She looked at me, with the smile that had come into her face when she saw him give me the flowers. "Oh, yes, I think so. If I didn't, it's my own fault. He explains everything so beautifully that it's a pleasure to listen. I always read what I sign."

"*Je l'espère bien!*" I said, laughing.

She looked a little grave. "The closing up a trust is very complicated."

"Yours not closed yet? It strikes me as very slow."

"Everything can't be done at once. Besides, he has asked for a little delay. Part of my affairs, indeed, are now in my own hands; otherwise I shouldn't have to sign."

"Is that a usual request—for delay?"

"Oh, yes, perfectly. Besides, I don't want everything in my own control. That is, I want it some day, because I think I ought to accept the responsibilities, as I accept all the pleasures; but I am not in a hurry. This way is so comfortable, and Mr. Caliph takes so much trouble for me."

"I suppose he has a handsome commission," I said, rather crudely.

"He has no commission at all; he would never take one."

"In your place, I would much rather he should take one."

"I have asked him to, but he won't!" Eunice said, looking now extremely grave.

Her gravity, indeed, was so great that it made me smile. "He is wonderfully generous!"

"He is, indeed."

"And is it to be indefinitely delayed—the termination of his trust?"

"Oh, no; only a few months, 'till he gets things into shape,' as he says."

"He has had several years for that, hasn't he?"

Eunice turned away; evidently our talk was painful to her. But there was something that vaguely alarmed me in her taking or, at least, accepting the sentimental view of Mr. Caliph's services. "I don't think you are kind, Catherine; you seem to suspect him," she remarked, after a little.

"Suspect him of what?"

"Of not wishing to give up the property."

"My dear Eunice, you put things into terrible words! Seriously, I should never think of suspecting him of anything so silly. What could his wishes count for? Is not the thing regulated by law—by the terms of your mother's will? The trust expires of itself at a certain period, doesn't it? Mr. Caliph, surely, has only to act accordingly."

"It is just what he is doing. But there are more papers necessary, and they will not be ready for a few weeks more."

"Don't have too many papers; they are as bad as too few. And take advice of some one else—say of your cousin Ermine, who is so much more sensible than his wife."

"I want no advice," said Eunice, in a tone which showed me that I had said enough. And presently she went on, "I thought you liked Mr. Caliph."

"So I do, immensely. He gives beautiful flowers."

"Ah, you are horrid!" she murmured.

"Of course I am horrid. That's my business—to be horrid." And I took the liberty of being so again, half an hour later, when she remarked that she must take good care of the check Mr. Caliph had brought her, as it would be a good while before she should have another. Why should it be longer than usual? I asked. "Is he going to keep your income for himself?"

"I am not to have any till the end of the year—any from the trust, at least. Mr. Caliph has been converting some old houses into shops, so that they will bring more rent. But the alterations have to be paid for—and he takes part of my income to do it."

"And pray what are you to live on meanwhile?"

"I have enough without that; and I have savings?"

"It strikes me as a cool proceeding, all the same."

"He wrote to me about it before we came home, and I thought that way was best."

"I don't think he ought to have asked you," I said. "As your trustee, he acts in his discretion."

"You are hard to please," Eunice answered.

That is perfectly true; but I rejoined that I couldn't make out whether he consulted her too much or too little. And I don't know that my failure to make it out in the least matters!

May 13.—Mrs. Ermine turned up to-day at an earlier hour than usual, and I saw as soon as she got into the room that she had something to announce. This time it was not an engagement. "He sent me a bouquet—Boston roses—quite as many as yours! They arrived this morning, before I had finished breakfast." This speech was addressed to me, and Mrs. Ermine looked almost brilliant. Eunice scarcely followed her.

"She is talking about Mr. Caliph," I explained.

Eunice stared a moment; then her face melted into a deep little smile. "He seems to give flowers to every one but to me." I could see that this reflection gave her remarkable pleasure.

"Well, when he gives them, he's thinking of you," said Mrs. Ermine. "He wants to get us on his side."

"On his side?"

"Oh, yes; some day he will have need of us!" And Mrs. Ermine tried to look sprightly and insinuating. But she is too utterly *fade*, and I think it is not worth while to talk any more to Eunice just now about her trustee. So, to anticipate Mrs. Ermine, I said to her, quickly, but very quietly—

"He sent you flowers simply because you had taken him into your carriage last night. It was an acknowledgment of your great kindness."

She hesitated a moment. "Possibly. We had a charming drive—ever so far down-town." Then, turning to Eunice, she exclaimed, "My dear, you don't know that man till you have had a drive with him!" When does one know Mrs. Ermine? Every day she is a surprise!

May 19.—Adrian Frank has come back to New York, and has been three times at this house—once to dinner, and twice at tea-time. After his brother's strong expression of the hope that we would take an interest in him, Eunice appears to have thought that the least she could do was to ask him to dine. She appears never to have offered this privilege to Mr. Caliph, by the way; I think her view of his cleverness is such that she imagines she knows no one sufficiently brilliant to be in-

vited to meet him. She thought Mrs. Ermine good enough to meet Mr. Frank, and she had also young Woodley—Willie Woodley, as they call him—and Mr. Latrobe. It was not very amusing. Mrs. Ermine made love to Mr. Woodley, who took it serenely; and the dark Latrobe talked to me about the Seventh Regiment—an impossible subject. Mr. Frank made an occasional remark to Eunice, next whom he was placed; but he seemed constrained and frightened, as if he knew that his step-brother had recommended him highly and felt it was impossible to come up to the mark. He is really very modest; it is impossible not to like him. Every now and then he looked at me, with his clear blue eye conscious and expanded, as if to beg me to help him on with Eunice; and then, when I threw in a word, to give their conversation a push, he looked at her in the same way, as if to express the hope that she would not abandon him. There was no danger of this, she only wished to be agreeable to him; but she was nervous and preoccupied, as she always is when she has people to dinner—she is so afraid they may be bored,—and I think that half the time she didn't understand what he said. She told me afterward that she liked him more even than she liked him at first; that he has, in her opinion, better manners, in spite of his shyness, than any of the young men; and that he must have a nice nature to have such a charming face;—all this she told me, and she added that, notwithstanding all this, there is something in Mr. Adrian Frank that makes her uncomfortable. It is, perhaps, rather heartless; but after this, when he called two days ago, I went out of the room and left them alone together. The truth is, there is something in this tall, fair, vague, inconsequent youth, who would look like a Prussian lieutenant if Prussian lieutenants ever hesitated, and who is such a singular mixture of confusion and candor—there is something about him that is not altogether to my own taste, and that is why I took the liberty of leaving him. Oddly enough, I don't in the least know what it is; I usually know why I dislike people. I don't dislike the blushing Adrian, however,—that is, after all, the oddest part. No, the oddest part of it is that I think I have a feeling of pity for him; that is probably why (if it were not my duty sometimes to remain) I should always depart when he comes. I don't like to see the people I pity; to be pitied by me is too low a depth. Why I should lavish my compassion on Mr. Frank, of course passes my comprehension. He is young, intelligent, in perfect health, master of a handsome fortune, and favorite brother of Haroun-al-Raschid. Such are the consequences of being

a woman of imagination. When, at dinner, I asked Eunice if he had been as interesting as usual, she said she would leave it to me to judge; he had talked altogether about Miss Condit! He thinks her very attractive! Poor fellow; when it is necessary he doesn't hesitate, though I can't imagine why it should be necessary. I think that *au fond* he bores Eunice a little; like many girls of the delicate, sensitive kind, she likes older, more confident men.

May 24.—He has just made me a remarkable communication! This morning I went into the Park in quest of a "bit," with some colors and brushes in a small box, and that wonderfully compressible camp-stool, which I can carry in my pocket. I wandered vaguely enough, for half an hour, through the carefully arranged scenery, the idea of which appears to be to represent the earth's surface *en raccourci*, and at last discovered a small clump of birches which, with their white stems and their little raw green bristles, were not altogether uninspiring. The place was quiet—there were no nurse-maids nor bicycles; so I took up a position and enjoyed an hour's successful work. At last I heard some one say behind me, "I think I ought to tell you I'm looking!" It was Adrian Frank, who had recognized me at a distance, and, without my hearing him, had walked across the grass to where I sat. This time I couldn't leave him, for I hadn't finished my sketch. He sat down near me, on an artistically preserved rock, and we ended by having a good deal of talk—in which, however, I did the listening, for I can't express myself in two ways at once. What I listened to was this—that Mr. Caliph wishes his step-brother to "make up" to Eunice, and that the candid Adrian wishes to know what I think of his chances.

"Are you in love with her?" I asked.

"Oh, dear, no! If I were in love with her I should go straight in, without—without this sort of thing."

"You mean without asking people's opinion?"

"Well, yes. Without asking even yours."

I told him that he needn't say "even" mine; for mine would not be worth much. His announcement rather startled me at first; but after I had thought of it a little, I found in it a good deal to admire. I have seen so many "arranged" marriages that have been happy, and so many "sympathetic" unions that have been wretched, that the political element doesn't altogether shock me. Of course, I can't imagine Eunice making a political marriage, and I said to Mr. Frank, very promptly, that she might consent if she

could be induced to love him, but would never be governed in her choice by his advantages. I said "advantages" in order to be polite; the singular number would have served all the purpose. His only advantage is his fortune; for he has neither looks, talents, nor position that would dazzle a girl who is herself clever and rich. This, then, is what Mr. Caliph has had in his head all this while—this is what has made him so anxious that we should like his step-brother. I have an idea that I ought to be rather scandalized, but I feel my pulse and find that I am almost pleased. I don't mean at the idea of her marrying poor Mr. Frank; I mean at such an indication that Mr. Caliph takes an interest in her. I don't know whether it is one of the regular duties of a trustee to provide the trustful with a husband; perhaps in that case his merit may be less. I suppose he has said to himself that, if she marries his step-brother, she won't marry a worse man. Of course, it is possible that he may not have thought of Eunice at all, and may simply have wished the guileless Adrian to do a good thing, without regard to Eunice's point of view. I am afraid that even this idea doesn't shock me. Trying to make people marry is, under any circumstances, an unscrupulous game; but the offense is minimized when it is a question of an honest man's marrying an angel. Eunice is the angel, and the young Adrian has all the air of being honest. It would, naturally, not be the union of her secret dreams, for the hero of those pure visions would have to be clever and distinguished. Mr. Frank is neither of these things, but I believe he is perfectly good. Of course, he is weak—to come and take a wife simply because his brother has told him to—or is he doing it simply for form, believing that she will never have him, that he consequently doesn't expose himself, and that he will therefore have on easy terms, since he seems to value it, the credit of having obeyed Mr. Caliph? Why he should value it is a matter between themselves, which I am not obliged to know. I don't think I care at all for the relations of men between themselves. Their relations with women are bad enough; but when there is no woman to save it a little—*merci!* I shouldn't think that the young Adrian would care to subject himself to a simple refusal, for it is not gratifying to receive the cold shoulder, even from a woman you don't want to marry. After all, he may want to marry her; there are all sorts of reasons in things. I told him I wouldn't undertake to do anything, and the more I think of it the less I am willing. It would be a weight off my mind to see her comfortably settled in life, beyond the possibility of marrying some highly varnished

brute—a fate in certain circumstances quite open to her. She is perfectly capable — with her folded angel's wings — of bestowing herself upon the baker, upon the fishmonger, if she was to take a fancy to him. The clever man of her dreams might beat her or get tired of her; but I am sure that Mr. Frank, if he should pronounce his marriage-vows, would keep them to the letter. From that to pushing her into his arms, however, is a long way. I went so far as to tell him that he had my good wishes; but I made him understand that I can give him no help. He sat for some time poking a hole in the earth with his stick and watching the operation. Then he said, with his wide, exaggerated smile—the one thing in his face that recalls his brother, though it is so different,—“I think I should like to try.” I felt rather sorry for him, and made him talk of something else; and we separated without his alluding to Eunice, though at the last he looked at me for a moment intently, with something on his lips which was probably a return to his idea. I stopped him; I told him I always required solitude for my finishing touches. He thinks me *brusque* and queer, but he went away. I don't know what he means to do; I am curious whether he will begin his siege. It can scarcely be said, as yet, to have begun—Eunice, at any rate, is all unconscious.

June 6.—Her unconsciousness is being rapidly dispelled; Mr. Frank has been here every day since I last wrote. He is a singular youth, and I don't make him out; I think there is more in him than I supposed at first. He doesn't bore us, and he has become, to a certain extent, one of the family. I like him very much, and he excites my curiosity. I don't quite see where he expects to come out. I mentioned some time back that Eunice had told me he made her uncomfortable; and now, if that continues, she appears to have resigned herself. He has asked her repeatedly to drive with him, and twice she has consented; he has a very pretty pair of horses, and a vehicle that holds but two persons. I told him I could give him no positive help, but I do leave them together. Of course, Eunice has noticed this—it is the only intimation I have given her that I am aware of his intentions. I have constantly expected her to say something, but she has said nothing, and it is possible that Mr. Frank is making an impression. He makes love very reasonably; evidently his idea is to be intensely gradual. Of course, it isn't gradual to come every day; but he does very little on any one occasion. That, at least, is my impression; for when I talk of his making love

I don't mean that I see it. When the three of us are together he talks to me quite as much as to her, and there is no difference in his manner from one of us to the other. His shyness is wearing off, and he blushes so much less that I have discovered his natural hue. It has several shades less of crimson than I supposed. I have taken care that he should not see me alone, for I don't wish him to talk to me of what he is doing—I wish to have nothing to say about it. He has looked at me several times in the same way in which he looked just before we parted, that day he found me sketching in the Park; that is, as if he wished to have some special understanding with me. But I don't want a special understanding, and I pretend not to see his looks. I don't exactly see why Eunice doesn't speak to me, and why she expresses no surprise at Mr. Frank's sudden devotion. Perhaps Mr. Caliph has notified her, and she is prepared for everything—prepared even to accept the young Adrian. I have an idea he will be rather taken in if she does. Perhaps the day will come soon when I shall think it well to say: “Take care, take care; you *may* succeed!” He improves on acquaintance; he knows a great many things, and he is a gentleman to his finger-tips. We talk very often about Rome; he has made out every inscription for himself, and has got them all written down in a little book. He brought it the other afternoon and read some of them out to us, and it was more amusing than it may sound. I listen to such things because I can listen to anything about Rome; and Eunice listens, possibly because Mr. Caliph had told her to. She appears ready to do anything he tells her; he has been sending her some more papers to sign. He has not been here since the day he gave me the flowers; he went back to Washington shortly after that. She has received several letters from him, accompanying documents that look very legal. She has said nothing to me about them; and since I uttered those words of warning, which I noted here at the time, I have asked no questions and offered no criticism. Sometimes I wonder whether I myself had not better speak to Mrs. Ermine; it is only the fear of being idiotic and meddlesome that restrains me. It seems to me so odd there should be no one else; Mr. Caliph appears to have everything in his own hands. We are to go down to our “seat,” as Mrs. Ermine says, next week. That brilliant woman has left town herself, like many other people, and is staying with one of her daughters. Then she is going to the other, and then she is coming to Eunice, at Cornerville.

(To be continued.)

THE CAPTURE OF JEFFERSON DAVIS.

AN EXTRACT FROM A NARRATIVE, WRITTEN NOT FOR PUBLICATION, BUT FOR THE ENTERTAINMENT OF MY CHILDREN ONLY.

* * * * *

In anticipation of the capture of Richmond, the President had decided to remove his family to a place of probable security. He desired, however, to keep them as near as might be to the position General Lee intended to occupy when obliged to withdraw from the lines around Richmond and Petersburg. Charlotte, North Carolina, was selected for the purpose; and I was requested to accompany Mrs. Davis and the children on their journey.

We started from Richmond in the evening of the Friday before the city was evacuated. The President accompanied us to the cars; and after the ladies had taken their seats, but while we were still at the station of the Danville railroad, awaiting the signal for the train to move, he walked a short distance aside with me, and gave his final instructions in nearly or quite these words:

"My latest information from General Lee is, that Sheridan has been ordered to move with his cavalry to our right flank and to tear up the railroad; he is to remain there, destroying as much of the railroad as he can, until driven off by Hampton or by the lack of supplies; he is then to rejoin Grant in front of Petersburg if possible; otherwise, to go to Sherman in North Carolina. After establishing Mrs. Davis at Charlotte, you will return to Richmond as soon as you can."

I may here remark that, when a prisoner in Washington, in the following July, I one day got possession of a piece of a newspaper containing a part of the report, made by General Sheridan, of the operations under his command known as the "Battle of Five Forks." I remember the impression it gave me of the accuracy and freshness of General Lee's intelligence from General Grant's head-quarters, when I read, that day in prison, Sheridan's own statement showing that his orders were to move with cavalry only, to make a raid on the railroad on General Lee's right flank, and, when driven off, to return to Petersburg if he could, otherwise to join Sherman; and that it was during the night, when he was about to move with the cavalry only, that General Grant notified him of a change of plan, afterward giving him the corps of infantry with which the battle was actually fought.

Bidding good-bye to the President, we got away from Richmond about ten o'clock. It was a special train. Our party consisted of Mrs. Davis, Miss Howell (her sister), the four children, Ellen (the mulatto maid-servant), and James Jones (the mulatto coachman). With us were also the daughters of Mr. Trenholm, the Secretary of the Treasury, on their way to South Carolina, under the escort of midshipman James M. Morgan. That young gentleman was then engaged to Miss Trenholm, and afterward married her. There were no other passengers, and the train consisted of only two or three cars. In one of them, the coachman had the two carriage horses recently presented to Mrs. Davis by several gentlemen of Richmond. She had owned and used them for several years; but during the preceding winter the President's household had felt the pressure of the "hard times" even more than before; he had sold all his own horses except the one he usually rode; and, being in need of the money these would fetch, Mrs. Davis had, some time afterward, sold them also through a dealer. The afternoon of the sale, however, they were returned to the stable with a kind letter to her from Mr. James Lyons and a number of other prominent gentlemen, the purchasers, begging her to accept the horses as a gift in token of their regard. The price they had paid for the pair was, I think, twelve thousand dollars—a sum which dwindles somewhat when stated to have been in Confederate currency (worth, at that time, only some fifty for one in gold), and representing about two hundred and forty dollars in good money.

It illustrates the then condition of the railways and means of transportation in the Confederate States, that, after proceeding twelve or fifteen miles, our locomotive proved unable to take us over a slight up-grade. We came to a dead halt, and remained there all night. The next day was well advanced when Burksville Junction was reached; and I there telegraphed to the President the accounts received from the battle between Sheridan and Pickett.

It was Sunday morning before we arrived at Danville. While preparations were making there to send on our train toward Charlotte, Morgan and I took a walk through the town and made a visit to the residence of Major

Sutherlin, the most conspicuous house in Danville. The train got off again by midday, but did not reach Charlotte until Tuesday. At Charlotte, we were courteously entertained for a day or two by Mr. Weil, an Israelite, a merchant of the town.

Communication had been so interrupted that we did not hear of the evacuation of Richmond until Mrs. Davis received a telegram, on Wednesday, from the President at Danville, merely announcing that he was there.

As soon as I could do so, and when we had comfortably established Mrs. Davis and her family in the house provided for them, I returned to Danville and joined the President. With several members of his cabinet, he was a guest at Major Sutherlin's house, where I arrived late in the evening, and spent the night.

A report coming in that the enemy's cavalry was approaching from the westward, the hills around Danville, where earth-works had already been thrown up, were manned by the officers and men that had constituted the Confederate navy in and near Richmond; and command of the force was given to Admiral Semmes (of the *Alabama*), who was made a brigadier-general for the nonce.

The several bureaus of the War Department, and perhaps several of the other departments, had arranged quarters for themselves in the town, and were organizing for regular work. A separate and commodious house had been provided (I think by the town authorities) as a head-quarters for the President and his personal staff; and Mr. M. H. Clark, our chief clerk, had already established himself there and was getting things in order. It was only the next afternoon, however, after my return to Danville, that the President received a communication informing him of the surrender by General Lee of the army of Northern Virginia, and gave orders for an immediate withdrawal into North Carolina. Under his directions, we set to work at once to arrange for a railway train to convey the more important officers of the Government and such others as could be got aboard, with our luggage and as much material as it was desired to carry along, including the boxes of papers that had belonged to the executive office in Richmond. With the coöperation of the officers of the Quartermaster's Department, the train was, with difficulty, got ready; and the guards I placed upon it excluded all persons and material not specially authorized by me to go aboard. Of course, a multitude was anxious to embark, and the guards were kept busy in repelling them.

As I stood in front of our head-quarters,

superintending the removal of luggage and boxes to the train, two officers rode up, their horses spattered with mud, and asked for the news. I told them of the surrender of General Lee's army, and inquired who they were and whence they had come. They had ridden from Richmond, and were just arrived, having made a wide detour from the direct road, to avoid capture by the enemy. One of them was a colonel from Tennessee. He expressed great eagerness to get on as rapidly as possible toward home. I remarked upon the freshness and spirit of his horse, and asked where he had got so good a steed. He said the horse belonged to a gentleman in Richmond, whose name he did not recollect, but who had asked him, in the confusion of the evacuation, to take the horse out to his son—then serving on General Ewell's staff. He added that, as General Ewell and staff had all been captured, he did not know what to do with the horse, and should be glad to turn him over to some responsible person—exactng an obligation to account to the owner. I said I should be glad to have the horse, and would cheerfully assume all responsibilities. The colonel rode off, but returned in a short time. He had tried to get on the railway train, but found he couldn't do it without an order from me; whereby he remarked that, if I would furnish such an order, he would accept my proposition about the horse. The arrangement was made immediately, and the colonel became a passenger on the train, which also conveyed my horse, with others belonging to the President and his staff.

That horse did me noble service, and I became very much attached to him. Further on, I shall tell the sad fate that befell him. Long afterward, I ascertained the owner was Mr. Edmond, of Richmond, with whom I had a conversation on the subject, when I was there attending upon the proceedings in the United States Court for the release of Mr. Davis from prison upon bail. I related the adventures of his steed, and offered to pay for him; but Mr. Edmond promptly and very generously said he could not think of taking pay for the horse; that the loss was but an incident of the loss of everything else we had all suffered in the result of the war, and that his inquiries had been made only because the animal was a great pet with the children, and they were all anxious to know his fate.

Among the people who besieged me for permits to enter the train was General R—, with several daughters and one or more of his staff officers. He had been on duty

in the "torpedo bureau," and had with him what he considered a valuable collection of fuses and other explosives. I distrusted such luggage as that, though the General confidently asserted it was quite harmless. I told him he couldn't go with us—there was no room for him. He succeeded at last, however, in getting access to the President, who had served with him, long years before, in the army; in kindness to an old friend, Mr. Davis finally said I had better make room for the General, and he himself took one of the daughters to share his own seat. That young lady was of a loquacity irrepressible; she plied her neighbor diligently—about the weather, and upon every other topic of common interest—asking him, too, a thousand trivial questions. The train could not yet be got to move; the fires in the locomotive wouldn't burn well, or some other difficulty delayed us; and there we all were, in our seats, crowded together, waiting to be off, full of gloom at the situation, wondering what would happen next, and all as silent as mourners at a funeral; all except, indeed, the General's daughter, who prattled on in a voice everybody heard. She seemed quite unconscious of the impatience Mr. Davis, evidently to everybody else, felt for her and her conversation. In the midst of it all, a sharp explosion occurred very near the President, and a young man was seen to bounce into the air, clapping both hands to the seat of his trousers. We all sprang to our feet in alarm, but presently found that it was only an officer of General R——'s staff, who had sat down rather abruptly upon the flat top of a stove (still standing in the car, but without a fire), and that the explosion was made by one of the torpedo appliances he was carrying in his coat-tail pocket.

Among the servants at the President's house in Richmond had been one called Spencer. He was the slave of somebody in the town, but made himself a member of our household, and couldn't be got rid of. Spencer was inefficient, unsightly, and unclean,—a black Caliban,—and had the manners of a corn-field ducky. He always called Mr. Davis "Marse Jeff," and was the only one of the domestics who used that style of address. I fancy the amusement Mr. Davis felt at that was the real explanation of the continued sufferance extended to the fellow by the family for a year or more. Spencer would often go to the door to answer the bell, and almost invariably denied that Mr. Davis was at home. The visitor sometimes entered the hall, notwithstanding, and asked to have his name sent up; whereupon Spencer generally lost his temper and remarked, "I tell you,

sir, Marse Jeff 'clines to see you"; and unless somebody came to the rescue, the intruder rarely got any further. This Spencer had accompanied the party from Richmond to Danville, but had made the journey in a box-car with a drunken officer, who beat him. The African was overwhelmed with disgust at such treatment, and announced in Danville that he should go no further if —— was to be of the party. When he had learned, however, that his enemy (being in a delirium and unable to be moved) was to be left behind at Danville, Spencer cheerfully reported at the train, and asked for transportation. I assigned him to a box-car with the parcels of fuses, etc., put aboard by General R——; and he had not yet made himself comfortable there, when somebody mischievously told him those things would certainly explode and blow him to "kingdom come." The ducky fled immediately, and demanded of me other quarters. I told him he couldn't travel in any other car; and that, happily, relieved us of his company. Mournfully remarking, "Den Marse Jeff'll have to take keer of hisself," Spencer, the valiant and faithful, bade me good-bye, and said he should return to Richmond!

We halted for several days at Greensboro' for consultation with General Joseph E. Johnston, whose army was then confronting Sherman. The people in that part of North Carolina had not been zealous supporters of the Confederate Government; and, so long as we remained in the State, we observed their indifference to what should become of us. It was rarely that anybody asked one of us to his house; and but few of them had the grace even to explain their fear that, if they entertained us, their houses would be burned by the enemy, when his cavalry should get there.

During the halt at Greensboro' most of us lodged day and night in the very uncomfortable railway cars we had arrived in. The possessor of a large house in the town, and perhaps the richest and most conspicuous of the residents, came indeed effusively to the train, but carried off only Mr. Trenholm, the Secretary of the Treasury. This hospitality was explained by the information that the host was the alarmed owner of many of the bonds, and of much of the currency, of the Confederate States, and that he hoped to cajole the Secretary into exchanging a part of the "Treasury gold" for some of those securities. It appeared that we were reputed to have many millions of gold with us. Mr. Trenholm was ill during most or all of the time at the house of his

warm-hearted host, and the symptoms were said to be greatly aggravated, if not caused, by importunities with regard to that gold.

Colonel John Taylor Wood, of our staff, had, some time before, removed his family to Greensboro' from Richmond, and took the President (who would otherwise have probably been left with us in the cars) to share his quarters near by. The Woods were boarding, and their rooms were few and small. The entertainment they were able to offer their guest was meager, and was distinguished by very little comfort either to him or to them, the people of the house continually and vigorously insisting to the colonel and his wife, the while, that Mr. Davis must go away, saying they were unwilling to have the vengeance of Stoneman's cavalry brought upon them by his presence in their house.

The alarm of these good people was not allayed when they ascertained, one day, that General Joseph E. Johnston, with General Breckinridge (Secretary of War), General Beauregard, Mr. Benjamin (Secretary of State), Mr. Mallory (Secretary of the Navy), Mr. Reagan (Postmaster-General), and perhaps one or two other members of the cabinet and officers of the army, were with the President, in Colonel Wood's rooms, holding a council of war.

That route through North Carolina had been for some time the only line of communication between Virginia and Georgia and the Gulf States. The roads and towns were full of officers and privates from those Southern States, belonging to the Army of Northern Virginia. Many of them had been home on furlough, and were returning to the army when met by the news of General Lee's surrender; others were stragglers from their commands. All were now going home, and, as some of the bridges south of Greensboro' had been burned by the enemy's cavalry, and the railways throughout the southern country generally were interrupted, of course everybody wanted the assistance of a horse or mule on his journey. Few had any scruples as to how to get one.

I remember that a band of eight or ten young Mississippians, at least one of them an officer (now a prominent lawyer in New Orleans), and several of them personally known to me, offered themselves at Greensboro' as an escort for the President. Until something definite should be known, however, as to our future movements, I was unable to say whether they could be of service in that capacity. After several days of waiting, they decided for themselves. Arousing me in the small hours of the night, their self-constituted commander said

if I had any orders or suggestions to give they should be glad to have them on the spot, as, otherwise, it had become expedient to move on immediately. I asked what had happened. He showed me the horses they had that night secured by "pressing" them from neighboring farmers, and particularly his own mount, a large and handsome dapple-gray stallion, in excellent condition. I congratulated him on his thrift, and in an instant they were off in a gallop through the mud. The President's horses, my own, and those belonging to the other gentlemen of our immediate party, were tied within a secure inclosure while we remained at Greensboro', and were guarded by the men (about a dozen) who, having received wounds disabling them for further service in the field, had acted as sentinels during the last year at the President's house in Richmond, under the command of a gallant young officer who had lost an arm.

The utmost vigilance was necessary, from this time on, in keeping possession of a good horse. I remember that at Charlotte, some days later, Colonel Burnett, senator from Kentucky, told me he had just come very near losing his mare. He had left her for a little while at a large stable where there were many other horses. Going back after a short absence, Burnett noticed a rakish-looking fellow walking along the stalls, and carefully observing the various horses until he came to the mare, when, after a moment's consideration, he called out to a negro rubbing down a neighboring horse: "Boy, saddle my mare here; and be quick about it." The negro answered, "Aye, aye, sir," and was about to obey, when the senator stepped up, saying: "My friend, you are evidently a judge of horseflesh; and I feel rather complimented that, after looking through the whole lot, you have selected my mare!" The chap coolly replied, "Oh! is that your mare, Colonel?" and walked off. When we had laughed over the story, I asked Burnett, "Well, and where is she now?" "Oh," said he, "I sha'n't trust her out of my sight again; and Gus Henry is holding her for me down at the corner until I can get back there." The person thus familiarly spoken of as "Gus" Henry, then acting as a hostler for his friend, was the venerable and distinguished senator from Tennessee, with all of the stateliness and much of the eloquence of his kinsman, Patrick Henry, the great orator of Virginia.

At Greensboro' were large stores of supplies belonging to the quartermaster and commissary departments. These were to be kept together until it could be ascertained whether General Johnston's army would need them. I recollect, as one of the incidents of

our sojourn there, that, after many threats during several days to do so, a formidable attack was made by men belonging to a cavalry regiment upon one of the depots where woolen cloths (I think) were stored. They charged down the road in considerable force, with yells and an occasional shot; but the "Home Guards," stationed at the store-house, stood firm, and received the attack with a well directed volley. I saw a number of saddles emptied, and the cavalry retreat in confusion. Notwithstanding the utmost vigilance of the officers, however, pilfering from the stores went on briskly all the time; and I fancy that, immediately after we left, there was a general scramble for what remained of the supplies.

From Greensboro', at this time, a railway train was dispatched toward Raleigh with a number of prisoners, to be exchanged, if possible, for some of our own men then in General Sherman's hands. They were in charge of Major William H. Norris, of Baltimore (Chief of the Signal Corps), and Major W. D. Hennen. The latter had, before the war, been a distinguished member of the New Orleans bar, and has since been at the bar in New York. Those two officers were at Yale College together in their youth, and had shared in many a frolic in Paris and other gay places. They evidently regarded this expedition with the prisoners as a huge "lark." The train moved off with a flag of truce flying from the locomotive. When, a day or two afterward, they approached the enemy's lines, the prisoners all got out of the cars and ran off to their friends, and Norris and Hennen were themselves made prisoners! Indignant at such treatment, they addressed a communication to the commanding officer (Schofield, I think), demanding to know why they were treated as prisoners, and why their flag had not been respected. Schofield considered the Confederate Government was now no more, and asked what flag they referred to. This gave Hennen a great opportunity, and he overpowered the enemy with a reply full of his most fervid eloquence: "What flag? The flag before which the 'star-spangled banner' has been ignominiously trailed in the dust of a thousand battle-fields! The flag that has driven from the ocean the commerce of the United States! The flag which will live in history as long as the heroic achievements of patriotic men are spoken of among the nations! The glorious, victorious, and immortal flag of the Confederate States of America!"

We moved southward on, I think, the day following the council of war held with General Johnston, starting from Greensboro' in

the afternoon. The President, those of us who constituted his immediate staff, and some members of the cabinet, were mounted. Others rode in ambulances, army wagons, or such conveyances as could be got. Almost at the last minute I was told I must provide an ambulance for Mr. Judah P. Benjamin, Secretary of State. His figure was not well adapted for protracted riding, and he had firmly announced that he should not mount a horse until obliged to.*

By good fortune, I was able to secure an ambulance; but the horses were old and broken down, of a dirty gray color, and with spots like fly-bites all over them,—and the harness was not good. There was no choice, however, and into that ambulance got Mr. Benjamin, General Samuel Cooper (Adjutant General, and ranking officer of the whole army), Mr. George Davis (of North Carolina, Attorney-General), and Mr. Jules St. Martin, Benjamin's brother-in-law.

By the time they got off, the front of our column had been some time in motion, and the President had ridden down the road. Heavy rains had recently fallen, the earth was saturated with water, the soil was a sticky red clay, the mud was awful, and the road, in places, almost impracticable. The wheeled vehicles could move but slowly; and it was only by sometimes turning into the fields and having St. Martin and the Attorney-General get out to help the horses with an occasional fence-rail under the axles, that their party got along at all—so difficult was the road because of the mud, and so formidable were the holes made during the winter, and deepened by the artillery and heavy wagons that day. I was near them from time to time, and rendered what assistance I could. Darkness came on after awhile, and nearly or quite everybody in the column passed ahead of that ambulance. Having been kept latterly in the rear by something detaining me, I observed, as I rode

* That he could handle a steed in an emergency was very well known, and was afterward shown when he dexterously got himself into the saddle upon a tall horse, and, with short legs hanging but an inconsiderable distance toward the ground, rode gayly off with the others of the President's following until, after their night march from Abbeville, South Carolina, across the Savannah River, sniffing the danger of longer continuance with so large a party, he set out alone for the sea-coast, whence he escaped (to Bermuda and Havana, I think, and finally) to England. I am told that in his pocket, when he started, was a document from one of the assistants to the adjutant-general of the army, certifying the bearer to be a French citizen, entitled to travel without hinderance, and ordering all Confederate officers and pickets to let him pass freely; and that it was understood that if he should encounter inquisitive detachments of the United States forces, he was to be unable to talk any other language than French, which he speaks like a native. So long as he remained with us his cheery good humor, and readiness to adapt

forward, the tilted hind-part of an ambulance stuck in the mud in the middle of the road, and recognized the voices inside, as I drew rein for a moment to chuckle at their misfortunes. The horses were blowing like two rusty fog-horns; Benjamin was scolding the driver for not going on; that functionary was stoically insisting they could proceed no whit further, because the horses were broken down; and General Cooper (faithful old gentleman, he had been in Richmond throughout our war, and had not known since the Seminole war what it is to "rough it") was grumbling about the impudence of a subordinate officer ("only a brigadier-general, sir"). It seems the offender had thrust himself into the seat in another ambulance drawn by good horses, that was intended for the Adjutant-General. Getting alongside, I could see the front wheels were over the hubs in a hole; the hind legs of the horses were in the same hole, up to the hocks; and the feet of the driver hung down almost into the mud. Mud and water were deep all around them, and their plight was pitiful indeed! They plucked up their spirits only when I offered to get somebody to pull them out. Riding forward, I found an artillery camp, where some of the men volunteered to go back with horses and haul the ambulance up the hill; and, returning to them again, I could see from afar the occasional bright glow of Benjamin's cheerful cigar. While the others of the party were perfectly silent, Benjamin's silvery voice was presently heard as he rhythmically intoned, for their comfort, verse after verse of Tennyson's ode on the death of the Duke of Wellington! The laureate would have enjoyed the situation could he have heard the appreciative rendering of his noble poem—under the circumstances of that moment!

Reaching the house at the top of the hill, we halted on hearing that the President

himself to the requirements of all emergencies, made him a most agreeable comrade. He is now a Queen's Counsel in London, and has just retired from the active work of a great and lucrative practice in all the courts there, after a career of singular interest. He was born, in 1812, in one of the British West India possessions, the ship, conveying his parents to this country from England, having put in there on learning at sea of the declaration of war by the United States. At Yale College when a boy; at the bar in New Orleans; in the Senate of the United States, from Louisiana; at first attorney-general, next secretary of war, and finally secretary of state of the Confederate States, at Richmond. When he was recently entertained at dinner, in the beautiful Inner Temple Hall (surrounded by the portraits of the most illustrious of those who have given dignity to the profession in the past), the bench and bar of the United Kingdom were assembled to do him special honor; about two hundred sat at the table; the Attorney-General presided, as leader of the bar of England; the Lord Chancellor and the Lord

and his party, including General Breckinridge, were the guests of the hospitable owner, and that we were expected to join them. There we had the first good meal encountered since leaving Virginia, and when bed-time came a great bustling was made to enable us all to sleep within doors, though the house was too small to afford many beds. A big negro man, with a candle in hand, then came into the room where we were gathered about a huge fire. Looking us over, he solemnly selected General Cooper, and, with much deference, escorted him into the "guest-chamber" through a door opening from the room we occupied. We could see the great soft bed and snowy white linen the old gentleman was to enjoy, and all rejoiced in the comfort they promised to aged bones, that for a week had been racked in the cars. The negro gravely shut the door upon his guest, and, walking through our company, disappeared. He came back after awhile with wood for our fire; and one of us asked him, "Aren't you going to give the President a room?" "Yes, sir, I done put him in thar," pointing to the "guest-chamber," where General Cooper was luxuriating in delights procured for him by the mistaken notion of the darky that he was Mr. Davis! The President and one or two others were presently provided for elsewhere, and the rest of us bestowed ourselves to slumber on the floor, before the roaring fire.

A better team for Benjamin's party was furnished next morning; and, just as we were about to start, our host generously insisted upon presenting to Mr. Davis a filly, already broken to saddle. She was a beauty, and the owner had kept her locked for several days in the cellar, the only place he considered safe against horse-thieves.

The next night we bivouacked in a pine grove near Lexington, and were overtaken there by dispatches from General Joseph E. Johnston, with information of his arrange-

Chief Justice were among those who spoke to toasts, and if there was any speech more graceful and striking than those made by them, it was the reply of Mr. Benjamin himself, with singular modesty and felicity, to the words of praise he had just heard from the eloquent Attorney-General. Lord Chancellor Selborne then said of him: "If I had to speak of Mr. Benjamin only as an English barrister, as I have known him from the bench, I should say that no man, within my recollection, has possessed greater learning, or displayed greater shrewdness or ability, or greater zeal for the interests intrusted to him, than he has exhibited. (Cheers.) To these high qualities he has united one still higher—the highest sense of honor, united with the greatest kindness and generosity (cheers), and the greatest geniality in his intercourse with all the branches of the profession. (Loud cheers.) That we should no longer have the benefit of his assistance and the light of his example, is a loss to us all. (Cheers.)"

ment for negotiations with General Sherman. General Breckinridge and Mr. Reagan (the Postmaster-General) were thereupon directed by the President to proceed immediately to General Johnston's head-quarters for consultation with that officer, and with large discretion as to what should be agreed to. They set off instantly.

In Lexington and in Salisbury we experienced the same cold indifference on the part of the people, first encountered at Greensboro', except that at Salisbury Mr. Davis was invited to the house of a clergyman, where he slept. Salisbury had been entered a few days before by a column of the enemy's cavalry (said to be Stoneman's), and the streets showed many evidences of the havoc they had wrought. With one or two others, I passed the night on the clergyman's front piazza as a guard for the President.

During all this march Mr. Davis was singularly equable and cheerful; he seemed to have had a great load taken from his mind, to feel relieved of responsibilities, and his conversation was bright and agreeable. He talked of men and of books, particularly of Walter Scott and Byron; of horses and dogs and sports; of the woods and the fields; of trees and many plants; of roads, and how to make them; of the habits of birds, and of a variety of other topics. His familiarity with, and correct taste in, the English literature of the last generation, his varied experiences in life, his habits of close observation, and his extraordinary memory, made him a charming companion when disposed to talk.

Indeed, like Mark Tapley, we were all in good spirits under adverse circumstances; and I particularly remember the entertaining conversation of Mr. Mallory, the Secretary of the Navy.

Not far from Charlotte, I sent forward a courier with a letter to Major Echols, the quartermaster of that post, asking him to inform Mrs. Davis of our approach, and to provide quarters for as many of us as possible. The major rode out to the outskirts of the town, and there met us with the information that Mrs. Davis and her family had hastily proceeded toward South Carolina several days before. He didn't know where she was to be found; but said she had fled when the railway south of Greensboro' had been cut by the enemy's cavalry. The major then took me aside and explained that, though quarters could be furnished for the rest of us, he had as yet been able to find only one person willing to receive Mr. Davis, saying the people generally were afraid that whoever entertained him would have his house burned by the enemy; that, indeed, it was understood threats to that effect

had been made everywhere by Stoneman's cavalry.

There seemed to be nothing to do but to go to the one domicile offered. It was on the main street of the town, and was occupied by Mr. Bates, a man said to be of northern birth, a bachelor of convivial habits, the local agent of the Southern Express Company, apparently living alone with his negro servants, and keeping a sort of "open house," where a broad, well equipped sideboard was the most conspicuous feature of the situation — not at all a seemly place for Mr. Davis.

Just as we had entered the house, Mr. Davis received by courier from General Breckinridge, at General Sherman's head-quarters, the intelligence that President Lincoln had been assassinated; and, when he communicated it to us, everybody's remark was that, in Lincoln, the Southern States had lost their only refuge in their then emergency. There was no expression other than of surprise and regret. As yet, we knew none of the particulars of the crime.

Presently, the street was filled by a column of cavalry (the command, I think, of General Basil Duke, of Kentucky) just entering the town. As they rode past the house, the men waved their flags and hurraed for "Jefferson Davis." Many of them halted before the door, and, in dust and uproar, called loudly for a speech from him. I was in the crowd, gathered thick about the steps, and not more than ten feet from the door. Mr. Davis stood on the threshold and made a very brief reply to their calls for a speech. I distinctly heard every word he said. He merely thanked the soldiers for their cordial greetings; paid a high compliment to the gallantry and efficiency of the cavalry from the State in which the regiment before him had been recruited; expressed his own determination not to despair of the Confederacy, but to remain with the last organized band upholding the flag; and then excused himself from further remarks, pleading the fatigue of travel. He said nothing more. Somebody else (Mr. Johnson, I think, a prominent resident there) read aloud the dispatch from General Breckinridge about the assassination of President Lincoln, but no reference was made to it in Mr. Davis's speech. There was no other speech, and the crowd soon dispersed.*

Colonel John Taylor Wood, Colonel Will-

* In pursuance of the scheme of Stanton and Holt to fasten upon Mr. Davis charges of a guilty foreknowledge of, if not participation in, the murder of Mr. Lincoln, Bates was afterward carried to Washington and made to testify (before the military tribunal, I believe, where the murderers were on trial) to something about that speech.

As I recollect the reports of the testimony, published

iam Preston Johnston, and Colonel Frank R. Lubbock, staff officers, remained in Bates's house with the President. There was no room for more. I was carried off by my Hebrew friend Weil and most kindly entertained, with Mr. Benjamin and St. Martin, at his residence.

On Sunday (the next day, I think), a number of us attended service at the Episcopal Church, and heard the rector preach vigorously about the sad condition of the country, and in reprobation of the folly and wickedness of the assassination of President Lincoln. As Mr. Davis walked away, after the sermon, with Colonel Johnston and me, he said, with a smile, "I think the preacher directed his remarks at me; and he really seems to fancy I had something to do with the assassination." The suggestion was absurd. No man ever participated in a great war of revolution with less of disturbance of the nicest sense of perfect rectitude in conduct or opinion; his every utterance, act, and sentiment was with the strictest regard for all the moralities, throughout that troubled time when the passions of many people made them reckless or defiant of the opinions of mankind.

His cheerfulness continued in Charlotte, and I remember his there saying to me, "I *cannot* feel like a beaten man!" The halt at Charlotte was to await information from the army of General Johnston. After a few days, the President became nervously anxious about his wife and family. He had as yet heard nothing of their whereabouts, but asked me to proceed into South Carolina in search of them, suggesting that I should probably find them at Abbeville. He told me I must rely on my own judgment as to what course to pursue from there; that, for himself, he should make his way as rapidly as possible to the Trans-Mississippi Department, to join the army under Kirby Smith.

I started at once, taking my horse on the railway train to Chester. On the train chanced to be Captain Lingan, an officer from New Orleans, recently serving at Richmond as an assistant to the commissioner for the exchange of prisoners. He had his horse with him, and from Chester we rode together

across the country to Newberry, there to take the train again for Abbeville. In Chester the night was spent in the car that brought us there. On the march to Newberry we bivouacked. The weather was fine, and the houses surrounded by jessamines and other flowers. The people were very hospitable, and we fain to rely upon them. Nothing could be bought, because we had no money. Our Confederate currency was of no value now, and there was no other. Riding through a street of Newberry in search of the quartermaster's stable, Lingan and I were saluted by a lady, inquiring eagerly whence we had come, what the news was, and whether we knew anything of Mr. Trenholm, adding she had heard he was ill. The town was lovely, and this the most attractive house we had seen there. It had a broad piazza, with posts beautifully overgrown by vines and rose-bushes, and the grounds around were full of flowers. I replied I had just left Mr. Trenholm in Charlotte; that he had somewhat recovered; and that, if she would allow us to do so, we should be happy to return, after providing for our horses, and tell her the latest news. As we rode off, Lingan laughingly said, "Well, that secures us 'hospitable entertainment.'" And, sure enough, when we went back and introduced ourselves, we were cordially received by the mistress of the house, who invited us to dine. The lady we had seen on the piazza was only a visitor there for the moment. It was the residence of Mr. Boyd, the president of a bank, and when that gentleman presently came in he courteously insisted upon our making his house our home. An excellent dinner was served, and I was given what seemed to me the most delightful bed ever slept in. After a delicious breakfast next morning, Mrs. Boyd dispatched us to the train with a haversack full of bounties for the rest of the journey.

At Abbeville, Mrs. Davis and her family were the guests of the President's esteemed friends, Colonel and Mrs. Burt; and there, too, were the daughters of Mr. Trenholm, at the house of their brother. Abbeville was a beautiful place, on high ground; and the

at the time, they made the witness say that Mr. Davis had approved of the assassination, either explicitly or by necessary implication; and that he had added, "If it was to be done, it is well it was done quickly," or words to that effect. If any such testimony was given, it is false and without foundation; no comment upon or reference to the assassination was made in that speech. I have been told the witness has always stoutly insisted he never testified to anything of the kind, but that what he said was altogether perverted in the publication made by rascals in Washington. Colonel William Preston Johnston tells me he has seen another version of the story, and thinks Bates is understood to have fathered it in a publication

made in some newspaper after his visit to Washington; it represents Bates as saying that the words above mentioned as imputed to Mr. Davis were used by him, not, indeed, in the speech I have described, but in a conversation with Johnston at Bates's house. Johnston assures me that, in that shape, too, the story is false — that Mr. Davis never used such words in his presence, or any words at all like them. He adds that Mr. Davis remarked to him, at Bates's house, with reference to the assassination, that Mr. Lincoln would have been much more useful to the Southern States than Andrew Johnson, the successor, was likely to be; and I myself heard Mr. Davis express the same opinion at that period.

people lived in great comfort, their houses embowered in vines and roses, with many other flowers everywhere. We had now entered the "sunny South."

Mrs. Davis insisted upon starting without delay for the sea-coast, to get out of the reach of capture. She and her sister had heard dreadful stories of the treatment ladies had been subjected to in Georgia and the Carolinas by men in Sherman's army, and thought with terror of the possibility of falling into the hands of the enemy; indeed, she understood it to be the President's wish that she should hasten to seek safety in a foreign country. I explained to her the difficulties and hardships of the journey to the sea-coast, and suggested that we might be captured on the road, urging her to remain where she was until the place should be quietly occupied by United States troops, assuring her that some officer would take care that no harm should befall her, and adding that she would then be able to rejoin her friends. Colonel and Mrs. Burt (a niece of John C. Calhoun) added their entreaties to mine; and to her expression of unwillingness to subject them to the danger of having their house burned for sheltering her, Colonel Burt magnanimously replied that there was no better use to which his house could be put than to have it burned for giving shelter to the wife and family of his friend. But she persisted in her purpose, and begged me to be off immediately. It was finally decided to make our way to the neighborhood of Madison, Florida, as fast as possible, there to determine how best to get to sea.

We had no conveyance for the ladies, however, and were at a loss how to get one, until somebody told me that General John S. Williams, of Kentucky (now United States Senator from that State) was but a few miles from the town recruiting his health, and that he had a large and strong vehicle well adapted to the purpose. I rode out in the direction indicated, and discovered that officer at the house of a man called, queerly enough, "Jeff" Davis. General Williams evidently perceived that, if he allowed his wagon and horses (a fortune in those times) to go beyond his own reach, he would never see them again, such was the disorder throughout the country. But he gallantly devoted them to Mrs. Davis, putting his property at her service as far as Washington, Georgia, and designating the man to bring the wagon and horses back from there, if possible, to him at Abbeville. Whether he ever recovered them I have not learned; but they started back promptly after we had reached Washington.

Among the "refugees" in Abbeville was

the family of Judge Monroe, of Kentucky. At their house were Lieutenant Hathaway, Mr. Monroe, and Mr. Messick,—Kentuckians all, and then absent from their command in the cavalry, on sick leave, I think. These three young gentlemen were well mounted, and volunteered to serve as an escort for Mrs. Davis.

We started the morning of the second day after I arrived at Abbeville, and had not reached the Savannah River when it was reported that small-pox prevailed in the country. All the party had been vaccinated except one of the President's children. Halting at a house near the road, Mrs. Davis had the operation performed by the planter, who got a fresh scab from the arm of a little negro called up for the purpose.

At Washington, we halted for two nights and the intervening day. Mrs. Davis and her family were comfortably lodged in the town. I was the guest of Dr. Robertson, the cashier of a bank, and living under the same roof with the offices of that institution. Here, too, was my friend Major Thomas W. Hall (now a busy and eminent member of the Baltimore bar), talking rather despondingly of the future, and saying he did not know what he should do with himself. After we had discussed the situation, however, he brightened up, with the remark that he thought he should write a book about the war. I comforted him with the observation that that would be just the thing; and that, as we ought all to have a steady occupation in life, if he would write a book, I should try to read it!

Near the town was a quartermaster's camp, where I selected three or four army wagons, each with a team of four good mules, and the best harness to be got. A driver for each team, and several supernumeraries, friends of theirs, were recruited there, with the promise, on my part, that the wagons and mules should be divided between them when at our journey's end. These men were all, I believe, from southern Mississippi, and, by volunteering with us, were not going far out of their own way home.

It was night-fall when these arrangements were completed, and I immediately moved my teams and wagons to a separate bivouac in the woods, apart; a wise precaution, for, during the night, some men, on the way to their homes in the far South-west, "raided" the quartermaster's camp and carried off all the best mules found there. Senator Wigfall, of Texas, had allowed to remain in the camp some mules he intended for his own use; the next day they were all missing.*

* A story told afterward well illustrates Wigfall's audacity, resources, and wit. It seems that he made

Into the wagons, next morning, we put Mrs. Davis's luggage, a few muskets with ammunition, two light tents for the ladies and children, and utensils for cooking, with supplies for ourselves and feed for the animals supposed to be sufficient to take us to Madison. As most of the country we were to pass through had been recently devastated by Sherman's army, or was pine woods, sparsely inhabited, these things were necessary.

We had expected to leave Washington with only the party we arrived with, consisting of Mrs. Davis, Miss Howell, the four children, Ellen, James Jones with the two carriage horses, the three Kentuckians, and myself,—adding only the teamsters. But, at Washington we were acceptably reinforced by Captain Moody, of Port Gibson, Mississippi, and Major Victor Maurin, of Louisiana. Both had served with the artillery in Virginia, had been home on leave, and had reached Augusta, Georgia, on their return to duty. Hearing there of the surrender of the army, they set out for home together, and met us at Washington, where Captain Moody kindly placed his light, covered wagon at the service of Mrs. Davis; and he and Major Maurin joined our party as an additional escort for her. Captain Moody had with him, I think, a negro servant.

In Washington, at that time, were Judge Crump, of Richmond (Assistant Secretary of the Treasury), and several of his clerks. They had been sent by Mr. Trenholm in advance, with some of the (not very large amount of) gold brought out of Richmond. The specie was in the vaults of the bank at Washington, and I did not hear of it until late at night. We were to start in the morning; and, as nobody in our party had a penny of the money needed to prosecute the intended exit from the country, I was determined to get some of that gold.

One of the Treasury clerks went with me to the house where Judge Crump was; we got him out of bed; and, after a long argument and much entreaty, the Assistant Secretary gave me an order for a few hundred

dollars in gold for Mrs. Davis, and one hundred and ten dollars for myself. The amounts were to be charged to the President and me, as upon account of our official salaries. Armed with the order, my friend the clerk got the money for us that night.

The last two people I talked to in Washington were General Robert Toombs, who resides there, and General Humphrey Marshall, of Kentucky.

The latter was enormously fat. He had been in public life for many years, and was one of the notables of his State. As I waited while my horse was shod, he sat down beside me in a door-way on the Square, and, though I was but a slender youth, almost squeezed the breath out of my body in doing so. He discussed the situation, and ended with, "Well, Harrison, in all my days I never knew a government to go to pieces in *this* way," emphasizing the words as though his pathway through life had been strewn with the wrecks of empires, comminuted indeed, but nothing like this! The next time I saw him, we were in New Orleans, in March, 1866. He told me of his adventures in escaping from Georgia across the Mississippi River. The waters were in overflow, and made the distance to be rowed, where he crossed, a number of miles. He said he was in a "dug-out" (a boat made of a single large log, with a cylindrical bottom and easily upset), and that the boatman made him lie down, for fear they might be seen by the enemy and he recognized by his great size, and so captured. All went well until the mosquitoes swarmed on him, and nearly devoured him in his fear of capsizing if he ventured to adopt effective measures to beat them off! In this connection, I remember that, when Marshall commanded a brigade in the mountains of East Tennessee and Kentucky, he was warned that the mountaineers, Union men, all knew him because of his size, and that some sharp-shooter would be sure to single him out and pick him off. He replied: "Ah! but I have taken precautions against that. I have a fat staff! There be six Richmonds in the field!"

As I rode out of Washington to overtake my wagons, then already started, I saw General Toombs, and sung out "Good-bye" to him. He was dressed in an ill-cut black Websterian coat, the worse for wear, and had on a broad-brimmed shabby hat. Standing beside an old buggy, drawn by two ancient gray horses, he told me he was going to Crawfordsville to have a talk with "Aleck" Stephens (the Vice-President); and, as I left, the atmosphere was murky with blasphemies and with denunciations of the Yankees! He

his way as best he could to Vicksburg, and there, mingling with a large number of paroled soldiers returning to the Trans-Mississippi, and having in his pocket a borrowed "parole paper," certifying the bearer to be "Private Smith," availed himself of the transportation furnished by the United States quartermaster to such prisoners, by steam-boat, I think, to Shreveport. On the voyage he had a discussion with some of the guard as to what should be done by the Government with the secession leaders. "And as to Wigfall," said one of the men, in excitement, "if we catch *him*, we shall hang him immediately." "There I agree with you," remarked Private Smith, "'twould serve *him* right; and, if I were there, I should be pulling at the end of *that* rope myself!"

had been informed of a detachment of the enemy's cavalry said to be already on the way to capture him, and was about to start for the sea-coast. The next time I saw him, he was at the "Théâtre du Châtelet," in Paris, in August or September, 1866. The spectacle was one of the most splendid ever put upon the stage there, and the French people were in raptures over the dazzling beauty of the scene. Toombs, fashionably dressed, sat in an orchestra chair, regarding it all with the stolid composure of an Indian, and with an expression of countenance suggesting that he had a thousand times seen spectacles more brilliant in Washington, Georgia.

From Washington we went along the road running due south. We had told nobody our plans; though, starting as we did, in the broad light of the forenoon, everybody saw, of course, the direction taken. Our teamsters were instructed not to say anything, to anybody whatever, as to who we were or whence we came or whither we were going. They were all old soldiers and obeyed orders. It frequently amused me to hear their replies to the country people, during the next few days, when questioned on these matters.

"Who is that lady?"

"Mrs. Jones."

"Where did you come from?"

"Up the road."

"Where are you going to?"

"Down the road a bit," etc., etc.

We had not proceeded far when a gentleman of the town, riding rapidly, overtook us with a letter from the President to his wife. It had been written at York, South Carolina, I think; was forwarded by courier to overtake us at Abbeville, and had reached Washington just after we started. It merely informed us that he and his immediate party were well, and that he should probably ride south from Washington to cross the Mississippi, if possible. I think no reply was made by Mrs. Davis to the letter; and, if my memory serves me, we left behind us nothing to advise the President as to where we were going.

That afternoon I was overcome with dysentery and a low fever, and dropped behind for a time, to lie down. When I overtook the party, they had already gone into camp; and, after giving my horse to one of the men, I had hardly strength enough to climb into a wagon, there to pass the night.

The next day we made a long march, and had halted for the night in a pine grove, just after crossing a railway track, when several visitors sauntered into our camp. Presently, one of the teamsters informed me that, while watering his mules near by, he had been told an attempt would be made during the night to

carry off our mules and wagons, and that the visitors were of the party to make the attack. A council of war was held immediately, and we were discussing measures of resistance, when Captain Moody went off for a personal parley with the enemy. He returned to me with the news that the leader of the party was a fellow-Freemason, a Mississippian, and apparently not a bad sort of person. We agreed he had better be informed who we were, relying upon him not to allow an attack upon us after learning that Mrs. Davis and her children were of the party. Captain Moody made that communication in the confidence of Freemasonry, and the gallant Robin Hood immediately approached Mrs. Davis in all courtesy, apologized for having caused her any alarm, assured her she should not be disturbed, and said the raid had been arranged only because it had been supposed we were the party of some quartermasters from Milledgeville, making off with wagons and mules to which he and his men considered their own title as good as that of anybody else. He then left our camp, remarking, however, that, to intercept any attempt at escape during the night, he had already dispatched some of his men to the cross-roads, some distance below, and that we might be halted by them there in the morning; but, to provide for that emergency, he wrote and delivered to Captain Moody a formal "order," entitling us to "pass" his outposts at the cross-roads! The next morning, when we reached the cross-roads, some men were there, evidently intending to intercept us; but—as all the gentlemen of our party were in the saddle, and we appeared to be ready for them—there was no challenge, and we got by without recourse to Robin Hood's "pass."

About the second or third day after that, we were pursued by another party; and one of our teamsters, riding a short distance in the rear of the wagons on the horse of one of the Kentuckians,—the owner having exchanged temporarily for one of the carriage horses, I think,—was attacked, made to dismount, and robbed of his horse, with the information that all the other horses and the mules would be taken during the night. By running a mile or two, the teamster overtook us. It was decided, of course, to prepare for an effective defense. As night came on, we turned off into a side road, and reaching a piece of high ground in the open pine woods, well adapted for our needs, halted—corralling the animals within a space inclosed by the wagons (arranged with the tongue of one wagon fastened by chains or ropes to the tail of another) and placing pickets. About the middle of the night, I, with two

teamsters, constituted the picket on the road running north. After awhile we heard the soft tread of horses in the darkness approaching over the light, sandy soil of the road. The teamsters immediately ran off to arouse the camp, having no doubt the attack was about to begin. I placed myself in the road to detain the enemy as long as possible, and, when the advancing horsemen came near enough to hear me, called "Halt." They drew rein instantly. I demanded "Who comes there?" The foremost of the horsemen replied "Friends," in a voice I was astonished to recognize as that of President Davis, not suspecting he was anywhere near us.

His party then consisted of Colonel William Preston Johnston, Colonel John Taylor Wood, Colonel Frank R. Lubbock, Mr. Reagan, Colonel Charles E. Thorburn (the latter, with a negro servant, had joined them at Greensboro', North Carolina), and Robert (Mr. Davis's own servant). Some scouts were scattered through the country, and were reporting to the President from time to time; but I don't recollect that either of them was with him on the occasion now referred to.

He had happened to join us at all only because some of his staff had heard in the afternoon, from a man on the road-side, that an attempt was to be made in the night to capture the wagons, horses, and mules of a party said to be going south on a road to the eastward. The man spoke of the party to be attacked in terms that seemed to identify us, as we had been described in Washington. The President immediately resolved to find us, and, turning to the east from his own route, rode until after midnight before he overtook us. He explained to us, at the time, how he had tried several roads in the search, and had ridden an estimated distance of sixty miles since mounting in the morning; and said he came to assist in beating off the persons threatening the attack. As we had camped some distance from the main road, he would have passed to the westward of our position, and would probably have had no communication with us and no tidings whatever of us, but for the chance remark about the threatened raid upon our animals. The expected attack was not made.

The President remained with us the rest of that night, rode with us the next day, camped with us the following night, and, after breakfast the day after that, bade us good-bye and rode forward with his own party, leaving us, in deference to our earnest solicitations, to pursue our journey as best we might with our wagons and incumbrances.

He camped that night with his own party at Abbeville, Georgia, personally occupying a deserted house in the outskirts of the village.

As they had reached that place after dark, and a furious rain was falling, but few of the people were aware of his presence, and nobody in the village had had opportunity to identify him.

I halted my party on the western bank of the Ocmulgee River as the darkness came on, immediately after getting the wagons through the difficult bottom-lands on the eastern side, and after crossing the ferry. About the middle of the night I was aroused by a courier sent back by the President with the report that the enemy was at or near Hawkinsville (about twenty-five miles to the north of us), and the advice that I had better move on at once to the southward, though, it was added, the enemy at Hawkinsville seemed to be only intent upon appropriating the quartermaster's supplies supposed to be there. I started my party promptly, in the midst of a terrible storm of thunder, lightning, and rain. As we passed through the village of Abbeville, I dismounted and had a conversation with the President in the old house, where he was lying on the floor wrapped in a blanket. He urged me to move on, and said he should overtake us during the night, after his horses had had more rest. We kept to the southward all night, the rain pouring in torrents most of the time, and the darkness such that, as we went through the woods where the road was not well marked, in a light, sandy soil, but wound about to accommodate the great pines left standing, the wagons were frequently stopped by fallen trees and other obstructions. In such a situation, we were obliged to wait until a flash of lightning enabled the drivers to see the way.

In the midst of that storm and darkness the President overtook us. He was still with us when, about five o'clock in the afternoon (not having stopped since leaving Abbeville, except for the short time, about sunrise, required to cook breakfast), I halted my party for the night, immediately after crossing the little creek just north of Irwinville, and went into camp. My teams were sadly in need of rest, and having now about fifty miles between us and Hawkinsville, where the enemy had been reported to be, and our information being, as stated, that they did not seem to be on the march or likely to move after us, we apprehended no immediate danger. That country is sparsely inhabited, and I do not recollect that we had seen a human being after leaving Abbeville. Colonel Johnston says that he rode on in advance as far as Irwinville, and there found somebody from whom he bought some eggs.

Colonel Thorburn had been, before the war, in the United States navy, and was, I think, a classmate of Colonel Wood in the Naval

Academy at Annapolis. During the first year or two of the war he had served in the army; he afterward became engaged in running the blockade, bringing supplies into the Confederate States. He says he had a small but seaworthy vessel then lying in Indian River, Florida; that his object in joining the party had been to take the President aboard that vessel and convey him thence around to Texas, in case the attempt to get across the Mississippi should for any reason fail or seem unadvisable; and that Colonel Wood and he had arranged that he should, at the proper time, ride on in advance, make all the necessary arrangements for the voyage, and return to Madison, Florida, to await the President there and conduct him aboard the vessel, if necessary. We had all now agreed that, if the President was to attempt to reach the Trans-Mississippi at all, by whatever route, he should move on at once, independent of the ladies and wagons. And when we halted he positively promised me (and Wood and Thorburn tell me he made the same promise to them) that, as soon as something to eat could be cooked, he would say farewell, for the last time, and ride on with his own party, at least ten miles farther before stopping for the night, consenting to leave me and my party to go on our own way as fast as was possible with the now weary mules.

After getting that promise from the President, and arranging the tents and wagons for the night, and without waiting for anything to eat (being still the worse for my dysentery and fever), I lay down upon the ground and fell into a profound sleep. Captain Moody afterward kindly stretched a canvas as a roof over my head, and laid down beside me, though I knew nothing of that until the next day. I was awakened by the coachman, James Jones, running to me about day-break with the announcement that the enemy was at hand! I sprang to my feet, and in an instant a rattling fire of musketry commenced on the north side of the creek. Almost at the same moment Colonel Pritchard and his regiment charged up the road from the south upon us. As soon as one of them came within range, I covered him with my revolver and was about to fire, but lowered the weapon when I perceived the attacking column was so strong as to make resistance useless, and reflected that, by killing the man, I should certainly not be helping ourselves, and might only provoke a general firing upon the members of our party in sight. We were taken by surprise, and not one of us exchanged a shot with the enemy. Colonel Johnston tells me he was the first prisoner taken. In a moment, Colonel Pritchard rode directly to me and,

pointing across the creek, said, "What does that mean? Have you any men with you?" Supposing the firing was done by our teamsters, I replied, "Of course we have—don't you hear the firing?" He seemed to be nettled at the reply, gave the order, "Charge," and boldly led the way himself across the creek, nearly every man in his command following. Our camp was thus left deserted for a few minutes, except by one mounted soldier near Mrs. Davis's tent (who was afterward said to have been stationed there by Colonel Pritchard in passing) and by the few troopers who stopped to plunder our wagons. I had been sleeping upon the same side of the road with the tent occupied by Mrs. Davis, and was then standing very near it. Looking there, I saw her come out and heard her say something to the soldier mentioned; perceiving she wanted him to move off, I approached and actually persuaded the fellow to ride away. As the soldier moved into the road, and I walked beside his horse, the President emerged for the first time from the tent, at the side farther from us, and walked away into the woods to the eastward, and at right angles to the road.

Presently, looking around and observing somebody had come out of the tent, the soldier turned his horse's head and, reaching the spot he had first occupied, was again approached by Mrs. Davis, who engaged him in conversation. In a minute, this trooper was joined by one or perhaps two of his comrades, who either had lagged behind the column and were just coming up the road, or had at that moment crossed over from the other (the west) side, where a few of them had fallen to plundering, as I have stated, instead of charging over the creek. They remained on horseback and soon became violent in their language with Mrs. Davis. The order to "halt" was called out by one of them to the President. It was not obeyed, and was quickly repeated in a loud voice several times. At least one of the men then threatened to fire, and pointed a carbine at the President. Thereupon, Mrs. Davis, overcome with terror, cried out in apprehension, and the President (who had now walked sixty or eighty paces away into the unobstructed woods) turned around and came back rapidly to his wife near the tent. At least one of the soldiers continued his violent language to Mrs. Davis, and the President reproached him for such conduct to her, when one of them, seeing the face of the President, as he stood near and was talking, said, "Mr. Davis, surrender! I recognize you, sir." Pictures of the President were so common that nearly or quite every man in both armies knew his face.

It was, as yet, scarcely daylight.

The President had on a water-proof cloak. He had used it, when riding, as a protection against the rain during the night and morning preceding that last halt; and he had probably been sleeping in that cloak, at the moment when the camp was attacked.

While all these things were happening, Miss Howell and the children remained within the other tent. The gentlemen of our party had, with the single exception of Captain Moody, all slept on the west side of the road and in or near the wagons. They were, so far as I know, paying no attention to what was going on at the tents. I have since talked with Johnston, Wood, and Lubbock, and with others, about these matters; and I have not found there was any one except Mrs. Davis, the single trooper at her tent, and myself, who saw all that occurred and heard all that was said at the time. Any one else who gives an account of it has had to rely upon hearsay or his own imagination for his story.

In a short time after the soldier had recognized the President, Colonel Pritchard and his men returned from across the creek—the battle there ending with the capture by one party of a man belonging to the other, and by the recognition which followed.

They told us that the column, consisting of a detachment of Wisconsin cavalry and another of Michigan cavalry, had been dispatched from Macon in pursuit of us, under the command of Colonel Harnden, of Wisconsin; that when they reached Abbeville, they heard a party of mounted men, with wagons, had crossed the river near there, the night before; that they immediately suspected the identity of the party, and decided to follow it; but that, to make sure of catching us if we had not already crossed the river, Lieutenant-Colonel Pritchard had been posted at the ferry with orders to remain there and capture anybody attempting to pass; that Colonel Harnden, with his Wisconsin men, marched down the direct road we had ourselves taken, and, coming upon us in the night, had halted on the north side of the creek to wait for daylight before making the attack, lest some might escape in the darkness; that Lieutenant-Colonel Pritchard had satisfied himself, by further conversation with the ferry-man, that it was indeed Mr. Davis who had crossed there, and, deciding to be in, if possible, at the capture, had marched as rapidly as he could along the road nearer the river, to the east of and for most of the distance nearly parallel with the route taken by Colonel Harnden; that he reached the cross-roads (Irwinville) in the night, ascertained nobody had passed there for several days, turned north, and found us only a mile and a half up

the road; that, to intercept any attempt at escape, he had dismounted some of his men, and sent them to cross the creek to the westward of us and to post themselves in the road north of our camp; that, as these dismounted men crossed the creek and approached the road, they came upon the Wisconsin troopers, and not being able, in the insufficient light, to distinguish their uniforms, and supposing them to be our escort, opened a brisk fire which was immediately returned; and that, on that signal, Colonel Pritchard and his column charged up the road into our camp, and thence into the thick of the fight. They said that, in the rencontre, a man and, I think, a horse or two were killed, and that an officer and perhaps one or two men were wounded.

During the confusion of the next few minutes, Colonel John Taylor Wood escaped, first inducing the soldier who halted him to go aside into the bushes on the bank of the creek, and there bribing the fellow with some gold to let him get away altogether. As Wood was an officer of the navy, as well as an officer of the army, had commanded cruisers along the Atlantic coast, had captured and sunk a number of New York and New England vessels, and was generally spoken of in the Northern newspapers as a "pirate," he not unnaturally apprehended that, if he remained in the enemy's hands, he would be treated with special severity.

He made his way to Florida, and there met General Breckinridge, with whom (and perhaps one or two others) he sailed down the east coast of the State in a small open boat, and escaped to Cuba. When in London, in September, 1866, I dined with Breckinridge, and had from him the story of their adventures. He said they kept close alongshore, and, frequently landing, subsisted on turtles' eggs found in the sand. When nearing the southern end of the coast, they one day perceived a boat coming to meet them and were at first afraid of capture; but presently, observing that the other boat was so changing its course as to avoid them, they shrewdly suspected it to contain deserters or escaped convicts from the Dry Tortugas, or some such people, who were probably themselves apprehensive of trouble if caught. Wood therefore gave chase immediately, and, having the swifter boat, soon overhauled the other one. The unsatisfactory account the men aboard gave of themselves seemed to confirm the suspicion with regard to their character. The new boat was a better sea-craft than the one our voyagers had, though not so fast a sailer. They were afraid theirs would not take them across the Gulf to Cuba, and so determined to appropriate the other. Turning pirates for the

occasion, they showed their side-arms, put on a bold air, and threatened the rascals with all manner of dreadful things; but finally relented so far as to offer to let them off with an exchange of boats! The victims were delighted with this clemency, and gladly went through what President Lincoln called the dangerous process of "swapping horses while crossing a stream." Each party went on its way rejoicing, and our friends finally, as I have said, reached the coast of Cuba, though almost famished. Indeed, Breckinridge said they were kept alive at all only by a loaf or two of bread kindly given them by a Yankee skipper as they sailed under the stern of his vessel at day-break of the last day of their voyage.

All of the other members of the President's party, except Colonel Thorburn, and all those of my own party, remained as prisoners—unless, indeed, one or two of the teamsters escaped, as to which I do not recollect.

I had been astonished to discover the President still in camp when the attack was made. What I learned afterward explained the mystery. Wood and Thorburn tell me that, after the President had eaten supper with his wife, he told them he should ride on when Mrs. Davis was ready to go to sleep; but that, when bed-time came, he finally said he would ride on in the morning—and so spent the night in the tent. He seemed to be entirely unable to apprehend the danger of capture. Everybody was disturbed at this change of his plan to ride ten miles farther, but he could not be got to move.

Colonel Thorburn decided to start during the night, to accomplish as soon as possible his share of the arrangement for the escape of the party from the sea-coast; and, with his negro boy, he set out alone before day-break. He tells me that, at Irwinville, they ran into the enemy in the darkness, and were fired upon; and that the negro leveled himself on his horse's back, and galloped away like a good fellow into the woods to the east. Thorburn says he turned in the saddle for a moment, shot the foremost of the pursuers, saw him tumble from his horse, and then kept on after the negro. They were chased into the woods, but their horses were fresher than those of the enemy and easily distanced pursuit. Thorburn says he went on to Florida, found his friend Captain Coxsetter at Lake City, ascertained that the vessel was, as expected, in the Indian River and in good condition for the voyage to Texas, arranged with the captain to get her ready for sailing, and then returned to Madison for the rendezvous. There, he says, he learned of Mr. Davis's capture, and, having no further use for the vessel, sent back orders to destroy her.

The business of plundering commenced immediately after the capture; and we were soon left with only what we had on and what we had in our pockets. Several of us rejoiced in some gold; mine was only the one hundred and ten dollars I have mentioned, but Colonel Lubbock and Colonel Johnston had about fifteen hundred dollars each. Lubbock held on to nearly or quite all of his. But Johnston had found the coins an uncomfortable burden when carried otherwise, and had been riding with them in his holsters. There his precious gold was found, and thence it was eagerly taken, by one or more of our captors. His horse and his saddle, with the trappings and pistols, were those his father, General Albert Sydney Johnston, had used at the battle of Shiloh, and were greatly prized. They and all our horses were promptly appropriated by the officers of Col. Pritchard's command; the colonel himself claimed and took the lion's share, including the two carriage-horses, which, as he was told at the time, were the property of Mrs. Davis, having been bought and presented to her by the gentlemen in Richmond upon the occasion already mentioned. Colonel Pritchard also asserted a claim to the horse I had myself ridden, which had stood the march admirably and was fresher and in better condition than the other animals. The colonel's claim to him, however, was disputed by the adjutant, who insisted on the right of first appropriation, and there was a quarrel between those officers on the spot.

While it was going on, I emptied the contents of my haversack into a fire where some of the enemy were cooking breakfast, and there saw the papers burn. They were chiefly love-letters, with a photograph of my sweetheart,—though with them chanced to be a few telegrams and perhaps some letters relating to public affairs, of no special interest.

After we had had breakfast, it was arranged that each of the prisoners should ride his own horse to Macon, the captors kindly consenting to waive right of possession meantime; and that arrangement was carried out, except that Mr. Davis traveled in one of the ambulances.

We marched in a column of twos, and Major Maurin and I rode together. He was very taciturn; but when, on the second or third day, we came upon a cavalry camp where a brass-band, in a large wagon drawn by handsome horses, was stationed by the road-side, and suddenly struck up "*Yankee Doodle*" as the ambulance containing Mr. Davis came abreast of it, the silent old Creole was moved to speech. The startling burst of music set our horses to prancing. When Major Maurin

had composed his steed, he turned to me with a broad smile and revenged himself with: "I remember the last time I heard *that* tune; it was at the battle of Fredericksburg, when a brass-band came across the pontoon bridge with the column and occupied a house within range of my guns, where they began 'Yankee Doodle.' I myself sighted a field-piece at the house, missed it with the first shot, but next time hit it straight. In all your life you never heard 'Yankee Doodle' stop so short as it did then!"

It was at that cavalry camp we first heard of the proclamation offering a reward of \$100,000 for the capture of Mr. Davis, upon the charge, invented by Stanton and Holt, of participation in the plot to murder Mr. Lincoln. Colonel Pritchard had himself just received it, and considerably handed a printed copy of the proclamation to Mr. Davis, who read it with a composure unruffled by any feeling other than scorn. The money was, several years later, paid to the captors. Stanton and Holt, lawyers both, very well knew that Mr. Davis could never be convicted upon an indictment for treason, but were determined to hang him anyhow, and were in search of a pretext for doing so.

The march to Macon took four days. As we rode up to the head-quarters of General Wilson there, an orderly (acting, as he said, under directions of the adjutant) seized my rein before I had dismounted, and led off my horse the moment I was out of the saddle. When, that afternoon, we were sent to the station to take the railway train arranged to convey the prisoners to Augusta, on our way to Fortress Monroe, the horses of all or most of the officers of our party were standing in front of the hotel, and the several ex-owners rode them to the station. My horse was not there, and I had to go to the station afoot.

Several years afterward, on the grand stand at the Jerome Park race-course, in New York, I met Colonel ———, from whom, in Danville, Virginia, I had got the horse under the circumstances narrated. He told me he was in that part of Georgia shortly after our capture, and said the quarrel between Colonel Pritchard and his adjutant, as to

who should have my horse, waxed so hot at Macon that the adjutant, fearing he would not be able to keep the horse himself, and determined Colonel Pritchard should not have him, ended the dispute by drawing his revolver and shooting the gallant steed dead.

At General Wilson's head-quarters in Macon, I met General Croxton, of Kentucky, one of Wilson's brigadiers, who had been two classes ahead of me at Yale College. He received me with expressions of great friendship; said he should have a special outlook for my comfort while a prisoner; and told me that it was at his suggestion that Harnden and Pritchard had been dispatched to intercept Mr. Davis at the crossing of the Ocmulgee River at Abbeville—having heard from some of the Confederate cavalry who had been disbanded at Washington, Georgia, each with a few dollars in silver in his pocket, that the President had ridden south from that place.

HAD Mr. Davis continued his journey, without reference to us, after crossing the Ocmulgee River, or had he ridden on after getting supper with our party the night we halted for the last time; had he gone but five miles beyond Irwinville, passing through that village at night, and so avoiding observation, there is every reason to suppose that he and his party would have escaped either across the Mississippi or through Florida to the sea-coast, as Mr. Benjamin escaped, as General Breckinridge escaped, and as others did. It was the apprehension he felt for the safety of his wife and children which brought about his capture. And, looking back now, it must be thought by everybody to have been best that he did not then escape from the country.

To have been a prisoner in the hands of the Government of the United States, and not to have been brought to trial upon any of the charges against him, is sufficient refutation of them all. It indicates that the people in Washington knew the accusations could not be sustained. * * * * *

Burton N. Harrison.

FRIENDSHIP.

I WERE not worth you, could I long for you:
But should you come, you would find me ready.
The lamp is lighted, the flame is steady—
Over the strait I toss this song for you.

Helen Gray Cone.

TERRA INCOGNITA.

AH me! that it has nearly passed away,
The grateful mystery, the vague delight,
Of those dim ancient days when yet there might
Be undreamed things where somber Thule lay
In clamorous seas; or where, 'neath passing day,
Hung blessed isles sometimes almost in sight;
Or, later, where fair Avalon was bright,
Or shone the golden cities of Cathay.

Old ocean holds no terrors any more;
We touch the limits of the farthest zone,
And would all Nature's fastnesses explore:
Oh, leave some spot that Fancy calls its own—
Some far and solitary wave-worn shore,
Where all were possible and all unknown!

George A. Hibbard.

MRS. KNOLLYS.

BY THE AUTHOR OF "GUERNDALE."

THE great Pasterzen glacier rises in Western Austria, and flows into Carinthia, and is fourteen or seventeen miles long, as you measure it from its birth in the snow-field, or from where it begins to move from the higher snows and its active course is marked by the first wrinkle. It flows in a straight, steady sweep, a grand avenue, guarded by giant mountains, steep and wide; a prototype, huge and undesigned, of the giants' stairway in the Venice palace. No known force can block its path; it would need a cataclysm to reverse its progress. What falls upon it moves with it, what lies beneath it moves with it—down to the polished surface of the earth's frame, laid bare; no blade of grass grows so slowly as it moves, no meteor of the air is so irresistible. Its substant ice curls freely, molds, and breaks itself like water,—breaks in waves, plastic like honey, crested lightly with a frozen spray; it winds tenderly about the rocky shore, and the granite, disintegrated into crumbs, flows on with it. All this so quietly that busy, officious little Man lived a score of thousand years before he noticed even that the glacier moved.

Now, however, men have learned to congregate upon its shores, and admire. Scientists stick staves in the ground (not too near, lest the earth should move with it), and appraise the majesty of its motion; ladies, politely mystified, give little screams of pleased surprise; young men, secretly exultant, pace the yard or two between the sticks, a distance that takes the frozen stream a year to compass, and look out upon it half contemptu-

ously. Then they cross it—carefully, they have enough respect left for that—with their cunningly nailed shoes and a rope; an hour or two they dally with it, till at last, being hungry and cold, they walk to the inn for supper. At supper they tell stories of their prowess, pay money to the guides who have protected them, and fall asleep after tea with weariness. Meantime, the darkness falls outside; but the white presence of the glacier breaks the night, and strange shapes unseen of men dance in its ashen hollows. It is so old that the realms of death and life conflict: change is on the surface, but immortality broods in the deeper places. The moon rises and sinks; the glacier moves silently, like a time-piece marking the centuries, grooving the record of its being on the world itself,—a feature to be read and studied by far-off generations of some other world. The glacier has a light of its own, and gleams to stars above, and the Great Glockner mountain flings his shadow of the planets in its face.

Mrs. Knollys was a young English bride, sunny-haired, hopeful-eyed, with lips that parted to make you love them,—parted before they smiled, and all the soft regions of her face broke into attendant dimples. And then, lest you should think it meant for you, she looked quickly up to "Charles," as she would then call him even to strangers, and Charles looked down to her. Charles was a short foot taller, with much the same hair and eyes, thick flossy whiskers, broad shoulders, and a bass voice. This was in the days before political economy cut Hymen's wings.

Charles, like Mary, had little money but great hopes; and he was clerk in a government office, with a friendly impression of everybody and much trust in himself. And old Harry Colquhoun, his chief, had given them six weeks to go to Switzerland and be happy in, all in celebration of Charles Knollys's majority and marriage to his young wife. So they had both forgotten heaven for the nonce, having a passable substitute; but the powers divine overlooked them pleasantly and forgave it. And even the phlegmatic driver of their *Einspänner* looked back from the corner of his eye at the *schöne Engländerin*, and compared her mentally with the far-famed beauty of the Königssee. So they rattled on in their curious conveyance, with the pole in the middle and the one horse out on one side, and still found more beauty in each other's eyes than in the world about them. Although Charles was only one and twenty, Mary Knollys was barely eighteen, and to her he seemed godlike in his age, as in all other things. Her life had been as simple as it had been short. She remembered being a little girl, and then the next thing that occurred was Charles Knollys, and positively the next thing she remembered of importance was being Mrs. Charles Knollys; so that old Mrs. Knollys, her guardian aunt and his, had first called her a love of a baby, and then but a baby in love. All this, of course, was five and forty years ago, for you know how old she was when she went again to Switzerland last summer—three and sixty.

They first saw the great mountains from the summit of the Schaffberg. This is a little height, three cornered, between three lakes; a natural Belvedere for Central Europe. Mr. and Mrs. Knollys were seated on a couch of Alpine roses behind a rhododendron bush watching the sunset; but as Charles was desirous of kissing Mrs. Knollys, and the rhododendron bush was not thick enough, they were waiting for the sun to go down. He was very slow in doing this, and by way of consolation Knollys was keeping his wife's hand hidden in the folds of her dress. Undoubtedly a modern lady would have been talking of the scenery, giving word-color pictures of the view; but I am afraid Mrs. Knollys had been looking at her husband, and talking with him of the cottage they had bought in a Surrey village, not far from Box Hill, and thinking how the little carvings and embroideries would look there which they had bought abroad. And, indeed, Mrs. Charles secretly thought Box Hill an eminence far preferable to the Venediger, and Charles's face an infinitely more interesting sight than any lake, however expressive.

But the sun, looking askance at them through the lower mist, was not jealous; all the same he spread his glory lavishly for them, and the bright little mirror of a lake twinkled cannily upward from below. Finally, it grew dark; then there was less talking. It was full night when they went in, she leaning on his arm and looking up; and the moonbeam on the snowy shoulder of the Glockner, twenty leagues away, came over, straightway, from the mountain to her face. Three days later, Charles Knollys, crossing with her the lower portion of the Pasterzen glacier, slipped into a crevasse, and vanished utterly from the earth.

II.

ALL this you know. And I was also told more of the young girl, bride and widow at eighteen; how she sought to throw herself into the clear blue gulf; how she refused to leave Heiligenblut; how she would sit, tearless, by the rim of the crevasse, day after day, and gaze into its profundity. A guide or man was always with her at these times, for it was still feared she would follow her young husband to the depths of that still sea. Her aunt went over from England to her; the summer waxed; autumn storms set in; but no power could win her from the place whence Charles had gone.

If there was a time worse for her than that first moment, it was when they told her that his body never could be found. They did not dare to tell her this for many days, but busied themselves with idle cranes and ladders, and made futile pretenses with ropes. Some of the big, simple-hearted guides even descended into the chasm, absenting themselves for an hour or so, to give her an idea that something was being done. Poor Mrs. Knollys would have followed them had she been allowed, to wander through the purple galleries, calling Charles. It was well she could not; for all Kaspar could do was to lower himself a hundred yards or so, chisel out a niche, and stand in it, smoking his honest pipe to pass the time, and trying to fancy he could hear the murmur of the waters down below. Meantime Mrs. Knollys strained her eyes, peering downward from above, leaning on the rope about her waist, looking over the clear brink of the bergschrund.

It was the Herr Doctor Zimmermann who first told her the truth. Not that the good Doctor meant to do so. The Herr Doctor had had his attention turned to glaciers by some rounded stones in his garden by the Traunsee, and more particularly by the Herr Privatdocent Splüthner. Splüthner, like

Uncle Toby, had his hobby-horse, his pet conjuring words, his gods *ex machinâ*, which he brought upon the field in scientific emergencies; and these gods, as with Thales, were Fire and Water. Craters and flood were his accustomed scape-goats, upon whose heads were charged all things unaccountable; and the Herr Doctor, who had only one element left to choose from, and that a passive one, but knew, on general principles, that Splüthner must be wrong, got as far off as he could and took Ice. And Splüthner having pooh-poohed this, Zimmermann rode his hypothesis with redoubled zeal. He became convinced that ice was the embodiment of orthodoxy. Fixing his professional spectacles on his substantial nose, he went into Carinthia and ascended the great Venice mountains, much as he would have performed any other scientific experiment. Then he encamped on the shores of the Pasterzen glacier, and proceeded to make a study of it.

So it happened that the Doctor, taking a morning stroll over the subject of his experiment, in search of small things which might verify his theory, met Mrs. Knollys sitting in her accustomed place. The Doctor had been much puzzled, that morning, on finding in a rock at the foot of the glacier the impression, or sign-manual as it were, of a certain fish, whose acquaintance the Doctor had previously made only in tropical seas. This fact seeming, superficially, to chime in with Splüthnerian mistakes in a most heterodox way, the Doctor's mind had for a moment been diverted from the ice; and he was wondering what the fish had been going to do in that particular gallery, and secretly doubting whether it had known its own mind, and gone thither with the full knowledge and permission of its maternal relative. Indeed, the good Doctor would probably have ascribed its presence to the malicious and personal causation of the devil, but that the one point on which he and Splüthner were agreed was the ignoring of unscientific hypotheses. The Doctor's objections to the devil were none the less strenuous for being purely scientific.

Thus ruminating, the Doctor came to the crevasse where Mrs. Knollys was sitting, and to which a little path had now been worn from the inn. There was nothing of scientific interest about the fair young English girl, and the Doctor did not notice her; but he took from his waistcoat-pocket a leaden bullet, molded by himself, and marked "Johannes Carpentarius, Juvavianus, A. U. C. 2590," and dropped it, with much satisfaction, into the crevasse. Mrs. Knollys gave a little cry; the bullet was heard for some seconds tinkling against the sides of the chasm; the

tinkles grew quickly fainter, but they waited in vain for the noise of the final fall. "May the Splüthner live that he may learn by it," muttered the Doctor; "I can never recover it."

Then he remembered that the experiment had been attended with a sound unaccounted for by the conformity of the bullet to the laws of gravitation; and looking up he saw Mrs. Knollys in front of him, no longer crying, but very pale. Zimmermann started, and in his confusion dropped his best brass registering thermometer, which also rattled down the abyss.

"You say," whispered Mrs. Knollys, "that it can never be recovered!"

"Madam," spoke the Doctor, doffing his hat, "how would you recofer from a blace when the smallest approximation which I haf yet been able to make puts the depth from the surface to the bed of the gletscher at vrom sixteen hundred to sixteen hundred and sixty *mètres* in distance?" Doctor Zimmermann spoke very good English; and he pushed his hat upon the back of his head, and assumed his professional attitude.

"But they all were trying ——" Mrs. Knollys spoke faintly. "They said that they hoped he could be recovered." The stranger was the oldest gentleman she had seen, and Mrs. Knollys felt almost like confiding in him. "Oh, I must have the—the body." She closed in a sob; but the Herr Doctor caught at the last word, and this suggested to him only the language of scientific experiment.

"Recofer it? If, madam," Zimmermann went on with all the satisfaction attendant on the enunciation of a scientific truth, "we take a body and drop it in the schrund of this gletscher; and the ice-stream moves so slower at its base than on the upper part, and the ice will cover it; efen if we could reach the base, which is a mile in depth. Then, see you, it is all caused by the motion of the ice ——"

But at this Mrs. Knollys had given a faint cry, and her guide rushed up angrily to the old professor, who stared helplessly forward. "God will help me, sir," said she to the Doctor, and she gave the guide her arm and walked wearily away.

The professor still stared, in amazement at her enthusiasm for scientific experiment and the passion with which she greeted his discoveries. Here was a person who utterly refused to be referred to the agency of Ice, or even, like Splüthner, of Fire and Water; and went out of the range of allowable hypotheses to call upon a Noumenon. Now both Splüthner and Zimmermann had studied all natural agencies and made allowance for them, but for the Divine they had always hitherto proved an alibi. The Doctor could make nothing of it.

At the inn that evening he saw Mrs. Knollys with swollen eyes; and remembering the scene of the afternoon, he made inquiries about her of the innkeeper. The latter had heard the guide's account of the meeting; and as soon as Zimmermann had made plain what he had told her of the falling body, "Triple blockhead!" said he. "*Es war ihr Mann.*" The Herr Professor staggered back into his seat; and the kindly innkeeper ran upstairs to see what had happened to his poor young guest.

Mrs. Knollys had recovered from the first shock by this time, but the truth could no longer be withheld. The innkeeper could but nod his head sadly, when she told him that to recover her Charles was hopeless. All the guides said the same thing. The poor girl's husband had vanished from the world as utterly as if his body had been burned to ashes and scattered in the pathway of the winds. Charles Knollys was gone, utterly gone; no more to be met with by his girl-wife, save as spirit to spirit, soul to soul, in ultramundane place. The fair-haired young Englishman lived but in her memory, as his soul, if still existent, lived in places indeterminate, unknowable to Doctor Zimmermann and his compeers. Slowly Mrs. Knollys acquired the belief that she was never to see her Charles again. Then, at last, she resolved to go—to go home. Her strength now gave way; and when her aunt left, she had with her but the ghost of Mrs. Knollys—a broken figure, drooping in the carriage, veiled in black. The innkeeper and all the guides stood bare-headed, silent, about the door, as the carriage drove off, bearing the bereaved widow back to England.

III.

WHEN the Herr Doctor had heard the innkeeper's answer, he sat for some time with his hands planted on his knees, looking through his spectacles at the opposite wall. Then he lifted one hand and struck his brow impatiently. It was his way, when a chemical reaction had come out wrong.

"Triple blockhead!" said he; "triple blockhead, thou art so bad as Splüthner." No self-condemnation could have been worse to him than this. Thinking again of Mrs. Knollys, he gave one deep, gruff sob. Then he took his hat, and going out, wandered by the shore of the glacier in the night, repeating to himself the Englishwoman's words: "*They said that they hoped he could be recovered.*" Zimmermann came to the tent where he kept his instruments, and stood there, looking at the sea of ice. He went to his

measuring pegs, two rods of iron: one sunk deep and frozen in the glacier, the other drilled into a rock on the shore. "Triple blockhead!" said he again, "thou art worse than Splüthner. The Splüthner said the glacier did not move; thou, thou knowest that it does." He sighted from his rods to the mountain opposite. There was a slight and all but imperceptible change of direction from the day before.

He could not bear to see the English girl again, and all the next day was absent from the inn. For a month he stopped at Heiligenblut, and busied himself with his instruments. The guides of the place greeted him coldly every day, as they started on their glacier excursions or their chamois hunting. But none the less did Zimmermann return the following summer, and work upon his great essay in refutation of the Splüthner.

Mrs. Knollys went back to the little cottage in Surrey, and lived there. The chests and cases she brought back lay unopened in the store-room; the little rooms of the cottage that was to be their home remained bare and unadorned, as Charles had seen them last. She could not bring herself to alter them now. What she had looked forward to do with him she had no strength to do alone. She rarely went out. There was no place where she could go to think of him. He was gone; gone from England, gone from the very surface of the earth. If he had only been buried in some quiet English church-yard, she thought,—some green place lying open to the sun, where she could go and scatter flowers on his grave, where she could sit and look forward amid her tears to the time when she should lie side by side with him,—they would then be separated for her short life alone. Now it seemed to her that they were far apart forever.

But late the next summer she had a letter from the place. It was from Dr. Zimmermann. There is no need here to trace the quaint German phrases, the formalism, the cold terms of science in which he made his meaning plain. It spoke of erosion; of the movement of the summer; of the action of the underwaters on the ice. And it told her, with tender sympathy oddly blended with the pride of scientific success, that he had given a year's most careful study to the place; with all his instruments of measurement he had tested the relentless glacier's flow; and it closed by assuring her that her husband might yet be found—in five and forty years. In five and forty years—the poor professor staked his scientific reputation on the fact—in five and forty years she might return, and the glacier would give up its dead.

This letter made Mrs. Knollys happier. It made her willing to live; it made her almost long to live until old age—that her Charles's body might be given back. She took heart to beautify her little home. The trifling articles she had bought with Charles were now brought out,—the little curiosities and pictures he had given her on their wedding-journey. She would ask how such and such a thing looked, turning her pretty head to some kind visitor, as she ranged them on the walls; now and then she would have to lay the picture down, and cry a little, silently, as she remembered where Charles had told her it would look best. Still, she sought to furnish the rooms as they had planned them in their mind; she made her surroundings, as nearly as she could, as they had pictured them together. One room she never went into; it was the room Charles had meant to have for the nursery. She had no child.

But she changed, as we all change, with the passing of the years. I first remember her as a woman middle-aged, sweet-faced, hardly like a widow, nor yet like an old maid. She was rather like a young girl in love, with her lover absent on a long journey. She lived more with the memory of her husband, she clung to him more, than if she had had a child. She never married; you would have guessed that; but, after the Professor's letter, she never quite seemed to realize that her husband was dead. Was he not coming back to her?

Never in all my knowledge of dear English women have I known a woman so much loved. In how many houses was she always the most welcome guest! How often we boys would go to her for sympathy! I know she was the confidante of all our love affairs. I cannot speak for girls; but I fancy she was much the same with them. Many of us owed our life's happiness to her. She would chide us gently in our pettiness and folly, and teach us, by her very presence and example, what thing it was that alone could keep life sweet. How well we all remember the little Surrey cottage, the little home fireside where the husband had never been! I think she grew to imagine his presence, even the presence of children: boys, curly-headed, like Charles, and sweet, blue-eyed daughters; and the fact that it was all imagining seemed but to make the place more holy. Charles still lived to her as she had believed him in the month that they were married; he lived through life with her as her young love had fancied he would be. She never thought of evil that might have occurred; of failing affection, of cares. Her happiness was in her mind alone; so all the earthly part was absent.

There were but two events in her life—

that which was past and that which was to come. She had lived through his loss; now she lived on for his recovery. But, as I have said, she changed, as all things mortal change; all but the earth and the ice-stream and the stars above it. She read much, and her mind grew deep and broad, none the less gentle with it all; she was wiser in the world; she knew the depths of human hope and sorrow. You remember her only as an old lady whom we loved. Only her heart did not change—I forgot that; her heart, and the memory of that last loving smile upon his face, as he bent down to look into her eyes, before he slipped and fell. She lived on, and waited for his body, as possibly his other self—who knows?—waited for hers. As she grew older she grew taller; her eyes were quieter, her hair a little straighter, darker than of yore; her face changed, only the expression remained the same. Mary Knollys!

Human lives rarely look more than a year, or five, ahead; Mary Knollys looked five and forty. Many of us wait, and grow weary in waiting, for those few years alone, and for some living friend. Mary Knollys waited five and forty years—for the dead. Still, after that first year, she never wore all black; only silvery grays, and white with a black ribbon or two. I have said that she almost seemed to think her husband living. She would fancy his doing this and that with her; how he would joy in this good fortune, or share her sorrows—which were few, mercifully. His memory seemed to be a living thing to her, to go through life with her, hand in hand; it changed as she grew old; it altered itself to suit her changing thought; until the very memory of her memory seemed to make it sure that he had really been alive with her, really shared her happiness or sorrow, in the far-off days of her earliest widowhood. It hardly seemed that he had been gone already then—she remembered him so well. She could not think that he had never been with her in their little cottage. And now, at sixty, I know she thought of him as an old person too; sitting by their fireside, late in life, mature, deep-souled, wise with the wisdom of years, going back with her, fondly, to recall the old, old happiness of their bridal journey, when they set off for the happy honey-moon abroad, and the long life now past stretched brightly out before them both. She never spoke of this, and you children never knew it; but it was always in her mind.

There was a plain stone in the little Surrey church-yard, now gray and moss-grown with the rains of forty years, on which you remember reading: "Charles Knollys—lost in Carinthia"—This was all she would have

inscribed; he was but lost; no one *knew* that he was dead. Was he not yet to be found? There was no grassy mound beside it; the earth was smooth. Not even the date was there. But Mrs. Knollys never went to read it. She waited until he should come; until that last journey, repeating the travels of their wedding-days, when she should go to Germany to bring him home.

So the woman's life went on in England, and the glacier in the Alps moved on slowly; and the woman waited for it to be gone.

IV.

IN the summer of 1882, the little Carinthian village of Heiligenblut was haunted by two persons. One was a young German scientist, with long hair and spectacles; the other was a tall English lady, slightly bent, with a face wherein the finger of time had deeply written tender things. Her hair was white as silver, and she wore a long, black veil. Their habits were strangely similar. Every morning, when the eastern light shone deepest into the ice-cavern at the base of the great Pasterzen glacier, these two would walk thither; then both would sit for an hour or two and peer into its depths. Neither knew why the other was there. The woman would go back for an hour in the late afternoon; the man, never. He knew that the morning light was necessary for his search.

The man was the famous young Zimmermann, son of his father, the old Doctor, long since dead. But the Herr Doctor had written a famous tract, when late in life, refuting all Splüthners, past, present, and to come; and had charged his son, in his dying moments, as a most sacred trust, that he should repair to the base of the Pasterzen glacier in the year 1882, where he would find a leaden bullet, graven with his father's name, and the date A. U. C. 2590. All this would be vindication of his father's science. Splüthner, too, was a very old man, and Zimmermann the younger (for even he was no longer young) was fearful lest Splüthner should not live to witness his own refutation. The woman and the man never spoke to each other.

Alas, no one could have known Mrs. Knollys for the fair English girl who had been there in the young days of the century; not even the innkeeper, had he been there. But he, too, was long since dead. Mrs. Knollys was now bent and white-haired; she had forgotten, herself, how she had looked in those old days. Her life had been lived. She was now like a woman of another world; it seemed another world in

which her fair hair had twined about her husband's fingers, and she and Charles had stood upon the evening mountain, and looked in one another's eyes. That was the world of her wedding-days, but it seemed more like a world she had left when born on earth. And now he was coming back to her in this. Meantime the great Pasterzen glacier had moved on, marking only the centuries; the men upon its borders had seen no change; the same great waves lifted their snowy heads upon its surface; the same crevasse still was where he had fallen. At night, the moonbeams, falling, still shivered off its glassy face; its pale presence filled the night, and immortality lay brooding in its hollows.

Friends were with Mrs. Knollys, but she left them at the inn. One old guide remembered her, and asked to bear her company. He went with her in the morning, and sat a few yards from her, waiting. In the afternoon she went alone. He would not have credited you, had you told him that the glacier moved. He thought it but an Englishwoman's fancy, but he waited with her. Himself had never forgotten that old day. And Mrs. Knollys sat there silently, searching the clear depths of the ice, that she might find her husband.

One night she saw a ghost. The latest beam of the sun, falling on a mountain opposite, had shone back into the ice-cavern; and seemingly deep within, in the grave azure light, she fancied she saw a face turned toward her. She even thought she saw Charles's yellow hair, and the self-same smile his lips had worn when he bent down to her before he fell. It could be but a fancy. She went home, and was silent with her friends about what had happened. In the moonlight she went back, and again the next morning before dawn. She told no one of her going; but the old guide met her at the door, and walked silently behind her. She had slept, the glacier ever present in her dreams.

The sun had not yet risen when she came; and she sat a long time in the cavern, listening to the murmur of the river, flowing under the glacier at her feet. Slowly the dawn began, and again she seemed to see the shimmer of a face—such a face as one sees in the coals of a dying fire. Then the full sun came over the eastern mountain, and the guide heard a woman's cry. There before her was Charles Knollys! The face seemed hardly pale; and there was the same faint smile—a smile like her memory of it, five and forty years gone by. Safe in the clear ice, still, unharmed, there lay—O God! not her Charles; not the Charles of her own thought, who had lived through life with her and shared her sixty years; not the old man she had borne

thither in her mind—but a boy, a boy of one and twenty lying asleep, a ghost from another world coming to confront her from the distant past, immortal in the immortality of the glacier. There was his quaint coat, of the fashion of half a century before; his blue eyes open; his young, clear brow; all the form of the past she had forgotten; and she his bride stood there to welcome him, with her wrinkles, her bent figure, and thin white hairs. She was living, he was dead; and she was two and forty years older than he.

Then at last the long-kept tears came to her, and she bent her white head in the snow. The old man came up with his pick, silently, and began working in the ice. The woman lay weeping, and the boy, with his still, faint smile, lay looking at them, through the clear ice-veil, from his open eyes.

I BELIEVE that the Professor found his bullet; I know not. I believe that the scientific

world rang with his name and the thesis that he published on the glacier's motion, and the changeless temperature his father's lost thermometer had shown. All this you may read. I know no more.

But I know that in the English churchyard there are now two graves, and a single stone, to Charles Knollys and Mary, his wife; and the boy of one and twenty sleeps there with his bride of sixty-three; his young frame with her old one, his yellow hair beside her white. And I do not know that there is not some place, not here, where they are still together, and he is twenty-one and she is still eighteen. I do not know this; but I know that all the pamphlets of the German doctor cannot tell me it is false.

Meantime the great Pasterzen glacier moves on, and the rocks with it; and the mountain flings his shadow of the planets in its face.

J. S., of Dale.

THE TWO DARKS.

AT dusk, when Slumber's gentle wand

Beckons to quiet fields my boy,
And day, whose welcome was so fond,
Is slighted like a rivalled toy,—

When fain to follow, fain to stay,
Toward night's dim border-line he peers,
We say he fears the fading day:
Is it the inner dark he fears?

His deep eyes, made for wonder, keep
Their gaze upon some land unknown,
The while the crowding questions leap
That show his ignorance my own.

For he would go he knows not where,
And I—I hardly know the more;
Yet what is dark and what is fair
He would to-night with me explore.

Upon the shoals of my poor creed
His plummet falls, but cannot rest;
To sound the soundless is his need,
To find the primal soul, his quest.

In vain these bird-like flutterings,
As when through cages sighs the wind:
My clearest answer only brings
New depths of mystery to his mind,—

Vague thoughts, by crude surmise beset,
And groping doubts that loom and pass
Like April clouds that, shifting, fret
With tides of shade the sun-wooded grass.

O lonely soul within the crowd
Of souls! O language-seeking cry!
How black were noon without a cloud
To vision only of the eye!

Sleep, child! while healing Nature breaks
Her ointment on the wounds of Thought;
Joy, that anew with morning wakes,
Shall bring you sight it ne'er has brought.

Lord, if there be, as wise men spake,
No Death, but only Fear of Death,
And when Thy temple seems to shake
'Tis but the shaking of our breath,—

Whether by day or night we see
Clouds where Thy winds have driven none,
Let unto us as unto Thee
The darkness and the light be one.

Robert Underwood Johnson.

TOPICS OF THE TIME.

Open Constituencies.

It has been the rule in this country that a legislative officer shall be a resident of the district from which he is chosen, and to this rule there have been few exceptions. Many of the State constitutions, indeed, require it, though some do not; while the Constitution of the United States only requires that a member of the House of Representatives shall be a resident of the State from which he is chosen. But, whether required or not, the practice has been everywhere observed in State and nation; and there has been, so far as we know, no important movement toward abandoning it in any part of the country. To be sure, ambitious city men are sometimes elected from their country homes; but they are apt, naturally enough, to have to combat a prejudice in procuring a representative office by such a makeshift.

In England, on the contrary, no such rule is known. Members of the House of Commons are, indeed, chosen by districts, each having one or more representatives; but the member chosen need not be a resident of the district itself, but may be taken from any part of the United Kingdom. Hence, at every parliamentary election, many boroughs and counties select as their representatives men that have never been residents there, and whose capacity for legislation is their sole recommendation to the favor of their constituents.

There is a good deal to be said in favor of the American system, for in many respects it has worked well. It has brought out men who have proved of great use in public affairs, and who might not have come to the front under a different system. On the other hand, the objections to the American method are of no little moment. In the first place, the rule of always choosing a resident often results in putting into office men of inferior ability, to the detriment of the public welfare. It frequently happens that there is no resident of conspicuous ability whose views are sufficiently accordant with those of the voters to secure his election; and when this is the case, an inferior man is necessarily chosen instead. There is in all countries a tendency on the part of the ablest men to concentrate in or near the large towns, because it is here, as a rule, that they find the best opportunities for the exercise of their talents. Commerce necessarily centers in such places, and the wealth that thus gathers there brings with it a large proportion of the ablest lawyers, teachers, and other professional men, as well as men of business. In other words, the rural districts are largely drained of their ablest men by the superior attractions of the cities; so that, in some districts, the number of men really fitted for high political office is small. The consequence is, that men of inferior character are often unavoidably chosen as representatives; men who would hardly be selected if the English custom prevailed of seeking a representative wherever a suitable person might be found.

Again, the American custom has the effect of keeping out of office many men who would be of great service to the country if they could get elected, and who might get elected if they could have their choice of a constituency, but who stand no chance at all in the district in which they happen to live. Some districts, especially in the great cities, are peopled by ignorant masses, whose choice of a representative is but slightly governed by considerations of fitness, and the ablest man in such a district would have small chance of getting elected. Hence, there result from our method of election two closely related evils, the actual choice of inferior men who happen to be residents, and the consignment to private life of many abler men who reside among an ignorant or unsympathetic constituency.

But perhaps the worst effect of the prevailing custom is the spirit of provincialism infused by it into our national politics. Every member of Congress is obliged, under penalty of losing his seat, to look out for the local interests of his district, however opposed they may be to the general good; and thus local interests are liable to become paramount in his mind over the national welfare and the principles of justice. Conspicuous instances of this sort have been repeatedly seen in the case of tariff legislation, and in the river and harbor jobs, whose very name has become odious. And if a representative is unfaithful to these local interests, however sinister they may be, he may at any time lose his office, in spite of important services rendered to the nation at large. But if he could present himself for election in any part of his own State, it would often happen that, when he was rejected by one constituency, he would be chosen by another, and thus a man of eminent fitness would seldom lose his office on account of local jealousy or provincial dislike.

It is somewhat remarkable that the custom of always choosing a resident has been so long retained, notwithstanding its inconveniences. But the narrow, provincial spirit which leads to the magnifying of local interests has too widely prevailed among us; and so long as this continues to be the case, the irrational custom is likely to be maintained. We believe, however, that this spirit is much less prevalent than it was, and that the American people are now more truly one in feeling than ever before; and we think that, in the more enlightened constituencies, no great effort would be required to abolish the present cast-iron custom altogether. That its abolition would result, in many instances, in giving us abler legislators there can be little doubt, while at the same time it would promote the independence of the legislators themselves, by freeing them from the thralldom of mere local interests. In our opinion, a popular leader would render his country no inconsiderable service by breaking through the absurd custom of a hundred years, and presenting himself for election in a district where he did not reside; and we are confident that if the custom was once broken, the advan-

tages of the new system would speedily be recognized. One of the principal uses of a Congressman has hitherto been the obtaining of small federal offices for his "constituents." Under the dawning régime of reform this degrading misuse of representatives will be done away with, and "open constituencies" will be more possible and more probable in America.

Is the Old Faith Dying ?

THE question as to the present status of Christianity in Christian lands is now under discussion; and the statements made by debaters on either side as to the facts of the case are curiously variant. On the one side, it is asserted in the most unqualified manner that belief in the facts and doctrines of the Christian religion is nearly obsolete; that the faith of our fathers has no longer any practical hold on the community; that the intelligent and influential citizens have nearly all parted company with the churches; and that the day is not distant when Christianity will be numbered among the effete superstitions. The truth of this statement seems, to those who make it, so obvious that they take no pains to prove it; it is assumed, as a postulate, in all their reasoning; it would be superfluous, they think, to show *that* these things are so; all that is required is to show *why* they are so.

On the other side, the disputants begin by denying the existence of any such facts as these antagonists assume, and by demanding the production of them. Not only so, they have recourse to the census of the United States and to the various year books and published records of the various Christian sects, to show that Christianity is gaining instead of losing ground; that the number of communicants in the various churches is increasing faster than the population; and that the sittings in the churches are now three times as numerous, in proportion to the number of the people, as they were in the days of the Revolution; so that if one-third of the room in them is now occupied, the church attendance must be at least as large, relatively, as it was one hundred years ago. Every habitual church-goer knows that more than one-third of the room is occupied at the ordinary Sunday services; while the extent to which the church is used for purposes of worship and instruction is greatly increased by the multiplication of services, both on week-days and on Sundays, and especially by the rise and progress of Sunday-schools. In most Protestant churches, the congregation which meets at the Sunday-school service is nearly as large as that which gathers for the morning preaching-service, and the two congregations are composed, to a large extent, of different persons—not one-half of the members of the Sunday-school being present at the preaching-service. This state of things may not be desirable; but the fact must be noted in making up our estimate of the number of persons in the community brought under the influence of the churches.

To this class of facts constant appeal is made by those who dispute the assumption that Christianity is a waning faith. The volume of the Rev. Daniel Dorchester, in which figures compiled from the census and from the official records of the different sects are clearly presented, makes a striking presentation of the growth of the Christian faith. By tables which have

been for some time before the public, and which have not, so far as we know, been controverted, it is made to appear that the number of communicants in the evangelical Protestant churches has increased, since the beginning of this century, three times as fast as the population. Some of these figures, with others confirming them, have lately been adduced by Dr. Ward in a discussion of this subject in the "North American Review." The showing made in this compact and vigorous article should have the effect to push the debate back to the settlement of the question of fact. Before any further arguments are constructed to show why Christianity is obsolescent, it would be necessary to bring forth some reasons for believing that such is the case. To prove mathematically that Christianity is true, or untrue, may be somewhat difficult; but there can be no serious difficulty in making it appear whether or not it is losing its hold upon the thought and life of the people. And it would be a much more scientific method of procedure if those who maintain the decadence of the popular faith would take a little trouble to acquaint themselves with the facts that bear upon this particular point.

It is often said specifically that men of affairs, as a class, have lost their interest in the churches, and an attempt was lately made to test the truth of this assertion. In an Eastern city, with a population of a little less than forty thousand, the president and cashier of one of the national banks were requested to furnish a list of the fifty strongest business firms in the city, with the name of the head of each firm. The gentlemen furnishing the list had no knowledge whatever of the use that was to be made of it. In classifying fifty-four names thus given, it was found that there were seven whose relation to the churches was unknown to the gentleman who had obtained the list; six who were not identified with any of them; and forty-one who were all regular attendants upon the churches and generous supporters of their work—the great majority of them communicants. In a Western city of a little more than sixty thousand inhabitants, a similar list of fifty-two names was obtained in the same way; and the analysis showed three whose ecclesiastical standing was unknown; one Jew; six not connected with churches; and forty-two regular church-goers, of whom thirty-one were communicants. These lists were both made up by well-informed and sagacious business men; the cities represented by them are not conspicuously religious communities; and the composition of them gives small color to the notion that the business men of our cities are estranged from the churches. It is astonishing that such a notion should ever have gained currency, in the face of the palpable fact that so much money is contributed every year for the support of the churches and the prosecution of their charitable and missionary enterprises.

It is possible that a fair showing with respect to the business men of other cities might be less favorable than that here presented; but it is almost certain that a complete induction of facts would correct the impression that the churches have lost their hold upon this class of men.

It is true that a comparatively small number of very respectable persons have withdrawn from all connection with the churches, and have shut their minds, in a temper the reverse of scientific, against all ideas and

influences which proceed from this source. But for this, they would be made aware of two facts of which they now seem oblivious: first, that many of the churches are quietly and cautiously adjusting their current teaching to the growing light of the age, so that there is much less repugnance between their doctrines and modern science than is often imagined; second, that they are learning to enter, by a truer sympathy and a more intelligent ministry, into the real life of men, and thus to maintain and strengthen their hold upon the masses of the people. Unquestionably, the "non-church-goer" who started this discussion, and all that class of outside critics to which he belongs, have much to learn respecting the real condition and prospects of the church of Christ in America. If their information were better, their

estimates would be more hopeful and their judgments more sympathetic. And they cannot too soon disabuse their minds of the belief that the Christian religion is in its decadence. Such facts as those to which we have referred show its outward growth; but the real signs of its progress cannot be expressed in figures. It is the gospel of the heaven rather than the gospel of the mustard-seed whose triumphs are most signal and most sure. The one grand fact on which defenders of Christianity should rest their case is presented in these words of Canon Fremantle: "The Spirit of Christ is supreme over the whole range of the secular life,—education, trade, literature, art, science, and politics,—and is seen to be practically vindicating this supremacy." If this can be seen, it is worth seeing. No fact could be more significant or more impressive.

OPEN LETTERS.

Matthew Arnold in America.

ONE of the signs that this country has reached its majority—reached it through the ennobling sacrifices of the civil war, which changed our political boyhood into manhood—is the fact that Americans are no longer sensitive to foreign criticism. The nation is too big, prosperous, good-natured to care what Europe thinks. The continent no longer trembles when a distinguished foreign critic sets his foot on it. He is welcome to fill his note-book and go his way; and by and by, when he publishes his "Notes of a Short Journey in the United States," or "Observations on the Social and Political System of American Democracy," we will read his little book, perhaps with amusement, perhaps with profit to ourselves, but certainly without that eager curiosity to know how we look to our visitors that used to possess us in *ante-bellum* days.

Yet the arrival among us of so acute a social observer as Mr. Matthew Arnold deserves a passing notice. I am not going to try to prophesy what Mr. Arnold's experiences here may be, nor to anticipate his judgment of society in the United States. What he thinks of us in a general way we already know from the preface to "Culture and Anarchy," and from his article last year in "The Nineteenth Century," "A Word about America." The opinion there given was evidently quite firmly held, although modestly expressed, and there is little reason to expect that a brief stay in this country will modify it much. But as our critic is always insisting upon the need of a greater flexibility of mind and accessibility to ideas in people of British stock, we may predict that he will in this instance practice that favorite virtue, and hold his opinion subject to some revision. Indeed, he has acknowledged that it is difficult "to speak of a people merely from what one reads."

There are one or two things, however, which, it may with confidence be predicted, he will find here, and will find perhaps worth studying. He will find, for instance, that democracy which he foresees to be inevitable, and that equality which he thinks desirable

in modern society. But whether the particular type of democracy and equality which we have developed will seem to him admirable is doubtful. "In America perhaps," he once wrote, "we see the disadvantages of having social equality before there has been any high standard of social life and manners formed." Again, Mr. Arnold has written much and ably on the question of secondary education, and has advocated the establishment in England of higher schools for the instruction of the middle class, which should enjoy state support and supervision like the French *lycées*. He will, therefore, naturally be interested in the public school systems of our cities, and in the state universities of some of our Western States. It is true that he has expressed in advance an unfavorable opinion of our secondary schools, and has intimated that, like the English classical and commercial academies, they have not "a serious programme—a programme really suited to the wants and capacities of those who are to be trained." I venture, however, to express the hope that he will have time to look closer into this matter, and to give us the results of his observations.

Finally, he will find the Philistine here in great rankness and luxuriance; and my chief object in writing this letter is to say why I think that we need not be overmuch disquieted by the presence of the Philistine among us, or by Mr. Arnold's discovery that he exists here in overwhelming numbers and in flagrant type. It is well known that our critic has divided English society into three classes, which he politely names Barbarians, Philistines, and Populace. In America, he tells us, there are no Barbarians and hardly any Populace. The great bulk of the nation consists of the Philistines; a livelier kind of Philistine, headmits, and more accessible to ideas, than his English brother, but left more to himself, and without the social standard furnished by an aristocracy. I believe it was Mr. Arnold who, in his essay on Heine, first imported the word Philistine into English, and he has succeeded in domesticating it by dint of repetition in his later essays. Yet even now it may be doubted whether the great British and American public has any clear notion of

the right meaning of the term. There was an amusing discussion in the English newspapers some time since as to whether Macaulay was or was not a Philistine. I do not remember that Mr. Arnold ever called him one. He has in many passages of his writings been very hard upon Macaulay for being a rhetorician, for lacking intellectual delicacy, and for being dogmatic, superficial, uncritical, and what not. But surely it would be a confusion of terms to apply to a man of Macaulay's inquisitive and speculative spirit a term which always implies in Mr. Arnold's use of it a distrust of ideas, an inflexibility of mind, an adherence to routine and machinery.

The truth is that Mr. Arnold's Philistine is identical with what we know in America as the practical man; the man who is impatient of "theories," and who brings everything to the test of utility; who does not care for "the things of the mind" except in so far as they minister to immediate practical ends. To Mr. Arnold the representative *par excellence* of Philistinism is the respectable English Liberal and Puritan Dissenter of the middle classes, whose life vibrates between "business and Bethels." It is the "hideousness and immense ennui" of the life lived by this person which afflicts the critic's imagination. The Philistine, he insists, must transform himself. He has "a defective type of religion, a narrow range of intellect and knowledge, a stunted sense of beauty, a low standard of manners." He must be civilized, must get sweetness and light. He must aim at culture, which is "the study and pursuit of perfection." And the chief agency, at present, for the diffusion of culture is criticism, "a disinterested endeavor to learn and propagate the best that is known and thought in the world." It is admitted, however, that the Philistine may and does possess all the solid virtues, industry, integrity, piety, etc.

Now, I think it is evident why we need not be overmuch disquieted by the reflection that the mass of Americans are Philistines. Mr. Arnold's vision of a transformed society in which the Philistine shall have been utterly abolished out of the land is, it is to be feared, an unattainable though a beautiful ideal. The rough work of the world has got to be done by men and women who have small leisure for the study and pursuit of perfection—even perhaps of moral perfection—and to whom a disinterested concern for the things of the mind will always be an impossibility. They have got to think of their business, and to find their happiness in it rather than in self-culture. And if their life outside of their business, if their religion, their amusements, etc., seem to the man of fine culture and wider horizons to be unsatisfactory, humdrum, and full of "immense ennui," he should not therefore call them hideous, though he may legitimately enough try to show them a better way. We cannot all of us employ our spare moments in reading Greek poetry.

I know that Mr. Arnold says, or seems to say, that there have been entire communities in possession of sweetness and light, but that appears doubtful. "By the Ilissus there was no Wragg, poor thing!" Perhaps not, but the Philistine was there; yes, we may feel sure that the Philistine was there, though the Ilissus is so far removed from us that the unfortunate man is not revealed to us as clearly as when he is our neighbor.

The best thing that we can do with our Philistine is to accept him and live on terms with him, while offering him every practicable means for self-improvement. Mr. Arnold complains that the English—and therefore, by implication, the American—middle class is vulgarized. This would be true if there went nothing to make vulgarity but the absence of high thinking and fine manners and tastes. But one may be without these and yet not be vulgar. Intellectual narrowness, social plainness, the absence of beauty, the hard conditions to which most men are more or less condemned, are far from constituting vulgarity. Mr. Arnold's impatience of the Philistine seems to spring from a certain unsympathetic attitude toward the homely—or, if he chooses, vulgar—aspects of human life which, though superficially ugly, are necessary, and therefore not unwholesome, nor indeed even altogether unlovely. Even in his more strictly literary criticism this defective sympathy is apparent. The quality which he praises most is *distinction* in style and thought, urbanity, dignity, intellectual delicacy, rather than what is most broadly and intensely human. He has no relish of the healthy coarseness of nature. In all his laudation of equality he remains at heart aristocratic. He does not feel with or for the lower classes as they are, but he wants to make gentlemen of them! If he wishes to understand the true spirit of American democracy, let him turn his attention for a moment to the remarkable literary phenomenon offered by the "poems" of Walt Whitman. Here, amid much rankness and formlessness, much slovenly writing and defective art, and some affectation, he will find the most vivid and powerful explosions of the true democratic spirit known in literature. By the true democratic spirit, I mean the spirit of exultant hope and confidence in the future of the people; the spirit of good fellowship, friendliness, brotherhood with the average man; and even a physical comfort in the contact of the healthy human animal, man or woman,—a liking for the warm, gregarious pressure of the crowd. This is the real equality: not merely the praiseworthy wish to elevate the middle and lower classes by culture up to a position where it is possible for a man of refinement to sympathize with them intellectually; but a willingness—nay, a strong thirst and impulse—to meet them on the basis of their common manhood; to interest one's self in their characters, feelings, life experiences. A man who may have an appreciation of Greek poetry, but who likes to put on a flannel shirt on occasion, go about among farmers, fishermen, commercial travelers, and see life from their point of view without being offended by their want of sweetness and light, is the ideal American democrat.

As to the welcome which our distinguished guest will receive in America, we do not doubt that it will be a hearty one—though heartiness is not, perhaps, a trait which Mr. Arnold specially prizes. It may be better to say, therefore, that his welcome will be appreciative. I do not allude to personal hospitalities, but to the respectful gratification at his presence in the country of the many who have long owed him an intellectual debt; or perhaps it might be truer to say the few who have owed him this debt. He has spoken of himself, now and then, as an unpopular writer; and possibly, in view of his rather low estimate of the

popular taste, the phrase is not altogether one of self-disparagement. His writings are certainly not as dear to the great heart of the people as are those of Dickens, Kingsley, and some other English authors who have visited their American constituency. Yet I know numbers of young men—and some, alas! no longer young—who have found in Matthew Arnold's poetry a more exact answer to their intellectual and emotional wants than in any poetry of Tennyson's or even of Emerson's. They have found, too, a classical purity and restraint of manner, "a certain Doric delicacy,"—such as Sir Henry Wotton was ravished with in the odes and songs of "Comus,"—which has imparted a finer gusto to their literary palates than anything else in contemporary poetry. They are apt to regret that a poet who has written such poetry as "The Scholar Gypsy" and "Thyrsis," as "Empedocles on Etna" and "The Sick King in Bokhara," should have—comparatively—wasted his time of late in scolding the British Philistine. And though they know that no poet can compel the service of his muse, yet they are fond of pointing to Mr. Arnold as an instance of the peril which attends a writer who allows himself to get more and more into an exclusively critical attitude, and to forget the habit of original creation. They know, of course, what their favorite poet's plea would be, what it already has been in his essay on "The Function of Criticism": that the times are unfit; that a period of criticism is needed to prepare another era of creative power. But, besides that, some of Mr. Arnold's admirers do not altogether believe the doctrine of that essay; they profess themselves eager to take prose if they cannot get poetry; such prose, *i. e.*, as that of his earlier and pleasanter essays—the essays "On Translating Homer," on Heine and the De Guérins, on "Pagan and Mediæval Religious Sentiment." Beautiful prose that was—simple, pliant, delicate, flowing so subtly and quietly into all the folds of the subject. But they are growing tired of hearing about the Philistine.

As regards the spread of Mr. Arnold's ideas about social classes, political tendencies, education, etc., or in other words, as regards the general influence of his writings in this country, I am afraid that his ideas in themselves are unpopular; and then that there is something fastidious, patronizing, *de haut en bas* in his way of remonstrating with the Philistine, which exasperates the latter and hardens him in his error. I once heard a public speaker fall with great fury upon a sentence of Mr. Arnold's in which he had declared that the Cornell University seemed "to rest on a provincial misconception of what culture truly is, and to be calculated to produce miners, or engineers, or architects, not sweetness and light." What, then, asked in effect this eloquent public speaker and influential statesman,—what, then, in Heaven's name is a university *for* if not to produce miners or engineers or other trained men to do their work in the world, and to do it thoroughly? And what is this vague, fugacious "sweetness and light" which this impractical doctrinaire offers us? etc., etc. One can imagine with what delicate irony Mr. Arnold would reply to this orating Philistine. How gently he would point out to him that our need is rather for more light than for immediate acting; and that this mania for acting, on the part of the Liberal party in England, has re-

sulted in the bill for enabling a man to marry his deceased wife's sister.

Not that Mr. Arnold was wrong in what he wrote about the true purpose of a university; but that, in his way of approaching the tired politician or business man who has been bearing the burden and heat of the fight, with his proffer of sweetness and light and his complaint of the hideousness of such names as Higginbottom, Stiggins, Bugg, Wragg, and other Anglo-Saxon outrages on euphony which have come betwixt the wind and his nobility,—in all this there is a slight suggestion, to the tired warrior of the gentleman whose chat annoyed Hotspur.

Not, I repeat, that he was wrong, for it is for the steady maintenance in his writings of a "disinterested" ideal of culture that the friends of liberal education should be most grateful to him. At a time when many philosophers are telling us that the development of human society, being the final step in the evolution of life, is to be, and ought to be, accompanied by the closer and ever closer specializing of functions in the individuals of that society—so that the miner, *e. g.*, shall tend more and more to be merely a miner, and the engineer merely an engineer, and every man of continually less importance as an individual and continually greater importance as a "differentiated" crank or organ in the social machine or body,—at such a time Mr. Arnold upholds the old idea that the highest product of social machinery is a *man*, and not a miner or engineer, and the highest object of educational systems is the culture of a man, or in other words, "the study and pursuit of perfection." It is very true that, under present conditions, for a long time to come such culture is attainable only by the few. But for that matter, wealth, ease, leisure, and many other desirable things are attainable only by the few. Perhaps the time may come, in the future of the race, when every one will have the time and means to do his duty to society without neglecting his highest duty to himself. Of such a time Matthew Arnold is one of the prophets.

Henry A. Beers.

"The Bread-winners."

A COMMENT.

I BELIEVE that all editors receive constantly letters about novels which they are publishing; and as it is at least a sign of interest, I have general usage to warrant me in committing my first sin of the sort, with "The Bread-winners" as my text. This story is well written, and I all the more regret the assumption in its second number that trades-unions are composed either of ignorant and lazy dupes, or of such wretches as Offitt. It is a bit of snobbishness imported from England, where even it has been an impossible position to be taken by good writers since "Put Yourself in His Place" was written. Strong as that was, and attacking only one of the abuses of trades-unionism, it failed in its purpose; and while violence seldom now characterizes an English strike, it is because the unions have become so strong that they are a recognized power, whose demands must be respected. When such men as Mill and Thornton and George advocate the banding of laborers together for mutual protection, novelists who trade more largely on sentiment and

sympathy with the oppressed should at least advance sufficiently to keep an even front with the economists. Taking the wage-fund theory at its extreme,—that labor is a commodity,—it is absurd to say that the buyer only should dictate the price, and that both parties to the transaction should not stand on an equal footing in the “haggling of the market,” either side using all the advantages that it can obtain, in any way short of actual violence. But, apart from discussion of the wages question on its merits, it is simply untruthful and worthy only of the more ignorant class of journalists to continue the assertion that trades-unions are mainly controlled and strikes inaugurated by agitators, interested only for what they can make out of them. Such men as John Jarrett, the ex-president of the Iron and Steel Workers, receive salaries for their services, but they earn every cent of them; and among these “labor agitators” there is not only organizing ability of the highest order, but more unselfishness than is displayed in nine-tenths of the business and social bodies by which work of any sort is accomplished through united effort. Nor is it fair or true that only the incompetent and idle workmen support these movements. If this were so, they would never have attained the proportions to which they have grown abroad, and which they are daily reaching here. The whole thing is only a rational solution of the labor question, the only possible one while men are inclined to look only at their own interests, unless some equal or superior power shall compel them to consider the interests of those with whom they are dealing. Thackeray and Dickens were powerful because they supported justice against prejudice, not less than by reason of their great genius; and the author of “The Bread-winners” will never turn out permanently valuable work, so long as he misrepresents a legitimate force in the interests of a false political economy and an antiquated spirit of caste.

Edward J. Shriver.

REPLY BY THE AUTHOR.

As I have not represented Mr. Offitt and his friends as trades-unionists, I might properly decline any controversy as to the merits of these organizations. It may be as well, however, to say a word in answer to the sweeping assertions of Mr. Shriver, though anything like a discussion of the matter is impossible in the limits which *THE CENTURY* can allow to such a note as this. Mr. Shriver makes the familiar claim of the harmless and rational processes of trades-unions; yet he knows that no important strike has ever been carried through without violence, and that no long strike has ever been ended without murder. He insists on the right of the workman to sell his labor at the best price; yet he knows that trades-unionism is the very negation of that right. The inner circle of petty tyrants who govern the trades-unions expressly forbid the working-man to make his own bargain with his employer; his boys may become thieves and vagabonds, his girls may take to the streets, but they shall not learn his trade, or any other honest trade, without the consent of the union. It is only a few years since we saw the streets of Pittsburgh devastated by murder, arson, and rapine,

through a rising which agitators could originate but could not control; it is only a few weeks since we saw some thousands of telegraph operators foolishly give up their means of livelihood at the dictation of a few conspirators, whose vanity and arrogance had blinded them to the plainest considerations of common sense. No one who has read the newspapers, for the last ten years, is ignorant of the existence of those secret orders, the offspring and the hideous caricatures of trades-unions, which come to the surface occasionally in the Pennsylvania courts, in connection with a story which begins with assassination and ends, most properly, with the gallows. I have made, I trust, a legitimate use of these evident facts, and do not feel myself called upon to discuss the rights and wrongs of trades-unions. I am not touched by the appeal Mr. Shriver makes to my literary ambition. “I follow use, not fame.” If I could make one working-man see that, in joining a secret society which compels him by oath to give up his conscience and his children’s bread to the caprice or ambition of any “Master Workman” or “Executive Council,” he is committing an act of folly whose consequences he cannot foresee, and placing himself in the power of an utterly irresponsible despotism, I should be better satisfied than if I should “turn out” what Mr. Shriver and Mr. Offitt would consider “permanently valuable work.”

Author of “The Bread-winners.”

Opera in New York.

THOSE who ought to know shake their heads at the idea of two Italian opera companies singing in New York at the same time. German opera, at one of the two principal houses, offsetting the usual Italian opera, would be, they think, a healthier kind of competition, and would better serve the public and the interests of musical culture. Americans, and especially New Yorkers, have grown up with Italian opera, which for more than half a century has kept the field. Fondness for beautiful voices and appreciation of refined execution in singing have been greatly developed by this education; but it must be confessed that Italian opera has exerted a perverting influence upon church music, in so far as our composers have adopted its forms for sacred songs and church services. With increasing musical knowledge our people have learned to appreciate the great orchestral and choral works of the German masters; and in latter years the Italian opera company has attempted to give “Fidelio,” “Lohengrin,” and “Flying Dutchman,” but only with indifferent success. The widespread appreciation of Wagner’s music has been due to the selections given in concert by Theodore Thomas, who has brought the orchestral forces in New York to such a degree of perfection, that at the present day the Philharmonic Orchestra is almost unrivaled by any orchestra in Europe. And probably the deepest musical impression ever made in this country was when Frau Materna, at the May Festival, sang portions of Wagner’s “Ring of the Nibelung.”

One necessary requisite for German opera—a magnificent orchestra—we already possess. But we need besides a trained chorus of German singers, and,

most important of all, good soloists. Our public is accustomed to hear first-class singers in Italian opera; but it would not be easy to procure equally good singers of German opera. It is a peculiarity of German singers that they like to establish themselves at some court theater, where they will be free from the distractions and weariness of a nomadic life, and where they will have time for conscientious study and are sure of a pension when their vocal powers become impaired. On the other hand, singers who are in the employ of speculators or "impresarios" are as a rule overworked. A large sum of money must be made to satisfy the manager and the excessive demands of the soloists, and the singers, without being aware of it, fall into routine ways.

It would not be possible probably to secure the services of such singers as Frau and Herr Vogel, Frau Materna, Sucher, Marianne Brandt, Herren Scaria, Betz, Gudehus, Hill, Fuchs, and Reichmann; for the season in Germany lasts nine or ten months, and their contracts only allow them a leave of absence of, sometimes, a few weeks at a time, during which they sing as "guests" or stars in other cities. Their vacation is devoted to rest. But there are in Germany many good singers who are not engaged at court theaters, or are so attached only for six or seven years.

Thus we can hardly expect to hear German opera from the best representatives of vocal art in Germany, and would need to content ourselves with performances which excel in point of "ensemble" and correct interpretation of the music.

Owing to the cost of grand opera in this country, people of small means are, for the most part, reduced to hearing the lightest operettas, most of them of questionable value. It would be much better if those who cannot afford grand opera might hear good comic opera, such as is produced in France and Germany, like Mozart's "Figaro," and many works of Boiëldieu and Auber. In fact, the only desirable solution of the pressing question of popular opera in America, is to have the best comic operas of France and Germany sung in English; until, of course, we may have operas in which both words and music are composed by Americans. The progress which the American people show in every branch of music is remarkable, and not less astonishing is the great number of young people having beautiful voices. This talent and these voices must be given the chance to be educated in an operatic school, where they may pass from the school-room to a practicing stage, upon which they may prepare themselves to step upon the stage of an opera-house.

G. Federlein.

BRIC-À-BRAC.

Old Mrs. Grimes.

(Tune: "Old Grimes is Dead.")

OLD Mrs. Grimes is dead. Alas!
 We ne'er shall see her more.
 She was the wife of good old Grimes,
 Who died some years before.

A very worthy dame is gone,
 Since she gave up her breath;
 Her head was white with frosts of time
 She lived until her death.

Though rough the path, her willing feet
 E'er walked where duty led;
 And never wore a pair of shoes,
 Except when out of bed.

Busy she was, from morn to night,
 Spite of old Time's advances;
 Although her husband left her here
 In easy circumstances.

Good Mrs. Grimes is now at rest,
 She'll rest through endless ages;
 The sun has set, her work is done,
 She's gone to claim her wages.

A. T.

The Wedding on the Creek.

OH! I's got to string de banjer 'g'inst de closin' ob
 de week,
 For dar's gwine to be a weddin' 'mongst de nig-
 gers on de Creek.
 Dey's gittin' up a frolic, an' dar's gwine to be a
 noise
 When de Plantation knocks ag'in' de Slab Town
 boys!
 Dar'll be stranger folks a-plenty, an' de gals is
 comin' too,
 All lubly as de day-break, an' fresher dan de
 jew!
 A'nt Dinah's gittin' ready, wid her half a dozen
 daughters,
 An' little Angelina, fum de Chinkypen Quarters;
 Anudder gal's a-comin', but I couldn't tell her
 name;
 She's sweet as 'lasses candy an' pretty all de same!
 She's nicer dan a rose-bush an' lubly ebrywhar
 Fum de bottom ob her slippers to de wroppin's in
 her ha'r.
 Lordy mussy 'pon me, how 'twill flusterate de
 niggers
 To see her slidin' 'cross de flo' an' steppin' froo de
 figgers!

S. Conant Foster.

To Mrs. Carlyle.

I HAVE read your glorious letters,
Where you threw aside all fetters,
Spoke your thoughts and mind out freely, in your
own delightful style,
And I fear my state's alarming;
For these pages are so charming,
That my heart I lay before you,—take it,
Jeannie Welsh Carlyle.

And I sit here thinking, thinking,
How your life was one long winking
At poor Thomas' faults and failings, and his undue
share of bile!

Wont you own, dear, just between us,
That this living with a genius
Isn't, after all, so pleasant,—is it,
Jeannie Welsh Carlyle?

There was nothing that's demeaning
In those frequent times of cleaning,
When you scoured and scrubbed and hammered, in
such true housewifely style;
And those charming teas and dinners,
Graced by clever saints and sinners,
Make me long to have been present—with you,
Jeannie Welsh Carlyle.

How you fought with dogs and chickens,
Playing young women, and the dickens
Knows what else; you stilled all racket, that might
Thomas' sleep beguile;
How you wrestled with the taxes,
How you ground T. Carlyle's axes,
Making him the more dependent on you—
Jeannie Welsh Carlyle.

Through it all from every quarter
Gleams, like sunshine on the water,
Your quick sense of fun and humor, and your bright,
bewitching smile;
And I own, I fairly revel
In the way that you say "devil."
'Tis so terse, so very vigorous, so like
Jeannie Welsh Carlyle.

All the time, say, were you missing
Just a little love and kissing,—
Silly things, that help to lighten many a weary,
dreary while?
Never a word you say to show it;
We may guess, but never know it;
You went quietly on without it—loyal
Jeannie Welsh Carlyle.

Bessie Chandler.

Engaged.

MUTE the music of the fiddle
When we wandered to the door;
Must have been about the middle
Of the night, or may be more.
Every poising of her face let
Loose the rhapsodies of love;
Every movement of her bracelet,
Or her glove.

After each adieu was bidden,
Leisurely we took our leave;
One white hand was half-way hidden
In a corner of my sleeve.
Foolishly my fancy lingers!
Still, what can a captive do?
Just the pressure of her fingers
Thrilled me through.

Spoke we of the pleasant dances,
Costumes, supper, and the wine;
Gossiped of the stolen glances;
Guessed engagements,—mentioned mine.
Some old sorrow to her eye lent
Tears that trickled while we talked,
And I found her growing silent
As we walked.

My engagement? Queer, why stupid
People peddle little lies!
Here, beside me, cunning Cupid
Shot his arrows from her eyes;
In my heart a twinge and flutter
Followed fast each dart he dealt,
And my tongue tried hard to utter
What I felt.

Standing near the polished newel,
With the gas turned very low,
Conscience seemed to whisper, "Cruel
Tell the truth before you go."
So my courage, getting firmer,
Set her doubtings all aright;
Tiny hands came with the murmur,
"Now, good-night!"

'Twas the same delicious lisp heard
At the dance—a merry strain!
True the voice now softly whispered,—
True she let her hands remain
In my own, as if in token
Of some wish in sweet eclipse,
Cherished lovingly, unspoken
By her lips.

Long-lashed eyelids gently drooping,
Face suffused with scarlet flush,
Told the secret, as I, stooping,
Kissed the rose-leaf of her blush:
Like some happy, sunny island
In a sea of joy was I;
Quick she turned her face to smile, and
Said "Good-bye!"

When we met the morning after,
Blithe as any bird was she;
Music mingled with her laughter,
Every word was love to me.
So the genial Mrs. Grundy,
Seeing how our hearts are caged,
Tells the truth at church next Sunday
"They're engaged!"

THE CENTURY MAGAZINE.

VOL. XXVII.

DECEMBER, 1883.

No. 2.

THE FAIREST COUNTY OF ENGLAND.

HISTORY tells us over and over again how closely the character of a district has been impressed upon the race which inhabits it; and it is not surprising that the love of one's native land should be deepened and intensified in proportion to the boldness and beauty of its natural features; for a dull, flat, and unbroken country—treeless, desolate, and waste—cannot engender the same feelings as a land of mountain and valley, of glen and gorge, of rock, stream, and forest. It is not unnatural, therefore, that the sons of Devon should entertain feelings of enthusiastic love and pride for their native county—feelings born of the sympathy created by nature herself. Yet the love of Devon—"the fairest county of England," by the judgment of the author of "*Lorna Doone*," one of the most charming creations among modern works of fiction—is not confined to Devonians. Well does the present writer remember the cordial ring of sympathy which reached him from one of his Scottish reviewers anent some loving descriptions of Devonshire scenery. "The women of the extreme west of England," said this reviewer, "are, perhaps, the most beautiful of any; the men are taller and less awkward than in the midland and eastern counties; the wild flowers are more abundant; the climate milder on the coast and more bracing on the moors. We have spent weeks in Devon in a general state of enchantment with the scenery, the foliage, the sparkling Scottish-like burns, and the unrivaled tors, besides being filled with enthusiasm for the abundant remains of British camps and circles and dolmens, to say nothing of that weird Wistman's wood of which the gnarled and dwarfish oaks are said to be coëval with the Druids." This enthusiastic tribute of praise from an inhabitant of North

Britain is no more than fairly representative of the feelings of all who from outside have crossed the border-land of Devon.

It has interest for the historian, for the archæologist, for the geologist, and for the naturalist, as well as for the simple lover of nature, be he neither of these. In the matter of size it stands second upon the list of English counties, including an area of 2,654 square miles. Its greatest length from north to south is some seventy miles, and its greatest breadth from east to west is about the same. Yet within the small included area—for, though large as compared with most of the English counties, it is in reality but a narrow extent of country—is to be found the most marvelous diversity of surface. On two sides it is washed by the sea—northward by the Bristol, southward by the English Channel. Cornwall forms its westward boundary, and Somerset and Dorset lie on its eastward borders. About two-thirds of its surface is under cultivation, and its farming and dairy produce are perhaps the finest in all England. Far-famed breeds of cattle and sheep are grazed on its pastures. Its moorlands furnish a race of ponies known the wide world over; while the luscious cider and the unrivaled "cream" of Devonshire are luxuries which have been tried and appreciated by many a visitor from distant climes. The waters on its coast teem with the finny life which supplies an important article of food to many a densely populated English city; while its sparkling inland streams furnish to the sportsman, more abundantly than any other English county, that beautiful inhabitant of fresh water, the red-spotted trout. The "lordly salmon," too, throng in thousands into its tidal rivers. In mineral wealth Devon cannot vie with its neighbor Cornwall, though

it has heretofore produced gold and silver, and a copper mine within its borders has proved to be among the finest in the whole world.

For the historian, Devonshire has furnished materials which make a long page in the annals of England. Its castle of Rougemont — now only a picturesque ruin — was the scene of the stoutest resistance offered to the invasion of the Norman conqueror. One of the many sieges for which Exeter (one of the two chief towns of Devon) has been famous was on the occasion of the Norman investment of the city. It is believed that Romans and Saxons had both in their turn built fortresses upon the site of Rougemont Castle; and after William the Conqueror had succeeded in overcoming the desperate resistance of the Exonians he rebuilt the castle by the aid, it is said, of the materials gathered from the ruins of the houses shattered during

the siege of the city. The red earth upon which the fortress was built gave occasion, it seems, for the name of Rougemont. The most beautiful and most imposing, however, of the buildings of Exeter is its cathedral, one of the most magnificent of the architectural monuments of England. It was Edward the Confessor who, in the year 1050, first made Exeter the seat of a diocese. But the erection of the existing cathedral building was not commenced until the year 1112. Bishop William Warelwast was its originator, and it received successive additions by subsequent bishops of Exeter during no less than seven reigns, being completed by Bishop Bothe, in the year 1478 and in the reign of Edward the Fourth. Its total length exceeds 400 feet; and its western front, in the richness and beauty of its architectural features, has few parallels in the whole world. Another building, which stands

A DEVONSHIRE VILLAGE, NEAR EXETER.

VIEW NEAR FARMINGTON.

next to the beautiful cathedral in importance, is the Guild-hall, a building the projecting front of which—supported on semicircular arches surmounting moor-stone columns, and dating from the year 1593—forms a curious and striking feature in “High street.”

Around Plymouth, the larger of the two chief towns, many fond memories cling; and none, perhaps, is dearer in memory to New Englanders than this, the chief sea-port of the southwestern shores of Britain: for Plymouth, the great sea-gate of sunny Devon, gave the last sight of Old England to the gallant band of “Pilgrim Fathers.”

To modern naval history Plymouth contributes much of stirring interest. Among the great names with which this town is associated in this connection are those of Hawkins and Drake, of Cook and Fro-bisher. In its harbor, too, Robert Blake died as, toward the close of an August day in 1657, he was returning to shore from one of his most memorable victories. Many pages would be needed to give even a brief summary of all that is interesting in connection with its dock-yards, its arsenal, its fortifications, its shipping, its light-house, and its breakwater. The last-named of these objects of interest illustrates strikingly what can be accomplished by indomitable enterprise and perseverance.

Prior to 1812, Plymouth Sound was open

to the full force of the Atlantic waves, which, under the influence of strong south-westerly gales, rolled into it with amazing violence. If by any contrivance of human ingenuity, a barrier could be erected across the sound, thought the projectors of the breakwater, one of the finest harbors in the world might be created. How could the task be begun? In the month of April, 1812, a huge block of stone was cast into the sea, about the center of Plymouth Sound, where the water was fifty feet deep. Other blocks followed, day after day, and week after week; and, though two hundred men were employed upon the work, a year passed without any visible result. Sixteen thousand tons of stone had been swallowed up, and still the waters closed over and hid from view the enormous masses of granite. Persistently, however, the work was carried on, and after a while its fruit began to be manifest, for, here and there in places, points of stone began to peep up among the waves. For thirty-four years the work proceeded, during which time no less than four millions of tons of granite had been cast into the sound.

Then upon this vast substructure, varying in depth from forty to eighty feet, according to the variations in the sea-bottom, and in width, at its base, from three hundred to four hundred feet,—in length about a mile,—a stone terrace was constructed, the most elevated platform of stone being but two feet

above the level of the highest spring tides. It forms a magnificent promenade in fine weather, and in rough weather withstands the utmost fury of the Atlantic billows, forming on its landward side a calm lake of water within which the British navy might ride in perfect safety.

Many and curious, in Devonshire, are the remains which link the past in picturesque association with the present, and possess for the antiquarian an interest which few other

counties can rival. The ruins of its ancient castles at Okehampton, at Plympton, at Tiverton, at Totnes, and at Berry Pomeroy, are among the most striking and most beautiful of the relics of feudal times. Though now mouldering in decay, and yielding to the gentle conquests of the ivy trailers which cling round and cover with a thin, dense, and picturesque mass of evergreen the crumbling stones of keep and embattlement, they attest, no less by the thickness of their walls than by their commanding positions, that they were once among the proudest of the feudal strongholds of England. Perhaps, of all these magnificent ruins, the most beautiful are those of Berry Pomeroy. They stand on the crest of a lofty cliff, embowered in woods; and when viewed from the valley below, they impress the beholder with a sense of their exceeding grandeur. Berry Pomeroy castle was erected by Rolf de Pomeroy, one of the chief followers of the Norman conqueror of England. The original extent of its buildings may be gathered from the statement that "it was a good day's work for a servant to open and shut the casements belonging to them." According to a tradition of the county, the castle was shattered by a terrific thunder-storm; and its exposed position—from which it towers above the highest trees of the magnificent wood which surrounds it—would lend weight to the story of its destruction.

Throughout the county are scattered the remains of many ancient abbeys and monasteries. Of all these, perhaps the most interesting are the ruins of Tavistock Abbey, which was founded in the year 961 by

ON THE DART AT DITTISHAM.

Ordgar, Earl of Devon, in obedience, it is said, to an admonitory vision. It was completed twenty years afterward—namely, in 981—by Ordulph, his son, a man of such gigantic stature that he could, according to William of Malmesbury, the historian, stride across streams ten feet wide. This huge son of Devon must have been of somewhat similar stature to the famous John Ridd, the hero of Mr. Blackmore's "Lorna Doone." Ordgar's daughter and the sister of Ordulph was the beautiful Elfleda, whose romantic history has been given by William of Malmesbury. Tavistock Abbey was plundered and burnt by the Danes in the year 997, but it was subsequently rebuilt,—after which it acquired considerable endowments, Henry the First in particular having bestowed upon its abbots the whole hundred of Tavistock, as well as the right to hold a weekly market and a three days' annual fair. The prosperity of the abbey continuing, it secured for its thirty-fifth abbot the privilege of sitting among the peers in the legislative assembly. But the next abbot in succession, the thirty-sixth,—John Peryn,—was compelled to surrender the whole monastery, with all its possessions, to Henry the Eighth, who granted them in the following year to John, Earl of Russell. In his descendant, the Duke of Bedford, the whole is now vested. The importance of the building may be gathered from the circumstance that it was said at one time that it "eclipsed every religious house in Devonshire in the extent, convenience,

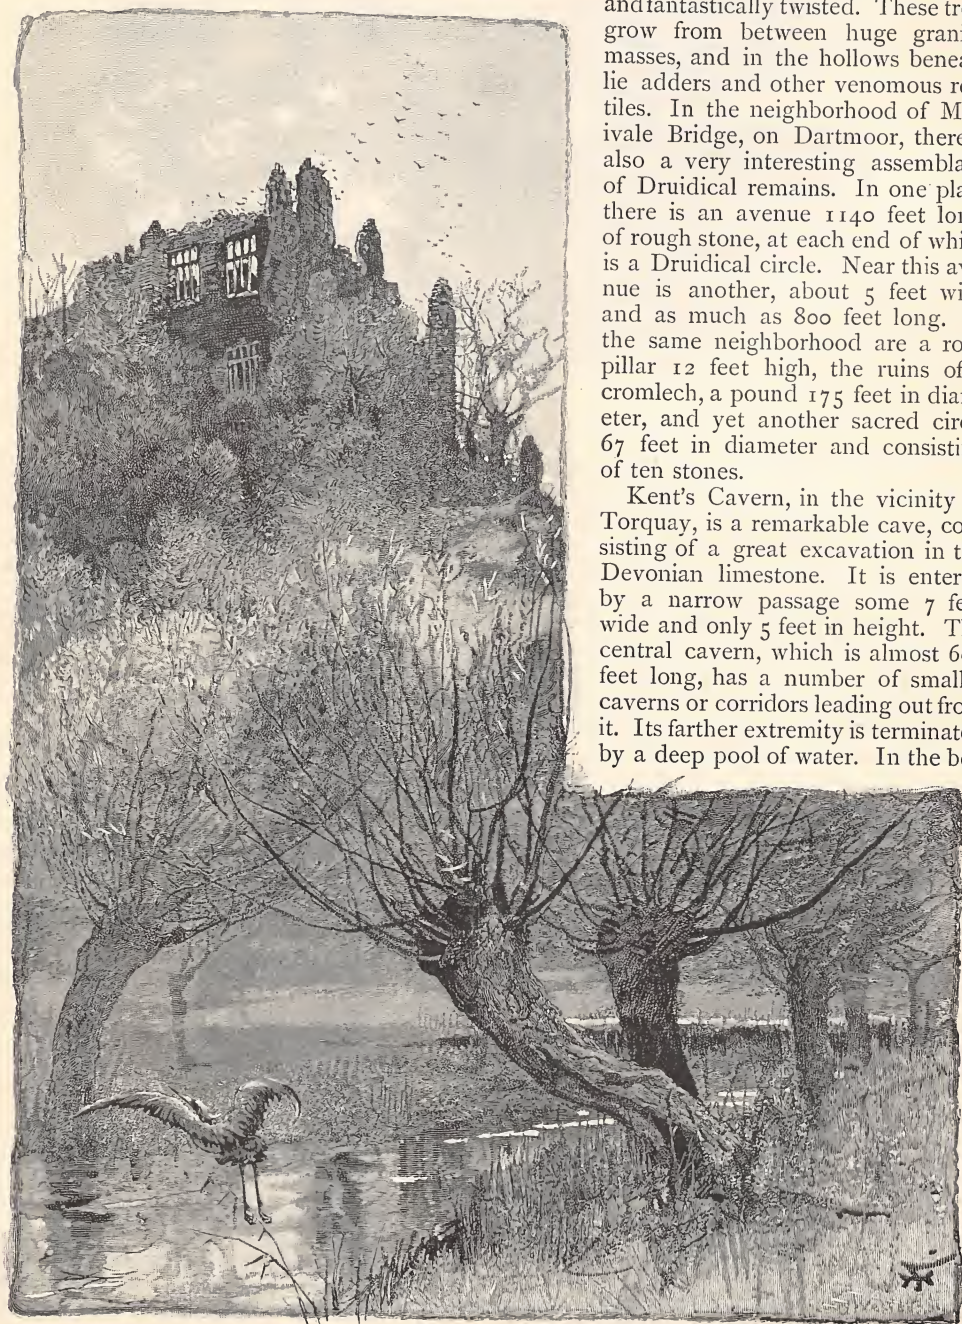

and magnificence of its buildings." Some of the abbots of Tavistock were reputed eminent scholars, and they established and maintained a school for teaching the Saxon language and literature; and very soon after the introduction of printing into England, a printing-press was established in this abbey, and from it was issued the earliest printed copy of the Stannary laws. Even the ruins, which are of considerable extent, attest the importance and magnificence of this great monument of monasticism.

Other and deep interest is afforded for the antiquarian in various parts of Devonshire by the numerous Druidical and other remains. The wild expanse of Dartmoor alone furnishes in great abundance some of the most remarkable of these remains. The designation of "Forest," which still attaches to Dartmoor, though now in a general way inapplicable to this remarkable table-land on account of the entire absence of trees from many parts of it, was, no doubt, peculiarly appropriate in ancient times, when a vast extent of this moorland must have been covered by a dense forest growth. In the gloomy depths of this primeval forest the Druids found ample opportunity for the exercise of their solemn, mysterious, and fearful rites; and hence the reason for the existence of so large a number of cromlechs, circles, and altars. The oak, too, in whose groves the most cruel and dreadful of the Druidical rites were performed, no doubt flourished luxuriantly on Dartmoor during the Druidical period. In-

deed, in many of the marshy parts of this moor immense oak trunks have been found. The weird "Wistman's Wood," a name which is believed to be a corruption of the "wise men's" (or Druids') wood, still exists to attest — by such evidence as the lingering remains of the present age can afford — what has been alleged of the dark doings of

the priests of the "sacred groves" of ancient Britain. "Wistman's Wood" is distant about a mile from Two Bridges on Dartmoor. It lies on the acclivity of a steep hill, and the road to it is incumbered with huge blocks of granite scattered all along the route. The oaks which form the wood are gnarled and stunted, their moss-covered upper branches being strangely and fantastically twisted. These trees grow from between huge granitic masses, and in the hollows beneath lie adders and other venomous reptiles. In the neighborhood of Merivale Bridge, on Dartmoor, there is also a very interesting assemblage of Druidical remains. In one place there is an avenue 1140 feet long, of rough stone, at each end of which is a Druidical circle. Near this avenue is another, about 5 feet wide and as much as 800 feet long. In the same neighborhood are a rock pillar 12 feet high, the ruins of a cromlech, a pound 175 feet in diameter, and yet another sacred circle 67 feet in diameter and consisting of ten stones.

Kent's Cavern, in the vicinity of Torquay, is a remarkable cave, consisting of a great excavation in the Devonian limestone. It is entered by a narrow passage some 7 feet wide and only 5 feet in height. The central cavern, which is almost 600 feet long, has a number of smaller caverns or corridors leading out from it. Its farther extremity is terminated by a deep pool of water. In the bed

BERRY POMEROY.

of this cavern modern research has been rewarded by some deeply interesting discoveries. Over the original earth-bottom of the cave is a bed or layer of considerable thickness, in which are contained strange mixtures of human bones with the bones of the elephant and the rhinoceros, the hyena, the bear, and the wolf, intermingled with stone and flint tools, arrow and spear heads, and fragments of coarse pottery. The animal remains testify

For the geologist and the naturalist Devonshire possesses an interest which a library of volumes could scarcely exhaust. The variety of formations within the limited area of Devonshire is indeed remarkable; and it is, undoubtedly, chiefly to this fact that the county owes its greatest attraction—its lovely scenery. All those visitors to Devon who for the first time have traversed its main line of railway, entering it either at Plymouth or from

A BIT ON DARTMOOR.

to the presence in the ancient forests of Britain of beasts of prey which long since have become extinct. Speculation may be exhausted in the endeavor to account for the curious intermingling in this cavern of the remains of human beings and of wild animals. The place may have been used for shelter successively by man and by the lords of the forest; or, as the presence of the rude weapons of man might seem to indicate, the beasts of the field may have been brought into this natural recess as trophies of the chase, and their flesh and skins used for purposes of food and clothing. Nothing less than the most persevering and enthusiastic search could have discovered the interesting remains which, for a vast period of time, had been buried in this retreat; for the fossils were covered by a thick floor of stalagmite which had been formed, there can be no doubt, by great blocks of limestone which had fallen from time to time, extending over a very lengthened period, from the roof of the cavern, and had become cemented into one mass by the perpetual percolations of lime-water from above.

its Somersetshire side just beyond the little town of Wellington, have been struck by the singular beauty of the coast, where the line by Dawlish and Teignmouth runs along the sea. Soon after leaving Exeter, the glorious green of the spreading vegetation, which on both sides of the way has been gently mantling the rolling uplands, is suddenly contrasted with the deep-blue sea and bright-red cliffs. These beautiful cliffs proclaim to the visitor that he is entering the region of the red sandstone, which gives a distinct geological character to this part of Devon. When, after exploring this coast and seeing all that is immediately adjacent to the South Devon Railway, he turns inland to explore the great moor-land of the county,—an extended tract untraversed by the iron lines,—his attention is called to another of the great geological features of Devon, the granite formation as exhibited most prominently in the famous tors of Dartmoor. It is in this particular part of geological Devonshire that, as already intimated, the most interesting of the Druidical and other antiquarian remains of the county

MOUTH OF THE DART.

have been discovered. The carboniferous series of rocks are noticeable in mid Devon and in the northern, north-western, and central parts of the county. Where, in the north-western district of this formation, it is shown upon the coast, the cliffs exhibit some remarkable traces of plants whose forms are nature-printed upon the cliff side. Passing over with brief mention the metamorphic rocks, the lias, the oolite, and tertiary formations, the traces of submarine forests and of raised beaches along the coast of Devon, the valley deposits in which have been found the fossil bones of the mammoth and the rhinoceros, the brown-coal beds

in which are inclosed the fossils of such exotic plants as the cinnamon and palm, tree ferns, and pines in size like the gigantic *Wellingtonia* of California, we come to a formation—the Devonian—which has given a special geological character to the county. In the strata included in this formation fossils representing no fewer than three hundred and eighty-three species of plants and animals have been found. If we turn from these records of the rocks to the existing fauna and flora of this beautiful county, we shall find life in marvelous variety.

The desire simply to enjoy the unrivaled scenery of Devon has brought hundreds of thousands of visitors to this lovely county; and it is to its wonderful diversity that the great charm of this scenery is undoubtedly due. Everywhere throughout its length and breadth there is abundant change; for continual contrasts are offered by the boldness of its hills, the ruggedness of its tors, the sparkling velocity of its streams, the softness and grace of its valleys, and the pervading charm of its glorious vegetation. Its northern coast-line—extending from Glenthorne, which on the east divides the county from Somersetshire, to Marsland mouth, which is its extreme north-western boundary—includes a bolder sea-front than the southern sea-line of the county, though

from Boggy Point to Hartland Point there are many gentle sweeps of golden sand fronting the fore-shore of Barnstaple Bay, into which the Taw and Torridge roll their joined waters. The coast from Glenthorne to Ilfracombe, and from Hartland Point to the borders of Cornwall at Marsland mouth, is characterized by a romantic boldness which offers a singular contrast to the exceeding softness

beats furiously, while, above, great cliffs of marble cleft into jagged peaks present a stern front to the waves. But a short distance from this rugged cove, and within the compass of a short walk from it, is the beautiful bay of Babbicombe, where the steep cliffs above the pebbly strand are charmingly wooded, enshrouding high over the sea that "village of villas" Mary Church. In the neighborhood

ANSTEY'S COVE, SOUTH DEVONSHIRE.

and grace of the combes and valleys running down between the beetling cliffs to the sea.

In the southern lines of coast extending from the Devonshire border to Plymouth, the contrasts, though lovely in the extreme, are on the whole less bold. There is greater variety, owing to the larger number of indentations in the sea-front, and to the more rapid alternation from peaceful, sandy bay to jagged shingly inlet in the cliff. Into the waters of the English Channel, from this southern sea-border, flow the Axe, the Otter, and the Sid, the Exe and Teign, the Dart, Plym, and Tamar, by the charming watering-places of Seaton and Sidmouth, of Exmouth, Dawlish, and Teignmouth, and of Dartmouth and Plymouth. In the wild and romantic inlet of the sea called Anstey's Cove, strewn rocks lie on the rugged beach, upon which the sea

of Mary Church are to be found quarries of the richest and most charmingly colored of the Devonian marbles.

With the exception of the great waste of Dartmoor, and the extreme northern part of the county which includes a portion of Exmoor, the land of Devonshire is remarkable for its fertility. The country around Bideford and Barnstaple includes a large amount of productive land, as also does the extensive tract known as the Vale of Exeter, a tract comprising some two hundred square miles. Dartmoor itself occupies an extensive area. It is some twenty-two miles long by about nineteen in breadth, and is chiefly barren and uncultivated. It is in fact an elevated tableland, with eminences rising to heights from fifteen hundred to, in some cases, nearly eighteen hundred feet above the sea level.

Its lofty hills, jagged tors, and narrow valleys, strewn in many cases with great masses of granite,—which appear to have been flung from the tors during some terrible convulsion of nature,—its morasses, and its roaring torrents help to give a strangely wild aspect to its scenery. Yet in parts of this moor-land the most beautiful contrasts to the general aspect of wildness and barrenness are afforded by the presence of hill-sides densely clothed with trees, and by foaming streams winding their way with singular impetuosity through narrow glens abounding with the richest vegetation. South of Dartmoor the country assumes such fertility and possesses such a wealth of natural beauty that it has been called “the garden of Devonshire.” This very beautiful tract of country is bounded northward by Dartmoor and the heights around Chudleigh, on the south by the English Channel, on the west by the Tamar dividing Cornwall from Devon, and on the east by Torbay. It comprises, within an area of some two hundred and fifty square miles, some of the boldest and most beautiful contrasts in hill and valley, some of the finest and most productive land in all Devon. Certainly there are few parts even of Devonshire which can equal the fascinating ten miles of moor winding from the little town of Totnes to Dartmoor.

The peculiar and individual beauty of Devonshire scenery is especially seen along the banks of its rivers, in its green lanes, over its moor-lands, and along its coasts. But throughout the county, in green lane, by river-border, on moor, or by sea-coast, this especial beauty owes its peculiar character to one circumstance. In “*The Fern Paradise*,” and subsequently in “*The Fern World*,” I have suggested that it is the great profusion and beauty of its ferns which lend to Devonshire scenery its peculiar character of softness and grace. “They clothe the hill-sides and the hill-tops; they grow in the moist depths of the valleys; they fringe the banks of the streams; they are to be found in the recesses of the woods; they hang from rocks and walls and trees, and crowd into the towns and villages, fastening themselves with sweet familiarity even to the houses.”* In most districts, the presence of ferns in great abundance will generally be found to indicate the character of the scenery.

Two beautiful scenes, typical of the moor and moor-land scenery of Devon, are vividly present to the mind's eye of the writer. The first is a scene on the river Plym, at Shaugh Bridge, in the lovely vale of Berkleigh, a few miles only from Plymouth, and easily reached by rail from the last-named place. Two little

streams, the Mew and the Cad, rising in Dartmoor, flow together near the little village of Shaugh, in Berkleigh vale, and their united waters form the Plym. Just below the point of junction a bridge crosses the stream, whose current rolls musically over big boulders. Above this bridge the scenery is singularly beautiful.

The second scene is a changing one, representing a transformation from the surroundings of a quaint old Devonshire town, by degrees, in which nature gradually asserts her own—town and railway giving way to steep hill and moorland glen. The route is from Totnes, a little town so mingled with the country that it is difficult to say where the one ends and the other begins. We pass along the main line of the South Devon Railway to Newton Abbot, and the engine pants as it runs up and down inclines which represent a compromise between a level iron road and impossible rocks. Engineering skill won here a great victory, and the tourist may pass through the very heart of glen and mountain with no more effort than that involved in the good use of his eyes. From Newton a branch line extends to Moreton Hampstead, and, arrived there, the moor, which erewhile has been struggling for her own,—her hills resisting with more and more of success the attempt to cultivate them,—at length triumphs in the undisputed possession of hill, valley, stream, and rock. Leaving Moreton Hampstead, we plunge into Dartmoor, making for one of its most beautiful fastnesses, the vale of Tingle Bridge.

After having reached the bridge, and descending to the river level, we may find our way into mid-stream by boulder stepping-stones; and, by resting for a moment on a great fragment of rock, we take in with a single sweeping glance one of the most enchanting pieces of river-side landscape. We are now in the bed of a vast amphitheater; great hills sublimely clothed with spreading trees rise around us on all sides, and shut us in, and a delightful sense of being alone with nature in one of her grandest aspects steals over us with a refreshing calm. The only sounds are those of birds singing sweetly in the shrubbery which infolds the river banks on our right, and of the river itself as it musically rolls on by the rock on which we are seated, now falling with a soft roar between islets of contorted rock piled up on each side of a depression in its bed, now gurgling over pebbly shallows, now gently splashing over the tops of mossy boulders.

If, returning from the brawling river-bed, we turn into a path skirting it on the side from which we approached our boulder islet,

* “*The Fern Paradise*.”

CLOVELLY, FROM THE PIER.

we shall enter upon a scene — one of the inner recesses of this haunt of nature — so purely Devonian in character as to demand some brief mention in this place. A narrow path, which appears from where we stand to follow the winding course of the stream, invites us to enter a bushy avenue, the issue from which, however, seems closed by a tangled mass of greenery. We are soon lost in the mazes of this leafy tunnel, and find ourselves enshrouded in verdant twilight. The soft greensward at our feet is densely covered with wild flowers, whose rich colors are brought out in strong relief where, by tiny openings in the thicket of green overhead, golden rays of sunshine gently fall on them. From a high embankment on our right, rising to a path on the hill-side far above the river, the clustering foliage is enriched by a wealth of fern-fronds drooping gracefully downward. By gently pressing aside the shrubs which from time to time fling their twigs across our way, we may follow this charming river-side path for a long dis-

tance, treading on its rich carpeting of wild flowers, and listening to the sweet sounds of bird and insect life.

It is the sparkle of running water which adds so much of life and beauty to Devonshire scenery. There is nowhere stillness and stagnancy, and it is to the abundance of rippling streams in its woods and lanes that the marvelous freshness and richness of their vegetation are mainly due. One may sometimes wander for miles through a network of green lanes bordered by high hedge-bank, whose topmost branches, meeting across the narrow way, form natural avenues of green. Sometimes these lanes are formed by steep cuttings in the hill-side, and in such cases there is sure to trickle, from the higher ground beyond the hedge-top, some pure stream of water. Or it may be that the water gently percolates through the thickness of the hedge-bank, or flows in a tiny rill along the course of the lane. The arching branches, spreading to meet each other from each hedge-top, shut in the moist emanations from the running water, and vegetation revels in the friendly shelter thus extemporized.

Sweet Clovelly, on the northern sea-border of Devon, is hung against the side of wooded sea-cliffs, and is approached by a road, the "Hobby Drive," which presents along its entire distance changing scenes that have probably few equals in the whole world. You enter, from the high road from Bideford to

Clovelly, a carriage-drive which, if you follow it for a few yards, will lead you away into the cool shadow of overarching trees. From this point you pass through a succession of the most enchanting combes, now lost in a world of leafiness as clustering trees close in upon you on all sides, now momentarily bathed in gleams of sunlight which fall on to you from interstices in the leafy canopy above. Down and down your path winds, now crossing the brawling bed of a stream whose banks are densely covered by graceful forms of fern, now coming, on the verge of an opening in the trees, upon a spot whence a charming view can be had, away at the combe mouth, over a great expanse of waving trees, of the blue sea lying calmly beyond. Presently you approach the brow of a richly wooded bluff, to which your path leads from the depth of a bosky recess; and from this charming standpoint you look out from under the sheltering trees upon an enchanting prospect of sea and cliff. The very cliff-top is covered by graceful ferny forms; trees and shrubs rich in leafy beauty surround you. Across the sky white clouds are gently sailing, chased by the soft sea-breeze. And sunshine in a golden flood bursts in upon your path.

"The birds chant melody in every bush;
The smoke lies rolled in the cheerful sun;
The green leaves quiver with the cooling wind,
And make a checkered shadow on the ground."

Francis George Heath.

THE FRIEZE OF THE PARTHENON.

A DISCOVERY IN CONNECTION WITH THE ATHENE.

IN an able article on "The Phidian Age of Sculpture," which appeared in a former number of this magazine (February, 1882, page 554), Mrs. Mitchell referred to some discoveries concerning the Parthenon which the present writer had the good fortune to make. It is one of these discoveries, the terra-cotta sketch of the upper part of the Athene from the Parthenon frieze, which it is proposed here to notice. It is, no doubt, a great gain to be able to restore to a state of comparatively original perfection a work of Pheidias, disfigured by the ravages of time and vandal hands; but, after all, to the archæologist the chief satisfaction lies in the conditions which led to the discovery. For the discovery was not a matter of accident, neither did it depend upon peculiarly personal qualification or aptitude, but was the result of the simple appli-

cation of a method of archæological observation now becoming systematized and developed—the result of sober, scientific work. This method of archæological investigation, the comparative study of style, consists in carefully studying and noting all the characteristics of well-identified remains of ancient art with regard to the subjects represented, the conception of these subjects, the style and manipulation of the rendering, both higher artistic and materially technical, and in comparing with the standard thus gained the numerous extant works, the date, school, and artist of which are not known. Thus, by means of scientific observation in all respects similar to that which has been practiced with so much success in the natural sciences, the step from the known to the unknown is bridged over, the circle of firmly constituted

facts grows wider as the sphere of the unrecognized and imperfectly known grows more restricted.

Throughout all the works of Pheidias art which have come down to us we notice that, however lofty their spiritual qualities, however great and ideal their artistic conceptions, they manifest to the student one simple and almost humble, yet none the less important, element which is essential to their great effect, namely, a due and sober regard paid by the sculptor to the physical, almost mechanical, conditions which surround each individual work. With all his loftiness and ideality, this great artist never lost his firm footing on the actual ground of his work, never expected that all the surroundings should be fashioned in keeping with his own great ideas, never neglected such seemingly paltry considerations as the limits of the space that was to be filled by his composition, the material to be used, the conditions of light in the position of the work, and the point from which the spectator would view it. As we learn from a careful study of this frieze, Pheidias seems to have asked himself, first, How can I make my figures visible, and distinctly visible? secondly, How can I relate the story I wish to transfer to marble so that it may be clearly understood, and may maintain its unity, though carried along the four walls of this temple? And when he had solved these questions by dint of sober thought and hard work, he set free from its fetters his lofty imagination, and it conceived a great composition which his hands had the power to execute and make real.

The first technical points which we notice in the frieze are the exceeding lowness of relief, the peculiar working of the edges of the outlines, and the increasing height of relief toward the top. All these idiosyncrasies of relief work must be referred to the peculiar way in which the frieze received its light, and to the conditions under which the spectator could gain sight of it. It must be borne in mind that the frieze, representing the Panathenaic procession, five hundred and twenty-two feet in length, ran along the outer wall of the *cella* at a height of thirty-nine feet, and that this wall was joined to the entablature surmounting the colonnade which ran round the temple and supported the roof.* The frieze could thus receive no light from above.

Furthermore, the entablature surmounting the columns descended one and a half metres ($4\frac{3}{4}$ ft.) lower than the level of the frieze, so that the light could not come directly from the side. It therefore received only a diffused light from the side and below between the columns, and especially the light reflected upward from the white pavement of the colonnade. The spectator, moreover, could not gain sight of the frieze if he stood outside the temple beyond the columns; he had, therefore, to stand between them or in front of them toward the wall. The distance between the wall and the inner circumference of the columns (it is about four and a half metres, including the columns) was 2.96 to 3.57 metres (9.7 to 11.7 ft.), so that the spectator stood very close to the wall and nearly under the relief itself.

The first result of these conditions is that Pheidias had to keep his relief very low. For, in the first place, if he had worked his figures in bold and high relief, the spectator necessarily standing so closely under it, the lower edges of the relief, the feet of men and horses, the tire of the wheels, would not only have been the most noticeable features, and have presented ugly lines, but would have hidden from view a great part of the composition above.

A positive evidence in the work itself that Pheidias duly considered the special position of the spectator, to whom the lower sides of the projections were most visible, is to be found in the fact that while, as we shall see, the other edges of the relief are straight cut and not modeled, the lower surfaces of the edges that can be seen from below, such as the bellies of the horses, are more carefully modeled and more highly finished than any other surfaces in the whole frieze. In the second place, the light received being in every case indirect, either diffused upward from between the columns, or reflected directly from the white floor, a strong relief, especially in the lower parts, would have thrown shadows upward, and would thus have made the upper parts less visible, or entirely hidden them from view. We have thus presented to us the masterpiece of technical skill: layers of figures one upon another, sometimes two or three horses and riders, in a relief standing out four and a half centimetres ($1\frac{3}{4}$ in.), and in the highest parts, namely, the heads of horses and men, five and a half centimetres ($2\frac{1}{4}$ in.). Our wonder at the technical skill must grow still greater when we consider that the several layers of figures put into his exceedingly low relief were worked with such definiteness that the outline of each figure, forming a

* To gain a clear view of the general subject we are dealing with, the reader could not do better than to consult Mrs. Mitchell's article, referred to above, and more especially to examine the sketch (page 553) to realize the position of the frieze in the building. [See also chapters XIV. and XVII. of Mrs. Mitchell's "History of Ancient Sculpture" (New York: Dodd, Mead & Co. London: Kegan Paul, Trench & Co.).—ED.]

PLAQUE IN THE LOUVRE. (SEE PAGE 178.)

part of a great mass, such as the procession of horsemen, became distinctly visible to the spectator at a distance of over thirty-nine feet, in spite of the imperfect light and the unfavorable point of view. This was effected by another peculiar and characteristic method of working the relief in this frieze.

The second result of the peculiar physical conditions of the Parthenon frieze is the manner of dealing with the outlines of the figures and the edges of the outlines. As the relief was kept very low, and the light was so imperfect, the outline, in order to be visible, had to be clearly cut and set off from the ground in an abrupt manner. In a low relief, which is placed on the eye-line before us, we avoid a harsh, perpendicular edge, which interrupts the flow of rounded lines, and we allow the relief as far as possible to run gradually over into the ground. In the Parthenon frieze, on the contrary, the edges of the outlines, with the exception of those that are seen from below, are cut straight and sharp to the ground, often at a

height of three and even of four and a half centimetres, perpendicular to the ground, and sometimes even slightly undercut, the edge slanting inward. In some instances, especially where there are several layers of figures projecting over one another, they are made more visible in that the layers are not parallel to one another, but the one layer has a more slanting plane. Another device is that of cutting a groove near the edge, and thus heightening the relief away from it. This is especially noticeable at the feet of the horsemen. Finally, a more projecting relief is obtained in the upper and most distant parts of the relief, especially in the heads of men and horses, by somewhat sinking the ground as it nears the outline of the head.

Lastly, we notice that the variations in the height of the relief are only to be found in the upper part of the frieze, which reaches the extreme height of five and a half centimetres, while the lower parts uniformly remain within the limit of four and a half centimetres. This treatment is due, in the

first place, to the fact that while, from the peculiar lighting, high relief in the lower parts might have thrown disturbing shadows over the upper part of the relief, there was no fear of such a disturbance in the upper part, and the artist was free to make this more strongly projecting. Secondly, it is due to considerations which we know Pheidias to have studied. It is because of the foreshortening which is the result of the spectator's point of viewing the composition. These considerations on the part of the artist are manifested in the way in which the lower portions of the bodies, for instance of the seated gods, are proportionately shorter than the upper parts, because, to the spectator viewing them in their original position, the lower parts would appear larger. The lower parts also appear more projecting and the upper parts receding when viewed immediately from below. To avoid this effect and thus to keep the figures in drawing, the upper parts of the frieze had to be projected more strongly than the lower parts. Only then would they appear to the spectator from below as being of the same height in relief. From the point in which it was seen in its original position, the variation in the height of the relief produced the same appearance that a relief of equal height throughout, which is placed on the eye-line, presents to the spectator.

Furthermore, the walls of the temple which Pheidias was called upon to decorate with a continuous scene possessing unity of artistic organization, presented to the sculptor four distinct sides, only one of which could be seen at a time. The task was thus set of giving connectedness to the scenes, while each was to be endowed with a certain completeness of meaning and harmony of composition. They were to be like the stanzas of a poem or the movements of a symphony. Pheidias used the limitations of outer physical conditions to realize in his work one of the central tasks of organized life, and more especially the organized life of art, which may be expressed by various terms, all containing the same fundamental idea: to find and constitute the proper relation and just balance between unity and variety, law and freedom, typical life and individual life, symmetry of form and flow of nature, the ideal and the real. This unity of artistic organization chiefly depends upon giving to the work some physically perceptible central point of interest and importance, toward which all the parts of the work tend, with regard to spiritual interest, or to volume, color, or line. This central point of unity was clearly suggested to the sculptor by the fact that the

four walls were not strictly equal in importance, in length, or in position; but that the oblong temple contained two shorter and two longer walls, and above all, a front (the east end) and a back (the west end). Instead of a mechanical, unvarying movement round the four walls, if they were equally important, without any growth of interest, the east front became the chief side toward which all the others were to lead, upon which the climax of the action was to be represented. The action will begin at the back, the west end, will proceed along either long side of the oblong temple, and like the band of a victor the two ends meet, and the dramatic knot is tied at the brow of the temple, the east front. The scene represented is the procession at the Panathenaic festival. Each of the four sides of the temple contains one definite stage of the whole action, while the bulk of the scene is naturally assigned to the long walls, on the north and south.

The west wall or back is the least important side, and at the same time it is the side facing the Propylæa, the entrance to the Acropolis, which the visitor first saw upon nearing the Parthenon. Thus it is on this side that the beginning of the whole action is placed, the preparation for the procession. Horsemen are mounting; there one is trying to hold back a rearing horse, another is drawing on his boots, another is forcing the bit into the mouth of his restive horse; others are already mounted, and are beginning to fall into line.

The north and south walls, as has been said, contain the procession proper. But, to keep up the continuity of composition between the several sides, the figures at the corners anticipate and take up the character of representation belonging to the side on to which they join, forming an organic transition from one movement to another, as in a musical composition the key or rhythm of the following movement is led up to in the previous one, and the *motive* of a former movement is repeated in a modified form at the beginning of the succeeding one. So, here, at the end of the western frieze, there are figures which, by their action, lead round the corner to the northern and southern frieze; and at the beginning of the northern frieze there is one group of preparation, a boy-servant tying the girdle of his master at the back, over which the drapery will be pulled in projecting folds. Then follow the matchless groups of horsemen in full processions, charioteers with warriors in armor, dignified elders carrying branches, musicians, kitharists and flute-players, maidens carrying offerings, and then the sacred hekatombs,

ATHENE. (ORIGINAL CONDITION.)

cows and sheep offered by Athens and its dependent colonies. The varying life and movement of these groups, all toned down and made worthy of a translation into so lasting a material as is marble, by harmony of composition, is made still more varied and living by the heralds and officers interspersed between the advancing grouping and keeps them in order.

All this movement leads on to the final scene at the east frieze, where the preparations for the scene that is to follow the offering of the hekatombs to the goddess Athene, are clearly suggested in the central group of the priest and priestess preparing to perform the sacrifice. But the true climax of the scene as represented is in the arrival of the procession before the assembled gods, who, according to the truly Greek idea, are present at the feast which the people give in their honor, the partakers of the people's joy, and are grouped on either side of the center. Such is the largeness of conception and treatment given to these gods that, though they be but in relief and half life size, they each furnish a model for a great monumental statue; nay, they need but to be transferred from relief to the round and increased in dimensions to make, each of them, a great statue, equaled only by the pedimental figures from the same temple. They have the dignity in conception and attitude, the breadth of treatment in modeling, and, withal, the grace and

serenity which characterize the works of Greek art, especially of the art of Pheidias.

Among these gods and goddesses, the figure which has been most admired by archæologists, artists, and amateurs is that of Athene, who, corresponding to Zeus on the one side, is seated on the other side of the central group, and is here figured from the frieze in the British Museum. And it has been thus admired despite the loss of the head — a loss which has been regretted by all writers on the subject.

Among a number of terra-cotta fragments in the Louvre Museum at Paris, the writer came upon the fragment of an antique terra-cotta plaque which at once arrested his attention. The fragment here figured (see page 176) from the original is seven and a half inches in height, five and a half inches in width, and one and a half inches in thickness. The color of the terra-cotta is of a faded reddish brown with a few spots of white, the remnants of a ground-color which was put on ancient terracottas to hold the upper colors, as we use white of egg to fix the gilding. The relief technique of Pheidias and the general character of the whole made it most evident that here was a specimen of Pheidias relief work, and the writer felt convinced in a moment that it was one of the figures from the eastern frieze. A pencil-sketch made at the time, when compared with an illustration of the frieze, afforded a complete confirmation of this con-

jecture, in showing it to be the seated figure of Athene. The question was, What was the degree of relationship between this terra-cotta and the actual frieze? When the directors of the Louvre Museum, among whom M. Léon Heuzey was especially kind, generously sent a plaster cast of the fragment to England, so that it could be carefully collated with the frieze of the British Museum, the identity of the two works became palpable, and the general character of the plaque as compared with the frieze was that of an "early state" as compared with the finished work.

The peculiar working of the edges of the relief in the Parthenon frieze to which attention has been drawn is maintained throughout in the terra-cotta; nay, it even acts disturbingly when we view it closely. The edge of the arm is worked straight down to the background, perpendicular to it, and sometimes even slanting inward. The outline of the face, especially the line of brow and nose, has the same straight-cut edge. The head is highest in relief, and therefore the hair has suffered most from friction, being most prominent. So close is the resemblance of workmanship to that of the Parthenon frieze, that, as there, so here, the stronger relief of the head is attained by adding to the actually greater height by sinking the ground around this upper part. The chiton is fastened in the same way above the shoulder, the brooch being more distinct in the plaque than in the frieze, where it is rubbed away. From this point the chief folds of the drapery radiate, two running above the right breast under the upper seam of the garment, which projects in a similar manner above the left breast in both instances. From the shoulder, running between the right breast and the opening at the side, there are five fold-grooves, the upper ones running toward the center of the figure, where they break up into numerous transverse folds, while the lower ones are subdivided by smaller grooves, less defined in the plaque and more clearly cut in the frieze. The triangular opening is identical, as also the manner in which it runs out into a curved fold at the bottom. Below it there is the same cavernous fold, and between it and the arm the drapery is subdivided in both instances by a small groove and a larger one toward the arm,—in the plaque the smaller one being visible up toward the arm, while in the frieze it is visible further down. There are no indications of a spear in the terra-cotta, because this could not well be rendered in that material. By the side of the cavernous fold, just above the breakage, there are three parallel curves in the folds which are quite similar in the drapery of the frieze. Unluckily, the terra-

cotta is fractured at the lap of the figure, and the whole lower portion is wanting.

On the other hand, the greatest satisfaction is gained from the plaque in that the head has been perfectly preserved, and that we can now complete in our mind the picture of the Athene of the frieze, whose mutilated head so painfully destroys the effect of the whole figure. And when the scale of the terra-cotta relief is taken into account, the delicacy and nobility of the modeling of the face and neck are surprising. The firmness of the features is still far removed from hardness, the cheek is soft and yet firm, and the texture of the hair is well set off against that of the face. The whole has a combination of maidenly purity and graceful nobility. There is no accentuation of the distinctively feminine charms; nay, from one aspect, the head is almost boyish in character. And this quality of the head, combined with the feminine forms of the body, produces that mixture of attributes which characterized the virgin daughter of Zeus in the less stern conception of the patron goddess of Athens. It has now become possible to restore the headless Athene to a state closely attaining the original perfection. Accordingly, the head of the plaque, enlarged to the size of the indications of the head on the frieze, has been modeled on a cast of the frieze at M. Brucciani's, a new mold taken, and from the cast of this restored mold the accompanying illustration has been copied.

So fortunate and complete is this discovery that, with the fatalistic skepticism which is inherent in us, the thorough coincidence in all points almost calls forth within us a doubt "whether it is not too good to believe." The question that will have to be answered at the outset will then be, What exactly is the plaque, and what uses did it serve? It is either a Roman copy or a contemporary Greek sketch.

The first possibility, that it is a copy made in Roman times, is one which has much in its favor. Whoever is conversant with Roman history and Roman literature, knows how intense was the admiration of this people for Greek culture in all its forms, and how they strove to imitate and assimilate with their own all its manifestations. We furthermore know that it was a common undertaking for a high-bred Roman, and an event which was almost essential to his complete education, to travel in Greece. Here it was that the Roman patrician's artistic nature was trained by the study of the great art treasures, as, fifty and a hundred years ago, the wealthy inhabitants of northern Europe completed their education by a visit to Italy. It was only excep-

tionally, under the influence of war and conquest, and with the ensuing public desire to decorate their capital, that conquerors like Sylla ventured to carry off original works of art. There existed a strong quasi-religious

thought worthy of any mention by ancient authors, should be copied and should be desired by artist or by amateur. Yet this may be easily explained. A Roman patrician of cultivated taste is struck by the beauty of the

ATHENE. (RESTORED.)

piety which forbade them under ordinary circumstances to desecrate the soil of the country which the Romans considered their original home, by despoiling it of its most sacred treasures of art. And yet the appreciative Roman felt, as we do, a desire to carry home with him reminiscences of the treasures he had seen, and to adorn therewith his house and gardens. And so there existed in the Roman period, after Greece had lost its inventive artistic genius together with its political independence, a numerous colony of half-mercantile sculptors, who copied, modified, and combined works of Greek art to supply the demand of the Roman market. Most of the statues in Italian museums are such copies or modifications. To this class of work the Paris plaque would belong if it is a copy. But, on the other hand, we must remember that there were so many supreme works of pure sculpture from the hands of the great artists, that we cannot well understand why a part of this decorative work, which, in comparison with the great works, is not

Parthenon frieze. Now, it must be borne in mind that the Roman's true taste inclined more to great architectural works of splendor than toward pure sculpture, and that Roman sculpture is essentially decorative in character. He feels a desire to decorate with the same reliefs the small temple in his country home, or still more probably his house or his villa, or a room or a court in them. Accordingly, he orders a reduced copy to be made in terra-cotta, and of this copy the plaque, probably found in Rome or its neighborhood, might be a fragment.

Much as this possibility has in its favor, serious objections may still be raised. In the first place, the later schools of artists in Rome and even in Greece had distinct styles of their own, markedly differing from the simple grandeur of the Pheidias age. Now it is contrary to experience that these later characteristics of style should be lost even in copies of earlier works intended to be correct. The later Roman copies that fill our museums, such as those of the Doryphoros of Polykleitos

and the Myronian Discobolos (of which an earlier copy exists for comparison with the later ones in the replica of the Palazzo Massimi at Rome), are most instructive in this respect. We should expect traces of such later work in the plaque, if it were a late copy. But of this there are no traces. The plaque has all the simplicity bordering on severity of the figure in the frieze; nay, it is almost severer and larger in character, while at the same time it is far removed from that stereotyped and exaggerated severity which is given to the copies of early work when the late copyist makes a point of maintaining the characteristics of archaic art.

Furthermore, it is physically impossible that a copy so accurate in all its details, including not only the folds, but even the peculiarities of Pheidias relief-technique, should be made by a copyist standing below while the frieze was in its original position, with the imperfect conditions of lighting to which attention has been drawn. For this purpose, the copyist would have had to be face to face with the original. Now, it is hardly conceivable that, even if it were permitted by the magistrates in charge of the temple, the copyist would have gone to the trouble and expense of erecting a scaffolding round the wall of the *cella* to the height of thirty-nine feet—the only means of enabling him to reproduce it with such accuracy.

There remain two other possibilities. If it was a work contemporaneous with the frieze itself, the reasons just mentioned would speak against its production when once the marble relief was in position; the terra-cotta must, therefore, have been made before the relief was fixed to the temple. Now, it is hardly probable that copies of the decorative sculptures of the Parthenon should have been made at the time. I must again remind the reader of the fact that, though to us the sculptures of the Parthenon are of the highest interest and importance as independent works of art among those that we collect in our museums, they were not so to the Greeks of the time of Pheidias. They were to them merely decorations of the great architectural structure; and the works which were chiefly estimated by them as works of art, complete in themselves, were the statues by the great artists, which the ancient authors describe, while they pass over the frieze without a remark.

We naturally feel some hesitation in suggesting the third possibility. But, in spite of this hesitation, we must not hide from ourselves the fact that it is not impossible that the plaque is the original sketch, and we are bound to bring forward as fairly as possible all circumstances which speak in favor of such

a possibility. Let us make sure that our desire to possess an original from the hand of Pheidias does not prejudice our observation; but let us equally make sure that our hesitation to state something uncommon, and our fear of laying ourselves open to the easy denial and ready incredulity of those who stamp even the admission of such a possibility as venturesome, does not equally hamper us in a just consideration of the work before us.

When we consider the extraordinary correspondence in the details and, above all, in the working of the relief, especially as regards the edges of the figure, the greater height of the upper parts, and the sinking of the background about the head, all of them, as we have seen, modifications suggested by the peculiar conditions of the frieze of the Parthenon, we at once feel that they speak strongly in favor of this view. Furthermore, the terra-cotta, though it marks all the chief lines of the drapery, still (as compared with the marble relief) does this with a certain definiteness and a want of life which characterize the "first state" of a work as distinguished from the finished production.

When we consider the actual mode in which the great works of art were produced during the few peaceful years of the supremacy of Pericles, a new light is thrown upon the possible destination of the terra-cotta relief of which the plaque is a fragment. Within these few years a number of great compositions, among which was the colossal Athene Parthenos decorated by many figures in relief and in the round, all of them over life size, were designed and executed by Pheidias. To these works, important temple-statues, Pheidias, in addition to the design, gave also the technical execution, or at least the finishing touches. According to our modern idea of the working power of an artist, a single work like the Athene Parthenos would call upon the time and energy of a sculptor for a period of several years. Now, besides this, there were all the decorations of the Parthenon with its ninety-two metopes, its hundreds of figures in relief in the frieze, its large pedimental compositions. It is inconceivable that Pheidias should have executed with his own hands all these works, though he may have given the finishing touch to some of the most important parts. Though the designs were made by him, the execution must have been put into the hands of marble-workers ranking from high-classed artists down to mere artisans. The occasional discrepancies in the actual execution of the marble-work in various parts of the frieze, the pediments, and the metopes, is in part to be re-

ferred to this fact. This assumption is fully verified by the ancient authorities. We hear from Plutarch that a great number of artists and artisans skilled in marble-work, metal-beating, wood and ivory carving, etc., flocked to Athens from all parts of Greece and the colonies, and were added to the large number of native workmen. These workmen were free from taxation, and all inducements were offered to the skilled among them. The same writer further tells us, "that these buildings were of immense size and unequalled in form and grace, the workmen striving emulously that the workmanship should excel in artistic finish; nothing was more to be wondered at than the rapidity with which they were brought forth."

It has even been assumed by archæologists that works like the frieze were sketched in small in their totality by Pheidias himself. Quatremère de Quincy gives the following account of what he supposed the process of their execution to have been:—"I quite believe that a small sketch of the whole composition, either in terra-cotta or in wax, was first made in order to fix the *ensemble*, the details, and the relation of the parts of this composition to each other. But I presume that from the sketch an exact tracing, the actual size of the frieze, was taken of the outlines of each figure and of the forms of each object; these outlines were faithfully chalked on the unhewn slab of marble in accordance with their succession and position in the sketch. It is after these designs that the sculptor then proceeded to work his marble."

Now, it is not likely that if the sculptor had at his disposal means of readily reproducing his designs, he would rely upon one copy only of so extensive a work, consisting of so many parts, each of which was essential to the whole, especially when we bear in mind the carelessness of workmen and the chances of destruction to which whatever is fragile is exposed in any marble-works. Modern sculptors avoid these difficulties by making molds from their clay models, from which any number of plaster casts can be reproduced. There is no evidence that the early Greek sculptors made plaster casts; there is evidence that they made lasting models of their statues. Molds are still extant in which terra-cotta figures were made. It is therefore not unreasonable to suppose that the small, thin, and fragile sketches of a work like the Parthenon frieze, which were given into the hands of the marble-workers, were fixed by means of clay

molds from which terra-cotta plaques, corresponding to the fragment we are considering, were reproduced.

The last question to be answered is, Is it likely that such sketches would be preserved? To answer this in the affirmative, it would have to be shown, first, that the ancients valued original models from the hand of great artists, as we prize the sketches of a Raphael or a Michelangelo; and secondly, that Pheidias stood in such esteem in later antiquity, that his works and sketches had an interest corresponding to that which the sketches of the great Italian masters have for us.

The first of these two points is proved by a passage from Pliny in which we are told that the models (*proplasmata*) of the sculptor Arkesilaos brought higher prices than actual statues of other sculptors; and also by another which shows that in the time of Pliny an antiquarian interest existed which drove people to pay high prices for old Greek plate for the sake of its antiquity, even if the design was almost effaced. With regard to the second point, the tone in which the later authors speak of Pheidias shows that he was held in reverence almost approaching religious worship, and that everything pertaining to him was preserved with piety. This is confirmed by the fact that his studio at Olympia was built in the sacred Altis, and was shown to the traveler in after days, and has been discovered by the German excavators at Olympia. Is it then unlikely that the original sketches of Pheidias works were carefully preserved by the ancients, and were bought at a high price by one of those rich Roman amateurs who gave so much money for the original models of an Arkesilaos?

I do not attempt to answer ultimately which of these possible destinations the plaque had. I must leave it to the unbiased reader to draw the conclusion. What I have proposed to myself is to give the facts.

The writer cannot refrain from giving in a few words the sequel to the story. A few months after this discovery, he found that another terra-cotta fragment in the Museum at Copenhagen, the relation of which to the Parthenon was noticed by Professor Petersen of Prague, turned out to be of the same dimensions, the same material and workmanship as the Louvre plaque, and moreover the boy with the *peplos* or cloak, the figure immediately next to the Athene.

Charles Waldstein.

THE SILVERADO SQUATTERS.

SKETCHES FROM A CALIFORNIAN MOUNTAIN.

BY ROBERT LOUIS STEVENSON,

Author of "New Arabian Nights," "Travels with a Donkey in the Cévennes," "An Inland Voyage," etc.

THE HUNTER'S FAMILY.

THERE is quite a large race or class of people in America for whom we scarcely seem to have a parallel in England. Of pure white blood, they are unknown or unrecognizable in towns; inhabit the fringe of settlements and the deep, quiet places of the country; rebellious to all labor and pettily theftuous, like the English gypsies; rustically ignorant, but with a touch of wood-lore and the dexterity of the savage. Where they came from is a moot-point. At the time of the war they poured north in crowds to escape the conscription; lived during summer on fruits, wild animals, and petty theft; and at the approach of winter, when these supplies failed, built great fires in the forest and there died stoically by starvation. They are widely scattered, however, and easily recognized. Loutish but not ill-looking, they will sit all day, swinging their legs, on a field fence, the mind seemingly as devoid of all reflection as a Suffolk peasant's, careless of politics, for the most part incapable of reading, but with a rebellious vanity and a strong sense of independence. Hunting is their most congenial business or, if the occasion offers, a little amateur detection. In tracking a criminal, following a particular horse along a beaten highway, and drawing inductions from a hair or a foot-print, one of these somnolent, grinning hodgees will suddenly display activity of body and finesse of mind. By their names ye may know them: the women figuring as Loveina, Larsenia, Serena, Leanna, Orreana; the men answering to Alvin, Alva, or Orion, pronounced Orrion, with the accent on the first. Whether they are indeed a race, or whether this is the form of degeneracy common to all back-woodsmen, they are at least known by a generic by-word as Poor Whites, or Low-downers.

I will not say that the Hanson family was Poor White; but I may go as far as this: they were, in many points, not unsimilar to the people usually so called. Rufe himself combined two of these qualifications; for he was both a hunter and an amateur detective. It was he who pursued Russel and Dollar,

the robbers of the Lake Port stage, and captured them, the very morning after the exploit, while they were still sleeping in a hay-field. Russel, a drunken Scotch carpenter, was even an acquaintance of his own, and he expressed much grave commiseration for his fate. In all that he said and did, Rufe was grave. I never saw him hurried. When he spoke, he took out his pipe with ceremonial deliberation, looked east and west, and then, in quiet tones and few words, stated his business or told his story. His gait was to match; it would never have surprised you if, at any step, he had turned around and walked away again; so warily and slowly, and with so much seeming hesitation, did he go about it. He lay long in bed in the morning, rarely, indeed, rose much before noon. He loved all games from poker to clerical croquet; and on the Toll House croquet-ground I have seen him laboring at the latter with the devotion of a curate. He took an interest in education, was an active member of the local school-board, and when I was there he had recently lost the school-house key. His wagon was broken, but it never seemed to occur to him to mend it. Like all other truly idle people, he had an artistic eye; he chose the print stuff for his wife's dresses, and counseled her in the making of a patchwork quilt—always, as she thought, wrongly—but, to the more educated eye, always with bizarre and admirable taste—the taste of an Indian. With all this he was a perfect, unoffending gentleman in word and act. Take his clay pipe from him, and he was fit for any society but that of fools. Quiet as he was, there burned a deep, permanent excitement in his dark blue eyes; and when this grave man smiled, it was like sunshine in a shady place.

Mrs. Hanson (*née*—if you please—Love-lands) was more commonplace than her lord. She was a comely woman, too, plump, fair-colored, with wonderful white teeth; and, in her print dresses (chosen by Rufe) and with a large sun-bonnet shading her valued complexion, made, I assure you, a very agreeable figure. But she was on the surface, what there was of her; outspoken and loud-spoken. Her noisy laughter had none of the charm of one

of Hanson's rare, slow-spreading smiles; there was no reticence, no mystery, no manner about the woman; she was a first-class dairy-maid, but her husband was an unknown quantity between the savage and the nobleman. She was often in and out with us; merry and healthy and fair; he came far seldomer; only, indeed, when there was business, or now and again to pay us a visit of ceremony, brushed up for the occasion, with his wife on his arm, and a clean clay pipe in his teeth. These visits, in our forest state, had quite the air of an event, and turned our red cañon into a salon.

Such was the pair who ruled in the old "Silverado Hotel," among the windy trees, on the mountain shoulder overlooking the whole length of Napa Valley, as the man aloft looks down on the ship's deck. There they kept house, with sundry horses and fowls, and a family of sons, Daniel Webster, and I think George Washington, among the number. Nor did they want visitors. An old gentleman of singular stolidity and called Breedlove—I think he had crossed the plains in the same caravan with Rufe—housed with them for awhile during our stay; and they had besides a permanent lodger in the form of Mrs. Hanson's brother, Irvine Lovelands. I spell Irvine by guess; for I could get no information on the subject; just as I could never find out, in spite of many inquiries, whether or not Rufe was a contraction for Rufus. They were all cheerfully at sea about their own names in that generation; but times change; and their descendants, the George Washingtons and Daniel Websters, will be clear upon the point. Any way, and however his name should be spelt, this Irvine Lovelands was the most unmitigated Caliban I ever knew.

Our very first morning at Silverado, when we were full of business, patching up doors and windows, making beds and seats, and getting our rough lodging into shape, Irvine and his sister made their appearance together—she for neighborliness and general curiosity—he, because he was working for me, if you please—cutting fire-wood at I forget how much a day. The way that he set about cutting wood was characteristic. We were at that moment patching up and unpacking in the kitchen. Down he sat on one side, and down sat his sister on the other. Both were chewing pine-tree gum, and he, to my annoyance, accompanied that simple pleasure with profuse exhortation. She rattled away, talking up hill and down dale, laughing, tossing her head, showing her brilliant teeth. He looked on in silence, now spitting heavily on the floor, now putting his head back and uttering a loud, discordant, joyless laugh. He had a

tangle of shock hair, the color of wool; his mouth was a grin; although as strong as a horse, he looked neither heavy nor yet adroit, only leggy, coltish, and in the road; but it was plain he was in high spirits, thoroughly enjoying his visit, and he laughed frankly whenever we failed to accomplish what we were about. This was scarcely helpful; it was, even to amateur carpenters, embarrassing; but it lasted until we knocked off work and began to get dinner. Then Mrs. Hanson remembered she should have been gone an hour ago, and the pair retired, and the lady's laughter died away among the nutmegs down the path. That was Irvine's first day's work in my employment—the devil take him!

The next morning he returned, and, as he was this time alone, he bestowed his conversation upon us with great liberality. He prided himself on his intelligence; asked us, if we knew the school-ma'am. *He* didn't think much of her any way. He had tried her, he had. He had put a question to her: if a tree a hundred feet high were to fall a foot a day, how long would it take to fall right down? She had not been able to solve the problem. "She don't know nothing," he opined. He told us how a friend of his kept school with a revolver, and chuckled mightily over that; his friend could teach school, he could. All the time, he kept chewing gum and spitting. He would stand awhile, looking down; and then he would toss back his shock of hair, and laugh hoarsely, and spit, and bring forward a new subject. A man, he told us, who bore a grudge against him had poisoned his dog. "That was a low thing for a man to do, now, wasn't it? It wasn't like a man that, nohow. But I got even with him—I poisoned *his* dog." His clumsy utterance, his rude, embarrassed manner, set a fresh value on the stupidity of his remarks. I do not think I ever appreciated the meaning of two words until I knew Irvine—the verb, loaf, and the noun, oaf. Between them, they complete his portrait. He could lounge, and wriggle, and rub himself against the wall, and grin, and be more in everybody's way than any other two people that I ever set my eyes on. Nothing that he did became him; and yet you were conscious that he was one of your own race, that his mind was cumbrously at work revolving the problem of existence like a quid of gum, and in his own cloudy manner enjoying life and passing judgment on his fellows. Above all things, he was delighted with himself. You would not have thought it, from his uneasy manners and troubled, struggling utterance; but he loved himself to the marrow, and was happy and proud like a peacock on a rail.

His self-esteem was indeed the one joint in his harness. He could be got to work, and even kept at work, by flattery. As long as my wife stood over him, crying out how strong he was, so long exactly he would stick to the matter in hand; and the moment she turned her back, or ceased to praise him, he would stop. His physical strength was wonderful, and to have a woman stand by and admire his achievements warmed his heart like sunshine. Yet he was as cowardly as he was powerful, and felt no shame in owing to the weakness. Something was once wanted from the crazy platform over the shaft, and he at once refused to venture there,—“did not like,” as he said, “foolin’ round them kind o’ places,”—and let my wife go instead of him, looking on with a grin. Vanity, where it exists, is usually more heroic; but Irvine steadily approved himself, and expected others to approve him,—rather looked down upon my wife, and decidedly expected her to look up to him, on the strength of his superior prudence. Yet the strangest part of the whole matter was perhaps this, that Irvine was as beautiful as a statue. His features were, in themselves, perfect; it was only his cloudy, uncouth, and coarse expression that disfigured them. So much strength residing in so spare a frame was proof sufficient of the accuracy of his shape. He must have been built somewhat after the pattern of Jack Sheppard; but the famous house-breaker, we may be certain, was no lout. It was by the extraordinary powers of his mind, no less than by the vigor of his body, that he broke his strong prison with such imperfect implements, turning the very obstacles to service. Irvine in the same case would have sat down and spat and grumbled curses. He had the soul of a fat sheep; but, regarded as an artist’s model, the exterior of a Greek god. It was a cruel thought to persons less favored in their birth, that this creature, endowed, to use the language of the theaters, with extraordinary “means,” should so manage to misemploy them that he looked ugly and almost deformed. It was only by an effort of abstraction, and after many days, that you discovered what he was.

By playing on the oaf’s conceit, and standing closely over him, we got a path made around the corner of the dump to our door, so that we could come and go with decent ease; and he even enjoyed the work, for in that there were bowlders to be plucked up bodily, bushes to be uprooted, and other occasions for athletic display; but cutting wood was another pair of shoes. Anybody could cut wood; and besides, my wife was tired of supervising him and had other things to attend to. And in short, days went by, and

Irvine came daily and talked and lounged and spat; but the fire-wood remained intact as sleepers on the platform, as growing trees upon the mountain-side. Irvine, as a wood-cutter, we could tolerate; but Irvine as a friend of the family, at so much a day, was too coarse an imposition; and at length, in the afternoon of the fourth or fifth day of our connection, I explained to him, as clearly as I could, the light in which I had grown to regard his presence. I pointed out to him that I could not continue to give him a salary for spitting on the floor; and this expression, which came after a good many others, at last penetrated his obdurate wits. He rose at once and said, if that was the way he was going to be spoken to, he reckoned he would quit. And no one interposing, he departed.

So far, so good. But we had no fire-wood. The next afternoon, I strolled down to Rufe’s and consulted him on the subject. It was a very droll interview, in the large, bare, north room of the “Silverado Hotel,” Mrs. Hanson’s patchwork on a frame, and Rufe, and his wife, and I, and the oaf himself, all more or less embarrassed. Rufe announced there was nobody in the neighborhood but Irvine who could do a day’s work for anybody. Irvine thereupon refused to have any more to do with my service; he “wouldn’t work no more for a man as had spoke to him’s I had done.” I found myself on the point of the last humiliation: driven to beg the creature whom I had just dismissed with insult; but I took the high hand in despair, said there must be no talk of Irvine coming back unless matters were to be differently managed, that I would rather chop fire-wood for myself than be fooled; and in short, the Hansons being eager for the lad’s hire, I so imposed upon them with merely affected resolution that they ended by begging me to reemploy him, on a solemn promise that he should be more industrious. The promise, I am bound to say, was kept; we soon had a fine pile of fire-wood at our door; and if Caliban gave me the cold shoulder and spared me his conversation, I thought none the worse of him for that, nor did I find my days much longer for the deprivation.

The leading spirit of the family was, I am inclined to fancy, Mrs. Hanson. Her social brilliancy somewhat dazzled the others; and she had more of the small change of sense. It was she who faced Kelmar, for instance; and perhaps, if she had been alone, Kelmar would have had no rule within her doors. Rufe, to be sure, had a fine, sober, open-air attitude of mind, seeing the world without exaggeration. Perhaps we may even say without enough; for he lacked, along with the others,

that commercial idealism which puts so high a value on time and money. Society itself is a kind of convention; perhaps Rufe was wrong; but looking on life plainly, he was unable to perceive that croquet or poker was in any way less important than, for instance, mending his wagon. Even his own profession, hunting, was dear to him mainly as a sort of play; even that he would have neglected, had it not appealed to his imagination. His hunting suit, for instance, had cost I should be afraid to say how many bucks—the currency in which he paid his way; it was all befringed after the Indian fashion, and it was dear to his heart. The pictorial side of his daily business was never forgotten; he was even anxious to stand for his picture in those buckskin hunting clothes; and I remember how he once warmed almost into enthusiasm, his dark blue eyes growing perceptibly larger, as he planned the composition in which he should appear “with the horns of some real big bucks, and dogs, and a camp on a crick” (creek, stream).

There was no trace in Irvine of this woodland poetry. He did not care for hunting, nor yet for buckskin suits. He had never observed scenery. The world, as it appeared to him, was almost obliterated by his own great grinning figure in the foreground: Caliban-Malvolio. And it seems to me, as if in the persons of these brothers-in-law, we had the two sides of rusticity fairly well represented: the hunter living really in nature, the clod-hopper living merely out of society; the one bent up in every corporal agent to capacity in one pursuit, and doing at least one thing keenly and thoughtfully, and thoroughly alive to all that touches it; the other, in the inert and bestial state, walking in a faint dream, and taking so dim an impression of the myriad sides of life that he is truly conscious of nothing but himself. It is only in the fastnesses of nature, forests, mountains, and the backs of man's beyond, that a creature endowed with five senses can grow up into the perfection of this crass and earthy vanity. In towns or the busier country-sides, he is roughly reminded of other men's existence; and if he learns ~~no~~ more, he learns at least to fear contempt. But Irvine had come scathless through life; conscious only of himself, of his great strength and intelligence; and in the silence of the universe, to which he did not listen, dwelling with delight on the sound of his own thoughts.

THE SEA FOGS.

A CHANGE in the color of the light usually called me in the morning. By a certain hour

the long, vertical chinks in our western gable, where the boards had shrunk and separated, flashed suddenly into my eyes as stripes of dazzling blue, at once so dark and so splendid that I used to marvel how the qualities could be combined. At an earlier hour the heavens in that quarter were still quietly colored; but the shoulder of the mountain which shuts in the cañon already glowed with sunlight in a wonderful compound of gold and rose and green; and this, too, would kindle, although more mildly and with rainbow tints, the fissures of our crazy gable. If I were sleeping heavily, it was the bold blue that struck me awake; if more lightly, then I would come to myself in that earlier and fairer light.

One Sunday morning, about five, the first brightness called me. I rose and turned to the east, not for my devotions, but for air. The night had been very still; the little private gale that blew every evening in our cañon for ten minutes, or perhaps a quarter of an hour, had swiftly blown itself out; in the hours that followed not a sigh of wind had shaken the tree-tops; and our barrack, for all its trenches, was less fresh that morning than of wont. But I had no sooner reached the window than I forgot all else in the sight that met my eyes; and I made but two bounds into my clothes, and down the crazy plank to the platform.

The sun was still concealed below the opposite hill-tops, though it was shining already not twenty feet above my head on our own mountain slope. But the scene, beyond a few near features, was entirely changed. Napa Valley was gone; gone were all the lower slopes and woody foot-hills of the range; and in their place, not a thousand feet below me, rolled a great level ocean. It was as though I had gone to bed the night before, safe in a nook of inland mountains, and had awakened in a bay upon the coast. I had seen these inundations from below; at Calistoga I had risen and gone abroad in the early morning, coughing and sneezing, under fathoms on fathoms of gray sea vapor like a cloudy sky: a dull sight for the artist, and a painful experience for the invalid. But to sit aloft one's self in the pure air and under the unclouded dome of heaven, and thus look down on the submergence of the valley, was strangely different and even delightful to the eyes. Far away were hill-tops like little islands. Nearer land, a smoky surf beat about the foot of precipices and poured into all the coves of these rough mountains. The color of that fog ocean was a thing never to be forgotten. For an instant, among the Hebrides and just about sundown, I have seen something like it on the sea itself. But the white was not so

opaline, nor was there, what surprisingly increased the effect, that breathless, crystal stillness over all. Even in its gentlest moods, the salt sea travails, moaning among the weeds or lipping on the sand; but that vast fog ocean lay in a trance of silence, nor did the sweet air of the morning tremble with a sound.

As I continued to sit upon the dump, I began to observe that this sea was not so level as, at first sight, it appeared to be. Away in the extreme south, a little hill of fog arose against the sky above the general surface; and as it had already caught the sun, it shone on the horizon like the top-sails of some giant ship. There were huge waves, stationary, as it seemed, like waves in a frozen sea; and yet, as I looked again, I was not sure but they were moving after all, with a slow and august advance. And while I was yet doubting, a promontory of the hills some four or five miles away, conspicuous by a bouquet of tall pines, was in a single instant overtaken and swallowed up. It re-appeared in a little with its pines, but this time as an islet, and only to be swallowed up once more, and then for good. This set me looking nearer hand, and I saw that in every cove along the line of mountains the fog was being piled in higher and higher as though by some wind that was inaudible to me. I could trace its progress, one pine tree first growing hazy and then disappearing after another; although sometimes there was none of this forerunning haze, but the whole opaque white ocean gave a start and swallowed a piece of mountain-side at a gulp. It was to flee these poisonous fogs that I had left the seaboard and climbed so high among the mountains. And now, behold, here came the fog to besiege me in my chosen altitudes, and yet came so beautifully that my first thought was of welcome.

The sun had now gotten much higher, and through all the gaps of the hills it cast long bars of gold across that white ocean. An eagle, or some other very great bird of the mountain, came wheeling over the nearer pine-tops, and hung, poised and something sideways, as if to look abroad on that unwonted desolation, spying, perhaps with terror, for the eyries of her comrades. Then, with a long cry, she disappeared again toward Lake County and the clearer air. At length, it seemed to me as if the flood were beginning to subside. The old landmarks by whose disappearance I had measured its advance, here a crag, there a brave pine tree, now began, in the inverse order, to make their re-appearance into daylight. I judged all danger of the fog was over for this little while. This was not Noah's flood; it was but a warning spring, and would now drift out seaward

whence it came. So, mightily relieved and a good deal exhilarated by the sight, I went into the house to light the fire.

I suppose it was nearly seven when I once more mounted the platform to look abroad. The fog ocean had swelled up enormously since last I saw it; and a few hundred feet below me, in the deep gap where the Toll House stands and the road runs through into Lake County, it had already topped the slope, and was pouring over and down the other side like driving smoke. The wind had climbed along with it; and though I was still in calm air, I could see the trees tossing below me, and their long, strident sighing mounted to me where I stood. Half an hour later, the fog had surmounted all the ridge on the opposite side of the gap, though a shoulder of the mountain still warded it out of our cañon. Napa Valley and its bounding hills were now utterly blotted out. The fog, snowy white in the sunshine, was pouring over into Lake County in a huge, ragged cataract, tossing tree-tops appearing and disappearing in the spray. The air struck with a little chill, and set me coughing. It smelt strong of the fog, like the smell of a washing-house, but with a shrewd tang of the sea-salt.

Had it not been for two things,—the sheltering spur which answered as a dyke, and the great valley on the other side which rapidly engulfed whatever mounted,—our own little platform in the cañon must have been already buried a hundred feet in salt and poisonous air. As it was, the interest of the scene entirely occupied our minds. We were set just out of the wind, and but just above the fog, and could listen to the voice of the one as to music on the stage; we could plunge our eyes down into the other as into some flowing stream from over the parapet of a bridge; thus we looked on upon a strange, impetuous, silent, shifting exhibition of the powers of nature, and saw the familiar landscape changing from moment to moment like figures in a dream. The imagination loves to trifle with what is not. Had this been indeed the deluge, I should have felt more strongly, but the emotion would have been similar in kind. I played with the idea, as the child flees in delighted terror from the creations of his fancy. The look of the thing helped me. And when at last I began to flee up the mountain, it was, indeed, partly to escape from the raw air that kept me coughing, but it was also part in play.

As I ascended the mountain-side, I came once more to overlook the upper surface of the fog; but it was a different appearance from what I had beheld at day-break. For, first, the sun now fell on it from high over-

head, and its surface shone and undulated like a great norland moor country sheeted with untrodden morning snow. And next, the new level must have been a thousand or fifteen hundred feet higher than the old, so that only five or six points of all the broken country below me still stood out. Napa Valley was now one with Sonoma on the west. On the hither side, only a thin scattered fringe of bluffs was unsubmerged; and through all the gaps the fog was pouring over, like an ocean, into the blue, clear, sunny country on the east. There it was soon lost, for it fell instantly into the bottom of the valleys, following the water-shed; and the hill-tops in that quarter were still clear cut upon the eastern sky.

Through the Toll House gap and over the near ridges on the other side, the deluge was immense. A spray of thin vapor was thrown high above it, rising and falling and blown into fantastic shapes. The speed of its course was like a mountain torrent. Here and there a few tree-tops were discovered and then whelmed again; and for one second the bough of a dead pine beckoned out of the spray like the arm of a drowning man. But still the imagination was dissatisfied, still the ear waited for something more. Had this indeed been water (as it seemed so, to the eye), with what a plunge of reverberating thunder would it have rolled upon its course, disemboweling mountains and deracinating pines! And yet water it was, and sea water at that; true Pacific billows, only somewhat rarefied, rolling in mid-air among the hill-tops.

I climbed still higher, among the red rattling gravel and dwarf underwood of Mount Saint Helena, until I could look right down upon Silverado, and admire the favored nook in which it lay. The snowy plain of fog was several hundred feet higher; behind the protecting spur a gigantic accumulation of cottony vapor threatened, with every second, to blow over and submerge our homestead; but the vortex setting past the Toll House was too strong; and there lay our little platform, in the arms of the deluge, but still enjoying its unbroken sunshine. About eleven, however, thin spray came flying over the friendly buttress, and I began to think the fog had hunted out its Jonah, after all. But it was the last effort. The wind veered while we were at dinner, and began to blow equally from the mountain summit; and by half-past one all that world of sea-fogs was utterly routed, and fleeing here and there into the south in little rags of cloud. And instead of a lone sea-beach, we found ourselves once more inhabiting a high mountain-side, with the clear, green country far below us, and the light smoke of Calistoga blowing in the air.

This was the great Russian campaign for that season; now and then, in the early morning, a little white lakelet of fog would be seen far down in Napa Valley; but the heights were not again assailed, nor was the surrounding world again shut off from Silverado.

A STARRY DRIVE.

IN our rule at Silverado, there was a melancholy interregnum. The queen and the crown prince with one accord fell sick; and as I was sick to begin with, our lone position on Mount Saint Helena was no longer tenable, and we had to hurry back to Calistoga and a cottage on the green. By that time we had begun to realize the difficulties of our position; we had found what an amount of labor it cost to support life in our red cañon; and it was the dearest desire of our hearts to get a China boy to go along with us when we returned. We could have given him a whole house to himself, self-contained, as they say in the advertisements, and on the money question we were prepared to go far. Kong Sam Kee, the Calistoga washerman, was intrusted with the office; and from day to day it languished on, with protestations on our part and mellifluous excuses on the part of Kong Sam Kee.

At length, about half-past eight of our last evening, with the wagon ready harnessed to convey us up the grade, the washerman, with a somewhat sneering air, produced the boy. He was a handsome, gentlemanly lad, attired in rich dark blue and shod with snowy white; but alas! he had heard rumors of Silverado; he knew it for a lone place on the mountain-side, with no friendly wash-house near by, where he might smoke a pipe of opium o' nights, with other China boys, and lose his little earnings at the game of tan; and he just backed out for more money, and then, when that demand was satisfied, refused to come point-blank. He was wedded to his wash-houses; he had no taste for the rural life; and we must go to our mountain servantless. It must have been near half an hour before we reached that conclusion, standing in the midst of Calistoga high street under the stars, and the China boy and Kong Sam Kee singing their pigeon English in the sweetest voices and with the most musical inflections.

We were not, however, to return alone; for we brought with us Joe Strong, the painter, a most good-natured comrade and a capital hand at an omelette. I do not know in which capacity he was most valued, as a cook or a companion; and he did excellently well in both.

The Kong Sam Kee negotiation had delayed us unduly; it must have been half-past

nine before we left Calistoga, and night came fully ere we struck the bottom of the grade. I have never seen such a night. It seemed to throw calumny in the teeth of all the painters that ever dabbled in starlight. The sky itself was of a ruddy, powerful, nameless, changing color, dark and glossy like a serpent's back. The stars, by innumerable millions, stuck boldly forth like lamps. The milky way was bright, like a moonlit cloud; half heaven seemed milky way. The greater luminaries shone each more clearly than a winter's moon; their light was dyed in every sort of color, red like fire, blue like steel, green like the tracks of sunset; and so sharply did each stand forth in its own luster, that there was no appearance of that flat, star-spangled arch we know so well in pictures, but all the bottom of heaven was one chaos of contesting luminaries—a hurly-burly of stars. Against this, the hills and rugged tree-tops stood out redly dark.

As we continued to advance, the lesser lights and milky ways first grew pale and then vanished; the countless hosts of heaven dwindled in number by successive millions; those that still shone had tempered their exceeding brightness and fallen back into their customary wistful distance; and the sky declined from its first bewildering splendor into the appearance of a common night. Slowly this change proceeded, and still there was no sign of any cause. Then a whiteness like mist was thrown over the spurs of the mountain. Yet awhile and, as we turned a corner, a great leap of silver light and net of forest shadows fell across the road and upon our wandering wagonful; and swimming low among the trees, we beheld a strange, misshapen, waning moon, half tilted on her back.

"Where are ye when the moon appears?" as the old poet sang, half taunting, to the stars, bent upon a courtly purpose.

"As the sunlight round the dim earth's midnight tower of shadow pours,
Streaming past the dim, wide portals,
Viewless to the eyes of mortals,
Till it floods the moon's pale islet on the morning's golden shores."

So sings Mr. Trowbridge, with a noble inspiration. And so had the sunlight flooded that pale islet of the moon; and her lit face put out, one after another, that galaxy of stars. The wonder of the drive was over; but by some nice conjunction of clearness in the air and fit shadow in the valley where we traveled, we had seen for a little while that brave display of the midnight heavens. It was gone, but it had been; nor shall I ever again behold the stars with the same mind. He who has seen the sea commoved with a great hurricane, thinks of it very dif-

ferently from him who has seen it only in a calm. The difference between a calm and a hurricane is not greatly more striking than that between the ordinary face of night and the splendor that shone upon us in that drive. Two in our wagon had often seen night in the tropics; but even that bears no comparison,—the nameless color of the sky, the hues of the star-fire, and the incredible projection of the stars themselves, starting from their orbits, so that the eye seemed to distinguish their positions in the hollow of space, these were things that we had never seen before and shall never see again.

Meanwhile, in this altered night, we proceeded on our way among the scents and silence of the forest, reached the top of the grade, wound up by Hanson's, and came at last to a stand under the flying gargoyle of the chute. Sam, who had been lying back, fast asleep, with the moon on his face, got down with the remark that it was pleasant "to be home." The wagon turned and drove away, the noise gently dying in the woods, and we clambered up the rough path, Caliban's great feat of engineering, and came home to Silverado.

The moon shone in at the eastern doors and windows and over the lumber on the platform. The one tall pine beside the ledge was steeped in silver. Away up the cañon, a wild-cat welcomed us with three discordant squalls. But, once we had lit a candle and begun to review our improvements, homely in either sense, and count our stores, it was wonderful what a feeling of possession and permanence grew up in the hearts of the lords of Silverado. A bed had still to be made up for Strong, and the morning's water to be fetched, with clinking pail; and as we set about these household duties, and showed off our wealth and conveniences before the stranger, and had a glass of wine, I think, in honor of our return, and trooped at length, one after another, up the flying bridge of plank, and lay down to sleep in our shattered, moon-pierced barrack, we were among the happiest sovereigns in the world, and certainly ruled over the most contented people. Yet, in our absence, the palace had been sacked. Wild-cats, so the Hansons said, had broken in and carried off a side of bacon, a hatchet, and two knives.

TOILS AND PLEASURES.

I MUST try to convey some notion of our life, of how the days passed, and what pleasure we took in them, of what there was to do, and how we set about doing it, in our mountain hermitage. The house, after we had repaired the worst of the damages, and

filled in some of the doors and windows with white cotton cloth, became a healthy and a pleasant dwelling-place, always airy and dry, and haunted by the outdoor perfumes of the glen. Within, it had the look of habitation, the human look. You had only to go into the third room, which we did not use, and see its stones, its sifting earth, its tumbled litter, and then return to our lodging with the beds made, the plates on the rack, the pail of bright water behind the door, the stove crackling in a corner, and perhaps the table roughly laid against a meal; and man's order, the little clean spots that he creates to dwell in, were at once contrasted with the rich passivity of nature. And yet our house was everywhere so wrecked and shattered, the air came and went so freely, the sun found so many port-holes, the golden outdoor glow shone in so many open chinks, that we enjoyed, at the same time, some of the comforts of a roof and much of the gayety and brightness of al-fresco life. A single shower of rain, to be sure, and we should have been drowned out like mice. But ours was a Californian summer, and an earthquake was a far likelier accident than a shower of rain.

Trustful in this fair weather, we kept the house for kitchen and bedroom, and used the platform as our summer parlor. The sense of privacy, as I have said already, was complete. We could look over the dump on miles of forest and rough hill-top; our eyes commanded some of Napa Valley, where the train ran, and the little county townships sat so close together along the line of the rail; but here there was no man to intrude. None but the Hansons were our visitors. Even they came but at long intervals, or twice daily, at a stated hour, with milk. So our days, as they were never interrupted, drew out to the greater length; hour melted insensibly into hour; the household duties, though they were many and some of them laborious, dwindled into mere islets of business in a sea of sunny day-time; and it appears to me, looking back, as though the far greater part of our life at Silverado had been passed propped upon an elbow or seated on a plank, listening to the silence that there is among the hills.

My work, it is true, was over early in the morning. I rose before any one else, lit the stove, put on the water to boil, and strolled forth upon the platform to wait till it was ready. Silverado would then be still in shadow, the sun shining on the mountain higher up. A clean smell of trees, a smell of the earth at morning, hung in the air. Regularly, every day, there was a single bird, not singing, but awkwardly chirruping among the green ma-

dronas; and the sound was cheerful, natural, and stirring. It did not hold the attention nor interrupt the thread of meditation like a blackbird or a nightingale; it was mere woodland prattle, of which the mind was conscious like a perfume. The freshness of these morning seasons remained with me far on into the day:

As soon as the kettle boiled, I made porridge and coffee; and that, beyond the literal drawing of water and the preparation of kindling, which it would be hyperbolical to call the hewing of wood, ended my domestic duties for the day. Thenceforth, my wife labored single-handed in the palace, and I lay or wandered on the platform at my own sweet will. The little corner near the forge, where we found a refuge under the madronas from the unsparing early sun, is indeed connected in my mind with some nightmare encounters over Euclid and the Latin grammar. These were known as Sam's lessons. He was supposed to be the victim and the sufferer; but here there must have been some misconception. For, whereas I generally retired to bed after one of these engagements, he was no sooner set free than he dashed up to the Chinaman's house, where he had installed a printing-press, that great element of civilization, and the sound of his labors would be faintly audible about the cañon half the day.

To walk at all was a laborious business. The foot sank and slid, the boots were cut to pieces among sharp, uneven, rolling stones. When we crossed the platform in any direction, it was usual to lay a course, using as much as possible the line of wagon-rails. Thus, if water were to be drawn, the water-carrier left the house along some tilting planks that we had laid down and not laid down very well. These carried him to that great high-road, the railway, and the railway served him as far as to the head of the shaft. But from there to the spring and back again he made the best of his unaided way, staggering among the stones and wading in low growth of the calcanthus, where the rattlesnakes lay hissing at his passage. Yet I liked to draw water. It was pleasant to dip the gray metal pail into the clean, colorless, cool water; pleasant to carry it back, with the water lipping at the edge and a broken sun-beam quivering in the midst.

But the extreme roughness of the walking confined us in common practice to the platform, and, indeed, to those parts of it that were most easily accessible along the line of rails. The rails came straight forward from the shaft, here and there overgrown with little green bushes, but still entire, and still carrying a truck, which it was Sam's delight to trundle to and fro by the hour with vari-

ous ladings. About midway down the platform the railroad trended to the right, leaving our house and coasting along the far side within a few yards of the madronas and the forge, and not far off the latter ended in a sort of platform on the edge of the dump. There, in old days, the trucks were tipped and their loads sent thundering down the chute. There, besides, was the only spot where we could approach the margin of the dump. Anywhere else, you took your life in your right hand when you came within a yard and a half to peer over; for, at any moment, the dump might begin to slide and carry you down and bury you below its ruins. Indeed, the neighborhood of an old mine is a place beset with dangers; for, as still as Silverado was, at any moment the report of rotten wood might tell us that the platform had fallen into the shaft, the dump might begin to pour into the road below, or a wedge slip in the great upright seam, and hundreds of tons of mountain bury the scene of our encampment.

I have already compared the dump to a rampart, built certainly by some rude people and for prehistoric wars. It was likewise a frontier. All below was green and woodland, the tall pines soaring one above another, each with a firm outline and full spread of bough. All above was arid, rocky, and bald. The great spout of broken mineral, that here dammed the cañon up, was a creature of man's handiwork,—its material dug out with pick and powder, and spread by the service of the trucks. But Nature herself, in that upper district, seemed to have had an eye to nothing besides mining; and even the natural hill-side was all sliding gravel and precarious boulder. Close at the margin of the well, leaves would decay to skeletons and mummies, which at length some stronger gust would carry clear of the cañon and scatter in the subjacent woods. Even moisture and decaying vegetable matter could not, with all nature's alchemy, concoct enough soil to nourish a few poor grasses. It is the same, they say, in the neighborhood of all silver mines,—the nature of that precious rock being stubborn with quartz and poisonous with cinnabar. Both were plenty in our Silverado. The stones sparkled white in the sunshine with quartz; they were all stained red with cinnabar. Here, doubtless, came the Indians of yore to paint their faces for the war-path, and cinnabar, if I remember rightly, was one of the few articles of Indian commerce. Now, Sam had it in his undisturbed possession, to pound down and slake, and paint his rude designs with. But to me it had always a fine flavor of poetry, compounded out of Indian story and Hawthornden's allusion:

"Desire, alas, desire a Zeuxis new,
From Indies borrowing gold, from eastern skies
Most bright cinoper —"

Yet this is but half the picture; our Silverado platform had another side to it. Though there was no soil and scarce a blade of grass, yet out of these tumbled gravel heaps and broken bowlders a flower-garden bloomed as at home in a conservatory. *Calcanthus* crept like a hardy weed all over our rough parlor, choking the railway and pushing forth its rusty, aromatic cones from between two blocks of shattered mineral. *Azaleas* made a big snow-bed just above the well. The shoulder of the hill waved white with Mediterranean heath. In the crannies of the ledge, and about the spurs of the tall pine, a red flowering stone-plant hung in clusters. Even the low, thorny chaparral was thick with pea-like blossom. Close at the foot of our path, nutmegs prospered, delightful to the sight and smell. At sunrise and again late at night, the scent of the sweet bay-trees filled the cañon, and the down-blowing night wind must have borne it hundreds of feet into the outer air.

All this vegetation, to be sure, was stunted. The madrona was here no bigger than the manzanita; the bay was but a stripling shrub; the very pines, with four or five exceptions, in all our upper cañon were not as tall as myself, or but a little taller; and the most of them came lower than to my waist. For a prosperous forest tree, we must look below where the glen was crowded with green spires. But for flowers and ravishing perfume, we had none to envy; our heap of road metal was thick with bloom like a hawthorn in the front of June; our red, baking angle in the mountain a laboratory of poignant scents. It was an endless wonder to my mind, as I dreamed about the platform, following the progress of the shadows, where the madrona with its leaves, the azalea and *calcanthus* with their blossoms, could find moisture to support such thick, wet, waxy growths, or the bay tree collect the ingredients of its perfume. But there they all grew together, healthy, happy, and happy-making, as though rooted in a fathom of black soil.

Nor was it only vegetable life that prospered. We had indeed few birds, and none that had much of a voice, or anything worthy to be called a song. My morning comrade had a thin chirp, unmusical and monotonous, but friendly and pleasant to hear. He had but one rival, a fellow with an ostentatious cry of near an octave descending, not one note of which properly followed another. This is the only bird I ever knew with a wrong ear. But there was something entralling about his performance; you listened and

listened, thinking each time he must surely get it right. But no; it was always wrong, and always wrong the same way. Yet he seemed proud of his song, delivered it with execution and a manner of his own, and was charming to his mate. A very incorrect, incessant human whistler had thus a chance of knowing how his own music pleased the world. Two great birds, eagles we thought, dwelt at the top of the cañon, among the crags that were printed on the sky. Now and again, but very rarely, they wheeled high over our heads in silence, or with a distant, dying scream; and then, with a fresh impulse, winged fleetly forward, dipped over a hill-top, and were gone. They seemed solemn and ancient things, sailing the blue air,—perhaps coëval with the mountain where they haunted, perhaps emigrants from Rome, where the glad legions may have shouted to behold them on the morn of battle.

But if birds were rare, the place abounded with rattlesnakes—the rattlesnakes' nest, it might have been named. Whenever we brushed among the bushes, our passage woke their angry buzz. One dwelt habitually in the wood-pile, and, sometimes, when we came for fire-wood, thrust up his small head between two logs, and hissed at the intrusion. The rattle has a legendary credit; it is said to be awe-inspiring, and, once heard, to stamp itself forever in the memory. But the sound is not at all alarming. The hum of many insects and the buzz of the wasp convince the ear of danger quite as readily. As a matter of fact, we lived for weeks in Silverado, coming and going, with rattles sprung on every side, and it never occurred to us to be afraid. I used to take sun-baths and do calisthenics in a certain pleasant walk among azalea and calcanthus, the rattles whizzing on every side like spinning-wheels, and the combined hiss or buzz rising louder and angrier at every sudden movement; but I was never in the least impressed, nor ever attacked. It was only toward the end of our stay that a man down at Calistoga, who was expatiating on the terrifying nature of the sound, gave me at last a very good imitation; and it burst on me at once that we dwelt in the very metropolis of deadly snakes, and that the rattle was simply the commonest noise in Silverado. Immediately on our return, we attacked the Hansons on the subject. They had formerly assured us that our cañon was favored, like Ireland, with an entire absence of all poisonous reptiles; but, with the perfect inconsequence of the natural man, they were no sooner found out than they went off at score in the contrary direction, and we were told that in no part of the world did rattlesnakes

attain to such a monstrous bigness as among the warm, flower-covered rocks of Silverado. This is a contribution rather to the natural history of the Hansons than to that of snakes.

One person, however, better served by his instinct, had known the rattle from the first, and that was Chuchu, the dog. No rational creature has ever led an existence more poisoned by terror than that dog's at Silverado. Every whizz of the rattle made him bound. His eyes rolled; he trembled; he would be often wet with sweat. One of our greatest mysteries was his terror of the mountain. A little way above our nook, the azaleas and almost all the vegetation ceased. Dwarf pines, not big enough to be Christmas-trees, grew thinly among loose stones and gravel seams. Here and there a big boulder sat quiescent on a knoll, having paused there till the next rain, in his long slide down the mountain. There was here no ambuscade for the snakes; you could see clearly where you trod; and yet the higher I went the more abject and appealing became Chuchu's terror. He was an excellent master of that composite language in which dogs communicate with men; and he would assure me, on his honor, that there was some peril on the mountain,—appeal to me, by all that I held holy, to turn back,—and at length, finding all was in vain, and that I still persisted, ignorantly foolhardy, he would suddenly whip round and make a bee-line down the slope for Silverado, the gravel showering after him. What was he afraid of? There were, admittedly, brown bears and California lions on the mountain; and a grizzly visited Rupe's poultry-yard not long before, to the unspeakable alarm of Caliban, who dashed out to chastise the intruder and found himself, by moonlight, face to face with such a tartar. Something, at least, there must have been; some hairy, dangerous brute lodged permanently among the rocks a little to the north-west of Silverado, spending his summer thereabout, with wife and family.

Crickets were not wanting; I thought I could make out exactly four of them, each with a corner of his own, who used to make night musical at Silverado. In the matter of voice they far excelled the birds, and their ringing whistle sounded from rock to rock, calling and replying the same thing, as in a meaningless opera. Thus, children in full health and spirits shout together, to the dismay of neighbors; and their idle, happy, deafening vociferations rise and fall like the song of the crickets. I used to sit at night on the platform and wonder why these creatures were so happy, and what was wrong with man that he also did not wind up his days with an hour or two of shouting; but

I suspect that all long-lived animals are solemn. The dogs alone are hardly used by nature, and it seems a manifest injustice for poor Chuchu to die in his teens after a life so shadowed and troubled, continually shaken with alarms, and the tear of elegant sentiment permanently in his eye.

There was another neighbor of ours at Silverado, small but very active, a destructive fellow. This was a black, ugly fly—a bore, the Hansons called him—who lived, by hundreds, in the boarding of our house. He entered by a round hole, more neatly pierced than a man can do it with a gimlet, and he seems to have spent his life in cutting out the interior of the plank, but whether as a dwelling or a store-house, I could never find. When I used to lie in bed in the morning for a rest,—we had no easy chairs in Silverado,—I would hear, hour after hour, the sharp, cutting sound of his labors, and from time to time a dainty shower of sawdust would fall upon the blankets. There lives no more industrious animal than a bore.

And now that I have named to the reader all our animals and insects without exception,—only I find I have forgotten the flies,—he will be able to appreciate the singular privacy and silence of our days. It was not only man who was excluded; animals, the song of birds, the lowing of cattle, the bleating of sheep, clouds, even, and the variations of the weather, were here also wanting; and as day after day the sky was one dome of blue, and the pines below us stood motionless in the still air, so the hours themselves were marked out from each other only by the series of our own affairs and the sun's great period as he ranged westward through the heavens. The two birds cackled awhile in the early morning; all day the water tinkled in the shaft, the bores ground sawdust in the planking of our crazy palace—infinitesimal sounds; and it was only with the return of night that any change would fall on our surroundings, as the four crickets began to flute together in the dark.

Indeed, it would be hard to exaggerate the pleasure that we took in the approach of evening. Our day was not very long, but very tiring. To trip along unsteady planks or wade among shifting stones, to go to and fro for water, to clamber down the glen to the Toll House after meat and letters, to cook, to make fires and beds were all exhausting to the body. Life out-of-doors, besides, under the fierce eye of day, draws largely on the animal spirits. There are certain hours in the afternoon when a man, unless he is in strong health or enjoys a vacant mind, would rather creep into a cool

corner of a house and sit upon the chairs of civilization. About that time the sharp stones, the planks, the upturned boxes of Silverado, began to grow irksome to my body; I set out on that hopeless, never-ending quest for a more comfortable position; I would be fevered and weary of the staring sun; and just then he would begin courteously to withdraw his countenance, the shadows lengthened, the aromatic airs awoke, and an indescribable but happy change announced the coming of the night.

Our nights were never cold, and they were always still, but for one remarkable exception. Regularly, about nine o'clock, a warm wind sprang up and blew, for ten minutes or may be a quarter of an hour, right down the cañon, fanning it well out, airing it as a mother airs the night nursery before the children sleep. As far as I could judge, in the clear darkness of the night, this wind was purely local; perhaps dependent on the configuration of the glen. At least, it was very welcome to the hot and weary squatters; and if we were not abed already, the springing up of this lilliputian valley-wind would often be our signal to retire.

I was the last to go to bed, as I was the first to rise. Many a night I have strolled about the platform, taking a bath of darkness before I slept. The rest would be in bed, and even from the forge I could hear them talking together from bunk to bunk. A single candle in the neck of a pint bottle was their only illumination; and yet the old cracked house seemed literally bursting with the light. It shone keen as a knife through all the vertical chinks, it struck upward through the broken shingles, and through the eastern door and window it fell in a great splash upon the thicket and the overhanging rock. You would have said a conflagration or, at the least, a roaring forge; and behold, it was but a candle. Or perhaps it was yet more strange to see the procession moving bedward around the corner of the house and up the plank that brought us to the bedroom door: under the immense spread of the starry heavens, down in a crevice of the giant mountain, these few human shapes, with their unshielded taper, made so disproportionate a figure in the eye and mind. But the more he is alone with nature, the greater man and his doings bulk in the consideration of his fellow-men. Miles and miles away upon the opposite hill-tops, if there were any hunter belated or any traveler who had lost his way, he must have stood and watched and wondered, from the time the candle issued from the door of the assayer's office till it had mounted the plank and disappeared again into the miners' dormitory.

ECHOES IN THE CITY OF THE ANGELS.

THE tale of the founding of the city of Los Angeles is a tale for verse rather than for prose. It reads like a page out of some new "Earthly Paradise," and would fit well into song such as William Morris has sung.

It is only a hundred years old, however, and that is not time enough for such song to simmer. It will come later with the perfume of century-long summers added to its flavor. Summers century-long? One might say a stronger thing than that of them, seeing that their blossoming never stops, year in nor year out, and will endure as long as the visible frame of the earth.

The twelve devout Spanish soldiers who founded the city named it at their leisure with a long name, musical as a chime of bells. It answered well enough, no doubt, for the first fifty years of the city's life, during which not a municipal record of any sort or kind was written—"Nuestra Señora Reina de los Angeles," "Our Lady the Queen of the Angels"; and her portrait made a goodly companion flag, unfurled always by the side of the flag of Spain.

There is a legend, that sounds older than it is, of the ceremonies with which the soldiers took possession of their new home. They were no longer young. They had fought for Spain in many parts of the Old World, and followed her uncertain fortunes to the New. Ten years some of them had been faithfully serving Church and King in sight of these fair lands, for which they hankered, and with reason.

In those days the soft, rolling, treeless hills and valleys, between which the Los Angeles River now takes its shilly-shallying course seaward, were forest slopes and meadows, with lakes great and small. This abundance of trees, with shining waters playing among them, added to the limitless bloom of the plains and the splendor of the snow-topped mountains, must have made the whole region indeed a paradise.

Navarro, Villavicencia, Rodriguez, Quintero, Moreno, Lará, Banegas, Rosas, and Canero, these were their names: happy soldiers all, honored of their king, and discharged with so royal a gift of lands thus fair.

Looking out across the Los Angeles hills and meadows to-day, one easily lives over again the joy they must have felt. Twenty-three young children there were in the band, poor little waifs of camp and march. What

a "braw flitting" was it for them, away from the drum-beat forever into the shelter of their own sunny home. The legend says not a word of the mothers, except that there were eleven of them, and in the procession they walked with their children behind the men. Doubtless, they rejoiced the most.

The Fathers from the San Gabriel Mission were there, with many Indian neophytes, and Don Felipe, the military governor, with his showy guard of soldiers.

The priests and neophytes chanted. The Cross was set up, the flag of Spain and the banner of Our Lady the Queen of the Angels unfurled, and the new town marked out around a square, a little to the north of the present plaza of Los Angeles.

If communities, as well as individuals, are happy when history finds nothing to record of them, the city of the Queen of the Angels must have been a happy spot during the first fifty years of its life, for not a written record of the period remains, not even a record of grants of land. The kind of grant that these worthy Spanish soldiers and their sons contented themselves with, however, hardly deserved recording,—in fact, was not a grant at all, since its continuance depended entirely on the care a man took of his house and the improvement he put on his land. If he left his house unoccupied or let it fall out of repair, if he left a field uncultivated for two years, any neighbor who saw fit might denounce him, and by so doing acquire a right to the property. This sounds incredible, but all the historical accounts of the time agree on the point. They say:

"The granting authorities could, and were by law required, upon a proper showing of the abandonment, to grant the property to the informant, who then acquired the same and no better rights than those possessed by his predecessor."

This was a premium indeed on staying at home and minding one's business—a premium which amounted to coercion. One would think that there must have been left from those days teeming records of alienated estates, shifted tenures, and angry feuds between neighbor and neighbor. But no evidence remains of such strifes. Life was too simple, and the people were too ignorant.

Their houses were little more than hovels, built of mud, eight feet high, with flat roofs made of reeds and asphaltum. Their fields,

THE FOUNDERS OF LOS ANGELES.

with slight cultivation, produced all they needed; and if anything lacked, the rich vineyards, wheat-fields, and orchards of the San Gabriel Mission lay only twelve miles away. These vineyards, orchards, and granaries, so near at hand, must have been sore temptation to idleness. Each head of a family had been

presented, by the paternal Spanish King, with "two oxen, two mules, two mares, two sheep, two goats, two cows, one calf, an ass, and one hoe." For these they were to pay in such small installments as they were able to spare out of their pay and rations, which were still continued by the generous King.

In a climate in which flowers blossom winter and summer alike, man may bask in sun all the year round if he chooses. Why, then, should those happy Spanish soldiers work? Even the King had thought it unnecessary, it seems, to give them any implements of labor except "one hoe." What could a family do, in the way of work, with "one hoe"? Evidently, they did not work, neither they nor their sons, nor their sons' sons after them. For, half a century later, they were still living a life of almost incredible ignorance, redeemed only by its simplicity and childlike adherence to the old religious observances.

Many of those were beautiful. As late as 1830 it was the custom throughout the town, in all the families of the early settlers, for the oldest member of the family—oftenest it was a grandfather or grandmother—to rise every morning at the rising of the morning star, and at once to strike up a hymn. At the first note every person in the house would rise, or sit up in bed, and join in the song. From house to house, street to street, the singing spread; and the volume of musical sound swelled, until it was as if the whole town sang.

The hymns were usually invocations to the Virgin, to Jesus, or to some saint. The opening line of many of them was,

"Rejoice, O Mother of God."

A manuscript copy of one of these old morning songs I have seen, and had the good fortune to win a literal translation of part of it, in the soft, Spanish-voiced, broken English, so pleasant to hear. The first stanza is the chorus, and was repeated after each of the others:

CHORUS.—"Come, O sinners,
Come, and we will sing
Tender hymns
To our refuge.

"Singers at dawn,
From the heavens above,
People all regions,
Gladly we too sing.

"Singing harmoniously,
Saying to Mary,
O beautiful Queen,
Princess of Heaven:

"Your beautiful head
Crowned we see;
The stars are adorning
Your beautiful hair;

"Your eyebrows are arched,
Your forehead serene;
Your face turned always
Looks toward God;

"Your eyes' radiance
Is like beautiful stars;
Like a white dove,
You are true to your spouse."

Each of these stanzas was sung first alone by the aged leader of the family choir. Then the rest repeated it; then all joined in the chorus.

It is said that there are still to be found, in lonely country regions in California, Mexican homes in which these sweet and holy "songs before sunrise" are sung.

Looking forward to death, the greatest anxiety of these simple souls was to provide themselves with a priest's cast-off robe to be buried in. These were begged or bought as the greatest of treasures; kept in sight, or always at hand, to remind them of approaching death. When their last hour drew near, this robe was flung over their breasts, and they died happy, their stiffening fingers grasping its folds. The dead body was wrapped in it, and laid on the mud floor of the house, a stone being placed under the head to raise it a few inches. Thus the body must lie till the time of burial. Around it, day and night, squatted, praying and singing, friends who wished not only to show their affection for the deceased, but to win indulgences for themselves; every prayer said thus, by the side of a corpse, having a special and specified value.

A strange demarkation between the sexes

AN INDIAN STIRRUP.

THE BURIAL OF A FOUNDER.

was enforced in these ceremonies. If it were a woman who lay dead, only women might kneel and pray and watch with her body; if a man, the circle of watchers must be exclusively of men.

A rough box, of boards nailed together, was the coffin. The body, rolled in the old robe whose virtues had so comforted its last conscious moments, was carried to the grave on a board, in the center of a procession of

friends chanting and singing. Not until the last moment was it laid in the box.

The first attempts to introduce more civilized forms of burial met with opposition, and it was only by slow degrees that changes were wrought. A Frenchman, who had come from France to Los Angeles, by way of the Sandwich Islands, bringing a store of sacred ornaments and trinkets, and had grown rich by sale of them to the devout, owned a spring-

wagon, the only one in the country. By dint of entreaty, the people were finally prevailed upon to allow their dead to be carried in this wagon to the burial-place. For a long time, however, they refused to have horses put to the wagon, but drew it by hand all the way; women drawing women, and men drawing men, with the same scrupulous partition of the sexes as in the earlier ceremonies. The picture must have been a strange one, and not without pathos,—the wagon, wound and draped with black and white, drawn up and down the steep hills by the band of silent mourners.

The next innovation was the introduction of stately catafalques for the dead to repose on, either in house or church, during the interval between their death and burial. There had been brought into the town a few old-fashioned high-post, canopied bedsteads, and from these the first catafalques were made. Gilded, decorated with gold and silver lace, and hung with white and black draperies, they made a by no means insignificant show, which doubtless went far to reconcile people's minds to the new methods.

In 1838 there was a memorable funeral of a woman over a hundred years old. Fourteen old women watched with her body, which lay stretched on the floor, in the ancient fashion, with only a stone beneath the head. The youngest of these watchers was eighty-five. One of them, Tomasa Camera by name, was herself over a hundred years old. Tomasa was infirm of foot, so they propped her with pillows in a little cart, and drew her to the house that she might not miss of the occasion. All night long, the fourteen squatted or sat on rawhides spread on the floor, and sang, and prayed, and smoked: as fine a wake as was ever seen. They smoked cigarettes, which they rolled on the spot, out of corn-husks slit fine for the purpose, there being at that day in Los Angeles no paper fit for cigarettes.

Outside this body-guard of aged women knelt a circle of friends and relatives, also chanting, praying, and smoking. In this outer circle, any one might come and go at pleasure; but into the inner ring of the watching none must come, and none must go out of it till the night was spent.

With the beginning of the prosperity of the City of the Angels came the end of its primeval peace. Spanish viceroys, Mexican alcaldes and governors, United States commanders, naval and military, followed on each other's heels, with or without frays, ruling California through a succession of tumultuous years. Greedy traders from all parts of the world added their rivalries and interventions

to the civil and military disputation. In the general anarchy and confusion, the peaceful and peace-loving Catholic fathers were robbed of their lands, their converts were scattered, their industries broken up. Nowhere were these uncomfortable years more uncomfortable than in Los Angeles. Revolts, occupations, surrenders, retakings, and resurrenders kept the little town in perpetual ferment. Disorders were the order of the day and of the night, in small matters as well as in great.

The Californian fought as impetuously for his old way of dancing as for his political allegiance. There are comical traditions of the men's determination never to wear long trousers to dances; nor to permit dances to be held in houses or halls, it having been the practice always to give them in outdoor booths or bowers with lattice-work walls of sycamore poles lashed together by thongs of rawhide.

Outside these booths the men sat on their horses looking in at the dancing, which was chiefly done by the women. An old man standing in the center of the inclosure directed the dances. Stopping in front of the girl whom he wished to have join the set, he clapped his hands. She then rose and took her place on the floor: if she could not dance, or wished to decline, she made a low bow and resumed her seat.

To look in on all this was great sport. Sometimes, unable to resist the spell, a man would fling himself off his horse, dash into the inclosure, seize a girl by the waist, whirl around with her through one dance, then out again and into the saddle, where he sat, proudly aware of his vantage. The decorations of masculine attire at this time were such as to make riding a fine show. Around the crown of the broad-brimmed sombrero was twisted a coil of gold or silver cord; over the shoulders was flung, with ostentatious carelessness, a short cloak of velvet or brocade; the waistcoats were embroidered in gold, silver, or gay colors; so also were the knee-breeches, leggings, and stockings. Long silken garters, with ornamented tassels at the ends, were wound round and round to hold the stockings in place. Even the cumbrous wooden stirrups were carved in elaborate designs. No wonder that men accustomed to such braveries as these saw ignominy in the plain American trousers.

They seem to have been a variety of Centaur, these early Californian men. They were seldom off their horses except to eat and sleep. They mounted, with jingling silver spur and glittering bridle, for the shortest distances, even to cross a plaza. They paid long visits on horseback, without dismounting. Clattering up to the window or door-sill,

halting, throwing one knee over the crupper, the reins lying loose, they sat at ease, far more at ease than in a house. Only at church, where the separation was inevitable, would they be parted from their horses. They turned

Los Angeles, the same merry outdoor party broke every window and door in the building, and put a stop to the festivity. They persisted in taking this same summary vengeance on occasion after occasion, until, finally, any

THE OLD MEXICAN WOMAN.

the near neighborhood of a church on Sunday into a sort of picket-ground, or horse-trainers' yard, full of horse-posts and horses; and the scene was far more like a horse fair than like an occasion of holy observance. There seems to have been a curious mixture of reverence and irreverence in their natures. They confessed sins and underwent penances with the simplicity of children; but when, in 1821, the church issued an edict against that "escandalosissima" dance, the waltz, declaring that whoever dared to dance it should be excommunicated, the merry sinners waltzed on only the harder and faster, and laughed in their priests' faces. And when the advocates of decorum, good order, and indoor dancing gave their first ball in a public hall in

person wishing to give a ball in his own house was forced to surround the house by a cordon of police to protect it.

The City of the Angels is a prosperous city now. It has business thoroughfares, blocks of fine stone buildings, hotels, shops, banks, and is growing daily. Its outlying regions are a great circuit of gardens, orchards, vineyards, and corn-fields, and its suburbs are fast filling up with houses of a showy though cheap architecture. But it has not yet shaken off its past. A certain indefinable, delicious aroma from the old, ignorant, picturesque times lingers still, not only in by-ways and corners, but in the very centers of its newest activities.

Mexican women, their heads wrapped in black shawls, and their bright eyes peering

CROWNING THE FAVORITE.

out between the close-gathered folds, glide about everywhere; the soft Spanish speech is continually heard; long-robed priests hurry to and fro; and at each dawn ancient, jangling bells from the Church of the Lady of the Angels ring out the night and in the day. Venders of strange commodities drive in stranger vehicles up and down the streets:

antiquated carts piled high with oranges, their golden opulence contrasting weirdly with the shabbiness of their surroundings and the evident poverty of their owner; close following on the gold of one of these, one has sometimes the luck to see another cart, still more antiquated and rickety, piled high with something—he cannot imagine what—terra-

cotta red in grotesque shapes ; it is fuel—the same sort which Villavicencia, Quintero, and the rest probably burned, when they burned any, a hundred years ago. It is the roots and root-shoots of manzanita and other shrubs. The colors are superb—terra-cotta reds, shading up to flesh pink, and down to dark mahogany ; but the forms are grotesque beyond comparison : twists, querls, contortions, a boxful of them is an uncomfortable presence in one's room, and putting them on the fire is like cremating the vertebræ and double teeth of colossal monsters of the Pterodactyl period.

The present plaza of the city is near the original plaza marked out at the time of the first settlement ; the low adobe house of one of the early governors stands yet on its east side, and is still a habitable building.

The plaza is a dusty and dismal little place, with a parsimonious fountain in the center, surrounded by spokes of thin turf, and walled at its outer circumference by a row of tall Monterey cypresses, shorn and clipped into the shape of huge croquettes or brad-awls standing broad end down. At all hours of the day idle boys and still idler men are to be seen basking on the fountain's stone rim, or lying, face down, heels in air, in the triangles of shade made by the cypress croquettes. There is in Los Angeles much of this ancient and ingenious style of shearing and compressing foliage into unnatural and distorted shapes. It comes, no doubt, of lingering reverence for the traditions of what was thought beautiful in Spain centuries ago ; and it gives to the town a certain quaint and foreign look, in admirable keeping with its irregular levels, zigzag, toppling precipices, and houses in tiers one above another.

One comes sometimes abruptly on a picture which seems bewilderingly un-American, of a precipice wall covered with bird-cage cottages, the little, paling-walled yard of one jutting out in a line with the chimney-tops of the next one below, and so on down to the street at the base of the hill. Wooden staircases and bits of terrace link and loop the odd little perches together ; bright green pepper-trees, sometimes tall enough to shade two or three tiers of roofs, give a graceful plumed draping at the sides, and some of the steep fronts are covered with bloom, in solid curtains, of geranium, sweet alyssum, heliotrope, and ivy. These terraced eyries are not the homes of the rich : the houses are lilliputian in size, and of cheap quality ; but they do more for the picturesqueness of the city than all the large, fine, and costly houses put together.

Moreover, they are the only houses that

command the situation, possess distance and a horizon. From some of these little ten-by-twelve flower-beds of homes is a stretch of view which makes each hour of the day a succession of changing splendors. The snowy peaks of San Bernardino and San Jacinto in the east and south ; to the west, vast open country, billowy green with vineyard and orchard ; beyond this, in clear weather, shining glints and threads of ocean, and again beyond, in the farthest outing, hill-crowned islands, misty blue against the sky. No one knows Los Angeles who does not climb to these sunny outlying heights and roam and linger on them many a day. Nor, even thus lingering, will any one ever know more of Los Angeles than its lovely outward semblances and mysterious suggestions, unless he have the good fortune to win past the barrier of proud, sensitive, tender reserve, behind which is hid the life of the few remaining survivors of the old Spanish and Mexican régime.

Once past this, he gets glimpses of the same stintless hospitality and immeasurable courtesy which gave to the old Franciscan establishments a world-wide fame, and to the society whose tone and customs they created an atmosphere of simple-hearted joyousness and generosity never known by any other communities on the American continent.

In houses whose doors seldom open to English-speaking people, there are rooms full of relics of that fast vanishing past. Strongholds also of a religious faith, almost as obsolete, in its sort and degree, as are the garments of the aged creatures who are peacefully resting their last days on its support.

In one of these houses, in a poverty-stricken but gayly decorated little bedroom, hangs a small oil painting, a portrait of Saint Francis de Paula. It was brought from Mexico, fifty-five years ago, by the woman who still owns it, and has knelt before it and prayed to it every day of the fifty-five years. Below it is a small altar covered with flowers, candlesticks, vases, and innumerable knickknacks. A long string under the picture is hung full of tiny gold and silver votive offerings from persons who have been miraculously cured in answer to prayers made to the saint. Legs, arms, hands, eyes, hearts, heads, babies, dogs, horses,—no organ, no creature, that could suffer is unrepresented. The old woman has at her tongue's end the tale of each one of these miracles. She is herself a sad cripple ; her feet swollen by inflammation, which for many years has given her incessant torture and made it impossible for her to walk, except with tottering steps, from room to room, by help of a staff. This, she says, is the only

thing her saint has not cured. It is her "cross," her "mortification of the flesh," "to take her to heaven." "He knows best." As she speaks, her eyes perpetually seek the picture, resting on it with a look of ineffable adoration. She has seen tears roll down its cheeks more than once, she says; and it often smiles on her when they are alone. When strangers enter the room she can always tell, by its expression, whether the saint is or is not pleased with them, and whether their prayers will be granted. She was good enough to remark that he was very glad to see us; she was sure of it by the smile in his eye. He had wrought many beautiful miracles for her. Nothing was too trivial for his sympathy and help. Once, when she had broken a vase in which she had been in the habit of keeping flowers on the altar, she took the pieces in her hands, and standing before him, said:

"You know you will miss this vase. I always put your flowers in it, and I am too poor to buy another. Now do mend this for me. I have nobody but you to help me." And the vase grew together again whole while she was speaking. In the same way he mended for her a high glass flower-case which stood on the altar.

Thus she jabbered away breathlessly in Spanish, almost too fast to be followed. Sitting in a high chair, her poor distorted feet propped on a cushion, a black silk handkerchief wound like a turban around her head, a plaid ribosa across her shoulders, contrasting sharply with her shabby wine-colored gown, her hands clasped around a yellow staff, on which she leaned as she bent forward in her eager speaking, she made a study for an artist.

She was very beautiful in her youth, she said; her cheeks so red that people thought they were painted; and she was so strong that she was never tired; and when, in the first year of her widowhood, a stranger came to her "with a letter of recommendation" to be her second husband, and before she had time to speak had fallen on his knees at her feet, she seized him by the throat and, toppling him backward, pinned him against the wall till he was black in the face. And her sister came running up in terror, imploring her not to kill him. But all that strength is gone now, she says sadly; her memory also. Each day, as soon as she has finished her prayers, she has to put away her rosary in a special place, or else she forgets that the prayers have been said. Many priests have desired to possess her precious miracle-working saint; but never till she dies will it leave her bedroom. Not a week passes without

some one's arriving to implore its aid. Sometimes the deeply distressed come on their knees all the way from the gate before the house, up the steps, through the hall, and into her bedroom. Such occasions as these are to her full of solemn joy, and no doubt, also, of a secret exultation whose kinship to pride she does not suspect.

In another unpretending little adobe house, not far from this Saint Francis shrine, lives the granddaughter of Moreno, one of the twelve Spanish soldiers who founded the city. She speaks no word of English; and her soft black eyes are timid, though she is the widow of a general, and, in the stormy days of the City of the Angels, passed through many a crisis of peril and adventure. Her house is full of curious relics, which she shows with a gentle, half-amused courtesy. It is not easy for her to believe that any American can feel real reverence for the symbols, tokens, and relics of the life and customs which his people destroyed. In her mind Americans remain to-day as completely foreigners as they were when her husband girded on his sword and went out to fight them, forty years ago. Many of her relics have been rescued at one time or another from plunderers of the missions. She has an old bronze kettle which once held holy water at San Fernando; an incense cup and spoon, and massive silver candlesticks; cartridge-boxes of leather, with Spain's ancient seal stamped on them; a huge copper caldron and scales from San Gabriel; a bunch of keys of hammered iron, locks, scissors, reaping-hooks, shovels, carding-brushes for wool and for flax; all made by the Indian workmen in the missions. There was also one old lock, in which the key was rusted fast and immovable, seemed to me fuller of suggestion than anything else there of the sealed and ended past to which it had belonged; and a curious little iron cannon, in shape like an ale mug, about eight inches high, with a hole in the side and in the top, to be used by setting it on the ground and laying a trail of powder to the opening in the side. This gave the Indians great delight. It was fired at the times of church festivals, and in seasons of drought to bring rain. Another curious instrument of racket was the *matraca*, a strip of board with two small swinging iron handles so set in it that, in swinging back and forth, they hit iron plates. In the time of Lent, when all ringing of bells was forbidden, these were rattled to call the Indians to church. The noise one of them can make when vigorously shaken is astonishing. In crumpled bundles, their stiffened meshes opening out reluctantly, were two curious rush-woven nets which had been used by Indian

women fifty years ago in carrying burdens. Similar nets, made of twine, are used by them still. Fastened to a leather strap or band passing around the forehead, they hang down behind far below the waist, and when filled out to their utmost holding capacity are so heavy that the poor creatures bend nearly double beneath them. But the women stand as uncomplainingly as camels while weight after weight is piled in; then, slipping the band over their heads, they adjust the huge burden and set off at a trot.

"This is the squaw's horse," said an Indian woman in the San Jacinto Valley one day, tapping her forehead and laughing good-naturedly, when the shop-keeper remonstrated with her husband who was heaping article after article, and finally a large sack of flour, on her shoulders; "squaw's horse very strong."

The original site of the San Gabriel Mission was a few miles to the east of the City of the Angels. Its lands are now divided into ranches and colony settlements, only a few acres remaining in the possession of the church. But the old chapel is still standing in a fair state of preservation, used for the daily services of the San Gabriel parish; and there are in its near neighborhood a few crumbling adobe hovels left, the only remains of the once splendid and opulent mission. In one of these lives a Mexican woman, eighty-two years old, who for more than half a century has washed and mended the priests' laces, repaired the robes, and remodeled the vestments of San Gabriel. She is worth crossing the continent to see: all white from head to foot, as if bleached by some strange gramarye; white hair, white skin, blue eyes faded nearly to white; white cotton clothes, ragged and not over clean, yet not a trace of color in them; a white linen handkerchief, delicately embroidered by herself, always tied loosely around her throat. She sits on a low box, leaning against the wall, with three white pillows at her back, her feet on a cushion on the ground; in front of her, another low box, on this a lace-maker's pillow, with knotted fringe stretched on it; at her left hand a battered copper caldron holding hot coals to warm her fingers and to light her cigarettes. A match she will never use; and she has seldom been without a cigarette in her mouth since she was six years old. On her right hand is a chest filled with her treasures,—rags of damask, silk, velvet, lace, muslin, ribbon, artificial flowers, flosses, worsteds, silks on spools; here she sits day in, day out, making cotton fringes and, out of shreds of silk, tiny embroidered scapulars, which she sells to all devout and charitable people of the region. She also teaches the children of

the parish to read and to pray. The walls of her hovel are papered with tattered pictures, including many gay-colored ones, taken off tin cans, their flaunting signs reading drolly,—*"Perfection Press Mackerel, Boston, Mass.," "Charm Baking Powder,"* and *"Knowlton's Inks,"* alternating with Toledo Blades and clipper-ship advertisements. She finds these of great use in both teaching and amusing the children. The ceiling, of canvas, black with smoke, and festooned with cobwebs, sags down in folds, and shows many a rent. When it rains, her poor little place must be drenched in spots. One end of the room is curtained off with calico; this is her bed-chamber. At the other end is a raised dais, on which stands an altar, holding a small statuette of the Infant Jesus. It is a copy in wood of the famous Little Jesus of Atoches in Mexico, which is worshiped by all the people in that region. It has been her constant companion and protector for fifty years. Over the altar is a canopy of calico, decorated with paper flowers, whirligigs, doves, and little gourds; with votive offerings, also, of gold or silver, from grateful people helped or cured by the Little Jesus. On the statuette's head is a tiny hat of real gold, and a real gold scepter in the little hand; the breast of its fine white linen cambric gown is pinned by a gold pin. It has a wardrobe with as many changes as an actor. She keeps these carefully hid away in a small camphor-wood trunk, but she brought them all out to show to us.

Two of her barefooted, ragged little pupils scampered in as she was unfolding these gay doll's clothes. They crowded close around her knees and looked on, with open-mouthed awe and admiration: a, purple velvet cape with white fringe for feast days; capes of satin, of brocade; a dozen shirts of finest linen, embroidered or trimmed with lace; a tiny plume not more than an inch long, of gold, exquisitely carved,—this was her chief treasure. It looked beautiful in his hat, she said, but it was too valuable to wear often. Hid away here among the image's best clothes were more of the gold votive offerings it had received: one a head cut out of solid gold; several rosaries of carved beads, silver and gold. Spite of her apparently unbounded faith in the Little Jesus's power to protect her and himself, the old woman thought it wiser to keep these valuables concealed from the common gaze.

Holding up a silken pillow, some sixteen inches square, she said:

"You could not guess with what that pillow is filled."

We could not, indeed. It was her own

A STREET IN LOS ANGELES.

hair. With pride she asked us to take it in our hands, that we might see how heavy it was. For sixteen years she had been saving it, and it was to be put under her head in her coffin. The friend who had taken us to her home exclaimed on hearing this, "And I can tell you it was beautiful hair. I recollect it forty-five years ago, bright brown, and down to her ankles, and enough of it to roll herself up in." The old woman nodded and laughed, much pleased at this compliment. She did not know why the Lord had preserved her life so long, she said; but she was very happy. Her nieces had asked her to go and live with them in Santa Ana; but she could not go away from San Gabriel. She told them that there was plenty of water in

the ditch close by her door, and that God would take care of the rest, and so he had; she never wants for anything; not only is she never hungry herself, but she always has food to give away. No one would suppose it; but many people come to eat with her in her house. God never forgets her one minute. She is very happy. She is never ill; or if she is, she has two remedies, which, in all her life, have never failed to cure her, and they cost nothing: saliva and ear-wax. For a pain, the sign of the cross, made with saliva on the spot which is in pain, is instantaneously effective; for an eruption of any skin disorder, the application of ear-wax is a sure cure. She is very glad to live so close to the church; the father has promised her this

room as long as she lives; when she dies, it will be no trouble, he says, to pick her up and carry her across the road to the church. In a gay painted box, standing on two chairs, so as to be kept from the dampness of the bare earth floor, she cherishes the few relics of her better days: a shawl and a ribosa of silk, and two gowns, one of black silk, one of dark blue satin. These are of the fashions of twenty years ago; they were given to her by her husband. She wears them now when she goes to church; so it is as if she were "married again," she says, and is "her husband's work still." She seems to be a character well known and held in some regard by the clergy of her church. When the bishop returned a few years ago from a visit to Rome, he brought her a little gift, a carved figure of a saint. She asked him if he could not get for her a bit of the relics of Saint Viviano.

"Oh, let alone!" he replied; "give you relics? Wait a bit; and as soon as you die, I'll have you made into relics yourself."

She laughed as heartily, telling this somewhat unecclesiastical rejoinder, as if it had been made at some other person's expense.

In the marvelously preserving air of California, added to her own contented temperament, there is no reason why this happy old lady should not last, as some of her Indian neighbors have, well into a second century. Before she ceases from her peaceful, pitiful little labors, new generations of millionaires in her country will no doubt have piled up bigger fortunes than this generation ever dreams of, but there will not be a man of them all so rich as she.

In the western suburbs of Los Angeles is a low adobe house, built after the ancient style, on three sides of a square, surrounded by orchards, vineyards, and orange groves, and looking out on an old-fashioned garden, in which southernwood, rue, lavender, mint, marigolds, and gillyflowers hold their own bravely, growing in straight and angular beds among the newer splendors of verbenas, roses, carnations, and geraniums. On two sides of the house runs a broad porch, where stand rows of geraniums and chrysanthemums growing in odd-shaped earthen pots. Here may often be seen a beautiful young Mexican woman, flitting about among the plants, or sporting with a superb St. Bernard dog. Her clear olive skin, soft brown eyes, delicate sensitive nostrils, and broad smiling mouth, are all of the Spanish madonna type; and when her low brow is bound, as is often her wont, by turban folds of soft brown or green gauze, her face becomes a picture indeed. She is the young wife of a gray-headed Mexican señor, of whom—by his own most

gracious permission—I shall speak by his familiar name, Don Antonio. Whoever has the fortune to pass as a friend across the threshold of this house, finds himself transported, as by a miracle, into the life of a half century ago. The rooms are ornamented with fans, shells, feather and wax flowers, pictures, saints' images, old laces and stuffs, in the quaint gay Mexican fashion. On the day when I first saw them, they were brilliant with bloom. In every one of the deep window-seats stood a cone of bright flowers, its base made by large white datura blossoms, their creamy whorls all turned outward, making a superb decoration. I went for but a few moments' call. I staid three hours, and left, carrying with me bewildering treasures of pictures of the olden time.

Don Antonio speaks little English; but the señora knows just enough of the language to make her use of it delicious, as she translates for her husband. It is an entrancing sight to watch his dark, weather-beaten face, full of lightning changes as he pours out torrents of his nervous, eloquent Spanish speech; watching his wife intently, hearkening to each word she uses, sometimes interrupting her urgently with "No, no; that is not it"; for he well understands the tongue he cannot or will not use for himself. He is sixty-five years of age, but he is young; the best waltzer in Los Angeles to-day; his eye keen, his blood fiery quick; his memory like a burning-glass bringing into sharp light and focus a half century as if it were a yesterday. Full of sentiment, of an intense and poetic nature, he looks back to the lost empire of his race and people on the California shores with a sorrow far too proud for any antagonisms or complaints. He recognizes the inexorableness of the laws under whose workings his nation is slowly, surely giving place to one more representative of the age. Intellectually he is in sympathy with progress, with reform, with civilization at its utmost; he would not have had them stayed, or changed, because his people could not keep up, and were not ready. But his heart is none the less saddened and lonely.

This is probably the position and point of view of most cultivated Mexican men of his age. The suffering involved in it is inevitable. It is part of the great, unreckoned price which must always be paid for the gain the world gets, when the young and strong supersede the old and weak.

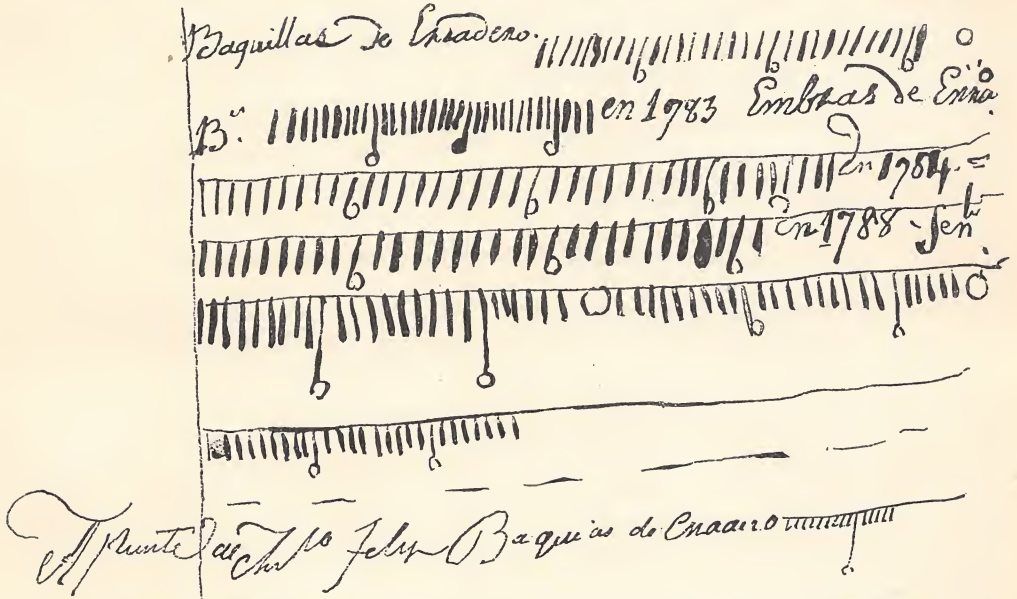

A sunny little south-east corner room in Don Antonio's house is full of the relics of the time when he and his father were foremost representatives of ideas and progress in the City of the Angels, and taught the first

school that was kept in the place: This was nearly a half century ago. On the walls of the room still hang maps and charts which they used; and carefully preserved, with the tender reverence of which only poetic natures are capable, are still to be seen there the old atlases, primers, catechisms, grammars, reading-books, which meant toil and trouble to the merry, ignorant children of the merry and ignorant people of that time.

The leathern covers of the books are thin and frayed by long handling; the edges of

tables, music, and bundles of records of the branding of cattle at the San Gabriel Mission, are among the curiosities of this room. The music of the first quadrilles ever danced in Mexico is here: a ragged pamphlet, which, no doubt, went gleeful rounds in the City of the Angels for many a year. It is a merry music, simple in melody, but with an especial quality of light-heartedness, suiting the people who danced to it.

There are also in the little room many relics of a more substantial sort than tattered

COPY OF A PAGE FROM A REGISTER OF BRANDED CATTLE. EVERY TENTH ONE BELONGED TO THE CHURCH.

the leaves worn down as if mice had gnawed them: tattered, loose, hanging by yellow threads, they look far older than they are, and bear vivid record of the days when books were so rare and precious that each book did doubled and redoubled duty, passing from hand to hand and house to house. It was on the old Lancaster system that Los Angeles set out in educating its children; and here are still preserved the formal and elaborate instructions for teachers and schools on that plan; also volumes of Spain's laws for military judges in 1781, and a quaint old volume called "Secrets of Agriculture, Fields and Pastures," written by a Catholic father in 1617, reprinted in 1781, and held of great value in its day as a sure guide to success with crops. Accompanying it was a chart, a perpetual circle, by which might be foretold, with certainty, what years would be barren and what ones fruitful.

Almanacs, histories, arithmetics, dating back to 1750, drawing-books, multiplication-

papers and books: a branding-iron and a pair of handcuffs from the San Gabriel Mission; curiously decorated clubs and sticks used by the Indians in their games; boxes of silver rings and balls made for decorations of bridles and on leggings and knee-breeches. The place of honor in the room is given, as well it might be, to a small cannon, the first cannon brought into California. It was made in 1717, and was brought by Father Junipero Serra to San Diego in 1769. Afterward it was given to the San Gabriel Mission, but it still bears its old name, "San Diego." It is an odd little arm, only about two feet long, and requiring but six ounces of powder. Its swivel is made with a rest to set firm in the ground. It has taken many long journeys on the backs of mules, having been in great requisition in the early mission days for the firing of salutes at festivals and feasts.

Don Antonio was but a lad when his father's family removed from the city of Mexico to California. They came in one of

the many unfortunate colonies sent out by the Mexican Government, during the first years of the secularization period, having had a toilsome and suffering two months, going in wagons from Mexico to San Blas, then a tedious and uncomfortable voyage of several weeks from San Blas to Monterey, where they arrived only to find themselves deceived and disappointed in every particular, and surrounded by hostilities, plots, and dangers on all sides. So great was the antagonism to them that it was at times difficult for a colonist to obtain food from a Californian. They were arrested on false pretenses, thrown into prison, shipped off like convicts from place to place, with no one to protect them or plead their cause. Revolution succeeded upon revolution, and it was a most unhappy period for all refined and cultivated persons who had joined the colony enterprises. Young men of education and breeding were glad to earn their daily bread by any menial labor that offered. Don Antonio and several of his young friends, who had all studied medicine together, spent the greater part of a year in making shingles. The one hope and aim of most of them was to earn money enough to get back to Mexico. Don Antonio, however, seems to have had more versatility and capacity than his friends, for he never lost courage; and it was owing to him that at last his whole family gathered in Los Angeles and established a home there. This was in 1836. There were then only about eight hundred people in the pueblo, and the customs, superstitions, and ignorances of the earliest days still held sway. The missions were still rich and powerful, though the confusions and conflicts of their ruin had begun. At this time, the young Antonio, being quick at accounts and naturally ingenious at all sorts of mechanical crafts, found profit as well as pleasure in journeying from mission to mission, sometimes spending two or three months in one place, keeping books, or repairing silver and gold ornaments.

The blow-pipe which he made for himself at that time his wife exhibits now with affectionate pride, and there are few things she enjoys better than translating, to an eager

TRACING FROM A MISSION CASH-BOOK: A CIPHER STANDS FOR ONE MEXICAN SILVER DOLLAR, A HALF CIPHER STANDS FOR HALF A DOLLAR, AND A STROKE STANDS FOR A QUARTER.

listener, his graphic stories of the incidents and adventures of that portion of his life.

While he was at the San Antonio Mission, a strange thing happened. It is a good illustration of the stintless hospitality of those old missions, that staying there at that time were a notorious gambler and a celebrated juggler who had come out in the colony from Mexico. The juggler threatened to turn the gambler into a crow; the gambler, after watching his tricks for a short time, became frightened, and asked young Antonio, in serious good faith, if he did not believe the juggler had made a league with the devil. A few nights afterward, at midnight, a terrible noise was heard in the gambler's room. He was found in convulsions, foaming at the mouth, and crying:

"Oh, father! father! I have got the devil inside of me! Take him away."

The priest dragged him into the chapel, showered him with holy water, and exorcised the devil, first making the gambler promise to leave off his gambling forever. All the rest of the night the rescued sinner spent in the chapel, praying and weeping. In the morning, he announced his intention of becoming a priest, and began his studies at once. These he faithfully pursued for a year, leading all the while a life of great devotion. At the end of that time, preparations were made for his ordination at San José. The day was set, the hour came: he was in the sacristy, had put on the sacred vestments, and was just going toward the church door, when he fell to the floor, dead. Soon after

this the juggler was banished from the country, trouble and disaster having everywhere followed on his presence.

On the first breaking out of hostilities between California and the United States, Don Antonio took command of a company of Los Angeles volunteers, to repel the intruders. By this time he had attained a prominent position in the affairs of the pueblo; had been alcalde and, under Governor Michelorena, inspector of public works. It was like the fighting of children, the impetuous attempts that heterogeneous little bands of Californians, here and

SWIVEL GUN. FIRST CANNON TAKEN INTO CALIFORNIA.

A VERANDA IN LOS ANGELES.

there, made to hold their country. They were plucky from first to last, for they were everywhere at a disadvantage, and fought on, quite in the dark as to what Mexico meant to do about them—whether she might not any morning deliver them over to the enemy. Of all Don Antonio's graphic narratives of the olden time, none is more interesting than those which describe his adventures during the days of this contest. On one of the first approaches made by the Americans to Los Angeles, he went out with his little haphazard company of men and boys to meet them. He had but one cannon, a small one, tied by ropes on a cart axle. He had but one small keg of powder which was good for anything; all the rest was bad, would merely go off "pouf,

pouf," the señora said, and the ball would pop down near the mouth of the cannon. With this bad powder he fired his first shots. The Americans laughed; this is child's play, they said, and pushed on closer. Then came a good shot, with the good powder, tearing into their ranks and knocking them right and left; another, and another. "Then the Americans began to think, these are no pouf balls; and when a few more were killed, they ran away and left their flag behind them. And if they had only known it, the Californians had only one more charge left of the good powder, and the next minute it would have been the Californians that would have had to run away themselves," merrily laughed the señora as she told the tale.

This captured flag, with important papers, were intrusted to Don Antonio to carry to the Mexican head-quarters at Sonora. He set off with an escort of soldiers, his horse decked with silver trappings, his sword, pistols—all of the finest: a proud beginning of a journey destined to end in a different fashion. It was in winter time; cold rains were falling; by night he was drenched to the skin, and stopped at a friendly Indian's tent to change his clothes. Hardly had he got them off when the sound of horses' hoofs was heard. The Indian flung himself down, put his ear to the ground, and exclaimed, "Americanos! Americanos!" Almost in the same second they were at the tent's door. As they halted, Don Antonio, clad only in his drawers and stockings, crawled out at the back of the tent, and creeping on all fours reached a tree up which he climbed, and sat safe hidden in the darkness among its branches listening, while his pursuers cross-questioned the Indian, and at last rode away with his horse. Luckily, he had carried into the tent the precious papers and the captured flag: these he intrusted to an Indian to take to Sonora, it being evidently of no use for him to try to cross the country thus closely pursued by his enemies.

All night he lay hidden; the next day he walked twelve miles across the mountains to an Indian village where he hoped to get a horse. It was dark when he reached it. Cautiously he opened the door of the hut of one whom he knew well. The Indian was preparing poisoned arrows: fixing one on the string and aiming at the door, he called out, angrily, "Who is there?"

"It is I, Antonio."

"Don't make a sound," whispered the Indian, throwing down his arrow, springing to the door, coming out and closing it softly. He then proceeded to tell him that the Americans had offered a reward for his head, and that some of the Indians in the rancharia were ready to betray or kill him. While they were yet talking, again came the sound of the Americans' horses' hoofs galloping in the distance. This time there seemed no escape. Suddenly Don Antonio, throwing himself on his stomach, wriggled into a cactus patch near by. Only one who has seen California cactus thickets can realize the desperateness of this act. But it succeeded. The Indian threw over the cactus plants an old blanket and some refuse stalks and reeds; and there once more, within hearing of all his baffled pursuers said, the hunted man lay, safe, thanks to Indian friendship. The crafty Indian assented to all the Americans proposed, said that Don Antonio would be sure to be caught in a few days, advised them to search in a certain rancharia

which he described, a few miles off, and in an opposite direction from the way in which he intended to guide Don Antonio. As soon as the Americans had gone, he bound up Antonio's feet in strips of raw hide, gave him a blanket and an old tattered hat, the best his stores afforded, and then led him by a long and difficult trail to a spot high up in the mountains where the old women of the band were gathering acorns. By the time they reached this place, blood was trickling from Antonio's feet and legs, and he was well-nigh fainting with fatigue and excitement. Tears rolled down the old women's cheeks when they saw him. Some of them had been servants in his father's house and loved him. One brought gruel; another bathed his feet; others ran in search of healing leaves of different sorts. Bruising these in a stone mortar, they rubbed him from head to foot with the wet fiber. All his pain and weariness vanished as by magic. His wounds healed, and in a day he was ready to set off for home. There was but one pony in the old women's camp. This was old, vicious, blind of one eye, and with one ear cropped short; but it looked to Don Antonio far more beautiful than the gay steed on which he had ridden away from Los Angeles three days before. There was one pair of ragged shoes of enormous size among the old women's possessions. These were strapped on his feet by leathern thongs, and a bit of old sheepskin was tied around the pony's body. Thus accoutered and mounted, shivering in his drawers under his single blanket, the captain and flag-bearer turned his face homeward. At the first friend's house he reached he stopped and begged for food. Some dried meat was given to him, and a stool on the porch offered to him. It was the house of a dear friend, and the friend's sister was his sweetheart. As he sat there eating his meat the women eyed him curiously. One said to the other, "How much he looks like Antonio!"

At last the sweetheart, coming nearer, asked him if he were "any relation of Don Antonio?"

"No," he said. Just at that moment his friend rode up, gave one glance at the pitiful beggar sitting on his porch, shouted his name, dashed toward him, and seized him in his arms. Then was a great laughing and half-weeping, for it had been rumored that he had been taken prisoner by the Americans.

From this friend he received a welcome gift of a pair of trowsers, many inches too short for his legs. At the next house his friend was as much too tall, and his second pair of gift trowsers had to be rolled up in thick folds around his ankles.

Finally, he reached Los Angeles in safety. Halting in a grove outside the town, he

waited till twilight before entering. Having disguised himself in the rags which he had worn from the Indian village, he rode boldly up to the porch of his father's house, and in an impudent tone called for brandy. The terrified women began to scream; but his youngest sister, fixing one piercing glance on his face, laughed out gladly, and cried:

"You can't fool me; you are Antonio."

Sitting in the little corner room, looking out, through the open door on the gay garden and breathing its spring air, gay even in midwinter, and as spicy then as the gardens of other lands are in June, I spent many an afternoon listening to such tales as this. Sunset always came long before its time, it seemed, on these days.

Occasionally, at the last moment, Don Antonio would take up his guitar, and, in a voice still sympathetic and full of melody, sing an old Spanish love song, brought to his mind by thus living over the events of his youth. Never, however, in his most ardent youth, could his eyes have gazed on his fairest sweetheart's face with a look of greater devotion than that with which they now rest on the noble, expressive countenance of his wife, as

he sings the ancient and tender strains. Of one of them, I once won from her, amid laughs and blushes, a few words of translation:

"Let us hear the sweet echo
Of your sweet voice that charms me.
The one that truly loves you,
He says he wishes to love;
That the one who with ardent love adores you,
Will sacrifice himself for you.
Do not deprive me,
Owner of me,
Of that sweet echo
Of your sweet voice that charms me."

Near the western end of Don Antonio's porch is an orange tree, on which were hanging at this time twenty-five hundred oranges, ripe and golden among the glossy leaves. Under this tree my carriage always waited for me. The señora never allowed me to depart without bringing to me, in the carriage, farewell gifts of flowers and fruit; clusters of grapes, dried and fresh; great boughs full of oranges, more than I could lift. As I drove away thus, my lap filled with bloom and golden fruit, canopies of golden fruit over my head, I said to myself often: "Fables are prophecies. The Hesperides have come true."

H. H.

ONE CHAPTER.

It was a very short chapter, and I often wish there had been more of it. But this is all there was. It was while I was at Wiesbaden. The doctors sent me there when my rheumatism got so bad; and though I had my faithful Cummings with me,—she is an excellent creature, though a little short-spoken and careless about candle-ends,—I should have been lonely enough but for Phil Merritt. Phil was an American, and that is what she said they called her, though her real name was Phyllis—much prettier and more lady-like, to my notions. But American ways are, of course, not our ways, and I suppose I should only be thankful she had a Christian name at all. However, I'm old-fashioned, and have never been out of England before, and may not be quite up with the age. Anyway, I was particularly glad that Phil was an American, for, while I know more about that country than most English women, having read those remarkable works of Mrs. Whitney's and Mrs. Stowe's and Miss Wetherell's, still it is always pleasantest to study the peculiarities of other nationalities from personal observation.

Well, Phil and I were great friends, in

spite of my sixty winters and her twenty-four summers. We first met in the hall of the Hôtel des Quatre Saisons, as I was toiling laboriously upstairs one day after my mineral bath, and thinking what a wonderful cook Dame Nature was to contrive chicken broth out of pure chemicals, with not so much as the ghost of a hen thrown in; and Phil, being naturally a very good-hearted, amiable girl, always on the lookout to do a kind deed, gave me her arm to my room, which chanced to be quite near hers; and after that not a day passed but she ran in to see me.

She was an orphan, living with her uncle and aunt—enormously rich people, I presume, for all Americans are millionaires. Why, as a sample, there's one family named Vandertilt, all whose men are common engineers and dine every day in their smocks, whose wealth exceeds that of the Rothschilds and the crowned heads of Europe taken together. But Phil dressed as simply as any English girl, and though she must, of course, have had a trunkful of diamonds somewhere, she never appeared in them, or at least never when I saw her. Uncommonly quiet, pretty taste she had. She was a little bit of a thing,

with the brightest, clearest, wisest brown eyes that ever were, and a face like a bird's, so quick and alert and knowing, and just brimming over with life and intelligence,—quite an American face I should fancy, it was so clear-cut and dark. I suppose she had a little Indian blood in her veins, as all old American families must have. She had an American voice too, wonderfully distinct and articulate, though lower-pitched than I should have expected, and with no perceptible nasal twang; and she had American hands and feet—there wasn't a glove or a shoe in the place small enough to fit her—and American manners, something altogether different from our girls, lady-like and yet positive, modest and yet independent and thoroughly self-possessed,—an air of always knowing exactly what she was about, and being provided with the very best of reasons for her every action. A most reliable, satisfactory, companionable girl she was,—a remarkable girl, indeed, in every way, and gave me a deal of information about her country, for there wasn't a thing the dear child didn't know something about, from politics down— or up, rather, since politics are at a vilely low stand in America. It whiled away the time delightfully to me, having her run in so to chat; for I hadn't a friend in the place besides, and owing to my rheumatism (it is not gout; none of our family have ever been high-livers) I wasn't able to leave my room except just for the baths.

"Don't you get tired reading?" she asked me one day. "Or shall I lend you some books? I have quite a little library with me." And she glibly ran over the names of a number of books written by people I had never heard of—Bryant, Aldrich, Howells, Hawthorne, Holmes, etc.—and whom, indeed, I didn't care to know. American literature is, I am afraid, on a par with its politics, and Josh Billings and Walt Whitman, who stand at its head, strike one brought up on our classics as very peculiar. It's safest to keep to their historians. Luke Twain and Cooper are really reliable, I am told, and the "Conquest of Mexico," by the latter, is said to read quite like Monte Cristo. Phil sat looking at me a moment through those glasses of hers that give her such a superhumanly wise aspect when she puts them on.

"You must find the days very dull, Miss Andrews," she said, sitting down on the floor in front of my china stove and peering in to see if it needed more wood. "I must find you some amusement. Why don't you write a book?"

"My dear!" I cried. "Me write!"

"Why, yes," she answered. "Just to fill up the time, you know. You can't read forever,

or crochet forever, and you must get dull with only Cummings for society."

"I'm never dull when I have you, my dear," I said. "Only please, Phil, don't put on any more wood; it's rather too hot here now!" (The dear child, with her American extravagance, would have emptied my whole wood-basket into the fire at once, and I expected it to hold out another day, at least.) "But what ever put the idea of me writing into your head, my love? Though, to be sure, I had quite a pretty talent for making verses when I was a child, but I think I've outgrown it now; one mostly does."

"Coax it back," said Phil, folding her tiny hands in her lap, and gazing meditatively at the fire, which brought out the red lights in her dark-brown hair in a very pretty way. "Coax it back. One mostly can. And truly, Miss Andrews, you have read so many books you must have a world of facts, and plots, and incidents, stored away in your brain by this time. Why don't you stir them all together and mix us up one good, new, fresh novel worth the reading?"

"With you for the heroine, my dear?" I suggested, laughing. "Indeed, I think that might do very well."

"No," said Phil, with that emphatic tone of hers that there is never any use in gain-saying. "I won't be a heroine. I decline to be put in a book. I won't stay in it if you put me there. I warn you I'll walk right out of the first chapter and spoil it all. You'll have to take somebody else."

"And whom shall I take?" I asked. "I think you are the very one."

"No, I'm not," answered Phil, screwing up her pretty lips: she had a sweet, charming mouth, though it was easy to see by it, too, what a will my young lady had of her own. "I haven't a particle of sentiment about me, you know; not the scappiest bit. I'm matter-of-fact and prosaic through and through. I couldn't fall in love, and I couldn't flirt to save my life. Anyway, I just won't be written about."

"And whom else shall I write about, my love?" said I, still laughing at her earnestness—Phil was always so energetic and decided about everything.

She got up and walked to the window. "What a pity you can't come down to the table d'hôte," she said; "there is any number of characters ready-made there, every day. There's the old Russian countess—if only you knew her! She's a whole comedy and foot-lights in herself. And—and—let me see—that Mme. Latoux and the little German Fräulein—really, they *must* go into books some day. They were born to have histories. It's their destiny."

"And how about heroes?" I said. "Women by themselves wouldn't do, would they, dear?"

"Well, as for heroes, Miss Andrews;—" Phil mused a little, then suddenly sat down and began winding a skein of worsted for me. "I really don't know," she said, with her head bent down over her work, "that you could find a better hero anywhere, for a thrilling three-volume novel, than in the young man who sits next to me."

"Why, my dear!" I exclaimed, "this is something new. What young man? Why haven't you mentioned him before?"

"He has only just come."

"Is he English?"

"No."

"American?"

"I can't say. He might be German from his looks, American from his manners, French from his dress, and cosmopolitan from his language."

"American from his manners!" I repeated, at the moment forgetting the nationality of my young friend. "My poor, dear child, what a trial it must be to have him next you!"

Phil looked up at me with a little smile. "I meant that he had perfect manners," she said, quietly. I recollected myself, and was mortified enough.

"What does he look like?" I asked hastily, to change the ground.

"Tall, slight, soldierly, with light hair and mustache, and blue eyes," replied Phil, dreamily. "An aristocratic face, and small, well-shaped hands. He must be an American."

"Has he spoken to you?"

"Not yet; he will, though."

"My dear——"

"Oh, certainly," interrupted Phil, rising to light my candles. "He's very nice, and the only young man in the house. It would be neglecting my chances not to know him. At home, of course, we shouldn't speak without an introduction and credentials being given on both sides; but over here it's different. One can so easily let an acquaintance slide, you know, if it turn out badly. By the way, I suppose you don't know what slide means in that sense, Miss Andrews?"

"Yes, yes, my dear; it's slang for cut. I understand well enough, though I'm a little set against using those nasty words myself. We considered slang a beastly habit in my strait-laced days. We'll let that second candle slide too, however, Phil, please. One is quite enough for this little room." (I am persuaded that dear child couldn't so much as spell the word economy.) "Are you going now? Well, I hope you'll eat your dinner to-mor-

row with better appetite for your fine company, my dear."

The next day Phil appeared again, establishing herself in her usual place in front of the stove-door. I had taken care to have Cummings hide away most of the wood in the closet, so that there wasn't much left for her to dispose of, and I didn't mind.

"And how about the young man?" I asked. "Is he still here?"

"He will be here till I go," answered Phil. "He is a very nice young man, indeed. He has lovely brown eyes, soft, and dreamy, and kind-looking,—eyes just like a dog. I love dogs' eyes, don't you?"

"You said he had blue eyes yesterday."

"Did I? Oh, yes. I said he looked like a German. Well, I got a better look at them to-day, you see, and they're not blue, but brown, and full of expression. I'm afraid he's a flirt. Flirts' eyes always are full of expression."

"You haven't been flirting with him, I hope, Phil, and he an utter stranger too, my dear? I am sure your aunt couldn't allow that."

"Oh, I never flirt, Miss Andrews. I'm not that style at all. But he's not a stranger now. Why, I know him quite intimately. I asked him for the salt as soon as we had taken our seats, and after that we talked steadily on right through till dessert. I know all about him,—enough to write his biography. I was right. He's an American. He's from Philadelphia."

"Ah, that's east of the Rocky Mountains, isn't it, my dear?" I asked, glad to show my geographical acquaintance with her country. Phil hesitated a moment, as if to locate it in her mind. She is always so exact.

"Well, yes; a little east," she said presently.

"Is it near where you live?" I continued.

"Yes, rather near," Phil answered, poking at my fire. "Only a few hundred miles off. I live in Rochester, in Western New York, you know."

"So you told me, my dear. Western New York. That's where the gold mines are, I understand, and the Indians. By the way, I wonder if you ever met a friend of mine; his name was Phipps, George Montague Phipps; his family sent him out for his health and he settled there,—Dallas, I think the place was,—he liked it so much."

"Dallas is in Texas," said Phil. "The young men don't come over to Rochester from there much, but I'll keep a lookout for him. I don't believe he is as nice as my young man here, however."

"And why *is* he here, my dear? For his health? Nobody ever comes here in October excepting for his health, you know."

"He is here for his mother. She is an invalid and doesn't appear at table. His name is Oscar Heyerman."

"Why, that's a German name, Phil."

"His father was German, I believe. He's really a charming young man, so intelligent, so cultivated, so handsome. You would lose your heart to him at once."

"Don't lose yours to him, my child."

"Better not, I think," replied Phil, with a sage shake of the head. "There's a wonderfully pretty little German girl sits the other side of him. He looked at her a great deal to-day, quite stared at her, in fact,—and he spoke to her just as we left the table. I foresee she is going to be my rival."

"She must be very nice and bright indeed, my dear, to be any proper rival of yours," I said, looking at Phil affectionately. "I am sure any man would rather talk to you than to most any other girl I know. You have so much common sense too, Phil, as well as looks."

"Yes, common sense is rather my forte," Phil acknowledged gravely. "The romance and sentiment were altogether left out, and the place filled in with good, plain, ugly common sense. But it's much less attractive to outsiders than nonsense, in the long run. I don't stand a ghost of a chance beside that simpering little German mädchen with her pink cheeks and baby ideas. You see, if Oscar says a word to me to-morrow. I shall break my heart."

"Don't say that, Phil, please," I begged. "There's so many a true word spoken in jest."

"Oh," said Phil, and for all further comment made a succession of horrible grimaces with such rapidity and astounding diversity that I nearly died with laughing at her, though I shook my head rebukingly all the time.

There proved to be no immediate danger, however, of Oscar's becoming interested in the little German girl. He devoted himself, on the contrary, entirely to Phil. She had something new to tell me about him every day when she ran in. Either she had met him by chance at the Kursaal, and had such a pleasant whispered talk with him while her aunt droned over the papers; or he had sat by her during the afternoon outdoor concert, or walked with her about the beautiful Kursaal grounds; or he had been shopping with her down through the long, pocket-despoiling arcades, and had helped her choose the pretty little trifle she brought to me.

"Do you like it?" she would say roguishly in the middle of my thanks. "It is Oscar's taste."

He made the fourth too, I fancy, on their drives to the Russian chapel, and the Rob-

ber's cave, and to Biebrich and other outlying places of interest, though I only knew it by Phil's accidentally repeating some remark or droll comment that he had made at the time. I don't think she quite liked me to know just how often he was invited to accompany them. She looked a little confused one day when I confessed how I had been watching at the window to see them start out, and was so disappointed to find they had gone in a close carriage. Indeed, after that I don't think he was invited so much. She didn't speak of his driving with them again. However, he walked with her uncle and herself to Sonnenburg Castle one day; she told me that. Her uncle was old, and I imagine left the two young people to scramble about the ruins quite by themselves,—Americans are so lax as guardians!—and she had a dainty little bunch of wild flowers pinned coquettishly in with the lace at her throat when she came back. She was fond of wearing flowers, and generally had a rose or cluster of violets somewhere about her dress, and if I chanced to ask where it came from, the answer was invariably the same, said with a demure twinkle of her pretty eyes: "Oscar, of course. What other young man is there here to give it to me?"

It was really wonderful how much interest her talk of Oscar lent to our meetings, and how eagerly I waited for the next bit of news, whatever it might turn out to be.

"He's certainly getting very much interested in you, Phil," I said anxiously one day. It was pleasant, but it troubled me a little too, living so right in the midst of a love story.

Phil laughed and shook her heavy braids.

"Indeed he is," I insisted. "I can see it plain enough, for all I'm not there to watch you two foolish young things with my curious old eyes. Old maids can put two and two together better than some clever arithmeticians, may be; and I only hope, my dear, that your aunt approves."

"Aunt Anne has nothing to say about me; I am quite independent of everybody," Phil rejoined with that determined look coming to her mouth that suited so well with her glasses and her straight, square way of holding her trim little figure. "I may make what friends I choose."

"It's that that worries me about you, my dear," I said as gently as I could. "I feel as if you hadn't anybody to look after you rightly, my poor child. And now this young man,—why, he may be a gambler for aught we know. He may have dreadful habits."

"One little half-bottle of cheap Hochheimer every day for dinner," interposed Phil with a laugh.

"But, my dear child, there's no knowing

how many whole bottles of Cliquot, besides any number of awful American drinks with wicked names, he may consume upstairs in private. One can't judge entirely about young men from just their down-stairs doings. I wonder if he is high-principled,—if he is a really good young man? You never mention seeing him at church. Oh, my dear, somebody ought to look after you a little, I do think. Somebody ought to look after you."

"Come and look after him instead," said Phil, who was standing in the window. "There he goes now. Don't you want to see him? He is almost as good to look at from the back as from the front."

She pushed aside the window curtain as she spoke; and though it is such pain to move, curiosity so far overmastered me that I hastily left my easy-chair, and dragged myself across the room to her side.

"Where?" I said breathlessly, straightening my cap as I best could, lest the young fellow should chance to look up. Even at sixty one doesn't like to be seen all awry.

"Such a pity!" said Phil, dropping the curtain again almost in my face. "You're just one second too late. He's gone around the corner. It's a great pity you didn't see him. You would never have suspected him of anything bad again. He has a charming face, so good, so trustworthy, and so—affectionate, one might say. I'm sure he is a lovely character. You should only hear the way he speaks of his mother. He is a devoted son."

I looked at Phil anxiously. She did not look at me, but stood with her forehead pressed against the window, tapping her little fingers on the sill.

"Don't, Phil, dear," I said gently. "It makes me nervous." She stopped at once, and glanced up at me with her head bent on one side like a little bird. Her eyes were brighter than any stars, and there was an odd, provoking smile on her clearly chiseled lips. "Phil," I said, laying my two hands on her shoulders, "I've not been young in my time for nothing, dear, and I see—I see."

"See what?" asked Phil. She banished all the knowingness out of her face, and put on a look of innocence that would have become a year-old babe, in less than no time.

"Don't be vexed," I said, "but how can I help seeing that, for all your pretended lack of romance, you are getting interested in that young man day by day."

Phil broke suddenly away from me and dashed to the wood-basket, bending over it with a little inarticulate sound.

"Don't put any more on, dear," I entreated, piteously. "Really, you don't know

how little it takes to keep a fire alight in those stoves. And you aren't vexed, are you, Phil? I couldn't help speaking, dear. I don't doubt he's all that's honorable and worthy if you think so, only you are so young, and—and—in England things are so different. I cannot get quite used to your American independence. It seems so odd parents and guardians should never have anything whatever to say in the matter of the children's marriages."

"Oh, but they do,—a little," said Phil, frowning gravely at the stove as she ran her finger absently along its cracks, knocking out the plaster upon the floor. "We always invite them to the wedding."

"And if they wont come?"

"We disinherit them. But it doesn't generally happen. But, my dear Miss Andrews, you are worrying about Oscar Heyerman and me. Now let me set your dear, kind heart at rest at once. He isn't thinking of me at all. I told you he would like that simpering German girl better. He does."

She spoke very low, and dropped her head a little. Something in her attitude or voice touched my heart, and reminded me of the days when—well, when I found out Jack cared for Hannah. My foolish old eyes got moist all of a sudden, and I crossed the room to her quickly, as if I hadn't an ache in my miserable bones, and tried to take her in my arms. "My dear, my dear," I whispered, all of a tremble, "don't give up hope yet. May be it isn't so. May be it isn't so. May be he'll come back to you yet." And then I remembered how Jack never did come back, and I sort of choked, and Phil just gave that queer little sound again and fled out of the room. How I longed to follow and comfort her! I felt so troubled about her I could scarcely sleep all that night. Poor, dear child, it had indeed gone far with her! It seemed very hard to stop quietly upstairs and know that all the time that inane little German miss was fooling my Phil's lover away just with two silly pink cheeks. "As if any man couldn't choose better than that!" I said indignantly to myself; for somehow, when I had found out that my poor child loved him and had lost him, all doubt of his worthiness instantly vanished from my mind, and I only fell to wishing I could do something to bring him back and make her happy. I never closed an eye till three o'clock, and after that the whole time I was dreaming and dreaming of how Phil stood at the altar all in white, and blazing with diamonds from head to foot, and how Oscar stood by her side with his back to me, so that I didn't see his face even then, and how he called out

right in the middle of the service for a gin cocktail (I think that was it), and how it was poor old I, in my dingy wrapper and cap, who had to come hobbling up the chancel-steps to give the bride away.

I didn't see Phil all the next day. Poor child! she saw I had surprised her secret, and though I didn't expect this delicacy of feeling on the part of an American girl, still I admired it in her, and only loved her the better for it. How I should have felt, had any one ever so much as suspected what I felt for Jack!

But by the day after, when still Phil did not come, it seemed as if I couldn't stand it not to know anything; and when the dinner was begun, I sent Cummings down-stairs just to peep in through the door and see which one Mr. Heyerman was talking to the more — my Phil, or the little tow-headed German idiot. Cummings didn't like being sent down on such an errand, and sniffed very disagreeably, and said she had never been engaged to do spy's work, and may be there was them as would do spying better, who wouldn't be so willing as she was to turn an old dress for me as had better be give away at once and done with, and not waste more time over it. However, she went down at last, though still expostulatory, and back she came in less than no time, her tongue clacking angrily all along the passage-way.

The head waiter had espied her peering through the crack of the door, and ordered her away. 'Twas no place for ladies' maids at no time, he had said, unless may be she wanted to come in and help serve the tables. Such an indignity had never been put on her at no time of her life before, she said, and that's what came from doing a nasty job at some one else's bidding. I had the greatest ado in the world to soothe her down, and get anything else out of her. Miss Merritt? Yes, she snarled, she *had* seen Miss Merritt, and Miss Merritt had seen her, and had nodded to her; that's what had directed the head waiter's attention to her, and the impertinence of that man she should *never* forget, not to her dying day. The German young lady? Yes, she had seen her, too. A sweet pretty dear she was, much more lady-like and genteel-looking than Miss Merritt. The young gentleman? There wasn't any young gentleman. There was an old man seated between the young ladies, if that's what I wanted to know,—a white-haired, deaf old gentleman. She heard Miss Merritt screeching at him that it didn't matter, when he upset his soup-plate over her dress. And if I was ever going to ask her to go down to that door again, I might look out for another

maid at the year's end, if I pleased. She had spoke her mind, and that was all she had to say.

I didn't know what to make of it,—not of Cummings's anger (that would wear off with time and judicious treatment, and a maid must be allowed tantrums as well as a mistress), but of her report; and I worried and worried, till late that afternoon Phil came in. She was in one of her brightest, gayest moods. I knew in a moment she had put it on as a mask. Women are always up to such little innocent hypocrisies, and it takes a woman to catch them at it. I didn't mean to say anything, but I couldn't help blurting it right out:

"My dear, Cummings says he wasn't there."

Phil never changed color nor winced when I spoke of him so suddenly. She is a brave little thing. She looked right up at me.

"No," she said. "Oscar dined out to-day. It was lonely for the little Fräulein."

And she never alluded to him once again the whole afternoon, though I several times skillfully led the conversation that way, in case she might like to unburden her poor heart to me. I wished her at least to feel that I was all readiness and all sympathy. But she is a very self-contained, reserved, intensely proud little creature, and I am afraid it was gall to her to feel how much I had already guessed of the truth. Poor child, I almost wished I could tell her about Jack, so as to take out the sting of it to her, letting her know that others had felt just the same. But never a word more would she speak that day of Oscar. She laughed, she joked, she made fun; her clear voice never wavered; her bright eyes never drooped; she was as cheery and sweet-tempered as if she had never known a sorrow. It seemed to me that my old heart must break for her. I haven't forgotten even yet how I behaved—how I danced and laughed with the best that very day when Jack was married! Only once her courage gave way a little,—the poor, overburdened young thing. It was in the dusk, and we were both very still, I thinking compassionately of her, and she—ah, well, I could guess, when I heard a little faint sigh from where Phil sat, or, rather, what started to be a sigh, and was checked in the rising. I put out my hand and touched hers. It seemed as if I *must* tell her how I felt for her. She gave a start, and then her usual little gay laugh.

"You have caught me," she said. "I am fain to confess it, Miss Andrews. I am homesick to-night,—awfully homesick."

I pressed her hand without speaking. There are moments when words seem so cold.

"Do you know," she continued, looking at me gratefully, and a little wistfully, "I would give all Europe—yes, all Europe and a good part of America besides, just for five minutes with my dear, dear little dog Dandy again!"

Her dog Dandy, indeed! Ah, poor child, poor child! Heaven looks leniently, I am sure, upon such innocent, womanly lies as these.

So the days slipped by, and I never came any nearer her confidence. If I asked about Oscar, she would frankly answer, and she occasionally mentioned that she had met him in the street, or seen him at the concert, or run across him in the reading-room flirting outrageously with the pretty German girl, right under her mamma's ugly nose. But she was very guarded in all that she said about him now, and in the way she said it. No stranger would ever have suspected that any deeper feeling underlay the careless tone in which she said his name. *But I knew.*

And so time wore around till one night she ran in later than usual, just as I was going to bed. Cummings looked thundery at once. She is like clock-work, and whoever puts her back, by so much as a minute, throws her all out of beat, and like as not stops her short.

"It's going on half-past nine, Miss Andrews," she said stiffly, as if I had begged for a little extra grace that I shouldn't have, and she immediately laid out my night-gown and cloth slippers with most suggestive and unbecomingly conspicuousness.

"I won't stay a minute," said Phil, with an intelligent glance toward the articles, and an appeasing nod to Cummings, who, with a grim determination not to be appeased, looked with fixed disapprobation at a nail in the wall, and pretended not to see Phil at all. "I leave so early to-morrow morning, I thought I would say my real good-bye to-night."

"What!" I cried aghast. "Oh, Phil, dear, are you really going to-morrow?"

"So it seems," answered Phil. "And none too soon. Why, we sail from Liverpool in three weeks, you know, and Paris is to be bought out first. And right glad I am to get away from this rainy old Wiesbaden. May I never have the ill luck to be at a German watering-place again out of the season. I should have died of *ennui* but for you, Miss Andrews."

"And oh, my child, think what you have been to me!" I said, with my eyes all at once getting weak, and my voice uncomfortably husky. "I have just lived on your visits. I don't know how ever I am to get along without you. And—and how can others spare you any better?"

"Others?" repeated Phil, opening her bright eyes with that questioning look which

seemed always to turn her whole face into an interrogation point.

"Yes, dear," I said, sinking my voice a little because of Cummings, who, under pretense of arranging my bed, was pushing forward the chair with the night-gown into yet more unavoidable range of vision. "I mean Oscar."

Phil dropped her eyes suddenly. I saw her face change.

"He's gone," she said bluntly.

"Gone?" I gasped. "My dear, when—where—you don't mean it?"

"He went this morning," answered Phil, her voice as steady as mine was shaky. "I really don't know where he went, but probably the little Fräulein does. She left yesterday."

"And you really don't know?" I echoed incredulously. "Phil, child, don't you expect to see him again? not to meet him anywhere ever again?"

"Not ever again," repeated Phil steadily. "It is good-bye to Mr. Oscar Heyerman forever."

And she kissed her little atom of a hand saucily toward the window. The action jarred on me. It seemed like such a mockery of the poor dear's real feelings. I could not bear to have her so brave. It would have been more natural to seem weaker. I shook my head and sighed.

"Ah, Phil," I said, thinking of Jack and of the long pain that that word *forever* covered,— "Ah, Phil, things seem mysterious and life looks long when one is young; but it's astonishing how short the same thing looks seen from the other end, dear. Even forevers lose their sting before one is quite through with life."

Phil stood looking at me. She was smiling a little, and gradually the smile spread and deepened. "You dear old Miss Andrews," she said, coming suddenly close and putting her arms about me, "I wish there might not be any forever about my good-bye to you. I've brought you one of my American books as a parting souvenir. It's a sweet little story, and will help you to think of me. And don't be too lonely when I am gone. Whom will you miss more, me or Oscar?"

"Don't talk so lightly, Phil, dear," I whispered. "Not just at the last like this. Don't you think I know?"

"No," answered Phil aloud. "I don't think you know at all. Good-night. Good-night, Cummings." And she was gone before I knew it.

"Poor child, poor child!" I murmured, as I surrendered myself to Cummings's not over-tender mercies. "So young, too. It's very hard on her."

"What's hard on her?" said Cummings, snatching off my cap with a venomousness which seemed to say she fancied it Phil's head.

"Oh, nothing," I answered, unwilling to betray my brave child's secret to any unloving ears. "I was only thinking it was hard that those two young people—she and that young man—shouldn't really ever meet again. I can't help hoping they may, even yet."

"What young man?" said Cummings, in her hard unsympathetic voice, pulling off my shoes as if she were a dentist and each foot were a tooth she was extracting. "I never see any young man. There aint any young man."

"Oh, but Cummings," I expostulated gently, "I mean Mr. Oscar Heyerman, you know. He's gone away."

"I'm thinking he can't be gone when he didn't ever come," retorted Cummings, stubbornly. "There's a Mr. and a Mrs. Oscar Heyerman on the *liste des étraungers*, right enough; but there aint any young man as ever I see. And so you needn't be worriting about him when you ought to ha' been asleep this half-hour gone, and me a-waiting all the time to put you where you should be."

"Cummings," I replied with dignity, "you are speaking very unbecomingly. Will you hand me my night-cap?"

"I'd just like to ha' seen her young man, that's all," said Cummings, jerking open my top drawer with a vindictive snap. "I don't believe there never was a bones-and-flesh young man at all, for I aint seen him."

"It isn't to be supposed you should have seen him, Cummings," I returned. "You have other things to occupy your attention than looking out for young men, I hope. And now you may put out the candle. The moonlight is bright enough for me to go to bed by without it."

But somehow I couldn't sleep that night either. It was such a very queer idea this of Cummings, that there wasn't any young man. It was just like her sour, cross-grained nature to take such a cynical stand. She'll never get to Heaven, I'm afraid, if her getting there is to be entirely a matter of faith. Still, it was an uncomfortable idea certainly, and gave me a shock like a cold-water bath.

Phil ran in bright and early the next morning, all dressed for the journey in her trim, close-fitting ulster, with her broad felt hat set jauntily back of the saucy little curls over her forehead, that were just as obstinate as she was, and would always go their way and not hers; and as she bent over me in the bed, the very first thing I said to her was, "Phil, Cummings says there wasn't ever any young man."

Phil stopped short on her way down to kiss me. "Cummings doesn't know," she said quietly.

"But there was, wasn't there, dear?" I entreated helplessly. "Phil, dear, there certainly was, wasn't there?"

Phil pursed up her lips and meditated some little time with her head on one side. Then she put on her glasses and looked down at me, wise as any Minerva.

"You will never know either," she said. "I know, of course, but I am never, never going to tell. Good-bye."

"Phil—oh, Phil!" I cried, catching at her dress in desperation. "Oh, indeed, you must not leave it so,—you *must* tell me! Wasn't there any young man? not any young man at all?"

"Was there or was there not?" said Phil, backing off toward the door, with always that provoking little smile on her lips and a defiant brightness in her eyes; "what can it possibly matter to anybody living but only me? It is my secret. I have a right to it. And I shall not ever, ever tell."

And that's the way she left it. That is why there isn't any more of it. You see she kept to her word and walked right out of my story at the end of the first chapter, and how the story ended I never knew myself. When I look at the book she left me (it's by a Mr. Aldrich, and indeed it's a clever little tale, though very disappointing), I wonder if it is possible she got any inspiration from that? But I don't know, and I never shall know, and I am still puzzling over it. Was it true or was it false? Was there or was there not a young man? When I think of Jack, I am sure that there must have been; and when I think of Phil, why I really do not know.

Grace Denio Litchfield.

A GREAT city is usually credited, and truly, with worldly motives, which make the prosperous portion of its inhabitants pushing, selfish, proud, and self-satisfied. Here Jews and Gentiles, Europeans and Americans, are all striving for the common prizes of life, and on these prizes, it would seem, their imagination is centered. Yet for nearly a century, in fact ever since New York was worthy the name of city, a quiet man moved daily among the crowd, busy as others about commerce and manufactures, society and social aims. He raised a family of influential children, and was pleasantly associated in business and society with nearly every person of consideration in New York, his native city, where he was born February 12, 1791. Yet, in all this daily contact with men, his chief objects were distinct from theirs, and he kept his own individuality and way of looking at things intact from the beginning. It has been said that Americans lose their individuality more easily than the people of other nations; Mr. Cooper certainly is an example to the contrary. No worldly enticements nor persuasions ever changed his own way of regarding things, and he had a consistent and singularly straightforward method in considering unusual subjects.

An association of eleven years with Mr. Cooper, as head of the "Woman's Art School," gave me an opportunity to observe him in the life-work which most earnestly engaged all his powers. His practical ingenuity in connection with steam-engines, his success in running the first locomotive in America, his new application of iron-work for building purposes, the improvements he aided in New York, such as the locating of Union and Madison squares and Tompkins Square as breathing spots for the city, are well known; his faith in the Atlantic cable and like enterprises, when other men doubted their success, are remembered; but only an eye-witness of it could imagine the time, and thought, and ingenuity he gave, year after year, to his favor-

ite scheme for the raising and bettering of his fellow-creatures in the "Cooper Union." In this connection, it may not be amiss to give a brief outline of this institution:

The three great branches of the "Cooper Union" are the night schools, where several thousand men are taught each season a scientific and literary course, besides drawing in its various branches; the day schools for women, comprising the "Woman's Art School," a school for telegraphy, and a type-writing class recently established; and a free library and reading-room, open day and evening, to which 400,000 visits are annually paid.

In the "Woman's Art School" about five hundred young women are taught different kinds of art work. Half of these are instructed in various industrial branches, in an absolutely free class; and the rest, at a very small cost, have the best teachers of drawing and painting in New York. Ever since the school was started in 1857 or 1858, the names of some of the best artists in New York have been connected with the free school; and in its list of teachers are such men as Jervis McEntee, N. A., and Dr. Rimmer formerly, and at the present time R. Swain Gifford, N. A., Wyatt Eaton, J. Alden Weir, William Sartain, A. N. A., Douglas Volk, and other well-known painters. The "Woman's Art School" is furnished with one of the finest collections of casts in this country, which include the chief of the Elgin marbles and many of the great classical statues. Bass-reliefs from the Renaissance period, such as the beautiful figures from Donatello and Della Robbia, together with the best ornamental models from the schools at South Kensington, afford the pupils excellent subjects for study. A small but well-selected art library consists of the works of Ruskin, Taine, Sir Joshua Reynolds, Leonardo da Vinci, Lalanne, Fergusson, and many other authorities; while the illustrated volumes of Racinet, Owen Jones, and books on pottery, engraving, design, etching, besides art period-

icals, cultivate the ideas and taste of the pupils. Lectures are given each winter on art; and such men as William Page, N. A., Louis C. Tiffany, A. N. A., William H. Goodyear, of the Metropolitan Museum, Hubert Herkomer, A. R. A., afford the pupils information in all the new ideas on art.

It is somewhat aside from the purpose of this article to speak of the practical results of the "Woman's Art School"; but, as it was a subject on which Mr. Cooper liked to dwell, it may be of special interest to the reader. Besides learning a profession, at the very time they are studying, half the pupils in the free classes wholly or partly support themselves by teaching, designing, engraving on wood, and other artistic occupations; and the annual report of this year shows that the present pupils and the last year's graduates have earned between \$27,000 and \$28,000, while probably of \$10,000 more earnings no account has been given. Many of the beautiful engravings in this magazine, in "St. Nicholas," and in the Patent Office Reports, are cut in the engraving room of the "Woman's Art School" at the Cooper Union.

Observing, in the early years of my connection with the "Institute," how much fonder Mr. Cooper was of scientific and mechanical work than of art, I was often surprised that he should ever have undertaken this great Art School. It was finally explained to me that, under the auspices of some of the most cultivated and intelligent ladies of New York, such as Miss Mary Hamilton, who was afterward Mrs. George L. Schuyler, Mrs. Jonathan Sturges, and others, a "School of Design" was begun before the "Cooper Union" was established. In this school were classes in drawing for mechanical purposes and in designing for paper, cotton, and woolen manufactures, both branches being suited to women. The school had prospered under the constant oversight of a committee of ladies, and when at length the Cooper Union was completed in 1857 or 1858, this class was offered to Mr. Cooper, who, seeing that it was likely to be successful in a line which he had marked out, accepted the transfer of this school of design to his foundation.

It is difficult to analyze mental processes; but it seems as if the same faculties which enabled Mr. Cooper to see the possibilities of machinery, opened his eyes to the advantage of practical education for young men and women who have their bread to earn. At a time when the colleges of this country insisted on Latin and Greek, Mr. Cooper realized that, to make young men of moderate means useful and happy, scientific

knowledge and special study for their own business was most important; and in founding the Woman's Art School, it is a question whether he has not settled the doubt of the desirableness of a "higher education" for women. Certainly he had women taught, systematically, what would fit them for intellectual occupations, before any college so taught them.

Nowadays *special* study has become a great part of the instruction in the best American colleges; but Mr. Cooper was one of the first educators in America to carry out the idea that a practical and necessitous people had better learn what they could apply to use. But Mr. Cooper's aim was not merely to promote material prosperity. He always used his influence in his schools to raise the standard of character. Young men were taught elocution in the night classes, primarily to enable them to assist in political discussion, and to make them interested in public affairs. For women, Mr. Cooper aimed to secure quiet, healthful, and dignified pursuits.

"I have always tried to do the *best* I knew how," he said to me one day, "and then people have wanted what I made. I determined to make the *best* glue, and found out every method and ingredient looking to that end, and so it has always been in demand." This habit of his mind was a pervading influence in the Institute.

Reminiscences of Mr. Cooper ought not to take the form of a sermon; yet it seems impossible for any one who contemplated him in his daily relations to the Cooper Union not to be impressed with the fact that the first and most positive lesson of his life was a spiritual one. He was occupied with the various departments of the schools, the reading-room, or the sanitary or building arrangements; and yet, even when he talked about the very bricks and mortar of the building, through the crucible of his benevolence these material objects seemed converted into "something rich and strange," through the "spiritual uses," as Swedenborg designates them, which were his motives for them all.

Nearly every week Mr. Cooper was at the Institute; but we never heard a word from his lips, nor saw a look in his face, nor heard a tone of his voice, which could have been wished otherwise. His influence was not only negatively good, but his presence always acted as a moral tonic.

From the first time I saw Mr. Cooper, eleven years ago, till the last occasion on which he visited the Cooper Union, I was struck with the fact that his ideas and actions were always what is called "at first hand." He rarely referred to what anybody

else thought or said; and with the exception of the verses he had committed to memory and thought about, till they formed part of the very substance of his mind, he never mentioned books. Some people take hold of things better if they see and examine them for themselves, and a glance at a landscape or a look at a person conveys much more than any description. Others prefer "fireside travels"; and I remember a distinguished professor who once said to me that he enjoyed flowers even more in poems than he did in reality.

"A primrose by the river's brim
A yellow primrose was to him,
And it was nothing more."

Not so, Mr. Cooper. The sight of a person or a thing stimulated his mind at once to new conditions, and his imagination became fertile to plan and arrange. He was a curious instance of a man who was intensely practical, yet never commonplace; and his desire for material results was always united with a still more earnest wish to develop self-respect, independence, and a love of usefulness in the young people who studied at the Institute.

Mr. Cooper was an early riser, and by half-past nine, nearly every day, his plain, small carriage, with its one steady horse, might be seen standing near the Seventh street entrance of the Institute. Mr. Cooper usually went about the building by himself, and his cheerful, intelligent face, which never looked haggard though it was old, and his slightly stooping form, in a plain black coat and a soft black felt hat, from beneath whose brim fell his silky white hair, might be seen for hours every day, sometimes on the staircases, often in the school-room. For a time he sat in the main office, talking with some business man employed in the building, or he conversed with me about the school. He rarely used the elevator till toward the end, but preferred to climb the numerous flights of stairs even up to the very top story; and many a time it has given me a shiver of anxiety to see him holding by the baluster as, by himself, he went down the long stone staircases. He was the kindest and most amiable of men in saving other people anxiety or pain; and sometimes when I begged him to let me go with him or to allow the office boy to take his arm, he said he did not need him; yet he suffered us to accompany him, when he saw that we really desired it. Of late years, the policeman, the janitor, and more recently a young servant went with him; but he did not like to be waited on, and always preferred to stand when he was talking to a woman.

When in the school-rooms he never wanted any disturbance made on his account. Till within the last year or two, he was in the Woman's Art School several times a week, and he generally came quite early, before ten o'clock. Often he brought visitors to see the building; but, unless some stranger came to view the pupils' work, he did not wish me to accompany the party. He came noiselessly into the long west corridor, and it was often only when I saw his silvery head retreating into the distance that I knew Mr. Cooper had been to visit us. At times when he appeared feeble, I joined him; walking along behind him, one would have conjectured that he was only looking about in the most casual way. Of late years his slow step, his venerable form slightly shrunk about the shoulders, and his gentle bearing were a sight which kept my own thoughts intent on him. Often on these occasions Mr. Cooper would pause, turn around, and, leaning up against one of the cases which lined the room, begin to talk on some subject of importance, or his reflective observations showed that his mind was busily employed.

One day he stood watching the portrait class, who, to the number of thirty pupils or more, were drawing likenesses of the same model from different positions. One scholar made the face in profile; another had it turned a little into the shadow; a third saw more of the full face; while others worked still further into or away from the light. He had stood observing the scene for a few minutes, when he said, "Such a sight as this should be a lesson in charity, when we perceive how the same person may be so different, according to the way he is looked at by various people."

During the first year of my acquaintance with Mr. Cooper, I frequently told him stories of our pupils who were very poor, or were making extraordinary efforts to remain in the Art School. Finding, however, that such cases could never be mentioned without his immediately volunteering to aid them, as a matter of honor I soon ceased to speak to him of instances which would enlist his sympathy. In spite of this, however, now and then some case came up of a girl in unusually difficult circumstances. She had, perhaps, come from the far West or the South, and was away from her friends; or was one of many children, or had saved, painfully, the money to keep her at the Cooper Union. The story was told to explain or illustrate some outside matter, and it did not occur to me that Mr. Cooper would feel it as an appeal to his charity. But so constant was his habit of sympathy, and so strong his desire to do

good, that on such occasions his hand would be instantly in his pocket, and before I could perceive what he was about, a bill was slipped into my hand, as if he were hardly willing I should think what he was doing, and he said, "This may help her, perhaps, to get better food"; or, "You can see if she needs anything specially; but do not say where it came from." These words were spoken in a tone so full of kindness, and yet so absolutely without ostentation, that I never did tell the recipient. The feeling in Mr. Cooper was too sacred a prompting to be soiled with any touch of earthly vanity. Truly he did not *wish* his left hand to know what his right hand was doing; and, by instantly speaking on some other subject, he tried to make me forget the incident which had occurred.

Many a time, stories about pupils who had become prosperous through their education at the Cooper Union were repeated to him either by letters or by the people themselves, or I told him incidents which it seemed but due that he should know. Such meed of praise, so far from ever raising an expression of vanity or pride in him, was received in the meekest spirit; and yet these *were* the results for which he was giving time, and money, and life. "All I want," he said, "is, that these poor women shall earn decent and respectable livings, and especially that they shall be kept from marrying bad husbands."

This subject of unhappy marriages seemed to be a very prominent one in Mr. Cooper's mind. That women were often imposed upon, were ill-used and broken down, he had a lively conviction; and all his chivalry and sense of fatherly protection were enlisted to save them, so far as he could, from these ordinary misfortunes. While the world is now occupied with the question of what women can be taught, their "higher education," and many kindred subjects, Mr. Cooper's acute genius discovered, as by intuition, many years ago, the relation of women of the middle class to society, to industries, and the family. He saw that many of them could not marry, and he realized what must be the forlorn position of a number of elderly daughters of a poor man. He had noted the dangerous likelihood of giddy, ignorant young girls marrying anybody for a home, even if the men they married were dissipated or inefficient; and he had the tenderest pity for poor widows or deserted wives. He talked many times, and at great length, on these subjects, and all circumstances and any sort of incident brought up this desire of his heart, to help women to be happy, independent, and virtuous.

One of the last times he was at the school,

and while a celebrated New York clergyman was giving a course of Lenten lectures to women, Mr. Cooper, with his face all animated with his feeling about it, said: "Dr. — is of the wealthy class, and he has been used to deal with wealthy women. The world does not look like the same place to him that it does to me. If he could be in my place for a month, and read the letters I get from poor and suffering women, he would think that it would be best to have them taught anything which they could learn to enable them to lessen all this trouble."

Compensation is one of the great laws of life, and a chief blessing which comes to those who have struggled and known all sorts of classes of society is the wider horizon gained of human nature. Mr. Cooper was perhaps as true a democrat as ever lived. I never could perceive that social distinctions made the least impression on him. He recognized wealth and influence as means of doing good, and he saw that they increased the scope for improvement and happiness. But the people who moved in different stations of life were the same to him; and men and women were alike interesting as they were his fellow-creatures, to whom he could be a brother-man.

There are many anecdotes to illustrate how completely his heart beat in harmony with every class, and how his fellow-citizens had learned to prize him. His familiar face was known all over New York, and whenever his plain carryall appeared, it was immediately recognized, let it be in Fifth Avenue, in Broadway, or in the poorest streets of the city. Whether it was an Irishman driving his loaded cart, or a fine carriage, everybody yielded Mr. Cooper the "right of way." Such homage as this can only be voluntary, and it is a singular contrast to the forced deference which compels every vehicle to give way to the equipages of the court in foreign countries.

At the time that Mr. Edward Cooper was nominated for Mayor of New York, naturally many of the foreign population knew nothing of him personally. A gentleman at the head of much of the German law practice at that time, when among his clients, was consulted about the candidate. "We are not acquainted with Mr. Edward Cooper," the Germans said, "but he must be a good man, as he is Mr. Peter Cooper's son, and so we shall vote for him."

It is rare to find a man like Mr. Cooper who, in his relations with women, has not a "certain condescension" in his feeling toward them. He may be charmed with them, he may love them dearly, or he may enjoy their

wit or be disgusted with folly or strong-mindedness; but he scarcely ever seems to regard them as fellow-creatures, simply.

It would seem, from his association with people of all classes, that Mr. Cooper had become, humanly, a cosmopolitan, and the few simple needs which are common to all mankind were always patent to his catholic heart. He often came into school with some distinguished man, foreign or native; and he showed the work of the Institute and its classes to the Empress of Brazil, the Prince of Wales, Count de Lesseps, Dean Stanley, and the scientific and the fashionable, with the same unconsciousness and simplicity that he did to rough but intelligent men from Western towns, or a party of women and children who had come in to see the "sights" of New York from a farm-house in New Jersey.

Mr. Cooper was fond of taking visitors by the arm as he walked about the building, and, in pleasant tones and with cheerful and cheering looks, the good old man would speak to them of his hopes and objects and of what he had accomplished. Carlyle in one of his letters to Emerson, describing Mr. Webster, says, "he was perfectly bred, though not with English breeding." Observing Mr. Cooper with all sorts of people, one never saw him when his manners were not perfect as a true gentleman. Not a shade of obsequiousness, or pride, or boasting, or vanity, nor a thought of himself personally, sullied the dignity and sweet gravity of his bearing.

His opinions were positive, and he stated them definitely; and his illustrations were often simple and even homely. It would be difficult to tell the occasions, so numerous were they, which drew from him the poems and little rhymes which were his solace and delight. He told them to strangers in their visits to the school, or often he repeated to the pupils verses of which he was specially fond. Among those he particularly liked were lines from "Pope's Essay on Man," which appealed strongly to him by its common sense and the knowledge it showed of human nature. I believe he knew the whole of the poem, but the parts he oftenest quoted were those that are nearly as familiar as proverbs.

"Look round our world; behold the chain of love,
Combining all below and all above."

And there is hardly any one familiar with Mr. Cooper who has not heard more times than once:

"O happiness! our being's end and aim!
Good, pleasure, ease, content! whate'er thy name,—

That something still which prompts th' eternal sigh,
For which we bear to live or dare to die."

"Remember, man, 'the universal cause
Acts not by partial but by general laws,'
And makes what happiness we justly call
Subsist not in the good of one, but all."

"Health consists with temperance alone,
And peace, O virtue, peace is all thine own."

"Honor and shame from no condition rise;
Act well your part, there all the honor lies."

"Know then this truth (enough for man to know),
Virtue alone is happiness below."

"Our own bright prospect to be blest,
Our strongest motive to assist the rest."

Of all other parts of this poem, the last was the one, perhaps, about which he cared most, and which most closely harmonized with his own theory of life:

"God loves from whole to parts; but human soul
Must rise from individual to the whole.
Self-love but serves the virtuous mind to wake,
As the small pebble stirs the peaceful lake:
The center mov'd, a circle straight succeeds,
Another still, and still another spreads,—
Friend, parent, neighbor, first it will embrace;
His country next, and next all human race;
Wide and more wide, th' o'erflowings of the mind
Take every creature in of every kind;
Earth smiles around, with boundless bounty blest,
And heaven beholds its image in his breast."

One day, I remember, an elderly gentleman, a stranger, sat with him in the office for an hour or more, listening to Mr. Cooper's relation of his experiences, personal and external. The gentleman was of a reflective turn of mind as well as Mr. Cooper; and soon Mr. Cooper was pouring into his ear the store of poetry, hymns, aphorisms, and wise sayings which were and had long been his mental support. Each turn of expression seemed filled with Mr. Cooper's own feeling, and these beautiful and wise words, no doubt, had, through long familiarity, in their turn molded his own mind.

Anybody who has heard Mr. Cooper speak in the hall of the Cooper Union is acquainted with this habit of recalling favorite verses and sayings, and can remember the rapt look in his face as he repeated them. When his mind was absorbed with contrivances of a practical nature, such as the affairs of a needy man or woman, his words were spontaneous, and his thoughts occupied with the question in hand; but when alone or in simple conversation, his mind flowed habitually into well-remembered words or verses; and I think I have never known a person who recalled so well or cared so much for favorite quotations, nor one on whose tongue they were so frequent.

When busy in the general office of the Cooper Union, with masons, carpenters, or people on business, if by chance any woman met him, Mr. Cooper was always ready to listen to her story, and to forward her desires to enter the Art School or the class in telegraphy. Frequently I was called, to find that Mr. Cooper wished to see me. He usually stood while talking; and on these occasions I found him with some woman at his side, who wished to become a pupil of the Art School.

"This is the lady who superintends the school," he said, as he introduced me. "You must tell her what you want." And then in an aside to me, but never except to explain his participation, he said: "She is very needy. She has three brothers and sisters to take care of"; or more often he told me he had met the person in the office, and she had asked him to introduce her. But since my connection with the Art School, on no occasion did Mr. Cooper ever interfere with the working of the rules; and he always ended by saying, even after his most interested statements: "But you must not take her unless it is best; and I do not want you to break in on any regulation." His tenderness of heart to present distress never interfered with his sense of justice to those who were far away and had applied to come to the Cooper Union, but were unable to make personal appeals to his kindness.

When one considers the rough and often brusque ways of business men, the considerate respect Mr. Cooper always showed in his manners for all persons in his employ is especially observable. His tone was of pleading for the unfortunate or reasoning about changes which he liked to suggest; but I never saw him use his authority. A gentleman who was most intimately related to him once said that he had never heard a cross or hasty tone in Mr. Cooper's voice; and when I recollect his uniform gentleness and perfect consideration, it is no longer remarkable that a man who had risen, by his own abilities, to a position of such trust and honor as Mr. Cooper, should have kept his simple relations with people intact during so long a life.

In one of the addresses at his funeral, when clergymen of three different denominations occupied the pulpit, one of them referred to Mr. Cooper as an example whom people of any religious belief might imitate, without regard to their theology, because of his great love of humanity. Swedenborg dwells on what he designates as a "life of uses," as the highest goal to which man can attain. This was

preëminently Mr. Cooper's standard, and his ingenuity was incessantly directed to think what he could hear of or plan that would benefit his fellow-creatures and enable them to be independent, useful, self-respecting, and intelligent. Type-writing seemed to him a good channel for the employment of women, and on one of his last visits to the Art School he explained to me his views about it. "It is a light and easy occupation; it is much used by business men," he said; and finally added, speaking as if his life and health were of no importance except as he could use them for some good end: "If my life and strength can last till I get such a class started here in the building, I shall be very glad." There was something pathetic as the saintly old man said these words; and at the same time it was inspiring to think that the end and aim of even such a life as his, in its highest development and purpose, was to arrange and invent what was useful for his fellow-creatures. To this he applied all his knowledge and experience; and all his acquaintance with mechanical contrivances, and what he knew of developing business interests, were made to subserve in raising and cheering as many men and women as possible, in their blind and ignorant efforts to fill useful and independent places in the world. The very last time I saw Mr. Cooper, and when his waning strength left his countenance languid and weary, his eye brightened and he straightened himself up firmly, as he told me that "the type-writing class was started, and he wanted me to go upstairs and see it."

A few years since, Mr. Cooper added a large section to the top of the Cooper Union, about two hundred feet long, from Seventh to Eighth street, and nearly a hundred wide. This was a great pleasure and comfort to him; he watched every brick as it was laid, and he delighted to explain how strong it was, and how bright and fine the new rooms were, and the beautiful view which could be seen from them over the harbor and neighboring country. He had meant to have pictures and machinery exhibited here; but when it proved that this section of the building was better fitted for the men's class-rooms, he abandoned his own plans to carry out the ideas of those on whom he could depend for advice.

Mechanical contrivances of all sorts were his delight, and when, in company with his faithful janitor, whose knowledge and good sense were in harmony with his own, he went about looking at the steam-heating apparatus, the ventilators, the elevator, and any new arrangements which had been made, he was

full of suggestions whose practical value we soon learned to appreciate. If I told him that we had not air enough, that the steam-pipes near the pupils' seats were too hot, his invention was stimulated in a moment to contrive some remedy for the evil. He often said to me, as he looked about the rooms: "Let me know if you can think of any improvement, and I shall be glad to do it if I can." And so there has been a constant addition to the conveniences, the studies, the healthful arrangements, and the books and casts for the school. Unlike many institutions, there has always been a feeling here that nothing was suffered to fall into a *rut*. When the books in the art library became worn, they were re-bound or replaced; casts were duplicated and new ones added; and carpenters, glaziers, and plumbers were permanently employed, so that the rooms could be kept in good condition. Any one with experience knows what cheer there is in such a state of things. It is so much easier for teachers and pupils, and all connected with such an establishment, when they are sure they are not neglected nor their interests ignored.

So completely was the pecuniary machinery organized, that though during the eleven years of my connection with the Cooper Union great numbers of people were to be paid monthly, no teacher of the Woman's Art School has ever had his or her money delayed a week; only by accident has it been delayed even a day. Peace and quiet and perfect order were the direct result of Mr. Cooper's influence and habits of life.

As I said before, Mr. Cooper cared little for art *per se*. And so he looked with some suspicion and incredulity on the headless Torso of "Victory," in the Elgin Marbles, and could see no beauty in the "Fates"; but he was well content to trust such matters to more experienced judges, and to reiterate his usual words: "If the young women can only learn, so that they can get decent and respectable livings!"

Human nature is a great mystery, and in the different periods of our life one stage does not well understand the others. How little can the child know the state of mind of the man! and in middle life how slightly are we sure that we comprehend the feelings and thoughts of old age! The world, to a youth, is full of hope; in the midst of the struggle, the accomplishment, and the disappointments of maturity, it looks different; and old age probably conceals thoughts, such as other periods cannot understand, of what things are vain and what are of value, as the bodily powers and desires fade away and the

certainty of death becomes more near and real. Some qualities in us are endued with an everlasting youth, and it is these which we embody as our conception of the Immortals. Benevolence, charity, a love of nature, such parts of us as these, appear to be the same in young and old; and in our idea of angelic natures we carry such qualities forward into another world. It was a strange and new problem of life to watch so aged a man as Mr. Cooper, and observe of what human nature was capable at so advanced a period of development. Often, when I looked at him and saw his clear eye kindle with enthusiasm for good, or his look melt with pity; when I saw him so kind and loving as he spoke of his daughter or young grandchildren, and so full of sympathy for the poor; and especially when I observed his step drooping and feeble, and his head bowed, as he first came into the school after a night when he had slept poorly, and then, at the tale of some helpless girl whom his benevolence had benefited, saw him grow bright again and his eyes light up and his breath become deeper,—on such occasions it did really seem as if new life came into him, and, as Swedenborg expresses it, as if it was "the spirit of an angel which informed him."

To the day when he was taken with his last illness, his sight was perfectly good, his hearing as sharp as ever, and there was no trace on his sincere and peaceful face of the querulousness or peevish discontent that is so often seen in old age. The highest lesson taught by Mr. Cooper was the lesson of his own life. As much as, or more than any one I ever knew, Mr. Cooper solved the problem: "Is life worth living?"

Observing him carefully for a long series of years, it appeared that certain parts of his nature were cultivated intentionally, as the result of a wisdom which discriminated what was really worth caring for from what was not worthy of pursuit. Personal ambitions or selfish aims had no weight with him, and disappointments and annoyances which would have left deep wounds with many passed off from him with scarcely an observation. He was most kind and loving; but if he were usefully employed, no domestic loss or separation from friends seemed to touch his happiness seriously. He spoke often of his preference for plain living, and his habits were as simple as those of a child. Love of pomp or display never touched him in the slightest, and he had an innocent openness of character which concealed nothing. Never, under any circumstance, did he show a particle of malignity, revenge, or meanness. If people disappointed him, he passed over

the wound it made and let his mind dwell on something more satisfactory. Swedenborg's phrase, "the wisdom of innocence," often occurred to my mind in observing Mr. Cooper. He knew what was wise, and to that his heart was given. Sensitive as any young man in all works of sympathy or kindness, the mean and bad ways of the world fell off from his perception.

So his life passed in New York and in the Cooper Union, serene, happy and contented. With "honor, love, obedience, hosts of friends," he was an example and encouragement to those who had not gained the quiet heights on which his inner self habitually dwelt.

On the evening of the yearly reception of the Woman's Art School, which occurred the latter part of May, Mr. Cooper stood or sat at the south corner of the east corridor to receive the thousands of people who attended the reception. The guests consisted of old and present pupils and their friends, and vast numbers of the outside public. Surrounded by his family, the venerable founder of the Cooper Union was always present,—the chief attraction of the evening. For many of the first years of my acquaintance with him, Mr. Cooper stood during these receptions almost the entire time, shaking hands with men, women, and children. The teachers and officers of the building were usually near him on these occasions, and it was very interesting to observe the various manners of the crowd who approached him. Sweet, simple, and dignified, he welcomed each person cordially. "*How* do you do? *How* do you do?" he said, over and over again, till we who cared for him tried to screen him from the press of visitors. An old man and woman would approach: "It is many years since we saw you last," they said, grasping his hands. "Mr. Cooper, we must put our little boy's hand in yours," said a young couple with a child five or six years old at their side. Then a group of boys would come along and stand curiously regarding him from a short distance. "That's Mr. Cooper," they whispered in an under-tone. Young men came along and stopped to talk to him and shake his hand, till some of us whispered to them that they must not stay to tire him. Occasionally, the salutations were very amusing, especially those of mechanics or workmen, who called him "Uncle Peter," with the evident intention of respectful endearment; and these people were met with the same affability as the rest. Not infrequently my own nerves were a little disturbed by some good but inconsiderate person, who, grasping his hand and looking at him with mingled affection and surprise, told him, "When I saw you a year

ago, Mr. Cooper, I thought it was the last time you would be here. I am glad to see you alive now." But by none of these remarks was Mr. Cooper in the least perturbed. "I have had a long life; it can't be for a very great while now," he answered. "God bless you, Mr. Cooper, for all you have done for me," said many a man and woman as they passed him. And so the evening wore away, and ten thousand people had come and gone through the great, bright halls and school-rooms; and Mr. Cooper's presence had put a good thought or feeling into everybody's heart. I can see him now, with his smiling face and interested look, and his soft white hair waving over his shoulders, amid flowers, lights, and the cheerful music, while his presence brooded like a benediction over the swaying and surging crowd. The same scene was repeated the next night at the "Men's Reception" and on the "Commencement Night," when he never failed to speak some useful lessons to the men and women before him, and to tell them how their lives might be better and happier and more useful; but a greater and better lesson than anything he could *say* was the sight of what he *was* and had *done*.

New Yorkers know the touching and unique spectacle at his funeral (his death occurred April 6, 1883, in his ninety-third year), and remember the unbroken line of respectful and sorrowing faces which silently contemplated the funeral procession in its course of three miles from the church in Twentieth street to the Battery. Broadway was absolutely emptied of business and vehicles while the body of this good friend of every one in New York was being carried to the grave. Every class of society was represented in the great crowd, and rich and poor alike had the same sorrowful look on their faces. In the poorer cross-streets, mothers held up their little children to look at the funeral, and rough-looking and wretched people of every nation seemed touched with a better feeling, while, as the hearse passed between the great business houses of Broadway, burly and prosperous merchants stood silent and with heads uncovered. The sight, looking down the main street of the city, was most impressive. At that hour of the afternoon, the great artery of New York is always crowded with carriages and vehicles. Horses and wagons are closely wedged together, and the mass moves along almost solid for miles. But now, when the funeral carriages turned two abreast into Broadway from Fourth street, not another vehicle broke the stillness, and the bare pavement was seen as far as the eye could reach. On either broad sidewalk was the mass of

upturned, silent faces. When the procession reached Fulton and Wall streets, it seemed nearly impossible to believe that life could be kept back from where these streets join Broadway; yet such was the love for Mr. Cooper that all remained silent to the end, and it was only when the carriages which had followed the hearse turned again, after leaving it, into Broadway that the crowd surged back and life resumed its usual course, ebbing and flowing as before.

The recollection of a great court funeral is still vivid in my mind, when the young

Queen Mercedes of Spain was buried. At this funeral the Spanish nobility laughed and flirted behind their fans, in the very church, while the Requiem Mass was being performed and the funeral sermons were being preached. The sight was a sad lesson on the vanity of worldly greatness, when one compared it with the spectacle of the silent procession of persons who moved for many hours up the aisles of the church to look once again on the dead face of Mr. Cooper, their loved and revered friend.

Susan N. Carter.

GEORGE FULLER.

On the walls of the New York Academy of Design, in 1878, there hung a picture called "Turkey Pasture in Kentucky," which attracted much attention. Simple in theme, sober in tone, telling no "story," and making no daring technical appeal to notice, it was yet remarked by the popular eye and was found, I think, by artists and all sensitive observers much the most interesting picture of the year. Who, it began very soon to be asked, is this Mr. Fuller, whose name is so unfamiliar, whose work is so original and so charming,—who is, apparently, making his *début*, yet whose essays are so complete and ripe and masterly? If he is, as he seems to be, a "new man," he shows the trade-mark neither of Paris nor of Munich; and if he is a product of home culture he shows even less affinity with the traditions of our own elder school. Where does he come from that he has learned to paint in so peculiar yet so fine a way?

Glancing at the catalogue we found that Mr. Fuller was not in any sense a "new man," but an artist of long standing—actually an Associate of the Academy itself, elected so long ago as 1857. Where and why, then, had he secluded himself so entirely and so persistently as to come now a stranger before the younger generation of to-

day? The answer to these questions may be given in a brief sketch of Mr. Fuller's life—a sketch most interesting because so unlike the usual histories of artistic development, whether in our own country or another.

Mr. Fuller was born of Puritan stock at Deerfield, Massachusetts, in the year 1822. An instinct for art had already shown itself in several members of his family, and from childhood his own tastes led him toward a painter's brush and palette. He went to Illinois at the age of fourteen with a party of railroad engineers, and remained two years, during which time he was much in the company of the sculptor Henry Kirke Brown. Between the ages of sixteen and twenty Mr. Fuller was again at Deerfield, following a school course, but making constant essays in painting, chiefly in the way of portraiture. In 1842 he wrote for counsel to Mr. Brown, then established in a studio at Albany, and gladly accepted the sculptor's invitation to go thither and study under his tuition. At Albany he remained nearly a year, when Mr. Brown went to Europe and Mr. Fuller to Boston where, painting portraits as before, he devoted himself also to the study of whatever works of art the city then afforded—especially the pictures of Stuart, Allston, and Alexander. A few years later he removed to New York,

and, at an age when most painters have finished their student courses, went diligently to work in the life-classes of the Academy. His first public success seems to have been gained in 1857, when he was already thirty-five years old. He then exhibited a portrait of his first friend in art, Mr. Brown, and on the strength of its good qualities was elected an Associate of the National Academy.

It is curious to read the list of those who were at this time Mr. Fuller's friends and fellow-workers, and to remember how he now stands side by side in his art with the youngest and most innovating of our painters. H. K. Brown, the two Cheneys, Henry Peters Gray, Quincy Ward, Sanford Gifford, Daniel Huntington,—these were among his most constant associates; while to-day we find him joining hands with the young "Society of American Artists," and feel that the "A. N. A." which follows his name is much less characteristic than the place held by that name on the Society's member-list and juries.

After a year in New York Mr. Fuller spent three winters at the South, making studies of negro life some of which have been utilized in his later work. Then, after a year in Philadelphia, he went for the first time to Europe, not to study in any academy but to learn from nature and from the treasures of earlier days in London, Paris, Amsterdam, Florence, Rome, and Sicily. In 1860, he returned to America, but not to the public practice of his art. Dissatisfied with his previous efforts and filled with visions and ideals proper to his own nature, he seems to have felt that if he was ever to work his way to ripe performance it would be through his own strength, and not through help from school or patron or fellow-craftsman. He shut himself up in his Deerfield home, took seriously to farming, and the world of exhibitions, of artists, and of critics knew him no more. He was invisible for many years—almost forgotten save by a few old friends who remembered the promise of his earlier work. The proof that he had not ceased to cultivate art while compelling nature to his needs, was not shown till 1876, when some friends who had penetrated the Deerfield studio persuaded him to exhibit in Boston fourteen pictures of different kinds, which at once gained him local fame and patronage. Two years later he appeared again on the walls of the New York Academy, after so long an absence that he came (I repeat), as a stranger and an aspirant—his place to be won afresh, his success dependent on the suffrages of a new generation of artists and of art lovers. He returned, not a beginner but a veteran in art, yet as a *débutant* once more. And to how different an artistic

world from the one he had known in years gone by! The great exodus of students to Parisian and Bavarian schools, of amateurs to foreign studios and galleries, had begun a few years before. Its results were just returning to us in the shape of a more cultivated and critical public, used to the best foreign work and of a throng of vigorous, eager, cosmopolitan young painters, all alike disregarding of older American traditions and filled with new ideas on every subject, from the definition of the abstract term "art" down to the most concrete professional questions of the studio. But in this new world Mr. Fuller's voice sounded not an alien but a consonant note. The artists—I mean the younger brood, and not the brother Academicians who "skied" his pictures—were the first and the most enthusiastic in his praise. Their estimate of his talent, and their feeling that it was akin, in these his later efforts, to their own ideas rather than to those of his actual contemporaries, was before long shown by his election into the Society of American Artists. In contrast with this ready recognition has been the action of the National Academy, the brevet rank of which he has held so long. Elected Associate in 1857, placed indisputably by his recent successes among the very first of American painters,—and in certain points, perhaps, beyond them all,—Mr. Fuller has not yet been named Academician. We do not feel that it is he who has been injured by such omission of his due. But to read the list of those whom the Academy has promoted over his head within the past six years, affords a factor which should not be omitted in our estimate of the value of its official titles.

In 1879 Mr. Fuller showed at the Academy the "Romany Girl" and a quite marvelous canvas called "And She Was a Witch"; in 1880 he sent the "Quadroon" and a boy's portrait; and in 1881, the loveliest of all his works—the "Winifred Dysart." To the exhibitions of the young Society he has also contributed year by year, chiefly portraits or landscapes, until in 1882 he sent two large figures, conceived in the same mood as the "Winifred," called "Lorette" and "Priscilla Fauntleroy," and last spring another, not dissimilar, called "Nydia." Among other canvases shown from time to time, under different circumstances, have been the "Herb Gatherer," the "Dandelion Girl," the "Psyche," a Cupid-like "Boy and Bird," and a wooded landscape with figures, now in Mr. Cottier's possession. And in his studio he has just now a large picture of a "Girl with a Calf," more akin in sentiment, perhaps, to the "Romany Girl" than to any other of his works.

Mr. Fuller's summer studio is still at Deer-

field, but his winter work is now done in Boston. Some German philosopher once decided that an artist may do his work contentedly under one of two opposite conditions: either in rooms filled with beauty or in rooms denuded of everything; either surrounded by objects with which his tastes are in unison and his works in keeping, or isolated as completely as possible from all things whatsoever. Which of these two environments he prefers will depend upon his temperament—upon his craving for, or independence of external, visual stimulants. The sort of environment with which no really artistic temperament could content itself would be one half-way between these two extremes—an environment of commonplace, unsuggestive, distracting, Philistine ugliness. Whether Mr. Fuller consciously objects to and discards the artistic litter which surrounds most modern painters, or whether he unconsciously neglects it because bare walls and his own ideals are all he needs, I cannot say. But his Boston studio fulfills with almost literal exactness the German's second postulate. If it is not "artistic," it is certainly not "Philistine" or suggestive of a tolerance for ugliness. It is a place to work in, and that is all—a large square room, with one great window overlooking Boston Common; two or three chairs and easels, a platform for the model, and what we may call, if we will, a "dado" of unfinished canvases turned against the wall. There was only one thing more when I first saw the studio, but that thing was significant. Hung on the empty wall was a single little canvas, a gorgeous, vague, entrancing bit of Monticelli's color, shining like a star from the surrounding void. Here was the one resting-point, apparently, that the artist's eye demanded—a key-note, as it were, a term of comparison, an inspiring draught to which he might turn at will.

In person, Mr. Fuller offers at first sight a strong contrast to the spirituality of his art—tall, massively built, with a large head and a patriarchal beard of white. Had we theories on such matters, we should expect very different things from such a form and physiognomy—some sort of vigorous "realism," most probably, instead of the delicate, idealizing art he gives. But the dissonance is in outward seeming only. Mr. Fuller's words and thoughts on art, his judgments of the results of others, and his estimate of his own aims and his own productions, are not only suggestive and interesting in themselves but valuable as giving an insight into the meaning and sentiment of his work.

To mark now the chief characteristic of that work, I may say that it is distinctly ideal in

its essence—opposed in its aims as in its technical methods to what we know as "realistic" art. All art-products fall into one of these two classes, though the limits of the two meet, of course, and some few men may stand on the wavering boundary line between them. The distinction between the one kind of work and the other is never to be based on choice of subject. Nor does it rest primarily on technical manner, though, indeed, a painter's manner is most apt to conform to the nature of his aims and his conceptions, since it is but his means toward expressing these. The true difference, however, is as between the nature of one painter and of another. Every artist, like every philosopher, is born a Platonist or an Aristotelian. It is not the thing he chooses to paint, but the way in which he sees and feels that thing, that marks a man as an "idealist" or a "realist." Michael Angelo was an idealist while painting divine creative power or the wrath of judgment days; Millet, while depicting peasants at their toil. Dürer was a realist when painting the Madonna, Vereschagin is when drawing the dead on the field of battle. Even in portraiture proper this same difference between dispositions makes itself as clearly felt—Rembrandt on the one hand, Holbein on the other; Holbein a realist, though limning philosophers and queens; Rembrandt an idealist, though portraying the tawdry patriarchs of the *ghetto*.

In drawing this distinction I would not, of course, have it for a moment understood that I call *any* art "realistic" in the sense of its being a mere copyism of external facts. All art, of whatever kind, however denuded, apparently, of imagination or poetic sentiment,—the art of Holbein or Jordaens or Metsu, even the so nearly literal and therefore so inartistic art of Denner, as well as the art of Raphaël or Corot,—is, as Emerson has put it, "nature passed through the alembic of man." The difference between Denner and the idealist—still more between a great artist like Holbein and the idealist—is a difference of quantity only; lies in the degree to which a painter modifies, transmutes, transfigures, in rendering a theme from nature. But this difference in degree may be so immensely wide that we are quite justified in drawing the distinction made above. And to draw it clearly is one of our most important tasks when we would make an estimate of any painter's character.

Mr. Fuller's art is not only of the idealistic school, but, considering his time and place, is peculiarly marked in this respect. The near-as-may-be reproduction of nature is a thing absolutely alien to his aims. To take nature

as his basis (as every artist must), to keep true to her general facts (as every artist should) and through them to her meaning, but to make natural effects speak with a stronger, clearer, more poetic voice, coming from the artist's own feelings and ideas when in nature's presence,—this may, perhaps, roughly define Mr. Fuller's theory of art. To-day, and in this new world, such an artistic temperament is uncommon. It is so rare, indeed, that many prophets who are hopeful of our artistic future yet believe that it will be a future devoid of idealism to a most marked degree. For myself, I do not think this. But it is the worst of futilities to argue over the hidden things to come. I will only plead, therefore, that although such a temperament as Mr. Fuller's must be confessed exceptional with us to-day, yet in the mere existence of one such temperament (not that I myself think it is the only one), we have ground for hopeful prophecy.

In subject most of Mr. Fuller's pictures are extremely simple, and without exception they are all conceived in a purely pictorial spirit, depending for their interest not at all on any "literary" or other extrinsic element. Many of them are large single figures, simple in pose, denuded of all accessories, connected with no incident upon the canvas, still less with any that a name might suggest to the beholder. In the "*Winifred Dysart*,"* for example, which seems to me the most perfect of them all with the possible exception of the "*Turkey Pasture*," we see against a shadowy landscape background, with a very high horizon-line and a glimpse of cloud-streaked sunset sky above, the three-quarter-length figure of a young girl dressed in a pale grayish-lilac gown, her arms and neck uncovered, holding in one hand a small empty jug, and looking out of the canvas with a straight though veiled and dreamy gaze. Nothing could be more simple and unstudied than her pose, with both arms hanging loosely by her side. But nothing could be more naively graceful. It is full of pure poetry, this picture,—not poetry of a literary sort, as the factor is too often introduced in art, but of a truly pictorial kind. We are told nothing of the girl; there is no "motive" used, no "anecdote" suggested. It is herself that interests and fascinates us,—and less by actual beauty, though this exists to a high degree, than by psychical charm, if I may so express myself, by a spiritual emanation which shines from her face and form, and from the artist's every touch.

* This picture was engraved by Mr. Closson for the "*American Art Review*" in 1881, and the "*Romany Girl*" was reproduced by Mr. Cole in *SCRIBNER'S MAGAZINE* for July, 1880.

He has made us see not only what he saw in a model placed before him, but what he divined, imagined, or created in her presence,—her inner as well as her outer nature. And as this was a poetical conception, and as it is expressed by consonant technique, the result is painted poetry. No more fascinating, haunting, individual, living figure has come from a contemporary hand. And it preserves its individuality in presence of the art of past days also,—has had no prototype or inspiration in the work of any other brush.

In the "*Romany Girl*" a rather more forceful chord is struck, but with hardly less of elusive charm, and nothing less of individuality or beauty. The wild-eyed, half bold, passionate, yet tender, face, the supple action expressed in the quiescent figure, the soul that speaks from the features as distinctly as does the so different soul in the "*Winifred*,"—these are the elements which place the canvas amid really creative works. The "*Quadroon*," with less of beauty and charm, has almost the same impressiveness. Sitting in the corn-field, with her arms resting on her knees, her great, sad, half-despairing eyes turned to ours, she reveals the mystery, the suffering of her race. No pictured scene of slave-life, with action, accessories, and story, could be more expressive, more pathetic. These simple single figures, as Mr. Fuller has created them, are so full of meaning, of character, of individuality, as well as of idyllic charm, that each becomes to us an actual being—remembered not as a mere pictured form, but as a true poetical identity.

The two pictures shown in 1882 seemed to me less perfect than these others, not quite so beautiful or so characteristic,—the results, apparently, of visions which had not been so compellingly clear in the painter's own mind. The "*Priscilla Fauntleroy*," however, was only a degree less charming than the "*Winifred*." It seemed captious to criticise her, even in the only possible way one could,—by comparing her with her elder sister. Mr. Fuller is his own severest critic. If his finest works have made us hypercritical he has but himself to blame.

In the "*Priscilla*," by the way, we have what may seem, at first sight, to be a subject of "literary" interest, emanating, to some degree at least, from an author's creative power and not altogether from the artist's. But this exception among Mr. Fuller's pictures is such in appearance rather than in fact. If Hawthorne's ideal in "*The Blithedale Romance*" has inspired him, it has served merely as a point of departure for the working of his own imagination. The canvas is not illustrative in the popular sense, nor does it depend

for its value to any great extent upon its adherence to its ostensible theme. We may or we may not find Hawthorne's Priscilla in this shy, startled girl, with one hand raised in a gentle, half-bewildered gesture to her face. But in either case we find a charming *picture*, and one suggesting a definite personality filled with delicacy and with grace. And this should be the case with every creation of the sort; whether or no it affords a complete realization of its extrinsic theme, its chief value should be intrinsic. Its pictorial quality should have been first in the artist's mind and should be first to the spectator's sense; and the artist should have clearly realized an inward ideal of his own, whether or no in strict accordance with his author's.

The primarily pictorial quality of Mr. Fuller's art is strongly shown when he comes to actual portraiture. It must be an eminently "paintable" face, I should think, that would tempt his brush, and a face that he could transmute, at least, into some kind of beauty. With ugliness, even of a characteristic and expressive sort, his idyllic impulse has no concern. Children and young girls and half-grown, blooming boys,—these are the models he most often takes; though I have seen a portrait of a very old lady, painted not long ago, which proves him sensible to the beauty of old age too, and able to give its character with force and truth as well as poetry. Given sympathetic models, Mr. Fuller's portraits have a rare psychologic interest, and his sympathetic models, being of the classes I have just noted, are those with which psychologic expression is most difficult to attain, since it must be divined under the smooth, unmarked flesh of youth, and rendered without strong accentuation of any kind. Yet we cannot but feel that of quite as much interest to their author have been their strictly pictorial possibilities. Indeed, I heard him say once to a would-be sitter: "Don't expect too much. I shall make it something of a portrait and a good deal of a picture." His portraits are, in a word, like his other works, of the idealizing and not the realistic school. And about them he most often throws the same vague, misty glamour he gives to his purely imaginary creations,—an atmosphere that results partly from his way of seeing nature, and partly from the technical method which that way of seeing has induced.

Of his landscapes the same words may be used. They are not so much definite picturings of definite localities as idealized studies of color, light, and foliage. One of the best is that owned by Mr. Cottier, with its wonderful effect of distance beyond the scat-

tered tree-trunks and its magical illumination. The most remarkable, however, is the lovely pastoral he calls the "Turkey Pasture in Kentucky," with which he reappeared at the Academy of Design in 1878. The landscape is wonderful in its strongly poetic yet truthful expression of light, of sun and shadow, and of color. In grace of composition, in suggested life and motion and vigor in the figures, it is, however, almost equally remarkable—one of the loveliest, and surely one of the most original and therefore most valuable, creations of recent art.

Such pictures as the "Herb Gatherer" and the "And She Was a Witch" resemble this last in giving us small figures in beautiful landscape settings. But they differ through the presence of a dramatic, even tragic, element we have not yet encountered. The "Herb Gatherer" is rather small in size, and shows us the aged, shrunken figure of a withered crone, finding her painful way through a weedy pasture, carrying the simples she has sought. An uncanny, witch-like atmosphere pervades the canvas. The face of the woman suggests past beauty, perhaps, but present converse with bitter thoughts; and the burden she bears speaks of strange, forbidden decoctions. The picture casts a spell over us—a spell such as is cast by much of Hawthorne's writing, though in the one case as in the other it is hard to explain just how the subtle influence is diffused. In the "Witch" picture the same effect is wrought with more distinctly tragic factors, and with even more intensity. The scene is a wooded landscape with tall thin tree-trunks; in the distance a woman led away to the dread tribunal; in the foreground a girl—her grand-daughter, one supposes—fleeing in terror to the door of her humble dwelling. Beautiful in its externals it is weirdly impressive and haunting in its meaning, though here, again, the sentiment is suggested merely, without the aid of very definite incident or story, a great deal being left to the spectator's own imagination.

Mr. Fuller is among the most conscientious—it might be better to say, the most loving—of workmen. No time, no effort, no thought, no pains seem to him too much to bestow on his creations. He works on them sometimes for years before he allows the world to see them, in the effort (always, I suppose, appearing fruitless to the true artist) to make the outward form tally with the inner vision. Indeed, it is but hesitatingly that I venture to describe any canvas still in Mr. Fuller's hands, knowing well his way of suddenly blotting out, after many years, perhaps, what to others may

seem one of his most perfect essays, and beginning it all over from the start. And a collector who buys one of Mr. Fuller's pictures has sometimes, if he could only profit by them, a whole little gallery of other pictures under the outer and ostensible creation. With regard to the aims and ideas with which he approaches his work I may, perhaps, quote a few words of his own—words which, however, it is but fair to say, were not written for the public eye. "I have long since learned," he says, "to look on the painter's stubborn means as a lion in the path, to be overcome without leaving evidence of the struggle. What sad days those were, twenty years ago or more, when every tyro noted down carefully the palettes of Rembrandt, Rubens, Reynolds, and Stuart, thinking thereby to gain some notion of their power; and, if this was not enough, turning to the 'Hand-book of Oil Painting,' by Walker, wherein were laid down thirty tints of red, blue, and yellow, for the painting of the human head. Experience teaches one, in time, to throw such rubbish aside; to realize that one must see for himself; that all rules fail to guide him in color; that the great painters were not alike in their ways of working, but that all were true to their perception of the pervading truth, to their sense of gradation, their control of their subject (common ground whereon Holbein is a colorist with Titian), and that the attainment of *gradation* is utterly above and regardless of any means used. To make one part keep its place or relation to the whole comes more through our feeling than our seeing. For myself, I am much controlled by the work before me, being greatly influenced by suggestions which come through much scraping off, glazing, scumbling, etc., in trying to extricate myself from difficulties which my way of working entails upon me—always striving for general truth. Indeed, the object to be attained must always be reached through our own methods. The great painters tell us this, and leave us to fight it out. They only insist upon gradation, the law of which governs values, tone, and harmony, so no detail must interfere with its truth. The main thing is to express broadly and simply, hiding our doing, realizing representation, not reproduction,—to get ourselves above our matter. A picture is a world in itself. The great thing is, first, to have an idea—to eliminate and to clear away the obstructions that surround it. It is more what is left out than what is put in. The manipulation admired by some, the true painter seeks to hide. The question must forever be, What is below the surface? Color is intuitive. It belongs to the imagination. It

affects the mind like the tones in music, and lives only in the minor key."

Of his own picture of the "Girl and Calf," now in hand, I heard him say: "What shall I make of it? I don't know yet. The subject is all there, of course, but what is the subject in a picture? Nothing. It is the *treatment* that makes or mars. (By *treatment* meaning, of course, the personal sentiment as well as the technical manner an artist brings to bear.) 'A Girl and a Calf'—what is that? We have all seen such figures a thousand times, and taken no interest. It is my business to bring out something the casual eye does not perceive—to accentuate, to interpret. Just how I shall do it must come to me as I work—or the picture will be nothing." These are the words of an idealist, but words which, in more or less of their entirety, will be echoed by every true artist of whatever school. The disciples of modern dash and brilliancy will, however, doubtless see no virtue in "hiding their doing," since this very "doing," independently of what is done, is too often to-day a picture's and an artist's highest claim to honor. That it is a high claim when well sustained, I do not question; yet, if there were more significance and individuality of matter behind some of the current ease and grace and strength of manner, modern art would be greatly the gainer.

Mr. Fuller's technical manner has been the subject of much discussion and disagreement—a sure proof of its originality if of nothing more. To some observers it seems not only original but very beautiful, with its subdued yet glowing color, its somewhat willful chiaroscuro, its almost diaphanous textures, its misty vagueness of effect, and its involved, half-hesitating touch. To others it has seemed a drawback, an imperfection, or even an affectation,—a mannerism that clouds the better elements of his art. For myself, however, it is impossible thus to separate Mr. Fuller's manner from his manner—to imagine one as disassociated from the other. His soft rich color, his vague backgrounds, his shadowy outlines, his broadened details, his misty touch, seem a very part and parcel of his conceptions and his aims. And this impression was only confirmed when I saw one of his earlier works, a portrait painted long ago before the European trip and the Deerfield hermit-life. It was the head of a comparatively young man with a fair complexion and a brown beard. It was fine in color, though without the perfect harmony of tone we know to-day, perfectly simple in execution, much more definite, more detailed, more "realistic," more naïve,—and more commonplace,—than we might believe had ever been

possible to his hand. Only in the character suggested with much sympathetic force, in its evidence not only to the nature of the model but also to the mood of the painter, could one see any trace of the poetizing artist of to-day. The painter's meaning seemed out of harmony with his speech. We longed to see the same face copied in the language he has taught himself since it first was painted,—a language so much more delicate, more abstract, more dreamy, and therefore so much better fitted to express the mood of such an artist.

As a colorist, Mr. Fuller's charm is to me very great. His range is called narrow, though there is an essential difference, I think, between the cool green scale he adopts in some of his landscapes—the delicate grayish harmony of the "Winifred," the deeper, browner tone of the "Romany Girl," the rosy glow of the "Nydia"—and the soft golden hue he gives to many of his portraits. It is probably his ever-present mistiness of technique, and the fact that with all his modulations he always holds to the "minor key" he loves, that has made his color seem to careless observers more unvarying than it really is. Sometimes it is perfect in its beauty, and always, once more, extremely individual. It is not in brilliancy that its excellence consists. It is in harmony, in complete tone, in the way things are made to keep in place and reveal their forms and relationships without recourse to the least violence of contrast. There is no accentuation in Mr. Fuller's canvases, never a vivid hue, a really high light or a really low dark. There is no emphasis whatever, either in a color or in its application, but always delicacy, self-restraint, suavity, mellowness, low, soft-toned, misty harmony. Yet there is no lack of strength, it seems to me, in his best examples, and certainly no want of complete gradation or of the definite expression of those broad facts he seeks to give. The "Turkey Pasture" is the most radiant of all his works, the "Winifred" perhaps the most delicately and rarely colored. But one of the most delightful of all in color was a portrait I saw in his Boston studio—the three-quarter-length figure of a young girl standing against a background of russet-hued landscape, fine in its suggestion of breeze and life. The dress was white,—but the word gives little notion of the subtle tone by which the artist had subdued its crudeness and brought it into keeping with the glowing background.

As there are no accessories in Mr. Fuller's compositions, so there are, as I have already implied, few details in his execution and little insistence upon textures. All is broadened, simplified, poetized,—taken out of the world

of even comparatively detailed imitation, and brought into the realm of somewhat ethereal but clearly realized imaginings.

The chief charge that has been brought against the artist's work is that of monotony—not only in the matter of color just referred to, but in its essence as a whole. Looking at his technical manner merely, it may seem well founded; but it is not, I think, a charge of a very serious sort. The versatility of some painters may multiply their crowns of glory, but cannot enhance the radiance of any single one. We delight in the versatility—the wide scope of thought, the radical change of mood, and the variety of treatment—of certain artists we could name. But we do not grumble at the almost changeless mood, the almost uniform expression of such a one as Corot. And so with Mr. Fuller. The man who could paint the "Winifred" and the "Turkey Pasture" is a true creative artist; and we go outside the legitimate bounds of criticism when we cavil because he cannot also give us other and quite different things. Yet, even so, I feel it is with his art in general as it is with his color,—there is less monotony than some would have us think. There is much diversity, indeed, if we look deeper than the surface of his paint. It is true that he who has seen one Fuller will never mistake another. But it is not true, as I have heard it bluntly put, that he who has seen one has seen them all. The uniformity of his handling is great, and is the more remarked on account of its strong individuality—its difference from the work of other men. But in their meaning, their conception, their inner essence as apart from their language, there is, it seems to me, a vital difference between such pictures as the "Nydia" and the "Witch," between such as the "Winifred" and the "Herb Gatherer."

An interesting characteristic of Mr. Fuller's art, perhaps the most interesting of all when considered with his ideal tendencies, is the evidently American flavor of the work it gives us. There are idealists as well as realists who might have been born in any land. Mr. Albert Ryder, for example, to take an instance close at hand, may be counted in with such; and in much of his work the greatest of our painters, Mr. John La Farge, though the latter, in some of his more recent decorative works, has given us the American type of face with much distinctness. But Mr. Fuller is never, and could never be, anything but a palpable American in his art. He is as American as the most thorough-going young realist who paints New York streets by the electric light or negro boys eating water-melons. Nay, far more American than the most of these; for, as I have said, the spirit, the quality of a

"TURKEY PASTURE IN KENTUCKY." ENGRAVED BY W. B. CLOSSON FROM THE PAINTING BY GEORGE FULLER. OWNED BY W. H. ABERCROMBIE, ESQ., BROOKLINE, MASS.

man's art do not depend upon his subject matter; and it so happens that many of our younger men approach local subjects with a sort of cold cosmopolitan vision, while Mr. Fuller feels his more subtly characteristic themes with a characteristically American soul. No one, it seems to me, but an American could have painted the "Winifred Dysart"—that etherealization of our own native type of beauty. No one else could so preserve the elusive yet distinct American look of all his portrait sitters, though veiling their features in the haze of his vaporous methods. Even his "Romany Girl" is an American gypsy,—a wild creature of our own woods and not of any other.

Another picture which reveals this quality in a noteworthy way is the "Nydia," exhibited last spring. It is not so interesting in character as some of its fellows, for the face of the single figure is seen in something less than profile; but it is a most charming and gracious vision. In refinement and delicacy of feeling, in perception of the peculiar beauty of early youth, of freshness and innocence and shy grace, it is akin, as I heard one observer say who knew whereof he spoke, "to the creations of a Reynolds or a Greuze." But just as surely as Sir Joshua's young girls are English, just so distinctly is this little so-called Nydia an American, though poetized, transmuted, if you will, into almost ethereal guise. The evidence thereof is intangible, elusive, inexplicable in words, as is always the evidence to such imponderable facts,—lying, possibly, in the mere poise of the head and outline of the nose and cheek. But it is unmistakable none the less; so I need hardly say that the chosen name is a misnomer,—that no one could divine Bulwer's blind girl of Thessaly in this dainty, rosy little maiden, not even with the help of certain shadowy, volcanic suggestions in the background. Nor need I add that the would-be Nydia, like the would-be Priscilla, shows that Mr. Fuller's art is always really independent of literary inspiration. To my mind it is a mistake for an artist of his temperament ever to attempt illustration even of the vaguest and most general sort. It must hamper his brush a little, although such a brush cannot even seriously *try* to bend itself to outward requirements. And though no title can help or trouble those who care for a canvas for its own pictorial sake, yet there are many persons who think the suggestions of a name are the main things to be looked for in a picture, and who resent their non-realization as they resent the breaking of a contract.

Of course, with such subjects as he chooses and such methods as he adopts, the national

accent of Mr. Fuller's art is never of a sharp, still less of an aggressive sort. He is not the man to answer Walt Whitman's appeal to our artists to

"Formulate the modern;
To limn with absolute faith the mighty, living present;
To exalt the present and the real;
To teach the average man the glory of his daily walk and trade."

It is nothing so definite as this with Mr. Fuller. His is more the sort of brush that says:

"An odor I'd bring as of forests of pine in Maine."

It is a flavor, not a message from the national life, that we perceive in his creations. But it is a flavor both acute and all-pervading; so, at least, it seems to me—for criticism of this kind cannot be dogmatic, but must be a mere putting on record of personal impressions.

But if I may trust such impressions still a little further, I will add that to me Mr. Fuller's art is not only American, but distinctly local. It has an aroma—I will not say of Boston, but perhaps of Concord; it is a painter's version of the vague, transcendental New England poesy that is fast dying out of this generation, but the essence of which is preserved to us in the writings of the last. Hawthorne's name has occurred more than once already to my pen, and it is, I think, one which well suggests the quality of Mr. Fuller's art. Such a canvas as the "Witch" recalls Hawthorne's mood to even dull perceptions—not more by its choice of subject than by its subtly artistic, dreamy, thrice-peculiar methods of expression. But more convincing still is the fact that when the "Winifred Dysart" was first exhibited, and people were speculating about its name, almost every one said: "I am sure it it must be some character of Hawthorne's, though I cannot fix its place"; while the truth is, that the name was invented by Mr. Fuller merely as a title by which the canvas might be distinguished in the public memory.*

The creating, for his own needs, of a novel, personal, as well as beautiful way of working with his colors, is what makes a man a master, an originator among technicians, as distinct from an accomplished (even consummately accomplished) scholar. And imagination—the power of individual vision, of characteristic, fresh conception—is what makes him an *artist* as distinct from even a masterly

* It is interesting to note in this connection that Mr. Fuller has just now sketched a picture suggested by the witch trials in Massachusetts. It is somewhat novel in composition for him, containing many figures; but, both from a pictorial and an expressional point of view, promises to be one of the best of his creations.

technician. Not one alone, but both these important factors are to be found in Mr. Fuller's work. His imagination is not of a powerful kind. His poetry is seductive, not compelling; idyllic, not passionate; marks him a dreamer, not a seer. But it is true poetry, and proper to himself alone. His technique, on the other hand, is not brilliant, not audacious, not the marvelous legerdemain with which our eye is dazzled by many lesser artists—who may often be more wonderful *painters* than those with rarer mental gifts. But it is most artistic, most expressive; when at its best, extremely beautiful; and always and from the outset all his own—learned from no forerunner, and communicable to no successor. Original and lovely ideas told in an original and charming speech—a summing up which puts Mr. Fuller on a high plane,

like to the best of his guild in kind, though not necessarily in degree. His long retirement from the public sight was a dangerous experiment. With a lower nature, a less individual endowment, it would probably have resulted in weaknesses of many kinds—in rigid mannerisms, in self-conceit, in want of balance (mental and technical), in loss of critical insight into his own work and that of others. But to Mr. Fuller it meant fifteen years of patient, humble, conscientious, enthusiastic, self-reliant yet self-criticising effort, in wise disregard of popular advisings. It meant the persistence of his own ideal and the development of his expressional means in a consonant and personal way. And it has resulted in pure, lovely, and above all—to repeat the main facts once more—in original and ideal work.

VIII.

A QUESTION OF BOOK-KEEPING.

A DAY or two after Narcisse had gone looking for Richling at the house of Madame Zénobie, he might have found him, had he known where to search, in Tchoupitoulas street.

Whoever remembers that thoroughfare as it was in those days, when the commodious "cotton-float" had not quite yet come into use, and Poydras and other streets did not so vie with Tchoupitoulas in importance as they do now, will recall a scene of commercial hurly-burly that inspired much pardonable vanity in the breast of the utilitarian citizen. Drays, drays, drays! Not the light New York things; but big, heavy, solid affairs, many of them drawn by two tall mules harnessed tandem. Drays by threes and by dozens, drays in opposing phalanxes, drays in long processions, drays with all imaginable kinds of burden: cotton in bales, piled as high as an omnibus; leaf tobacco in huge hogsheads; cases of linens and silks; stacks of rawhides; crates of cabbages; bales of prints and of hay; interlocked heaps of blue and red plows; bags of coffee, and spices, and corn; bales of bagging; barrels, casks, and tierces; whisky, pork, onions, oats, bacon, garlic, molasses, and other delicacies; rice, sugar—what was there not? Wines of France and Spain, in pipes, in baskets, in hampers, in octaves; queensware from England; cheeses, like cart-wheels, from Switzerland; almonds, lemons, raisins, olives, boxes of citron, casks of chains, specie from Vera Cruz; cries of drivers, cracking of whips, rumble of wheels, tremble of earth, frequent gorge and stoppage. It seemed an idle tale to say that any one could be lacking bread and raiment. "We are a great city," said the patient foot-passengers, waiting long on street corners for opportunity to cross the way.

On one of these corners paused Richling. He had not found employment, but you could not read that in his face; as well as he knew himself, he had come forward into the world prepared amiably and patiently to be, to

do, to suffer anything, provided it was not wrong or—ignominious. He did not see that even this is not enough in this rough world; nothing had yet taught him that one must often gently suffer rudeness and wrong. As to what constitutes ignominy, he had a very young man's—and, shall we add? a very American—idea. He could not have believed, had he been told, how many establishments he had passed by, omitting to apply in them for employment. He little dreamed he had been too select. He had entered not into any house of the Samaritans, to use a figure; much less, to speak literally, had he gone to the lost sheep of the house of Israel. Mary, hid away in uncomfortable quarters a short stone's throw from Madame Zénobie's, little imagined that, in her broad irony about his not hunting for employment, there was really a little seed of truth. She felt sure that two or three persons who had seemed about to employ him had failed to do so because they detected the defect in his hearing, and in one or two cases she was right.

Other persons paused on the same corner where Richling stood, under the same momentary embarrassment. One man, especially busy-looking, drew very near him. And then and there occurred this simple accident—that at last he came in contact with the man who had work to give him. This person good-humoredly offered an impatient comment on their enforced delay. Richling answered in sympathetic spirit, and the first speaker responded with a question:

"Stranger in the city?"

"Yes."

"Buying goods for up-country?"

It was a pleasant feature of New Orleans life that sociability to strangers on the street was not the exclusive prerogative of gamblers' decoys.

"No; I'm looking for employment."

"Aha," said the man, and moved away a little. But in a moment Richling, becoming aware that his questioner was glancing all over him with critical scrutiny, turned, and the man spoke.

"D'you keep books?"

Just then a way opened among the vehicles;

* Copyright, 1883, by George W. Cable. All rights reserved.

the man, young and muscular, darted into it, and Richling followed.

"I *can* keep books," he said, as they reached the farther curb-stone.

The man seized him by the arm.

"D'you see that pile of codfish and herring where that tall man is at work yonder with a marking-pot and brush? Well, just beyond there is a boarding-house, and then a hardware store; you can hear them throwing down sheets of iron. Here; you can see the sign. See? Well, the next is my store. Go in there—upstairs into the office—and wait till I come."

Richling bowed and went. In the office he sat down and waited what seemed a very long time. Could he have misunderstood? For the man did not come. There was a person sitting at a desk on the farther side of the office, writing, who had not lifted his head from first to last. Richling said:

"Can you tell me when the proprietor will be in?"

The writer's eyes rose, and dropped again upon his writing.

"What do you want with him?"

"He asked me to wait here for him."

"Better wait, then."

Just then, in came the merchant. Richling rose, and he uttered a rude exclamation:

"I forgot you completely! Where did you say you kept books at, last?"

"I've not kept anybody's books yet, but I can do it."

The merchant's response was cold and prompt. He did not look at Richling, but took a sample vial of molasses from a dirty mantel-piece and lifted it between his eyes and the light, saying,

"You can't do any such thing. I don't want you."

"Sir," said Richling, so sharply that the merchant looked round, "if you don't want me, I don't want you; but you mustn't attempt to tell me that what I say is not true!" He had stepped forward as he began to speak, but he stopped before half his words were uttered, and saw his folly. Even while his voice still trembled with passion and his head was up, he colored with mortification. That feeling grew no less when his offender simply looked at him, and the man at the desk did not raise his eyes. It rather increased when he noticed that both of them were young—as young as he.

"I don't doubt your truthfulness," said the merchant, marking the effect of his forbearance; "but you ought to know you can't come in and take charge of a large set of books in the midst of a busy season, when you've never kept books before."

"I don't know it at all."

"Well, I do," said the merchant, still more coldly than before. "There are my books," he added, warming, and pointed to three great canvassed and black-initialed volumes standing in a low iron safe, "left only yesterday in such a snarl, by a fellow who had never kept books, but knew how, that I shall have to open another set! After this I shall have a book-keeper who has kept books."

He turned away.

Some weeks afterward Richling recalled vividly a thought that had struck him only faintly at this time: that, beneath much superficial severity and energy, there was in this establishment a certain looseness of management. It may have been this half-recognized thought that gave him courage to say, advancing another step:

"One word, if you please."

"It's no use, my friend."

"It may be."

"How?"

"Get an experienced book-keeper for your new set of books——"

"You can bet your bottom dollar!" said the merchant, turning again and running his hands down into his lower pockets. "And even he'll have as much as he can do——"

"That is just what I wanted you to say," interrupted Richling, trying hard to smile; "then you can let me straighten up the old set."

"Give a new hand the work of an expert!"

The merchant almost laughed out. He shook his head and was about to say more, when Richling persisted:

"If I don't do the work to your satisfaction, don't pay me a cent."

"I never make that sort of an arrangement; no, sir!"

Unfortunately, it had not been Richling's habit to show this pertinacity, else life might have been easier to him as a problem; but these two young men, his equals in age, were casting amused doubts upon his ability to make good his professions. The case was peculiar. He reached a hand out toward the books.

"Let me look over them for one day; if I don't convince you the next morning in five minutes that I can straighten them, I'll leave them without a word."

The merchant looked down an instant, and then turned to the man at the desk.

"What do you think of that, Sam?"

Sam set his elbows upon the desk, took the small end of his pen-holder in his hands and teeth, and looking up, said:

"I don't know; you might——try him?"

"What did you say your name was?"

asked the other, again facing Richling. "Ah, yes. Who are your references, Mr. Richmond?"

"Sir?" Richling leaned slightly forward and turned his ear.

"I say, who knows you?"

"Nobody."

"Nobody! Where are you from?"

"Milwaukee."

The merchant tossed out his arm impatiently.

"Oh, I can't do that kind o' business."

He turned abruptly, went to his desk, and, sitting down half-hidden by it, took up an open letter.

"I bought that coffee, Sam," he said, rising again and moving farther away.

"Umhum," said Sam; and all was still.

Richling stood expecting every instant to turn on the next and go. Yet he went not. Under the dusty front windows of the counting-room the street was roaring below. Just beyond a glass partition at his back a great windlass far up under the roof was rumbling with the descent of goods from a hatchway at the end of its tense rope. Salesmen were calling, trucks were trundling, shipping clerks and porters were replying. One brawny fellow he saw, through the glass, take a herring from a broken box, and stop to feed it to a sleek, brindled mouser. Even the cat was valued; but he—he stood there absolutely zero. He saw it. He saw it as he never had seen it before in his life. This truth smote him like a javelin: that all this world wants is a man's permission to do without him. Right then it was that he thought he swallowed all his pride; whereas he only tasted its bitter brine as like a wave it took him up and lifted him forward bodily. He strode up to the desk beyond which stood the merchant with the letter still in his hand, and said:

"I've not gone yet! I may have to be turned off by you, but not in this manner!"

The merchant looked around at him with a smile of surprise mixed with amusement and commendation, but said nothing. Richling held out his open hand.

"I don't ask you to trust me. Don't trust me. Try me!"

He looked distressed. He was not begging, but he seemed to feel as though he were.

The merchant dropped his eyes again upon the letter, and in that attitude asked:

"What do you say, Sam?"

"He can't hurt anything," said Sam.

The merchant looked suddenly at Richling.

"You're not from Milwaukee. You're a Southern man."

Richling changed color.

"I said Milwaukee."

"Well," said the merchant, "I hardly know. Come and see me further about it to-morrow morning. I haven't time to talk now."

* * * * *

"TAKE a seat," he said, the next morning, and drew up a chair sociably before the returned applicant. "Now, suppose I was to give you those books, all in confusion as they are; what would you do first of all?"

Mary fortunately had asked the same question the night before, and her husband was entirely ready with an answer which they had studied out in bed.

"I should send your deposit-book to bank to be balanced, and, without waiting for it, I should begin to take a trial-balance off the books. If I didn't get one pretty soon, I'd drop that for the time being, and turn in and render the accounts of everybody on the books, asking them to examine and report."

"All right," said the merchant, carelessly; "we'll try you."

"Sir?" Richling bent his ear.

"All right; we'll try you. I don't care much about recommendations. I generally most always make up my opinion about a man from looking at him. I'm that sort of a man."

He smiled with inordinate complacency.

So, week by week, as has been said already, the winter passed—Richling on one side of the town, hidden away in his work, and Dr. Sevier on the other, very positive that the "young pair" must have returned to Milwaukee.

At length the big books were re-adjusted in all their hundreds of pages, were balanced, and closed. Much satisfaction was expressed; but another man had meantime taken charge of the new books, one who influenced business, and Richling had nothing to do but put on his hat.

However, the house cheerfully recommended him to a neighboring firm which also had disordered books to be righted; and so more weeks passed. Happy weeks! happy days! Ah, the joy of them! John bringing home money, and Mary saving it!

"But, John, it seems such a pity not to have staid with A, B & Co.; doesn't it?"

"I don't think so. I don't think they'll last much longer."

And when he brought word that A, B & Co. had gone into a thousand pieces, Mary was convinced that she had a very far-seeing husband.

By and by, at Richling's earnest and restless desire, they moved their lodgings again. And thus we return by a circuit to the morning when Dr. Sevier, taking up his slate, read the summons that bade him call at the corner of St. Mary and Prytania streets.

IX.

WHEN THE WIND BLOWS.

THE house stands there to-day. A small, pinched, frame, ground-floor-and-attic, double tenement, with its roof sloping toward St. Mary street and overhanging its two door-steps that jut out on the sidewalk. There the Doctor's carriage stopped, and in its front room he found Mary in bed again, as ill as ever. A humble German woman living in the adjoining half of the house was attending to the invalid's wants, and had kept her daughter from the public school to send her to the apothecary with the Doctor's prescription.

"It is the poor who help the poor," thought the physician.

"Is this your home?" he asked the woman softly, as he sat down by the patient's pillow. He looked about upon the small, cheaply furnished room, full of the neat makeshifts of cramped housewifery.

"It's mine," whispered Mary. Even as she lay there in peril of her life and flattened out as though Juggernaut had rolled over her, her eyes shone with happiness and scintillated as the Doctor exclaimed in under-tone,

"Yours!" He laid his hand upon her forehead. "Where is Mr. Richling?"

"At the office." Her eyes danced with delight. She would have begun, then and there, to tell him all that had happened,— "had taken care of herself all along," she said, "until they began to move. In moving, had been *obliged* to overwork—hardly *fixed* yet——"

But the Doctor gently checked her and bade her be quiet.

"I will," was the faint reply; "I will; but,—just one thing, Doctor, please let me say."

"Well?"

"John——"

"Yes, yes; I know; he'd be here, only you wouldn't let him stay away from his work."

She smiled assent, and he smiled in return. "Business is business," he said.

She turned a quick, sparkling glance of affirmation, as if she had lately had some trouble to maintain that ancient truism. She was going to speak again, but the Doctor waved his hand downward soothingly toward the restless form and uplifted eyes.

"All right," she whispered, and closed them.

The next day she was worse. The physician found himself, to use his words, "only the tardy attendant of offended nature." When he dropped his finger-ends gently upon her temple she tremblingly grasped his hand.

"You'll save me?" she whispered.

"Yes," he replied, "we'll do that—the Lord helping us."

A glad light shone from her face as he uttered the latter clause. Whereat he made haste to add:

"I don't pray, but I'm sure you do."

She silently pressed the hand she still held.

On Sunday, he found Richling at the bedside. Mary had improved considerably in two or three days. She lay quite still as they talked, only shifting her glance softly from one to the other as one and then the other spoke. The Doctor heard with interest Richling's full account of all that had occurred since he had met them last together. Mary's eyes filled with merriment when John told the droller part of their experiences in the hard quarters from which they had only lately removed. But the Doctor did not so much as smile. Richling finished, and the physician was silent.

"Oh, we're getting along," said Richling, stroking the small, weak hand that lay near him on the coverlet. But still the Doctor kept silence.

"Of course," said Richling, very quietly, looking at his wife, "we mustn't be surprised at a backset now and then. But we're getting on."

Mary turned her eyes toward the Doctor. Was he not going to assent at all? She seemed about to speak. He bent his ear, and she said, with a quiet smile:

"When the wind blows, the cradle will rock."

The physician gave only a heavy-eyed "Humph!" and a faint look of amusement.

"What did she say?" said Richling; the words had escaped his ear. The Doctor repeated it, and Richling, too, smiled.

Yet it was a good speech—why not? But the patient also smiled, and turned her eyes toward the wall with a disconcerted look, as if the smile might end in tears. For herein lay the very difficulty that always brought the Doctor's carriage to the door—the cradle would not rock.

For a few days more that carriage continued to appear, and then ceased. Richling dropped in one morning at Number 3½ Carondelet and settled his bill with Narcisse.

The young Creole was much pleased to be at length brought into actual contact with a man of his own years, who without visible effort had made an impression on Dr. Sevier.

Until the money had been paid and the bill receipted, nothing more than a formal business phrase or two passed between them. But as Narcisse delivered the receipted bill with an elaborate gesture of courtesy,

and Richling began to fold it for his pocket, the Creole remarked:

"I 'ope you will excuse the 'an'-a-'iting."

Richling re-opened the paper; the penmanship was beautiful.

"Do you ever write better than this?" he asked. "Why, I wish I could write half as well."

"No; I do not fine that well a-'itten. I cannot see 'ow that is—I nevva 'ite to the satizfaction of my abil'ty soon in the maw-nin's. I am dest'oying my chi'og'aphy at that desk yeh."

"Indeed?" said Richling; "why, I should think——"

"Yessch, 'tis the tooth. But consunning the chi'og'aphy, Mistoo 'Itchlin', I 'ave des-covvud one thing to a maul cettainty, and that is, if I 'ave something to 'ite to a young lady, I always dizguise my chi'og'aphy. Ha-ha! I 'ave learn' that! You will be aztonish' to see in 'ow many diffe'n' fawm' I can make my 'an'-a-'iting to appeah. That paz thoo my fam'ly, in fact, Mistoo 'Itchlin'. My hant, she's got a honcle w'at use' to be cluck in a bank, w'at could make the si'natu'e of the pwesiden', as well as of the cashieh, with that so absolute puffegtion, that they tu'n 'im out of the bank! Yessch. In fact, I thing you ought to know 'ow to 'ite a ve'y fine 'an', Mistoo 'Itchlin'."

"N-not very," said Richling; "my hand is large and legible, but not well adapted for—book-keeping; it's too heavy."

"You 'ave the 'ight physio'nomie, I am shu'. You will pe'haps believe me with difficulty, Mistoo 'Itchlin', but I assu' you I can tell if a man 'as a fine chi'og'aphy aw no, by juz lookin' upon his liniment. Do you know that Benjamin Fwanklin 'ote a v'ey fine chi'og'aphy, in fact? Also Voltaire. Yessch. An' Napoleon Bonaparte. Lawd By'on muz 'ave 'ad a beacheouz chi'og'aphy. 'Tis impossible not to be, with that face. He is my favo'ite poet, that Lawd By'on. Moze people pwefeh 'im to Shaksper, in fact. Well, you muz go? I am v'ey 'appy to meck yo' acquaintance, Mistoo 'Itchlin', seh. I am so'y Doctah Seveeah is not theh pwesently. The negs time you call, Mistoo 'Itchlin', you muz not be too much aztonizh to fine me gone from yeh. Yessch. He's got to haugment me ad the en' of that month, an' we 'ave to-day the fifteenth Mawch. Do you smoke, Mistoo 'Itchlin'?" He extended a package of cigarettes. Richling accepted one. "I smoke lawgely in that weatheh," striking a match on his thigh. "I feel ve'y sultry to-day. Well,"—he seized the visitor's hand,—"au 'evoi, Mistoo 'Itchlin'." And Narcisse returned to his desk happy in the conviction that Richling had gone away dazzled.

X.

GENTLES AND COMMONS.

DR. SEVIER sat in the great easy-chair under the drop-light of his library table trying to read a book. But his thought was not on the page. He expired a long breath of annoyance, and lifted his glance backward from the bottom of the page to its top.

Why must his mind keep going back to that little cottage in St. Mary street? What good reason was there? Would they thank him for his solicitude? Indeed! He almost smiled his contempt of the supposition. Why, when on one or two occasions he had betrayed a least little bit of kindly interest,—what? Up had gone their youthful vivacity like an umbrella. Oh, yes!—like all young folks—their affairs were intensely private. Once or twice he had shaken his head at the scantiness of all their provisions for life. Well? They simply and unconsciously stole a hold upon one another's hand or arm, as much as to say, "To love is enough." When, gentlemen of the jury, it isn't enough!

"Pshaw!" The word escaped him audibly. He drew partly up from his half recline, and turned back a leaf of the book to try once more to make out the sense of it.

But there was Mary, and there was her husband. Especially Mary. Her image came distinctly between his eyes and the page. There she was, just as on his last visit,—a superfluous one—no charge,—sitting and plying her needle, unaware of his approach, gently moving her rocking-chair, and softly singing, "Flow on, thou shining river,"—the song his own wife used to sing. "Oh, child, child! do you think it's always going to be 'shining'?" They shouldn't be so contented. Was pride under that cloak? Oh, no, no! But even if the content was genuine, it wasn't good. Why, they oughtn't to be *able* to be happy so completely out of their true sphere. It showed insensibility. But, there again,—Richling wasn't insensible, much less Mary.

The Doctor let his book sink, face downward, upon his knee.

"They're too big to be playing in the sand." He took up the book again. "'Tisn't my business to tell them so." But before he got the volume fairly before his eyes, his professional bell rang, and he tossed the book upon the table.

"Well, why don't you bring him in?" he asked, in a tone of reproof, of a servant who presented a card; and in a moment the visitor entered.

He was a person of some fifty years of age, with a patrician face, in which it was impossi-

ble to tell where benevolence ended and pride began. His dress was of fine cloth, a little antique in cut, and fitting rather loosely on a form something above the medium height, of good width, but bent in the shoulders, and with arms that had been stronger. Years, it might be, or possibly some unflinching struggle with troublesome facts, had given many lines of his face a downward slant. He apologized for the hour of his call, and accepted with thanks the chair offered him.

"You are not a resident of the city?" asked Dr. Sevier.

"I am from Kentucky." The voice was rich, and the stranger's general air one of rather conscious social eminence.

"Yes?" said the Doctor, not specially pleased, and looked at him closer. He wore a black satin neck-stock, and dark-blue buttoned gaiters. His hair was dyed brown. A slender frill adorned his shirt-front.

"Mrs."—the visitor began to say, not giving the name, but waving his index-finger toward his card, which Dr. Sevier had laid upon the table, just under the lamp,—“my wife, Doctor, seems to be in a very feeble condition. Her physicians have advised her to try the effects of a change of scene, and I have brought her down to your busy city, sir.”

The Doctor assented. The stranger resumed:

"Its hurry and energy are a great contrast to the plantation life, sir."

"They're very unlike," the physician admitted.

"This chafing of thousands of competitive designs," said the visitor, "this great fretwork of cross purposes, is a decided change from the quiet order of our rural life. Hmm! There everything is under the administration of one undisputed will, and is executed by the unquestioning obedience of our happy and contented slave peasantry. I prefer the country. But I thought this was just the change that would arouse and electrify an invalid who has really no tangible complaint."

"Has the result been unsatisfactory?"

"Entirely so. I am unexpectedly disappointed." The speaker's thought seemed to be that the climate of New Orleans had not responded with that hospitable alacrity which was due so opulent, reasonable, and universally obeyed a guest.

There was a pause here, and Dr. Sevier looked around at the book which lay at his elbow. But the visitor did not resume, and the Doctor presently asked:

"Do you wish me to see your wife?"

"I called to see you alone first," said the other, "because there might be questions to

be asked which were better answered in her absence."

"Then you think you know the secret of her illness, do you?"

"I do. I think, indeed I may say I know, it is—bereavement."

The Doctor compressed his lips and bowed.

The stranger drooped his head somewhat, and, resting his elbows on the arms of his chair, laid the tips of his thumbs and fingers softly together.

"The truth is, sir, she cannot recover from the loss of our son."

"An infant?" asked the Doctor. His bell rang again as he put the question.

"No, sir; a young man—one whom I had thought a person of great promise; just about to enter life."

"When did he die?"

"He has been dead nearly a year. I——"

The speaker ceased as the mulatto waiting-man appeared at the open door, with a large, simple, German face looking easily over his head from behind.

"Toclor," said the owner of this face, lifting an immense open hand, "Toclor, uf you bleace, Toclor, you vill bleace ugscooce me."

The Doctor frowned at the servant for permitting the interruption. But the gentleman beside him said:

"Let him come in, sir; he seems to be in haste, sir, and I am not,—I am not, at all."

"Come in," said the physician.

The new-comer stepped into the room. He was about six feet three inches in height, three feet six in breadth, and the same in thickness. Two kindly blue eyes shone softly in an expanse of face that had been clean-shaven every Saturday night for many years, and that ended in a retreating chin and a dewlap. The limp, white shirt-collar just below was without a necktie, and the waist of his pantaloons, which seemed intended to supply this deficiency, did not quite, but only almost reached up to the unoccupied blank. He removed from his respectful head a soft gray hat, whitened here and there with flour.

"Yentlemen," he said, slowly, "you vill ugscooce me to interruptet you,—yentlemen."

"Do you wish to see me?" asked Dr. Sevier.

The German made an odd gesture of deferential assent, lifting one open hand a little in front of him to the level of his face, with the wrist bent forward and the fingers pointing down.

"Uf you bleace, Toclor, I toose; undt tat's te fust time I effer *tut* wanted a toclor. Undt you mus' ugscooce me, Toclor, to callin' on you, ovver I vish you come undt see mine——"

To the surprise of all, tears gushed from his eyes.

"Mine poor wife, Tector!" He turned to one side, pointed his broad hand toward the floor, and smote his forehead.

"I yoost come in fun mine paykery undt comin' into mine howse, fen — I see something" — he waved his hand downward again — "someting — layin' on te — floor — face pleck ans a nigger's; undt fen I look to see who udt iss, — *udt is Mississ Reisen!* Tector, I vish you come right off! I couldn't shtayndt udt you toandt come right away!"

"I'll come," said the Doctor, without rising; "just write your name and address on that little white slate yonder."

"Tector," said the German, extending and dipping his hat, "I'm ferra much a-velcome to you, Tector; undt tat's yoost fot te pottekerra by mine corner sayt you vould too. He sayss, 'Reisen,' he sayss, 'you yoost co to Tector Tsewier.'" He bent his great body over the farther end of the table and slowly worked out his name, street, and number. "Dtere udt iss, Tector; I put udt town on teh schlate; ovver, I hope you ugscooce te hayndtwriding."

"Very well. That's right. That's all."

The German lingered. The Doctor gave a bow of dismissal.

"That's all, I say. I'll be there in a moment. That's all. Dan, order my carriage."

"Yentlemen, you vill ugscooce me?"

The German withdrew, returning each gentleman's bow with a faint wave of the hat.

During this interview the more polished stranger had sat with bowed head, motionless and silent, lifting it only once and for a moment at the German's emotional outburst. Then the upward and backward turned face was marked with a commiseration partly artificial, but also partly natural. He now looked up at the Doctor.

"I shall have to leave you," said the Doctor.

"Certainly, sir," replied the other; "by all means!" The willingness was slightly overdone and the benevolence of tone was mixed with complacency. "By all means," he said again; "this is one of those cases where it is only a proper grace in the higher to yield place to the lower." He waited for a response, but the Doctor merely frowned into space and called for his boots. The visitor resumed:

"I have a good deal of feeling, sir, for the unlettered and the vulgar. They have their station, but they have also — though doubtless in smaller capacity than we — their pleasures and pains."

Seeing the Doctor ready to go, he began to rise.

"I may not be gone long," said the physician, rather coldly; "if you choose to wait —"

"I thank you; n-no-o —." The visitor stopped between a sitting and a rising posture.

"Here are books," said the Doctor, "and the evening papers — 'Picayune,' 'Delta,' 'True Delta.'" It seemed for a moment as though the gentleman might sink into his seat again. "And there's the 'New York Herald.'" "

"No, sir!" said the visitor quickly, rising and smoothing himself out; "nothing from that quarter, if you please." Yet he smiled. The Doctor did not notice that, while so smiling, he took his card from the table. There was something familiar in the stranger's face which the Doctor was trying to make out. They left the house together. Outside the street door the physician made apologetic allusion to their interrupted interview.

"Shall I see you at my office to-morrow? I would be happy —"

The stranger had raised his hat. He smiled again, as pleasantly as he could, which was not delightful, and said, after a moment's hesitation:

" — Possibly."

XI.

A PANTOMIME.

It chanced one evening about this time — the vernal equinox had just passed — that from some small cause Richling, who was generally detained at the desk until a late hour, was home early. The air was soft and warm, and he stood out a little beyond his small front door-step lifting his head to inhale the universal fragrance, and looking in every moment, through the unlighted front room, toward a part of the diminutive house where a mild rattle of domestic movements could be heard, and whence he had, a little before, been adroitly requested to absent himself. He moved restlessly on his feet, blowing a soft tune.

Presently he placed a foot on the step and a hand on the door-post, and gave a low, urgent call.

A distant response indicated that his term of suspense was nearly over. He turned about again once or twice, and a moment later Mary appeared in the door, came down upon the sidewalk, looked up into the moonlit sky and down the empty, silent street, then turned and sat down, throwing her wrists across each other in her lap, and lifting her eyes to her husband's with a smile that confessed her fatigue.

The moon was regal. It cast its deep contrasts of clear-cut light and shadow among the thin, wooden, unarchitectural forms and weed-grown vacancies of the half-settled neighborhood, investing the matter-of-fact with mystery, and giving an unexpected charm to the unpicturesque. It was—as Richling said, taking his place beside his wife—midspring in March. As he spoke he noticed she had brought with her the odor of flowers. They were pinned at her throat.

"Where did you get them?" he asked, touching them with his fingers.

Her face lighted up.

"Guess."

How could he guess? As far as he knew, neither she nor he had made an acquaintance in the neighborhood. He shook his head, and she replied:

"The butcher."

"You're a queer girl," he said, when they had laughed.

"Why?"

"You let these common people take to you so."

She smiled with a faint air of concern.

"You don't dislike it, do you?" she asked.

"Oh, no," he said, indifferently, and spoke of other things.

And thus they sat, like so many thousands and thousands of young pairs in this wide, free America, offering the least possible interest to the great human army round about them, but sharing or believing they shared in the fruitful possibilities of this land of limitless bounty, fondling their hopes and recounting the petty minutiae of their daily experiences. Their converse was mainly in the form of questions from Mary and answers from John.

"And did he say that he would?" etc. "And didn't you insist that he should?" etc. "I don't understand how he could require you to," etc., etc. Looking at everything from John's side, as if there never could be any other, until at last John himself laughed softly when she asked why he couldn't take part of some outdoor man's work, and give him part of his own desk-work in exchange, and why he couldn't say plainly that his work was too sedentary.

Then she proposed a walk in the moonlight, and insisted she was not tired; she wanted it on her own account. And so, when Richling had gone into the house and returned with some white worsted gauze for her head and neck and locked the door, they were ready to start.

They were tarrying a moment to arrange this wrapping when they found it necessary to move aside from where they stood in order to let two persons pass on the sidewalk.

These were a man and woman who had at least reached middle age. The woman wore a neatly fitting calico gown; the man, a short pilot-coat. His pantaloons were very tight and pale. A new soft hat was pushed forward from the left rear corner of his closely cropped head, with the front of the brim turned down over his right eye. At each step he settled down with a little jerk alternately on this hip and that, at the same time faintly dropping the corresponding shoulder. They passed. John and Mary looked at each other with a nod of mirthful approval. Why? Because the strangers walked silently hand-in-hand.

It was a magical night. Even the part of town where they were, so devoid of character by day, had become all at once romantic with phantasmal lights and glooms, echoes and silences. Along the edge of a wide chimney-top on one blank, new hulk of a house, that nothing else could have made poetical, a mocking-bird hopped and ran back and forth, singing as if he must sing or die. The mere names of the streets they traversed suddenly became sweet food for the fancy. Down at the first corner below they turned into one that had been an old country road, and was still named Felicity.

Richling called attention to the word painted on a board. He merely pointed to it in playful silence, and then let his hand sink and rest on hers as it lay in his elbow. They were walking under the low boughs of a line of fig-trees that overhung a high garden wall. Then some gay thought took him; but when his downward glance met the eyes uplifted to meet his they were grave, and there came an instantaneous tenderness into the exchange of looks that would have been worse than uninteresting to you or me. But the next moment she brightened up, pressed herself close to him, and caught step. They had not owned each other long enough to have settled into sedate possession, though they sometimes thought they had done so. There was still a tingling ecstasy in one another's touch and glance that prevented them from quite behaving themselves when under the moon.

For instance, now, they began, though in cautious under-tone, to sing. Some person approached them, and they hushed. When the stranger had passed, Mary began again another song, alone:

"Oh, don't you remember sweet Alice, Ben Bolt?"

"Hush," said John, softly.

She looked up with an air of mirthful inquiry, and he added:

"That was the name of Dr. Sevier's wife."

"But he doesn't hear me singing."

"No, but it seems as if he did."

And they sang no more.

They entered a broad, open avenue, with a treeless, grassy way in the middle, up which came a very large and lumbering street-car, with smokers' benches on the roof, and drawn by tandem horses.

"Here we turn down," said Richling, "into the way of the Naiades." (That was the street's name.) "They're not trying to get me away."

He looked down playfully. She was clinging to him with more energy than she knew.

"I'd better hold you tight," she answered.

Both laughed. The nonsense of those we love is better than the finest wit on earth. They walked on in their bliss. Shall we follow? Fie!

They passed down across three or four of a group of parallel streets named for the nine muses. At Thalia, they took the left, went one square, and turned up by another street toward home.

Their conversation had flagged. Silence was enough. The great earth was beneath their feet, firm and solid; the illimitable distances of the heavens stretched above their heads and before their eyes. Here was Mary at John's side, and John at hers; John her property and she his, and time flowing softly, shiningly on. Yea, even more. If one might believe the names of the streets, there were Naiads on the left and Dryads on the right. A little farther on, Hercules; yonder corner the dark trysting-place of Bacchus and Melpomene; and here, just in advance, the corner where Terpsichore crossed the path of Apollo.

They came now along a high, open fence that ran the entire length of a square. Above it a dense rank of bitter-orange trees overhung the sidewalk, their dark mass of foliage glittering in the moonlight. Within lay a deep, old-fashioned garden. Its white shell walks gleamed in many directions. A sweet breath came from its parterres of mingled hyacinths and jonquils that hid themselves every moment in black shadows of lagustrums and laurestines. Here, in severe order, a pair of palms, prim as mediæval queens, stood over against each other; and in the midst of the garden, rising high against the sky, appeared the pillared veranda and immense, four-sided roof of an old French colonial villa, as it stands unchanged to-day.

The two loiterers slackened their pace to admire the scene. There was much light shining from the house. Mary could hear voices, and, in a moment, words. The host was speeding his parting guests.

"The omnibus will put you out only one block from the hotel," some one said.

DR. SEVIER, returning home from a visit to a friend in Polymnia street, had scarcely got well seated in the omnibus before he witnessed from its window a singular dumb show. He had handed his money up to the driver as they crossed Euterpe street, had received the change and deposited his fare as they passed Terpsichore, and was just sitting down when the only other passenger in the vehicle said, half-rising:

"Hello! there's going to be a shooting scrape!"

A rather elderly man and woman on the sidewalk, both of them extremely well dressed and seemingly on the eve of hailing the omnibus, suddenly transferred their attention to a younger couple a few steps from them, who appeared to have met them entirely by accident. The elderly lady threw out her arms toward the younger man with an expression on her face of intensest mental suffering. She seemed to cry out, but the deafening rattle of the omnibus, as it approached them, intercepted the sound. All four of the persons seemed, in various ways, to experience the most violent feelings. The young man more than once moved as if about to start forward, yet did not advance; his companion, a small, very shapely woman, clung to him excitedly and pleadingly. The older man shook a stout cane at the younger, talking furiously as he did so. He held the elderly lady to him with his arm thrown about her, while she now cast her hands upward, now covered her face with them, now wrung them, clasped them, or extended one of them in seeming accusation against the younger person of her own sex. In a moment the omnibus was opposite the group. The Doctor laid his hand on his fellow-passenger's arm.

"Don't get out. There will be no shooting."

The young man on the sidewalk suddenly started forward, with his companion still on his farther arm, and with his eyes steadily fixed on those of the elder and taller man, a clenched fist lifted defensively, and with a tense, defiant air walked hurriedly and silently by within easy sweep of the uplifted staff. At the moment when the slight distance between the two men began to increase, the cane rose higher, but stopped short in its descent and pointed after the receding figure.

"I command you to leave this town, sir!"

Dr. Sevier looked. He looked with all his might, drawing his knee under him on the cushion and leaning out. The young man had passed. He still moved on, turning back as he went a face full of the fear that men show when they are afraid of their own violence; and as the omnibus clattered away, he

crossed the street at the upper corner and disappeared in the shadows.

"That's a very strange thing," said the other passenger to Dr. Sevier, as they resumed the corner seats by the door.

"It certainly is!" replied the Doctor, and averted his face. For when the group and he were nearest together and the moon shone brightly upon the four, he saw, beyond all question, that the older man was his visitor of a few evenings before, and that the younger pair were John and Mary Richling.

XII.

"SHE'S ALL THE WORLD."

EXCELLENT neighborhood, St. Mary street, and Prytania was even better. Everybody was very retired though, it seemed. Almost every house standing in the midst of its shady garden,—sunny gardens are a newer fashion of the town,—a bell-knob on the gate-post, and the gate locked. But the Richlings cared nothing for this; not even what they should have cared. Nor was there any unpleasantness in another fact.

"Do you let this window stand wide this way when you are at work here, all day?" asked the husband. The opening alluded to was on Prytania street, and looked across the way to where the asylumed widows of "St. Anna's" could glance down into it over their poor little window-gardens.

"Why, yes, dear." Mary looked up from her little cane rocker with that thoughtful contraction at the outer corners of her eyes and that illuminated smile, that between them made half her beauty. And then, somewhat more gravely and persuasively: "Don't you suppose they like it? They must like it. I think we can do that much for them. Would you rather I'd shut it?"

For answer, John laid his hand on her head and gazed into her eyes.

"Take care," she whispered; "they'll see you."

He let his arm drop in amused despair.

"Why, what's the window open for? And anyhow, they're all abed and asleep these two hours."

They did like it, those aged widows. It fed their hearts' hunger to see the pretty unknown passing and repassing that open window in the performance of her morning duties, or sitting down near it with her needle, still crooning her soft morning song,—poor, almost as poor as they, in this world's glitter, but rich in hope and courage, and rich beyond all count in the content of one who finds herself queen of ever so little a house, where love is.

"Love is enough!" said the widows.

And certainly she made it seem so. The open window brought, now and then, a moisture to the aged eyes; yet they liked it open.

But without warning, one day, there was a change. It was the day after Dr. Sevier had noticed that queer street quarrel. The window was not closed, but it sent out no more light. The song was not heard, and many small, faint signs gave indication that anxiety had come to be a guest in the little house. At evening, the wife was seen in her front door and about its steps watching in a new, restless way for her husband's coming; and when he came it could be seen, all the way from those upper windows, where one or two faces appeared now and then, that he was troubled and care-worn. There were two more days like this one; but at the end of the fourth the wife read good tidings in her husband's countenance. He handed her a newspaper, and pointed to a list of departing passengers.

"They're gone!" she exclaimed.

He nodded, and laid off his hat. She cast her arms about his neck, and buried her head in his bosom. You could almost have seen Anxiety flying out at the window. By morning the widows knew of a certainty that the cloud had melted away.

IN the counting-room one evening, as Richling said good-night with noticeable alacrity, one of his employers, sitting with his legs crossed over the top of a desk, said to his partner:

"Richling works for his wages."

"That's all," replied the other; "he don't see his interests in ours any more than a tin-smith would, who comes to mend the roof."

The first one took a meditative puff or two from his cigar, tipped off its ashes, and responded:

"Common fault. He completely overlooks his immense indebtedness to the world at large, and his dependence on it. He's a good fellow, and bright; but he actually thinks that he and the world are starting even."

"His wife's his world," said the other, and opened the Bills Payable book. Who will say it is not well to sail in an ocean of love? But the Richlings were becalmed in theirs, and, not knowing it, were satisfied.

Day in, day out, the little wife sat at her window, and drove her needle. Omnibuses rumbled by, an occasional wagon or cart set the dust a-flying, the street venders passed, crying the praises of their goods and wares, the blue sky grew more and more intense as weeks piled up upon weeks; but the empty repetitions, and the isolation, and, worst of all, the escape of time—she smiled at all, and

sewed on and crooned on, in the sufficient thought that John would come, each time, when only hours enough had passed away forever.

Once she saw Dr. Sevier's carriage. She bowed brightly, but he—what could it mean?—he lifted his hat with such austere gravity. Dr. Sevier was angry. He had no definite charge to make, but that did not lessen his displeasure. After long, unpleasant wondering, and long trusting to see Richling some day on the street, he had at length driven by this way purposely to see if they had indeed left town, as they had been so imperiously commanded to do.

This incident, trivial as it was, roused Mary to thought; and all the rest of the day the thought worked with energy to dislodge the frame of mind that she had acquired from her husband.

When John came home that night and pressed her to his bosom, she was silent. And when he held her off a little and looked into her eyes, and she tried to better her smile, those eyes stood full to the lashes and she looked down.

"What's the matter?" asked he, quickly.

"Nothing!" She looked up again, with a little laugh.

He took a chair and drew her down upon his lap.

"What's the matter with my girl?"

"I don't know."

"How, you don't know?"

"Why, I simply don't. I can't make out what it is. If I could, I'd tell you; but I don't know at all." After they had sat silent a few moments:

"I wonder," she began—

"You wonder what?" asked he, in a rallying tone.

"I wonder if there's such a thing as being too contented."

Richling began to hum, with a playful manner:

"And she's all the world to me."

Is that being too —"

"Stop!" said Mary; "that's it!" She laid her hand upon his shoulder. "You've said it. That's what I ought not to be!"

"Why, Mary, what on earth!"—His face flamed up.

"John, I'm willing to be *more* than all the rest of the world to you. I always must be that. I'm going to be that forever. And you"—she kissed him passionately—"you're all the world to me! But I've no right to be *all* the world to you. And you mustn't allow it. It's making it too small!"

"Mary, what are you saying?"

"Don't, John. Don't speak that way. I'm

not saying anything. I'm only trying to say something, I don't know what."

"Neither do I," was the mock-rueful answer.

"I only know," replied Mary, the vision of Dr. Sevier's carriage passing before her abstracted eyes and of the Doctor's pale face bowing austere within it, "that if you don't take any part or interest in the outside world, it'll take none in you; do you think it will?"

"And who cares if it doesn't?" cried John, clasping her to his bosom.

"I do," she replied. "Yes, I do. I've no right to steal you from the rest of the world, or from the place in it that you ought to fill. John——"

"That's my name."

"Why can't I do something to help you?"

John lifted his head unnecessarily.

"No!"

"Well, then, let's think of something we can do, without just waiting for the wind to blow us along—I mean," she added, appeasingly, "I mean without waiting to be employed by others."

"Oh, yes; but that takes capital."

"Yes, I know; but why don't you think up something—some new enterprise or something—and get somebody with capital to go in with you?"

He shook his head.

"You're out of your depth. And that wouldn't make so much difference, but you're out of mine. It isn't enough to think of something; you must know how to do it. And what do I know how to do? Nothing! Nothing that's worth doing!"

"I know one thing you could do."

"What's that?"

"You could be a professor in a college."

John smiled bitterly.

"Without antecedents?" he asked.

Their eyes met; hers dropped, and both voices were silent. Mary drew a soft sigh. She thought their talk had been unprofitable. But it had not; John laid hold of work from that day on in a better and wiser spirit.

XIII.

THE BOUGH BREAKS.

By some trivial chance, she hardly knew what, Mary found herself one day conversing at her own door with the woman whom she and her husband had once smiled at for walking the moonlit street with her hand in willing and undisguised captivity. She was a large and strong, but extremely neat, well-spoken, and good-looking Irish woman, who might have seemed at ease but for a faintly betrayed ambition.

She praised with rather ornate English the good appearance and convenient smallness of Mary's house; said her own was the same size. That person with whom she sometimes passed "of a Sundeh"—yes, and moonlight evenings—that was her husband. He was "ferst ingineer" on a steam-boat. There was a little, just discernible waggle in her head as she stated things. It gave her decided character.

"Ah! engineer," said Mary.

"*Ferst ingineer*," repeated the woman; "you know there bees *ferst ingineers*, an' *secon' ingineers*, an' *therd ingineers*. Yes." She unconsciously fanned herself with the dust-pan that she had just bought from a tin peddler.

She lived only some two or three hundred yards away around the corner, in a tidy little cottage snuggled in among larger houses in Coliseum street. She had had children, but she had lost them; and Mary's sympathy when she told her of them—the girl and two boys—won the woman as much as the little lady's pretty manners had dazed her. It was not long before she began to drop in upon Mary in the hour of twilight and sit through it without speaking often, or making herself especially interesting in any way, but finding it pleasant notwithstanding.

"John," said Mary,—her husband had come in unexpectedly,—"*our neighbor, Mrs. Riley.*"

John's bow was rather formal, and Mrs. Riley soon rose and said good-evening.

"John," said the wife again, laying her hands on his shoulders as she tiptoed to kiss him, "what troubles you?" Then she attempted a rallying manner: "Don't my friends suit you?"

He hesitated only an instant, and then said:

"Oh, yes, that's all right."

"Well, then, I don't see why you look so."

"I've finished the task I was to do."

"What! you haven't —"

"I'm out of employment."

They went and sat down on the little hair-cloth sofa that Mrs. Riley had just left.

"I thought they said they would have other work for you."

"They said they might have; but it seems they haven't."

"And it's just in the opening of summer, too," said Mary; "why, what right —"

"Oh!"—a despairing gesture and averted gaze—"they've a perfect right if they think best. I asked them that myself at first—not too politely, either; but I soon saw I was wrong."

They sat without speaking, until it had grown quite dark. Then John said, with a long breath, as he rose:

"It passes my comprehension."

"What passes it?" asked Mary, detaining him by one hand.

"The reason why we are so pursued by misfortunes."

"But, John," she said, still holding him, "*is it misfortune?* When I know so well that you deserve to succeed, I think maybe it's good fortune in disguise after all. Don't you think it's possible? You remember how it was last time—when A, B & Co. failed. Maybe the best of all is to come now!" She beamed with courage. "Why, John, it seems to me I'd just go in the very best of spirits, the first thing to-morrow, and tell Dr. Sevier you are looking for work. Don't you think it might——"

"I've been there."

"Have you? What did he say?"

"He wasn't in."

THERE was another neighbor with whom John and Mary did not get acquainted. Not that it was more his fault than theirs; it may have been less. Unfortunately for the Richlings, there was in their dwelling no toddling, self-appointed child commissioner to find his way in unwatched moments to the playground of some other toddler, and so plant the good seed of neighbor acquaintanceship.

This neighbor passed four times a day. A man of fortune, aged a hale sixty or so, who came and stood on the corner, and sometimes even rested a foot on Mary's door-step, waiting for the Prytania omnibus; and who, on his returns, got down from the omnibus step a little gingerly, went by Mary's house, and presently shut himself inside a very ornamental iron gate a short way up St. Mary street. A child would have made him acquainted. Even as it was, they did not escape his silent notice. It was pleasant for him, from whose life the early dew had been dried away by a well-risen sun, to recall its former freshness by glimpses of this pair of young beginners. It was like having a bird's nest under his window.

John, stepping backward from his door one day, saying a last word to his wife, who stood on the threshold, pushed against this neighbor as he was moving with somewhat cumbersome haste to catch the stage, turned quickly, and raised his hat.

"Pardon."

The other uncovered his bald head and circlet of white, silken locks, and hurried on to the conveyance.

"President of one of the banks down-town," whispered John.

That is the nearest they ever came to being acquainted. And even this accident might

not have occurred had not the man of snowy locks been glancing up at Mary as he passed instead of at his omnibus.

As he sat at home that evening he remarked :

"Very pretty little woman that, my dear, that lives in the little house at the corner; who is she?"

The lady responded, without lifting her eyes from the newspaper in which she was interested; she did not know. The husband mused and twirled his penknife between a finger and thumb.

"They seem to be starting at the bottom," he observed.

"Yes?"

"Yes; much the same as we did."

"I haven't noticed them particularly."

"They're worth noticing," said the banker.

He threw one fat knee over the other and laid his head in the back of his easy-chair.

The lady's eyes were still on her paper, but she asked:

"Would you like me to go and see them?"

"No, no—unless you wish."

She dropped the paper into her lap with a smile and sigh.

"Don't propose it. I have so much going to do—" She paused, removed her glasses, and fell to straightening the fringe of the lamp mat. "Of course, if you think they're in need of a friend—but from your description——"

"No," he answered, quickly, "not at all. They've friends, no doubt. Everything about them has a neat, happy look. That's what attracted my notice. They've got friends, you may depend." He ceased, took up a pamphlet, and adjusted his glasses. "I think I saw a sofa going in there to-day as I came to dinner. A little expansion, I suppose."

"It was going out," said the only son, looking up from a story-book.

But the banker was reading. He heard nothing, and the word was not repeated. He did not divine that a little becalmed and befogged bark, with only two lovers in her too proud to cry "Help," had drifted just yonder upon the rocks, and, spar by spar and plank by plank, was dropping into the smooth, unmerciful sea.

Before the sofa went, there had gone, little by little, some smaller valuables.

"You see," said Mary to her husband, with the bright hurry of a wife bent upon something high-handed, "we both have to have furniture: we must have it; and I don't have to have jewelry. Don't you see?"

"No, I——"

"Now, John!" There could be but one end to the debate; she had determined that. The first piece was a bracelet. "No, I

wouldn't pawn it," she said. "Better sell it outright at once."

But Richling could not but cling to hope and to the adornments that had so often clasped her wrists and throat or pinned the folds upon her bosom. Piece by piece he pawned them, always looking out ahead with strained vision for the improbable, the incredible, to rise to his relief.

"Is *nothing* going to happen, Mary?"

Yes; nothing happened—except in the pawn-shop.

So, all the sooner, the sofa had to go.

"It's no use talking about borrowing," they both said. Then the bureau went. Then the table. Then, one by one, the chairs. Very slyly it was all done, too. Neighbors mustn't know. "Who lives there?" is a question not asked concerning houses as small as theirs; and a young man in a well-fitting suit of only too heavy goods, removing his winter hat to wipe the standing drops from his forehead; and a little blush-rose woman at his side in a mist of cool muslin and the cunningest of millinery,—these, who always paused a moment, with a lost look, in the vestibule of the sepulchral-looking little church on the corner of Prytania and Josephine streets, till the sexton ushered them in, and who as often contrived, with no end of ingenuity, despite the little woman's fresh beauty, to get away after service unaccosted by the elders,—who could imagine that *these* were from so deep a nook in poverty's vale?

There was one person who guessed it: Mrs. Riley, who was not asked to walk in any more when she called at the twilight hour. She partly saw and partly guessed the truth, and offered what each one of the pair had been secretly hoping somebody, anybody, would offer—a loan. But when it actually confronted them, it was sweetly declined.

"Wasn't it kind?" said Mary; and John said, emphatically, "Yes." Very soon it was their turn to be kind to Mrs. Riley. They attended her husband's funeral. He had been killed by an explosion. Mrs. Riley beat upon the bier with her fists, and wailed with a far-reaching voice:

"O Mike, Mike! Me jew'l, me jew'l! Why didn't ye wait to see the babe that's unborn?"

And Mary wept. And when she and John reëntered their denuded house, she fell upon his neck with fresh tears and kissed him again and again, and could utter no word, but knew he understood. Poverty was so much better than sorrow! She held him fast, and he her, while he tenderly hushed her, lest a grief, the very opposite of Mrs. Riley's, should overtake her.

XIV.

HARD SPEECHES AND HIGH TEMPER.

DR. SEVIER found occasion, one morning, to speak at some length, and very harshly, to his book-keeper. He had hardly ceased when John Richling came briskly in.

"Doctor," he said, with great buoyancy, "how do you do?"

The physician slightly frowned.

"Good-morning, Mr. Richling."

Richling was tamed in an instant; but to avoid too great a contrast of manner, he retained a semblance of sprightliness as he said:

"This is the first time I have had this pleasure since you were last at our house, Doctor."

"Did you not see me one evening, some time ago, in the omnibus?" asked Dr. Sevier.

"Why, no," replied the other with returning pleasure; "was I in the same omnibus?"

"You were on the sidewalk."

"No-o," said Richling, pondering. "I've seen you in your carriage several times, but you —"

"I didn't see you."

Richling was stung. The conversation failed. He recommenced it in a tone pitched intentionally too low for the alert ear of Narcisse.

"Doctor, I've simply called to say to you that I'm out of work and looking for employment again."

"Umhum," said the Doctor, with a cold fullness of voice that hurt Richling afresh. "You'll find it hard to get anything this time of year," he continued, with no attempt at under-tone; "it's very hard for anybody to get anything these days, even when well recommended."

Richling smiled an instant. The Doctor did not, but turned partly away to his desk, and added, as if the smile had displeased him:

"Well, maybe you'll not find it so."

Richling turned fiery red.

"Whether I do or not," he said rising, "my affairs sha'n't trouble anybody. Good-morning."

He started out.

"How's Mrs. Richling?" asked the Doctor.

"She's well," responded Richling, putting on his hat and disappearing in the corridor. Each footstep could be heard as he went down the stairs.

"He's a fool!" muttered the physician.

He looked up angrily, for Narcisse stood before him.

"Well, Doctah," said the Creole, hurriedly arranging his coat-collar, and drawing his handkerchief, "I'm goin' ad the poss-office."

"See here, sir!" exclaimed the Doctor, bringing his fist down upon the arm of his chair, "every time you've gone out of this office for the last six months you've told me you were going to the post-office; now don't you ever tell me that again!"

The young man bowed with injured dignity and responded:

"All a-ight, seh."

He overtook Richling just outside the street entrance. Richling had halted there bereft of intention, almost of outward sense, and choking with bitterness. It seemed to him as if in an instant all his misfortunes, disappointments, and humiliations, that never before had seemed so many or so great, had been gathered up into the knowledge of that hard man upstairs, and, with one unmerciful downward wrench, had received his seal of approval. Indignation, wrath, self-hatred, dismay, in undefined confusion, usurped the faculties of sight and hearing and motion.

"Mistoo 'Itchlin'," said Narcisse, "I 'ope you fine you'seff O. K., seh, if you'll egscuse the slang expression."

Richling started to move away, but checked himself.

"I'm well, sir, thank you, sir; yes, sir, I'm very well."

"I bilieve you, seh. You ah lookin' well."

Narcisse thrust his hands into his pockets, and turned upon the outer sides of his feet, the embodiment of sweet temper. Richling found him a wonderful relief at the moment. He quit gnawing his lip and winking into vacancy, and felt a malicious good humor run into all his veins.

"I dunno 'ow 'tis, Mistoo 'Itchlin'," said Narcisse, "but I muz tell you the tooth, you always 'ave to me the appe'ance ligue the chile of p'ospe'ity."

"Eh?" said Richling, hollowing his hand at his ear,—"child of —"

"P'ospe'ity!"

"Yes—yes," replied the deaf man vaguely, "I—have a relative of that name."

"Oh!" exclaimed the Creole, "thass good faw luck! Mistoo 'Itchlin', look' like you a lill mo' hawd to yeh—but egscuse me. I s'pose you muz be advancing in business, Mistoo 'Itchlin'. I say I s'pose you muz be gittin' along!"

"I? yes; yes, I must."

He started.

"I'm 'appy to yeh it!" said Narcisse.

His innocent kindness was a rebuke. Richling began to offer a cordial parting salutation, but Narcisse said:

"You goin' that way? Well, I kin go that way." They went.

"I was goin' ad the poss-office, but —"

he waved his hand and curled his lip. "Mis-too 'Itchlin', in fact, if you yeh of something suitable to me I would like to yeh it. I am not satisfied with that pless yondeh with Doctah Seveeah. I was compel this mawnin', biffu you came in, to 'epoove 'im faw 'is 'oodness. He called me a jackass, in fact. I woon allow that. I 'ad to 'epoove 'im. 'Doctah Seveeah,' says I, 'don't you call me a jackass ag'in!' An' 'e din call it me ag'in. No, seh. But 'e din like to 'ush up. Thass the rizz'n 'e was a lill miscutteous to you. Me, I am always polite. As they say, 'A nod is juz as good as a kick f'om a bline hoss.' You ah fon' of maxim, Mistoo 'Itchlin'? Me, I'm ve'y fon' of them. But they's got one maxim what you may 'ave 'eard—I do not fine that maxim always come t'ue. 'Ave you evva yeah that maxim, 'A fool faw luck'? That don't always come t'ue. I 'ave discovered that."

"No," responded Richling, with a parting smile, "that doesn't always come true."

Dr. Sevier denounced the world at large, and the American nation in particular, for two days. Within himself, for twenty-four hours,

(To be continued.)

he grumly blamed Richling for their rupture; then for twenty-four hours reproached himself, and on the morning of the third day knocked at the door, corner of St. Mary and Prytania.

No one answered. He knocked again. A woman in bare feet showed herself at the corresponding door-way in the farther half of the house.

"Nobody don't live there no more, sir," she said.

"Where have they gone?"

"Well, reely, I couldn't tell you, sir. Because, reely, I don't know nothing about it. I haint but jest lately moved in here myself, and I don't know nothing about nobody around here scarcely at all."

The Doctor shut himself again in his carriage and let himself be whisked away, in great vacuity of mind.

"They can't blame anybody but themselves" was, by and by, his rallying thought. "Still"—he said to himself after another vacant interval, and said no more. The thought that whether *they* could blame others or not did not cover all the ground, rested heavily on him.

THE PRETENDERS TO THE THRONE OF FRANCE.

IF France were a republican nation, as many Americans, satisfied with their own fortunate lot, fondly suppose, this question of the various claimants to the French throne would surely be scarcely worth a moment's attention. But the alarm shown by the French Government whenever the question has been raised, the stringent measures adopted, and those proposed for the future, bear testimony to a feeling of insecurity. It cannot be doubted that a large part of the nation favors a constitutional government under a nominal king, one whose power would be restricted—a sort of president of a republican monarchy, if such a contradictory term may be admitted. A court of some kind is the great want felt in the luxurious city of Paris; a center of fashion and elegance, presided over by those whose undoubted rank would naturally call around them the most distinguished individuals of their own land and of other nations. In Paris, luxury is an absolute necessity, and Spartan virtues will never take root in that city of gayety and pleasure. The Parisian lives chiefly by the trades which thrive on the habits of a court and an aristocracy. When there is none, he seeks the patronage of

any one who will spend money lavishly; and then is seen what we see now, the degradation of the national taste, under the auspices of the meretricious leaders of pleasure.

That sooner or later the monarchy will be reëstablished, even many who are antagonistic to the principle feel to be more than a probability. Had the Prince Imperial lived, many think he would now be on the throne of France. The sensation produced by the illness and danger of the Comte de Chambord, the anxiety with which news of his condition was awaited, and the involuntary respect shown by even Republican politicians when writing of the almost unknown and exiled representative of the old royal race, is a striking proof of what we have said. If he had lived, it is probable that a reaction in his favor would have taken place. Still, the whole education, the chivalrous principles of the Comte de Chambord, seem to have rendered him unfit to reign over the French nation, such as it is now. No impartial observer can deny that the whole moral and intellectual tone of the nation has been lowered. That the profuse luxury and loose morality of the imperial *régime* did harm

must be acknowledged. But what do we see now? Never has public morality and decency been so outraged; never have crimes of the most horrible kind been so frequent. We see the reign of vice represented by low actresses of low theaters and women of bad reputation. All the journals relate their doings; their funerals are followed by literary men, who write their biographies and praise their "virtues"! As there are no royal ladies now to occupy public attention, and as private gentlewomen strive to remain unnoticed, these women are the queens of the day.

When the "vices of a court" are mentioned, is it not easy to inquire what could be worse than what we see now? Under Louis Philippe, the court was a pattern of domestic life and family affections. More that was worthy of blame might be brought forward against the Empire; still, whatever might have been the private lives of some of the courtiers, nothing serious could be urged against the Empress Eugénie, and all must feel respect for the Princesse Clotilde. That, under Henri V. (had the Comte de Chambord lived to obtain the throne), there could have been no danger of royal toleration of moral laxity at court, may be inferred from his traditions and training.

His full name was Henri Charles Ferdinand Marie Dieudonné of Bourbon—"Son of France" (*Fils de France*), Duc de Bordeaux, Comte de Chambord, and in the eyes of his adherents King of France, *de jure* if not *de facto*. They called him *Le Roi*.

Why *Dieudonné*—God-given? The heir-apparent of the childless Louis XVIII. was his brother, the Comte d'Artois, afterward Charles X., whose eldest son, the Duc d'Angoulême, married to the orphan daughter of Louis XVI. and Marie Antoinette, was likewise without children. The hopes of the nation, as to the continuation of the dynasty, were consequently centered in the younger son of the Comte d'Artois, the Duc de Berry, married to the Princesse Caroline of Naples. One child was born, a daughter, who, in consequence of the Salic law, could not ascend the throne of France; if he should have no more, there would be an end to the elder branch of the Bourbons. It was then that the assassin Louvel struck down the young prince at the door of the opera-house, just as he turned away from the carriage to which he had taken the Duchess, his wife, who did not wish to remain till the end of the performance. The stab of the poniard had been directed with a sure hand, and the Duc de Berry died at the opera-house before morning, surrounded by the weeping royal family, and in the presence

of the old King, hastily summoned to witness the death of his murdered nephew, whose condition did not admit of his removal to the Tuileries palace.

Before his death, after vainly entreating for the pardon of his murderer, the Duke declared that his wife had hopes of an heir.

The child was born, and it was a boy, who, in thanksgiving, was named *Dieudonné*, God-given, and *Henri*, in memory of the ever popular founder of the Bourbon dynasty—Henri Quatre (Henry of Navarre).

The child of sorrow, the royal Benoni, grew up, educated with his charming sister, beloved by all, Louise of France, afterward Duchesse de Parma; a princess of great intelligence and of a masculine spirit, like many other daughters of the house of Bourbon; withal, irreproachable in her private life—a truly Christian wife and mother.

Henri was a bright and spirited boy; kind-hearted, with the characteristic kindness of the Bourbons, ever ready to respond to high and generous impulse; no bookworm, nor even very exemplary as a studious school-boy; but an engaging child, with the soul of a prince and, what is more, the soul of a gentleman.

At ten years of age he left France, an exile, having in vain been proclaimed king after the abdication of his grandfather, Charles X., which was immediately followed by that of his uncle, the Duc d'Angoulême. The family took refuge at Holyrood, the fated palace of the Stuarts, whose memories seemed to cast their gloomy shadow over the young heads of Henri and Louise. From Holyrood they went to Prague, and from Prague to Goritz, where Charles X. died. Meanwhile their mother, the Duchesse de Berry, had made an imprudent attempt to stir up the loyal western provinces of France in favor of her son; betrayed by the Hebrew Deutz, she was seized at Nantes by the emissaries of Louis Philippe, and detained as a state prisoner at the fortress of Blaye, near Bordeaux, where she was forced to confess a secret marriage with the Comte Lucchesi-Palli, which threw ridicule over the whole affair.

The extreme displeasure of the exiled King, on hearing of this act of indiscretion, was shown by the separation of the children from their mother, who, released by Louis Philippe after the birth of her child, followed her second husband to Venice, where she henceforward principally resided; while Henri and Louise were educated under the superintendence of their aunt, the austere Duchesse d'Angoulême. It was a gloomy life for them; but they grew up amiable, joyous, and full of noble spirit, loved by all who knew them. A terrible accident,

COMTE DE CHAMBORD. (DIED 1883.) (FROM A PHOTOGRAPH BY BIANCO.)

which might have been fatal, partially crippled the young prince, and was certainly detrimental to his fine presence, from the persistent and marked lameness which remained; but he retained considerable beauty of feature. The clear, bright blue eyes had still a most peculiar and charming expression, in which were blended the dignity of exalted rank and the frank kindness of an honorable and excellent man, with the searching penetration of one accustomed to study character in those who sought his presence.

When the death of his grandfather and of his uncle the Duc d'Angoulême had removed all doubts as to his position, he announced his intention of being known simply as Comte de Chambord, from the name of an estate which, in happier days, had been presented to him by a national subscription. He lived henceforward chiefly at Frohsdorf, near Vienna, a plain manor, more suited to an ordinary country gentleman; but a visit to England was the occasion of a demonstration of loyalty on the part of the young French nobility, who gathered round the young and handsome pretender.

At Frohsdorf he chose to be called simply by the neutral title of "*Monseigneur*," and set aside all ceremonious etiquette. The Duchesse

d'Angoulême, however, although styled "The Queen" (*La Reine*), punctiliously conformed to ancient usage, and invariably rose from her seat when her nephew entered the room or left it.

A bride had to be found for the young Prince; no easy matter when political difficulties were considered. The Princesse Marie Thérèse, of Modena, consented to devote her life to the exile, to whom she brought a large fortune, which, with all that was known of her amiable qualities, seemed to satisfy all requirements. But, although of an elegant figure and distinguished appearance, she could not lay claim to that beauty of feature to which in France so much importance is attached; and more than this, the marriage was childless, a source of lasting grief to the Comtesse de Chambord, although this privation may now prove a blessing to France, in simplifying the question of the various pretenders.

The Revolution of 1848, with the downfall of Louis Philippe, seemed to open the way to the young heir of the elder Bourbons. After the dreadful insurrection of June, it was evident that the country longed for peace, longed for a definite ruler, and would receive joyfully any one coming as a savior. Everything was *à la Chambord*; *fleurs-de-lis*, the Bourbon emblem, were seen everywhere; all the young men wore white flowers in their button-holes, and all looked eagerly toward Henri Dieudonné.

But no response came, and the disappointment was universal. There was no one at hand to play the part of General Monk, and the cautious advisers of the young Prince, men who loved him, men who had the recollection of the past fresh in their minds, could not bear that their cherished Prince should play the part of a political adventurer, or run any personal risk. Had he come forward then, as probably his ancestor, Henri Quatre, would have done, it is more than likely that the victory would have been his. But, restrained by his too prudent advisers, he hesitated, and that interval gave time to Louis Napoleon Bonaparte to step forward. As the Emperor himself said, at a later period:

"One went away—the other did not come—so I reached the goal."*

Another political mistake greatly to be regretted was the prohibition addressed by the Comte de Chambord to his adherents with regard to their acceptance of any public functions under other forms of government. The natural consequence has been that all the young Legitimist noblemen lived in idleness, and have become mere carpet knights; so

* "*L'un est parti—l'autre n'est pas venu—je suis arrivé.*"

COMTE DE PARIS. (FROM A PHOTOGRAPH BY JOLIOT.)

that if the Comte de Chambord had been proclaimed King of France, he would have been forced to choose the members of the government outside of the group of his most devoted followers.

After the establishment of the Empire, the Comte de Chambord seemed resigned to play a passive part, only interrupted by occasional protestations and manifestoes, to which nobody paid much attention. He lived quietly, like a private gentleman, at Frohsdorf, Goritz, and Venice, making no attempt to disturb by force the established form of government in France. A sincere Catholic, and punctual in the observance of the religious obligations of that faith, he yet never played the part of a gloomy bigot; and his genial manners, his love of field sports, the cordial hospitality offered to all visitors in his plain, unpretending manner, endeared him to those who had the honor of being received there; and all French visitors were heartily welcomed, even when known to belong to antagonistic political parties.

The Comte de Chambord has been represented as a stranger to France by education, and as a mere Austrian gentleman, who knew nothing of France. This is a great mistake. No one was more French than the exiled

Count; no one spoke the French language with a more perfect accent, or more elegance of expression; no one loved France better, or sought more information as to her destinies from every source. Newspapers of every political shade were received at Frohsdorf, carefully read by his secretaries, and marked for his perusal.

Having been told from his childhood that he was a direct gift from the Almighty, that he was predestined from his birth, he had, perhaps, a too absolute conviction that he was a sort of Messiah, and that his day must come. "The word to be spoken belongs to France; the hour belongs to God"—was his maxim.

Well informed, but not pedantic, of quick intelligence and ready speech, the Comte de Chambord, by his conversation, left the impression on his hearers of a superior mind and a determined will. Some may be inclined to say—*too* determined. Be this a virtue or a defect,—for it is not always easy to mark the exact point where firmness ceases and obstinacy begins,—the Comte de Chambord never yielded a point of principle or listened to suggestions of mere expediency.

In opposition to him for many years was the young representative of the Orleans branch, the Comte de Paris. Like his cousin, he had lost his father by a violent death, and at ten years of age had been forced to fly from France, an exile, with an aged grandfather and a widowed mother. The Duchesse d'Orleans was, however, very different from the Duchesse de Berry, mother of the Comte de Chambord. A grave, well-informed German princess, as quiet and serious in her habits and mode of life as the Duchesse de Berry was vivacious and inconsiderate, there could be no question of withdrawing her sons from her influence. Their education was superintended by herself; she was an ambitious mother, and during her life there could be no reconciliation between the two rival branches of the Bourbons. In her sight, her son was the rightful King, and she would never have yielded to any compromise. But, while the Comte de Chambord inherited from his Italian mother her vivacity and grace, tempered in his case by the austere guidance of the Duchesse d'Angoulême, the Comte de Paris acquired the cold and grave exterior of the Duchesse d'Orleans and her love of intellectual pursuits. He is said to have been more a man of science and learning than a politician

La parole est à la France, l'heure est à Dieu.

or a statesman; his tastes were quiet, his habits were retired, and almost too simple for his position for those who think that princes should not forget the old saying that *majesty without its externals is a jest*, and that they must not be too much like other people.

This the Comte de Chambord recognized, and in his home there was just enough of necessary etiquette to mark the chief of the royal line. His table had the simplicity of a private home; but all was served on massive plate, engraved with the heraldic *fleur-de-lis* of the Bourbons. When dinner was announced, the Count and Countess walked out first and took the center places at the dinner-table; the visitors who were especially honored were placed on the left of the Count and the right of the Countess. These seats of honor were differently filled at every meal, by a graceful innovation of the host, that all might enjoy the privilege in turn. No one ventured to address him, but his kindness enabled every one to have an opportunity of conversing with him. In the case of any visitor of note, he was honored with a private interview in the study of the Comte de Chambord, who delighted in prolonged conversation and free discussion of every topic. The interview lasted during the pleasure of the royal host, who gave permission to retire by a significant smile and bend—motioning as if about to rise, but without actually leaving his seat.

The Comte de Paris, on the contrary, lives exactly like a private individual, and waives all etiquette. He is considered to be personally devoid of all ambition, but anxious to do what might be considered his duty. In the hope of smoothing difficulties with regard to the pacification of France after the war of 1870, he sought a reconciliation with the Comte de Chambord, who received his young cousin with open arms and the warmest feeling. The Comte de Paris has always, since then, proved most honorably faithful to the engagement taken, at that time, of never putting forward his own claims in opposition to those of the chief of his race. His partisans were inclined to regret the promise given, when the negotiations which had so nearly succeeded in placing the Comte de Chambord on the throne of France failed through his refusal to accept the tri-colored flag, which he rejected as the emblem of the Revolution, while the French army loved it as the emblem of military glory. Whatever may have been the feelings of the Comte de Paris on this occasion, the promise which he had given was faithfully and honorably kept. A compromise had been suggested which all regretted to see rejected by the Comte de Chambord: the tri-colored flag to be retained

by the army, and the white flag to be treated as a royal standard peculiar to the sovereign, like that used by Queen Victoria.

The *tricolore* had been accepted by Louis Philippe, and all his sons had "won their spurs" under its shade. It was not likely, therefore, to be distasteful to the Comte de Paris as an emblem of the liberal *citizen government* inaugurated by his grandfather, but repudiated by the principles of the elder branch represented by the Comte de Chambord. The Comte de Paris, however, has made no sign, no attempt to court popularity. He has continued, as before, to live the life of a private gentleman, studiously avoiding public notice, silent on political matters, and remarked only as the author of clever articles in reviews, chiefly on social questions, and of an elaborate "History of the Civil War in the United States," in which contest he served honorably. He is said to regard his position as a Pretender more in the light of a public duty than as the source of any advantage to himself or to his family.

Far different is the character of the Bonaparte claimant, Prince Jerome Napoleon ("Plon-plon"). His resemblance in feature to his illustrious uncle, the great Emperor, is most striking; but no less striking is the difference of expression, which is certainly not to the advantage of Prince Napoleon. All the revelations of that face are confirmed by popular report, and universal sympathy is felt for the admirable Princesse Clotilde, forced by necessity to live apart from the husband to whom she had been sacrificed through political considerations. No two individuals could be more ill-matched than the atheistical, dissipated Jerome Napoleon, as celebrated for his immoral life as for his coarse brutality of temper, and his supposed—what shall we call it?—*personal prudence* under fire, and the calm, dignified Italian Princess, fearless, like a true daughter of the house of Savoy; devout, almost to excess; with the tastes and habits of a nun, and the ardent faith of a martyr. She did not possess the beauty or the quick, brilliant wit which might have pleased him; she cared little for splendid dress or worldly pleasures. She spent almost too much time in devotional practices, which he abhorred. During the Empire, the home life of the Princesse Clotilde was austere, quiet, and, it must be owned, very monotonous; perhaps too much so to be quite judicious, under the circumstances in which she was placed. But everything that surrounded her shocked her feelings so much that she could only take refuge in silence and reserve. Her husband was openly an unbeliever, the enemy of the church to which she was de-

voted ; and his conduct in other respects was a permanent and cruel insult to his wife.

When the Empire fell, the Princess went to reside at a country-seat, in Switzerland, on the Lake of Geneva. There she led the

in consequence of the determined opposition of Prince Napoleon, through motives of personal ambition, and the dutiful submission of the young heir, appointed by the boy-like will of the Prince Imperial,—as if the crown

PRINCE NAPOLEON AND HIS SONS, VICTOR AND LOUIS. (FROM A PHOTOGRAPH BY NADAR.)

life of a Sister of Charity, tending the poor and the sick with her own hands, and depriving herself of everything that could possibly be spared, in order to give more to those in need. After the death of the King, her father, she retired, without any opposition from the Prince, her husband, to the palace of Moncalieri, near Turin, which had been left to her ; there, at least, she was not obliged to endure the affronts which hitherto had not been spared to her. The sympathy of all went with her, and the unpopularity of Prince Napoleon consequently increased. Notwithstanding his remarkable intelligence, which cannot be denied, his eloquence as an orator, and the prestige of that Bonaparte face, so like that of the great Emperor, Prince Napoleon is universally disliked, and despised as much as he is disliked. Even the Bonapartists dare not put forward his claims ; their chance of success would be too small.

The attempt to transfer their allegiance to Prince Victor, his son, has proved a failure,

of France could be given away by will to a chosen successor !

The young Prince Victor has not yet had time or opportunity to show what he really is. But popular rumor is all in his favor. He is said to have few of the characteristics of the Bonaparte race, and to be more peculiarly a prince of Savoy, on the side of his mother, with the physical characteristics of the Italian royal family, and the high spirit of that line.

Which of these various Pretenders will reach the goal—if any does ? Who knows ? With the fickle character of the French nation everything is possible. Some expect that the Comte de Paris, at no distant period, will be summoned to the throne of France, with a liberal constitution, freely accepted by him, according to the traditions of his family. But it is as easy to foresee, a few years further on, a Bonaparte reaction, and the young Prince Victor, having reached a riper age, reëstablishing another Empire.

THE IMPRESSIONS OF A COUSIN.*

BY HENRY JAMES,

Author of "The Portrait of a Lady," "Roderick Hudson," "Daisy Miller," etc.

PART II.

JUNE 8.—Late this afternoon, about an hour before dinner, Mr. Frank arrived with what Mrs. Ermine calls his equipage, and asked her to take a short drive with him. At first she declined — said it was too hot, too late, she was too tired; but he seemed very much in earnest, and begged her to think better of it. She consented at last, and when she had left the room to arrange herself, he turned to me with a little grin of elation. I saw he was going to say something about his prospects, and I determined, this time, to give him a chance. Besides, I was curious to know how he believed himself to be getting on. To my surprise, he disappointed my curiosity; he only said, with his timid brightness:

"I am always so glad when I carry my point."

"Your point? Oh, yes. I think I know what you mean."

"It's what I told you that day."

He seemed slightly surprised that I should be in doubt as to whether he had really presented himself as a lover. "Do you mean to ask her to marry you?"

He stared a little, looking graver. "Do you mean to-day?"

"Well, yes, to-day, for instance; you have urged her so to drive."

"I don't think I will do it to-day; it's too soon."

His gravity was natural enough, I suppose; but it had suddenly become so intense that the effect was comical, and I could not help laughing. "Very good; whenever you please."

"Don't you think it's too soon?" he asked,

"Ah, I know nothing about it."

"I have seen her alone only four or five times."

"You must go on as you think best," I said.

"It's hard to tell. My position is very difficult." And then he began to smile again. He is certainly very odd.

It is my fault, I suppose, that I am too impatient of what I don't understand; and I don't understand this odd mixture of the per-

functory and the passionate, or the singular alternation of Mr. Frank's confessions and reserves.

"I can't enter into your position," I said. "I can't advise you or help you in any way."

Even to myself, my voice sounded a little hard as I spoke, and he was evidently discomposed by it. He blushed as usual, and fell to putting on his gloves.

"I think a great deal of your opinion, and for several days I have wanted to ask you."

"Yes, I have seen that."

"How have you seen it?"

"By the way you have looked at me."

He hesitated a moment. "Yes, I have looked at you — I know that. There is a great deal in your face to see."

This remark, under the circumstances, struck me as absurd. I began to laugh again. "You speak of it as if it were a collection of curiosities."

He looked away now. He wouldn't meet my eye, and I saw that I had made him feel thoroughly uncomfortable. To lead the conversation back into the commonplace, I asked him where he intended to drive.

"It doesn't matter much where we go — it's so pretty everywhere now." He was evidently not thinking of his drive, and suddenly he broke out: "I want to know whether you think she likes me."

"I haven't the least idea. She hasn't told me."

"Do you think she knows that I mean to propose to her?"

"You ought to be able to judge of that better than I."

"I am afraid of taking too much for granted; also, of taking her by surprise."

"So that — in her agitation — she might accept you? Is that what you are afraid of?"

"I don't know what makes you say that. I wish her to accept me."

"Are you very sure?"

"Perfectly sure. Why not? She is a charming creature."

"So much the better, then; perhaps she will."

"You don't believe it," he exclaimed, as

if it were very clever of him to have discovered that."

"You think too much of what I believe. That has nothing to do with the matter."

"No, I suppose not," said Mr. Frank, apparently wishing very much to agree with me.

"You had better find out as soon as possible from Eunice herself," I added.

"I haven't expected to know—for some time."

"Do you mean for a year or two? She will be ready to tell you before that."

"Oh, no—not a year or two; but a few weeks."

"You know you come to the house every day. You ought to explain to her."

"Perhaps I had better not come so often."

"Perhaps not!"

"I like it very much," he said, smiling.

I looked at him a moment; I don't know what he has got in his eyes. "Don't change! You are such a good young man that I don't know what we should do without you." And I left him to wait alone for Eunice.

From my window, above, I saw them leave the door; they make a fair, bright young couple as they sit together. They had not been gone a quarter of an hour when Mr. Caliph's name was brought up to me. He had asked for me—me alone; he begged that I would do him the favor to see him for ten minutes. I don't know why this announcement should have made me nervous; but it did. My heart beat at the prospect of entering into direct relations with Mr. Caliph. He is very clever, much thought of, and talked of; and yet I had vaguely suspected him—of I don't know what! I became conscious of that, and felt the responsibility of it; though I didn't foresee, and indeed don't think I foresee yet, any danger of a collision between us. It is to be noted, moreover, that even a woman who is both plain and conceited must feel a certain agitation at entering the presence of Haroun-al-Raschid. I had begun to dress for dinner, and I kept him waiting till I had taken my usual time to finish. I always take some such revenge as that upon men who make me nervous. He is the sort of man who feels immediately whether a woman is well dressed or not; but I don't think this reflection really had much to do with my putting on the freshest of my three little French gowns.

He sat there, watch in hand; at least, he slipped it into his pocket as I came into the room. He was not pleased at having had to wait, and when I apologized, hypocritically, for having kept him, he answered, with a certain dryness, that he had come to transact an

important piece of business in a very short space of time. I wondered what his business could be, and whether he had come to confess to me that he had spent Eunice's money for his own purposes. Did he wish me to use my influence with her not to make a scandal? He didn't look like a man who had come to ask a favor of that kind; but I am sure that if he ever does ask it, he will not look at all as he might be expected to look. He was clad in white garments from head to foot, in recognition of the hot weather, and he had half a dozen roses in his button-hole. This time his flowers were for himself. His white clothes made him look as big as Henry VIII.; but don't tell me he is not a Jew! He's a Jew of the artistic, not of the commercial, type; and as I stood there, I thought him a very strange person to have as one's trustee. It seemed to me that he would carry such an office into transcendental regions, out of all common jurisdictions; and it was a comfort to me to remember that I have no property to be taken care of. Mr. Caliph kept a pocket-handkerchief, with an enormous monogram, in his large, tapering hand, and every other moment he touched his face with it. He evidently suffers from the heat. With all that, *il est bien beau*. His business was not what had at first occurred to me; but I don't know that it was much less strange.

"I knew I should find you alone, because Adrian told me this morning that he meant to come and ask our young friend to drive. I was glad of that; I have been wishing to see you alone, and I didn't know how to manage it."

"You see it's very simple. Didn't you send your brother?" I asked. In another place, to another person, this might have sounded impertinent; but evidently, addressed to Mr. Caliph, things have a special measure, and this I instinctively felt. He will take a great deal, and he will give a great deal.

He looked at me a moment, as if he were trying to measure what I would take. "I see you are going to be a very satisfactory person to talk with," he answered. "That's exactly what I counted on. I want you to help me."

"I thought there was some reason why Mr. Frank should urge Eunice so to go," I went on, refreshed a little, I admit, by these words of commendation. "At first she was unwilling."

"Is she usually unwilling—and does he usually have to be urgent?" he asked, like a man pleased to come straight to the point.

"What does it matter, so long as she consents in the end?" I responded, with a smile that made him smile. There is a singular stimulus, even a sort of excitement, in talking

with him; he makes one wish to venture. And this not as women usually venture, because they have a sense of impunity; but, on the contrary, because one has a prevision of penalties—those penalties which give a kind of dignity to sarcasm. He must be a dangerous man to irritate.

"Do you think she will consent, in the end?" he inquired; and though I had now foreseen what he was coming to, I felt that, even with various precautions which he had plainly decided not to take, there would still have been a certain crudity in it, when, a moment later, he put his errand into words. "I want my little brother to marry her, and I want you to help me bring it about." Then he told me that he knew his brother had already spoken to me, but that he believed I had not promised him much countenance. He wished me to think well of the plan; it would be a delightful marriage.

"Delightful for your brother, yes. That's what strikes me most."

"Delightful for him, certainly; but also very pleasant for Eunice, as things go here. Adrian is the best fellow in the world; he's a gentleman; he hasn't a vice or a fault; he is very well educated; and he has twenty thousand a year. A lovely property."

"Not in trust?" I said, looking into Mr. Caliph's extraordinary eyes.

"Oh, no; he has full control of it. But he is wonderfully careful."

"He doesn't trouble you with it?"

"Oh, dear, no; why should he? Thank God, I haven't got that on my back. His property comes to him from his father, who had nothing to do with me; didn't even like me, I think. He has capital advisers—presidents of banks, overseers of hospitals, and all that sort of thing. They have put him in the way of some excellent investments."

As I write this, I am surprised at my audacity; but, somehow, it didn't seem so great at the time, and he gave absolutely no sign of seeing more in what I said than appeared. He evidently desires the marriage immensely, and he was thinking only of putting it before me so that I, too, should think well of it; for evidently, like his brother, he has the most exaggerated opinion of my influence with Eunice. On Mr. Frank's part, this doesn't surprise me so much; but I confess it seems to me odd that a man of Mr. Caliph's acuteness should make the mistake of taking me for one of those persons who covet influence and like to pull the wires of other people's actions. I have a horror of influence, and should never have consented to come and live with Eunice if I had not seen that she is at bottom much stronger

than I, who am not at all strong, in spite of my grand airs. Mr. Caliph, I suppose, cannot conceive of a woman in my dependent position being indifferent to opportunities for working in the dark; but he ought to leave those vulgar imputations to Mrs. Ermine. He ought, with his intelligence, to see one as one is; or do I possibly exaggerate that intelligence? "Do you know I feel as if you were asking me to take part in a conspiracy?" I made that announcement with as little delay as possible.

He stared a moment, and then he said that he didn't in the least repudiate that view of his proposal. He admitted that he was a conspirator—in an excellent cause. All match-making was conspiracy. It was impossible that as a superior woman I should enter into his ideas, and he was sure that I had seen too much of the world to say anything so *banal* as that the young people were not in love with each other. That was only a basis for marriage when better things were lacking. It was decent, it was fitting, that Eunice should be settled in life; his conscience would not be at rest about her until he should see that well arranged. He was not in the least afraid of that word "arrangement"; a marriage was an eminently practical matter, and it could not be too much arranged. He confessed that he took the European view. He thought that a young girl's elders ought to see that she marries in a way in which certain definite proprieties are observed. He was sure of his brother; he knew how faultless Adrian was. He talked for some time, and said a great deal that I had said to myself the other day, after Mr. Frank spoke to me; said, in particular, very much what I had thought, about the beauty of arrangements—that there are far too few among Americans who marry; that we are the people in the world who divorce and separate most; that there would be much less of that sort of thing if young people were helped to choose,—if marriages were, as one might say, presented to them. I listened to Mr. Caliph with my best attention, thinking it was odd that, on his lips, certain things which I had phrased to myself in very much the same way should sound so differently. They ought to have sounded better, uttered as they were with the energy, the authority, the lucidity of a man accustomed to making arguments; but somehow they didn't. I am afraid I am very perverse. I answered—I hardly remember what; but there was a taint of that perversity in it. As he rejoined, I felt that he was growing urgent—very urgent; he has an immense desire that something may be done. I remember saying, at last,

"What I don't understand is, why your brother should wish to marry my cousin. He has told me he is not in love with her. Has your presentation of the idea, as you call it—has that been enough? Is he acting simply at your request?"

I saw that his reply was not perfectly ready, and for a moment those strange eyes of his emitted a ray that I had not seen before. They seemed to say, "Are you really taking liberties with me? Be on your guard; I may be dangerous." But he always smiles. Yes, I think he is dangerous, though I don't know exactly what he could do to me. I believe he would smile at the hangman, if he were condemned to meet him. He is very angry with his brother for having admitted to me that the sentiment he entertains for Eunice is not a passion; as if it would have been possible for him, under my eyes, to pretend that he is in love! I don't think I am afraid of Mr. Caliph; I don't desire to take liberties with him (as his eyes seemed to call it), or with any one; but, decidedly, I am not afraid of him. If it came to protecting Eunice, for instance; to demanding justice— But what extravagances am I writing? He answered, in a moment, with a good deal of dignity, and even a good deal of reason, that his brother has the greatest admiration for my cousin, that he agrees fully and cordially with everything he (Mr. Caliph) has said to him about its being an excellent match, that he wants very much to marry, and wants to marry as a gentleman should. If he is not in love with Eunice, moreover, he is not in love with any one else.

"I hope not!" I said, with a laugh; whereupon Mr. Caliph got up, looking, for him, rather grave.

"I can't imagine why you should suppose that Adrian is not acting freely. I don't know what you imagine my means of coercion to be."

"I don't imagine anything. I think I only wish he had thought of it himself."

"He would never think of anything that is for his good. He is not in the least interested."

"Well, I don't know that it matters, because I don't think Eunice will see it—as we see it."

"Thank you for saying 'we.' Is she in love with some one else?"

"Not that I know of; but she may expect to be, some day. And better than that, she may expect—very justly—some one to be in love with her."

"Oh, in love with her! How you women talk! You, all of you, want the moon. If she is not content to be thought of as Adrian

thinks of her, she is a very silly girl. What will she have more than tenderness? That boy is all tenderness."

"Perhaps he is too tender," I suggested. "I think he is afraid to ask her."

"Yes, I know he is nervous—at the idea of a refusal. But I should like her to refuse him once."

"It is not of that he is afraid; it is of her accepting him."

Mr. Caliph smiled, as if he thought this very ingenious.

"You don't understand him. I'm so sorry! I had an idea that—with your knowledge of human nature, your powers of observation—you would have perceived how he is made. In fact, I rather counted on that." He said this with a little tone of injury which might have made me feel terribly inadequate if it had not been accompanied with a glance that seemed to say that, after all, he was generous and he forgave me. "Adrian's is one of those natures that are inflamed by not succeeding. He doesn't give up; he thrives on opposition. If she refuses him three or four times, he will adore her!"

"She is sure, then, to be adored—though I am not sure it will make a difference with her. I haven't yet seen a sign that she cares for him."

"Why, then, does she go out to drive with him?"

There was nothing brutal in the elation with which Mr. Caliph made this point; still, he looked a little as if he pitied me for exposing myself to a refutation so prompt.

"That proves nothing, I think. I would go to drive with Mr. Frank, if he should ask me, and I should be very much surprised if it were regarded as an intimation that I am ready to marry him."

Mr. Caliph had his hands resting on his thighs, and in this position, bending forward a little, with his smile he said, "Ah, but he doesn't want to marry *you*!"

That was a little brutal, I think; but I should have appeared ridiculous if I had attempted to resent it. I simply answered that I had as yet seen no sign even that Eunice is conscious of Mr. Frank's intentions. I think she is, but I don't think so from anything she has said or done. Mr. Caliph maintains that she is capable of going for six months without betraying herself, all the while quietly considering and making up her mind. It is possible he is right—he has known her longer than I. He is far from wishing to wait for six months, however; and the part I must play is to bring matters to a crisis. I told him that I didn't see why he did not speak to her directly—why he should operate in

this roundabout way. Why shouldn't he say to her all that he had said to me—tell her that she would make him very happy by marrying his little brother? He answered that this is impossible, that the nearness of the relationship would make it unbecoming; it would look like a kind of nepotism. The thing must appear to come to pass of itself, and I, somehow, must be the author of that appearance! I was too much a woman of the world, too acquainted with life, not to see the force of all this. He had a great deal to say about my being a woman of the world. In one sense, it is not all complimentary; one would think me some battered old dowager who had married off fifteen daughters. I feel that I am far from all that when Mr. Caliph leaves me so mystified. He has some other reason for wishing these nuptials than love of the two young people, but I am unable to put my hand on it. Like the children at hide-and-seek, however, I think I "burn." I don't like him, I mistrust him; but he is a very charming man. His geniality, his richness, his magnetism, I suppose I should say, are extraordinary; he fascinates me, in spite of my suspicions. The truth is that, in his way, he is an artist, and in my little way I am also one; and the artist in me recognizes the artist in him, and cannot quite resist the temptation to foregather. What is more than this, the artist in him has recognized the artist in me,—it is very good of him,—and would like to establish a certain freemasonry. "Let us take together the artistic view of life;" that is simply the meaning of his talking so much about my being a woman of the world. That is all very well; but it seems to me there would be a certain baseness in our being artists together at the expense of poor little Eunice. I should like to know some of Mr. Caliph's secrets, but I don't wish to give him any of mine in return for them. Yet I gave him something before he departed; I hardly know what, and hardly know how he extracted it from me. It was a sort of promise that I would, after all, speak to Eunice,— "as I should like to have you, you know." He remained there for a quarter of an hour after he got up to go: walking about the room with his hands on his hips; talking, arguing, laughing, holding me with his eyes, his admirable face—as natural, as dramatic, and at the same time as diplomatic, as an Italian. I am pretty sure he was trying to produce a certain effect, to entangle, to magnetize me. Strange to say, Mr. Caliph compromises himself, but he doesn't compromise his brother. He has a private reason, but his brother has nothing to do with his privacies. That was my last word to him.

"The moment I feel sure that I may do something for your brother's happiness—your brother's alone—by pleading his cause with Eunice, that moment I will speak to her. But I can do nothing for yours."

In answer to this, Mr. Caliph said something very unexpected: "I wish I had known you five years ago!"

There are many meanings to that; perhaps he would have liked to put me out of the way. But I could take only the polite meaning. "Our acquaintance could never have begun too soon."

"Yes, I should have liked to know you," he went on, "in spite of the fact that you are not kind, that you are not just. Have I asked you to do anything for my happiness? My happiness is nothing. I have nothing to do with happiness. I don't deserve it. It is only for my little brother—and for your charming cousin."

I was obliged to admit that he was right; that he had asked nothing for himself. "But I don't want to do anything for you, even by accident!" I said, laughing, of course.

This time he was grave. He stood looking at me a moment, then put out his hand. "Yes, I wish I had known you!"

There was something so expressive in his voice, so handsome in his face, so tender and respectful in his manner, as he said this, that for an instant I was really moved, and I was on the point of saying, with feeling, "I wish indeed you had!" But that instinct of which I have already spoken checked me—the sense that, somehow, as things stand, there can be no *rapprochement* between Mr. Caliph and me that will not involve a certain sacrifice of Eunice. So I only replied: "You seem to me strange, Mr. Caliph. I must tell you that I don't understand you."

He kept my hand, still looking at me, and went on as if he had not heard me. "I am not happy—I am not wise nor good." Then, suddenly, in quite a different tone, "For God's sake, let her marry my brother!"

There was a quick passion in these words which made me say, "If it is so urgent as that, you certainly ought to speak to her. Perhaps she'll do it to oblige you!"

We had walked into the hall together, and the last I saw of him he stood in the open door-way, looking back at me with his smile. "Hang the nepotism! I *will* speak to her!"

Cornerville, July 6.—A whole month has passed since I have made an entry; but I have a good excuse for this dreadful gap. Since we have been in the country I have found subjects enough and to spare, and I have been painting so hard that my hand, of an evening, has been glad to rest. This place

is very lovely, and the Hudson is as beautiful as the Rhine. There are the words, in black and white, over my signature; I can't do more than that. I have said it a dozen times, in answer to as many challenges, and now I record the opinion with all the solemnity I can give it. May it serve for the rest of the summer! This is an excellent old house, of the style that was thought impressive, in this country, forty years ago. It is painted a cheerful slate-color, save for a multitude of pilasters and facings which are picked out in the cleanest and freshest white. It has a kind of clumsy gable or apex, on top; a sort of roofed terrace, below, from which you may descend to a lawn dotted with delightful old trees; and between the two, in the second story, a deep veranda, let into the body of the building, and ornamented with white balustrades, considerably carved, and big blue stone jars. Add to this a multitude of green shutters and striped awnings, and a mass of Virginia creepers and wistarias, and fling over it the lavish light of the American summer, and you have a notion of some of the conditions of our *villeggiatura*. The great condition, of course, is the splendid river lying beneath our rounded headland in vast silvery stretches, and growing almost vague on the opposite shore. It is a country of views; you are always peeping down an avenue, or ascending a mound, or going around a corner, to look at one. They are rather too shining, too high-pitched, for my little purposes; all nature seems glazed with light and varnished with freshness. But I manage to scrape something off. Mrs. Ermine is here, as brilliant as her setting; and so, strange to say, is Adrian Frank. Strange for this reason, that the night before we left town I went into Eunice's room and asked her whether she knew, or rather whether she suspected, what was going on. A sudden impulse came to me; it seemed to me unnatural that in such a situation I should keep anything from her. I don't want to interfere, but I think I want even less to carry too far my aversion to interference; and without pretending to advise Eunice, it was revealed to me that she ought to know that Mr. Caliph had come to see me on purpose to induce me to work upon her. It was not till after he was gone that it occurred to me he had sent his brother in advance, on purpose to get Eunice out of the way, and that this was the reason the young Adrian would take no refusal. He was really in excellent training. It was a very hot night. Eunice was alone in her room, without a lamp; the windows were wide open, and the dusk was clarified by the light of the street. She sat there, among things vaguely visible, in a white

wrapper, with her fair hair on her shoulders, and I could see her eyes move toward me when I asked her whether she knew that Mr. Frank wished to marry her. I could see her smile, too, as she answered that she knew he thought he did, but also knew he didn't.

"Of course, I have only his word for it," I said.

"Has he told you?"

"Oh, yes, and his brother, too."

"His brother?" And Eunice slowly got up.

"It's an idea of Mr. Caliph's as well. Indeed, Mr. Caliph may have been the first. He came here to-day, while you were out, to tell me how much he should like to see it come to pass. He has set his heart upon it, and he wished me to engage to do all in my power to bring it about. Of course, I can't do anything, can I?"

She had sunk into her chair again, as I went on; she sat there looking before her, in the dark. Before she answered me she gathered up her thick hair with her hands, twisted it together, and holding it in place, on top of her head, with one hand, tried to fasten a comb into it with the other. I passed behind her to help her; I could see she was agitated. "Oh, no, you can't do anything," she said, after a moment, with a laugh that was not like her usual laughter. "I know all about it; they have told me, of course." Her tone was forced, and I could see that she had not really known all about it—had not known that Mr. Caliph is pushing his brother. I went to the window and looked out a little into the hot, empty street, where the gas-lamps showed me, up and down, the hundred high stoops, exactly alike, and as ugly as a bad dream. While I stood there, a thought suddenly dropped into my mind, which has lain ever since where it fell. But I don't wish to move it, even to write it here. I staid with Eunice for ten minutes; I told her everything that Mr. Caliph had said to me. She listened in perfect silence—I could see that she was glad to listen. When I related that he didn't wish to speak to her himself on behalf of his brother, because that would seem indelicate, she broke in, with a certain eagerness, "Yes, that is very natural!"

"And now you can marry Mr. Frank without my help!" I said, when I had done.

She shook her head sadly, though she was smiling again. "It's too late for your help. He has asked me to marry him, and I have told him he can hope for it—never!"

I was surprised to hear he had spoken, and she said nothing about the time or place. It must have been that afternoon, during their

drive. I said that I was rather sorry for our poor young friend; he was such a very nice fellow. She agreed that he was remarkably nice, but added that this was not a sufficient reason for her marrying him; and when I said that he would try again, that I had Mr. Caliph's assurance that he would not be easy to get rid of, and that a refusal would only make him persist, she answered that he might try as often as he liked, he was so little disagreeable to her that she would take even that from him. And now, to give him a chance to try again, she has asked him down here to stay, thinking apparently that Mrs. Ermine's presence puts us *en règle* with the proprieties. I should add that she assured me there was no real danger of his trying again; he had told her he meant to, but he had said it only for form. Why should he, since he was not in love with her? It was all an idea of his brother's, and she was much obliged to Mr. Caliph, who took his duties much too seriously, and was not in the least bound to provide her with a husband. Mr. Frank and she had agreed to remain friends, as if nothing had happened; and I think she then said something about her intending to ask him to this place. A few days after we got here, at all events, she told me that she had written to him, proposing his coming; whereupon I intimated that I thought it a singular overture to make to a rejected lover, whom one didn't wish to encourage. He would take it as encouragement, or at all events Mr. Caliph would. She answered that she didn't care what Mr. Caliph thinks, and that she knew Mr. Frank better than I, and knew, therefore, that he had absolutely no hope. But she had a particular reason for wishing him to be here. That sounded mysterious, and she couldn't tell me more; but in a month or two I would guess her reason. As she said this she looked at me with a brighter smile than she has had for weeks; for I protest that she is troubled—Eunice is greatly troubled. Nearly a month has elapsed, and I haven't guessed that reason. Here is Adrian Frank, at any rate, as I say; and I can't make out whether he persists or renounces. His manner to Eunice is just the same; he is always polite and always shy, never inattentive and never unmistakable. He has not said a word more to me about his suit. Apart from this he is very sympathetic, and we sit about sketching together in the most fraternal manner. He made to me a day or two since a very pretty remark; viz., that he would rather copy a sketch of mine than try, himself, to do the place from nature. This, perhaps, does not look so *galant* as I repeat it here; but with the tone and

glance with which he said it, it really almost touched me. I was glad, by the way, to hear from Eunice, the night before we left town, that she doesn't care what Mr. Caliph thinks; only, I should be gladder still if I believed it. I don't, unfortunately; among other reasons, because it doesn't at all agree with that idea which descended upon me with a single jump—from heaven knows where—while I looked out of her window at the stoops. I observe with pleasure, however, that he doesn't send her any more papers to sign. These days pass softly, quickly, but with a curious, an unnatural, stillness. It is as if there was something in the air—a sort of listening hush. That sounds very fantastic, and I suppose such remarks are only to be justified by my having the artistic temperament—that is, if I have it! If I haven't, there is no excuse; unless it be that Eunice is distinctly uneasy, and that it takes the form of a voluntary, exaggerated calm, of which I feel the contact, the tension. She is as quiet as a mouse, and yet as restless as a flame. She is neither well nor happy; she doesn't sleep. It is true that I asked Mr. Frank, the other day, what impression she made on him, and he replied, with a little start and a smile of alacrity, "Oh, delightful, as usual!"—so that I saw he didn't know what he was talking about. He is tremendously sunburnt, and as red as a tomato. I wish he would look a little less at my daubs and a little more at the woman he wishes to marry. In summer, I always suffice to myself, and I am so much interested in my work that if I hope, devoutly, as I do, that nothing is going to happen to Eunice, it is probably quite as much from selfish motives as from others. If anything were to happen to her, I should be immensely interrupted. Mrs. Ermine is bored, *par exemple!* She is dying to have a garden-party, at which she can drag a long train over the lawn; but day follows day, and this entertainment does not take place. Eunice has promised it, however, for another week, and I believe means to send out invitations immediately. Mrs. Ermine has offered to write them all; she has, after all, *du bon*. But the fatuity of her misunderstandings of everything that surrounds her passes belief. She sees nothing that really occurs, and gazes complacently into the void. Her theory is always that Mr. Caliph is in love with Eunice,—she opened up to me on the subject only yesterday, because with no one else to talk to but the young Adrian, who dodges her, she doesn't in the least mind that she hates me, and that I think her a goose,—that Mr. Caliph is in love with Eunice, but that Eunice, who is queer enough for anything, doesn't like him, so that he has sent

down his step-brother to tell stories about the good things he has done, and to win over her mind to a more favorable view. Mrs. Ermine believes in these good things, and appears to think such action on Mr. Caliph's part both politic and dramatic. She has not the smallest suspicion of the real little drama that has been going on under her nose. I wish I had that absence of vision; it would be a great rest. Heaven knows, I see more than I want—for instance, when I see that my poor little cousin is pinched with pain, and yet that I can't relieve her, can't even advise her. I couldn't do the former even if I would, and she wouldn't let me do the latter even if I could. It seems too pitiful, too incredible, that there should be no one to turn to. Surely if I go up to town for a day next week, as seems probable, I may call upon William Ermine. Whether I *may* or not, I will.

July 11.—She has been getting letters, and they have made her worse. Last night I spoke to her—I asked her to come into my room. I told her that I saw she was in distress; that it was terrible to me to see it; that I was sure that she has some miserable secret. Who was making her suffer this way? No one had the right—not even Mr. Caliph, if Mr. Caliph it was, to whom she appeared to have conceded every right. She broke down completely, burst into tears, confessed that she is troubled about money. Mr. Caliph has again requested a delay as to his handing in his accounts, and has told her that she will have no income for another year. She thinks it strange; she is afraid that everything isn't right. She is not afraid of being poor; she holds that it's vile to concern one's self so much about money. But there is something that breaks her heart, in thinking that Mr. Caliph should be in fault. She had always admired him, she had always believed in him, she had always—What it was, in the third place, that she had always done I didn't learn, for at this point she buried her head still deeper in my lap and sobbed for half an hour. Her grief was melting. I was never more troubled, and this in spite of the fact that I was furious at her strange air of acceptance of a probable calamity. She is afraid that everything isn't right, forsooth! I should think it was not, and should think it hadn't been for heaven knows how long. This is what has been in the air; this is what was hanging over us. But Eunice is simply amazing. She declines to see a lawyer; declines to hold Mr. Caliph accountable; declines to complain, to inquire, to investigate in any way. I am sick, I am terribly perplexed—I don't know what to do. Her tears dried up in an instant as soon as I made the very obvious remark that

the beautiful, the mysterious, the captivating Caliph is no better than a common swindler; and she gave me a look which might have frozen me if when I am angry I were freezable. She took it *de bien haut*; she intimated to me that if I should ever speak in that way again of Mr. Caliph we must part company forever. She was distressed; she admitted that she felt injured. I had seen for myself how far that went. But she didn't pretend to judge him. He had been in trouble,—he had told her that; and his trouble was worse than hers, inasmuch as his honor was at stake, and it had to be saved.

"It's charming to hear you speak of his honor," I cried, quite regardless of the threat she had just uttered. "Where was his honor when he violated the most sacred of trusts? Where was his honor when he went off with your fortune? Those are questions, my dear, that the courts will make him answer. He shall make up to you every penny that he has stolen, or my name is not Catherine Condit!"

Eunice gave me another look, which seemed meant to let me know that I had suddenly become in her eyes the most indecent of women; and then she swept out of the room. I immediately sat down and wrote to Mr. Ermine, in order to have my note ready to send up to town at the earliest hour the next morning. I told him that Eunice was in dreadful trouble about her money matters, and that I believed he would render her a great service, though she herself had no wish to ask it, by coming down to see her at his first convenience. I reflected, of course, as I wrote, that he could do her no good if she should refuse to see him; but I made up for this by saying to myself that I at least should see him, and that he would do me good. I added in my note that Eunice had been despoiled by those who had charge of her property; but I didn't mention Mr. Caliph's name. I was just closing my letter when Eunice came into my room again. I saw in a moment that she was different from anything she had ever been before—or, at least, had ever seemed. Her excitement, her passion, had gone down; even the traces of her tears had vanished. She was perfectly quiet, but all her softness had left her. She was as solemn and impersonal as the priestess of a cult. As soon as her eyes fell upon my letter, she asked me to be so good as to inform her to whom I had been writing. I instantly satisfied her, telling her what I had written; and she asked me to give her the document. "I must let you know that I shall immediately burn it up," she added; and she went on to say that if I should send it to Mr. Ermine, she herself would write to him by the same post

that he was to heed nothing I had said. I tore up my letter, but I announced to Eunice that I would go up to town and see the person to whom I had addressed it. "That brings us precisely to what I came in to say," she answered; and she proceeded to demand of me a solemn vow that I would never speak to a living soul of what I had learned in regard to her affairs. They were her affairs exclusively, and no business of mine or of any other human being, and she had a perfect right to ask and to expect this promise. She has, indeed—more's the pity; but it was impossible to me to admit just then—indignant and excited as I was—that I recognized the right. I did so at last, however, and I made the promise. It seems strange to me to write it here; but I am pledged by a tremendous vow, taken in this "intimate" spot, in the small hours of the morning, never to lift a finger, never to speak a word, to redress any wrong that Eunice may have received at the hands of her treacherous trustee, to bring it to the knowledge of others, or to invoke justice, compensation, or pity. How she extorted this promise from me is more than I can say: she did so by the force of her will—which, as I have already had occasion to note, is far stronger than mine—and by the vividness of her passion, which is none the less intense because it burns inward and makes her heart glow while her face remains as clear as an angel's. She seated herself with folded hands, and declared she wouldn't leave the room until I had satisfied her. She is in a state of extraordinary exaltation, and from her own point of view she was eloquent enough. She returned again and again to the fact that she did not judge Mr. Caliph; that what he may have done is between herself and him alone; and that if she had not been betrayed to speaking of it to me in the first shock of finding that certain allowances would have to be made for him, no one need ever have suspected it. She was now perfectly ready to make those allowances.

She was unspeakably sorry for Mr. Caliph. He had been in urgent need of money, and he had used hers: pray, whose else would I have wished him to use? Her money had been an insupportable bore to him from the day it was thrust into his hands. To make him her trustee had been in the worst possible taste; he was not the sort of person to make a convenience of, and it had been odious to take advantage of his good-nature. She had always been ashamed of owing him so much. He had been perfect in all his relations with her, though he must have hated her and her wretched little investments from the first. If she had lost money, it was not his fault; he

had lost a great deal more for himself than he had lost for her. He was the kindest, the most delightful, the most interesting of men. Eunice brought out all this with pure defiance; she had never treated herself before to the luxury of saying it, and it was singular to think that she found her first pretext, her first boldness, in the fact that he had ruined her. All this looks almost grotesque as I write it here; but she imposed it upon me last night with all the authority of her passionate little person. I agreed, as I say, that the matter was none of my business; that is now definite enough. Two other things are equally so. One is that she is to be plucked like a chicken; the other is that she is in love with the precious Caliph, and has been so for years! I didn't dare to write that the other night, after the beautiful idea had suddenly flowered in my mind; but I don't care what I write now. I am so horribly tongue-tied that I must at least relieve myself here. Of course, I wonder now that I never guessed her secret before; especially as I was perpetually hovering on the edge of it. It explains many things, and it is very terrible. In love with a pickpocket! *Merci!* I am glad fate hasn't played me that trick.

July 14.—I can't get over the idea that he is to go scot-free. I grind my teeth over it as I sit at work, and I find myself using the most livid, the most brilliant colors. I have had another talk with Eunice, but I don't in the least know what she is to live on. She says she has always her father's property, and that this will be abundant; but that, of course, she cannot pretend to live as she has lived hitherto. She will have to go abroad again and economize; and she will probably have to sell this place—that is, if she can. "If she can" of course means, if there is anything to sell; if it isn't devoured with mortgages. What I want to know is, whether justice, in such a case as this, will not step in, notwithstanding the silence of the victim. If I could only give her a hint—the angel of the scales and sword—in spite of my detestable promise! I can't find out about Mr. Caliph's impunity, as it is impossible for me to allude to the matter to any one who would be able to tell me. Yes, the more I think of it the more reason I see to rejoice that fate hasn't played me that trick of making me fall in love with a pickpocket! Suffering keener than my poor little cousin's I cannot possibly imagine, or a power of self-sacrifice more awful. Fancy the situation, when the only thing one can do for the man one loves is to forgive him for thieving! What a delicate attention, what a touching proof of tenderness! This Eunice can do; she has waited all these years to do some-

thing. I hope she is pleased with her opportunity. And yet when I say she has forgiven him for thieving, I lose myself in the mystery of her exquisite spirit. Who knows what it is she has forgiven—does she even know herself? She consents to being injured, despoiled, and finds in consenting a kind of rapture. But I notice that she has said no more about Mr. Caliph's honor. That substantive she condemns herself never to hear again without a quiver, for she has condoned something too ignoble. What I further want to know is, what conceivable tone he has taken—whether he has made a clean breast of it, and thrown himself upon her mercy, or whether he has sought refuge in bravado, in prevarication? Not, indeed, that it matters, save for the spectacle of the thing, which I find rich. I should also like much to know whether everything has gone, whether something may yet be saved. It is safe to say that she doesn't know the worst, and that if he has admitted the case is bad, we may take for granted that it leaves nothing to be desired. Let him alone to do the thing handsomely! I have a right to be violent, for there was a moment when he made me like him, and I feel as if he had cheated me too. Her being in love with him makes it perfect; for of course it was in that that he saw his opportunity to fleece her. I don't pretend to say how he discovered it, for she has watched herself as a culprit watches a judge; but from the moment he guessed it, he must have seen that he could do what he liked. It is true that this doesn't agree very well with his plan that she should marry his step-brother; but I prefer to believe it, because it makes him more horrible. And apropos of Adrian Frank, it is very well I like *him* so much (that comes out rather plump, by the way), inasmuch as if I didn't, it would be quite open to me to believe that he is in league with Caliph. There has been nothing to prove that he has not said to his step-brother, "Very good; you take all you can get, and I will marry her, and being her husband, hush it up,"—nothing but the expression of his blue eyes. That is very little, when we think that expressions and eyes are a specialty of the family, and haven't prevented Mr. Caliph from being a robber. It is those eyes of his that poor Eunice is in love with, and it is for their sake that she forgives him. But the young Adrian's are totally different, and not nearly so fine, which I think a great point in his favor. Mr. Caliph's are southern eyes, and the young Adrian's are eyes of the north. Moreover, though he is so amiable and obliging, I don't think he is amiable enough to *endosser* his brother's victims to that extent, even

to save his brother's honor. He needn't care so much about that honor, since Mr. Caliph's name is not his name. And then, poor fellow, he is too stupid; he is almost as stupid as Mrs. Ermine. The two have sat together directing cards for Eunice's garden-party as placidly as if no one had a sorrow in life. Mrs. Ermine proposed this pastime to Mr. Frank; and as he has nothing in the world to do, it is as good an employment for him as another. But it exasperates me to see him sitting at the big table in the library, opposite to Mrs. E., while they solemnly pile one envelope on top of another. They have already a heap as high as their heads; they must have invited a thousand people. I can't imagine who they all are. It is an extraordinary time for Eunice to be giving a party—the day after she discovers that she is penniless; but of course it isn't Eunice; it's Mrs. Ermine. I said to her yesterday that if she was to change her mode of life—simple enough already, poor thing—she had better begin at once; and that her garden-party under Mrs. Ermine's direction would cost her a thousand dollars. She answered that she must go on, since it had already been talked about; she wished no one to know anything—to suspect anything. This would be her last extravagance, her farewell to society. If such resources were open to us poor heretics, I should suppose she meant to go into a convent. She exasperates me, too—every one exasperates me. It is some satisfaction, however, to feel that my exasperation clears up my mind. It is Caliph who is "sold," after all. He would not have invented this alliance for his brother if he had known—if he had faintly suspected—that Eunice was in love with him, inasmuch as in this case he had assured impunity. Fancy his not knowing it—the idiot!

July 20.—They are still directing cards, and Mrs. Ermine has taken the whole thing on her shoulders. She has invited people that Eunice has never heard of—a pretty rabble she will have made of it! She has ordered a band of music from New York, and a new dress for the occasion—something in the last degree *champêtre*. Eunice is perfectly indifferent to what she does; I have discovered that she is thinking only of one thing. Mr. Caliph is coming, and the bliss of that idea fills her mind. The more people the better; she will not have the air of making petty economies to afflict him with the sight of what he has reduced her to!

"This is the way Eunice ought to live," Mrs. Ermine said to me this afternoon, rubbing her hands, after the last invitation had departed. When I say the last, I mean the last till she had remembered another that

was highly important, and had floated back into the library to scribble it off. She writes a regular invitation hand—a vague, sloping, silly hand, that looks as if it had done nothing all its days but write, “Mr. and Mrs. Ermine request the pleasure,” or, “Mr. and Mrs. Ermine are delighted to accept.” She told me that she knew Eunice far better than Eunice knew herself, and that her line in life was evidently to “receive.” No one better than she would stand in a door-way and put out her hand with a smile; no one would be a more gracious and affable hostess, or make a more generous use of an ample fortune. She is really very trying, Mrs. Ermine, with her ample fortune; she is like a clock striking impossible hours. I think she must have engaged a special train for her guests—a train to pick up people up and down the river. Adrian Frank went to town to-day; he comes back on the 23d, and the festival takes place the next day. The festival,—Heaven help us! Eunice is evidently going to be ill; it’s as much as I can do to keep from adding that it serves her right! It’s a great relief to me that Mr. Frank has gone; this has ceased to be a place for him. It is ever so long since he has said anything to me about his “prospects.” They are charming, his prospects!

July 26.—The garden-party has taken place, and a great deal more besides. I have been too agitated, too fatigued and bewildered, to write anything here; but I can’t sleep to-night,—I’m too nervous,—and it is better to sit and scribble than to toss about. I may as well say at once that the party was very pretty—Mrs. Ermine may have that credit. The day was lovely; the lawn was in capital order; the music was good, and the *buffet* apparently inexhaustible. There was an immense number of people; some of them had come even from Albany—many of them strangers to Eunice, and *protégés* only of Mrs. Ermine; but they dispersed themselves on the grounds, and I have not heard, as yet, that they stole the spoons or plucked up the plants. Mrs. Ermine, who was exceedingly *champêtre*,—white muslin and corn-flowers,—told me that Eunice was “receiving adorably,” was in her native element. She evidently inspired great curiosity; that was why every one had come. I don’t mean because every one suspects her situation, but because as yet, since her return, she has been little seen and known, and is supposed to be a distinguished figure—clever, beautiful, rich, and a *parti*. I think she satisfied every one; she was voted most interesting, and except that she was deadly pale, she was prettier than any one else. Adrian Frank did not come back on the 23d, and did not

arrive for the festival. So much I note without, as yet, understanding it. His absence from the garden-party, after all his exertions under the orders of Mrs. Ermine, is in need of an explanation. Mr. Caliph could give none, for Mr. Caliph was there. He professed surprise at not finding his brother; said he had not seen him in town, that he had no idea what had become of him. This is probably perfectly false. I am bound to believe that everything he says and does is false; and I have no doubt that they met in New York, and that Adrian told him his reason—whatever it was—for not coming back. I don’t know how to relate what took place between Mr. Caliph and me. We had an extraordinary scene,—a scene that gave my nerves the shaking from which they have not recovered. He is truly a most amazing personage. He is altogether beyond me; I don’t pretend to fathom him. To say that he has no moral sense is nothing. I have seen other people who have had no moral sense; but I have seen no one with that impudence, that cynicism, that remorseless cruelty. We had a tremendous encounter; I thank Heaven that strength was given me! When I found myself face to face with him, and it came over me that, blooming there in his diabolical assurance, it was he—he with his smiles, his bows, his gorgeous *boutonnière*, the wonderful air he has of being anointed and gilded—he that had ruined my poor Eunice, who grew whiter than ever as he approached: when I felt all this, my blood began to tingle, and if I were only a handsome woman I might believe that my eyes shone like those of an avenging angel. He was as fresh as a day in June, enormous, and more than ever like Haroun-al-Raschid. I asked him to take a walk with me; and just for an instant, before accepting, he looked at me, as the French say, in the white of the eyes. But he pretended to be delighted, and we strolled away together to the path that leads down to the river. It was difficult to get away from the people—they were all over the place; but I made him go so far that, at the end of ten minutes, we were virtually alone together. It was delicious to see how he hated it. It was then that I asked him what had become of his step-brother, and that he professed, as I have said, the utmost ignorance of Adrian’s whereabouts. I hated him; it was odious to me to be so close to him; yet I could have endured this for hours in order to make him feel that I despised him. To make him feel it without saying it—there was an inspiration in that idea; but it is very possible that it made me look more like a demon than like the angel I just mentioned. I told him in a

moment, abruptly, that his step-brother would do well to remain away altogether in future; it was a farce, his pretending to make my cousin reconsider her answer.

"Why, then, did she ask him to come down here?" He launched this inquiry with confidence.

"Because she thought it would be pleasant to have a man in the house; and Mr. Frank is such a harmless, discreet, accommodating one."

"Why, then, do you object to his coming back?"

He had made me contradict myself a little, and, of course, he enjoyed that. I was confused—confused by my agitation; and I made the matter worse. I was furious that Eunice had made me promise not to speak, and my anger blinded me, as great anger always does, save in organizations as fine as Mr. Caliph's.

"Because Eunice is in no condition to have company. She is very ill; you can see for yourself."

"Very ill? with a garden-party and a band of music! Why, then, did she invite us all?"

"Because she is a little crazy, I think."

"You are very consistent!" he cried, with a laugh. "I know people who think every one crazy but themselves. I have had occasion to talk business with her several times of late, and I find her mind as clear as a bell."

"I wonder if you will allow me to say that you talk business too much? Let me give you a word of advice: wind up her affairs at once without any more procrastination, and place them in her own hands. She is very nervous; she knows this ought to have been done already. I recommend you strongly to make an end of the matter."

I had no idea I could be so insolent, even in conversation with a swindler. I confess I didn't do it so well as I might, for my voice trembled perceptibly in the midst of my efforts to be calm. He had picked up two or three stones, and was tossing them into the river, making them skim the surface for a long distance. He held one poised a moment, turning his eye askance on me; then he let it fly, and it danced for a hundred yards. I wondered whether in what I had just said I broke my vow to Eunice; and it seemed to me that I didn't, inasmuch as I appeared to assume that no irreparable wrong had been done her.

"Do you wish yourself to get control of her property?" Mr. Caliph inquired, after he had made his stone skim. It was magnificently said, far better than anything I could do; and I think I answered it—though it made my heart beat fast—almost with a smile of applause.

"Aren't you afraid?" I asked in a moment, very gently.

"Afraid of what,—of you?"

"Afraid of justice—of Eunice's friends?"

"That means you, of course. Yes, I am very much afraid. When was a man not, in the presence of a clever woman?"

"I am clever; but I am not clever enough. If I were, you should have no doubt of it."

He folded his arms as he stood there before me, looking at me in that way I have mentioned more than once—like a genial Mephistopheles. "I must repeat what I have already told you, that I wish I had known you ten years ago!"

"How you must hate me to say that!" I exclaimed. "That's some comfort, just a little—your hating me."

"I can't tell you how it makes me feel to see you so indiscreet," he went on, as if he had not heard me. "Ah, my dear lady, don't meddle—a woman like you! Think of the bad taste of it."

"It's bad if you like; but yours is far worse."

"Mine! What do you know about mine? What do you know about me? See how superficial it makes you." He paused a moment, smiling almost compassionately; and then he said, with an abrupt change of tone and manner, as if our conversation wearied him and he wished to sum up and return to the house, "See that she marries Adrian; that's all you have to do!"

"That's a beautiful idea of yours!" You know you don't believe in it yourself!" These words broke from me as he turned away and we ascended the hill together.

"It's the only thing I believe in," he answered, very gravely.

"What a pity for you that your brother doesn't! For he doesn't—I persist in that!" I said this because it seemed to me just then to be the thing I could think of that would exasperate him most. The event proved I was right.

He stopped short in the path—gave me a very bad look. "Do you want him for yourself? Have *you* been making love to him?"

"Ah, Mr. Caliph, for a man who talks about taste!" I answered.

"Taste be d—d!" cried Mr. Caliph, as we went on again.

"That's quite my idea!" He broke into an unexpected laugh, as if I had said something very amusing, and we proceeded in silence to the top of the hill. Then I suddenly said to him, as we emerged upon the lawn, "Aren't you really a little afraid?"

He stopped again, looking toward the house and at the brilliant groups with which

the lawn was covered. We had lost the music, but we began to hear it again. "Afraid? of course I am! I'm immensely afraid. It comes over me in such a scene as this. But I don't see what good it does you to know."

"It makes me rather happy!" That was a fib; for it didn't, somehow, when he looked and talked in that way. He has an absolutely bottomless power of mockery; and really, absurd as it appears, for that instant I had a feeling that it was quite magnanimous of him not to let me know what he thought of my idiotic attempt to frighten him. He feels strong and safe, somehow, somewhere; but I can't discover why he should, inasmuch as he certainly doesn't know Eunice's secret, and it is only her state of mind that gives him impunity. He believes her to be merely credulous; convinced by his specious arguments that everything will be right in a few months; a little nervous, possibly,—to justify my account of her,—but for the present, at least, completely at his mercy. The present, of course, is only what now concerns him; for the future he has invented Adrian Frank. How he clings to this invention was proved by the last words he said to me before we separated on the lawn; they almost indicate that he has a conscience, and this is so extraordinary—

"She must marry Adrian! She must marry Adrian!"

With this he turned away and went to talk to various people whom he knew. He talked to every one; diffused his genial influence all over the place, and contributed greatly to the brilliancy of the occasion. I hadn't, therefore, the comfort of feeling that Mrs. Ermine was more of a waterspout than usual, when she said to me, afterward, that Mr. Caliph was a man to adore, and that the party would have been quite "ordinary" without him. "I mean in comparison, you know." And then she said to me, suddenly, with her blank impertinence: "Why don't you set your cap at him? I should think you would!"

"Is it possible you have not observed my frantic efforts to captivate him?" I answered. "Didn't you notice how I drew him away and made him walk with me by the river. It's too soon to say, but I really think I am gaining ground." For so mild a pleasure, it really pays to mystify Mrs. Ermine. I kept away from Eunice till almost every one had gone. I knew that she would look at me in a certain way, and I didn't wish to meet her eyes. I have a bad conscience; for turn it as I would, I *had* broken my vow. Mr. Caliph went away without my meeting him again; but I saw that half an hour before he left he strolled to a distance with Eunice. I instantly guessed what his business was; he had made

up his mind to present to her directly, and in person, the question of her marrying his step-brother. What a happy inspiration, and what a well-selected occasion! When she came back I saw that she had been crying, though I imagine no one else did. I know the signs of her tears, even when she has checked them as quickly as she must have done to-day. Whatever it was that had passed between them, it diverted her from looking at me, when we were alone together, in that way I was afraid of. Mrs. Ermine is prolific; there is no end to the images that succeed each other in her mind. Late in the evening, after the last carriage had rolled away, we went up the staircase together, and at the top she detained me a moment.

"I have been thinking it over, and I am afraid that there is no chance for you. I have reason to believe that he proposed to-day to Eunice!"

August 19.—Eunice is very ill, as I was sure she would be, after the effort of her horrible festival. She kept going for three days more; then she broke down completely, and for a week now she has been in bed. I have had no time to write, for I have been constantly with her in alternation with Mrs. Ermine. Mrs. Ermine was about to leave us after the garden-party, but when Eunice gave up, she announced that she would stay and take care of her. Eunice tells me that she is a good nurse, except that she talks too much, and of course she gives me a chance to rest. Eunice's condition is strange; she has no fever, but her life seems to have ebbed away. She lies with her eyes shut, perfectly conscious, answering when she is spoken to, but immersed in absolute rest. It is as if she had had some terrible strain or fatigue, and wished to steep herself in oblivion. I am not anxious about her—am much less frightened than Mrs. Ermine or the doctor, to whom she is apparently dying of weakness. I tell the doctor I understand her condition—I have seen her so before. It will last probably a month, and then she will slowly pull herself together. The poor man accepts this theory for want of a better, and evidently depends upon me to see her through, as he says. Mrs. Ermine wishes to send for one of the great men from New York, but I have opposed this idea, and shall continue to oppose it. There is (to my mind) a kind of cruelty in exhibiting the poor girl to more people than are absolutely necessary. The dullest of them would see that she is in love. The seat of her illness is in her mind, in her soul, and no rude hands must touch her there. She herself has protested—she has murmured a prayer that she may be forced to see no one else. "I only want to be

left alone—to be left alone.” So we leave her alone; that is, we simply watch and wait. She will recover—people don’t die of these things; she will live to suffer—to suffer always. I am tired to-night, but Mrs. Ermine is with her, and I shall not be wanted till morning; therefore, before I lie down, I will repair in these remarkable pages a serious omission. I scarcely know why I should have written all this, except that the history of things interests me, and I find that it is even a greater pleasure to write it than to read it. If what I have committed to this little book hitherto has not been profitless, I must make a note of an incident which I think more curious than any of the scenes I have described.

Adrian Frank re-appeared the day after the garden-party—late in the afternoon, while I sat in the veranda and watched the sunset, and Eunice strolled down to the river with Mrs. Ermine. I had heard no sound of wheels, and there was no evidence of a vehicle or of luggage. He had not come through the house, but walked around it from the front, having apparently been told by one of the servants that we were in the grounds. On seeing me he stopped, hesitated a moment, then came up to the steps, shook hands in silence, seated himself near me, and looked at me through the dusk. This was all tolerably mysterious, and it was even more so after he had explained a little. I told him that he was a “day after the fair”; that he had been considerably missed, and even that he was slightly wanting in respect to Eunice. Since he had absented himself from her party, it was not quite delicate to assume that she was ready to receive him at his own time. I don’t know what made me so truculent—as if there were any danger of his having really not considered us, or his lacking a good reason. It was simply, I think, that my talk with Mr. Caliph the evening before had made me so much bad blood, and left me in a savage mood. Mr. Frank answered that he had not staid away by accident—he had staid away on purpose; he had been for several days at Saratoga, and on returning to Cornerville had taken quarters at the inn in the village. He had no intention of presuming further on Eunice’s hospitality, and had walked over from the hotel simply to bid us good-evening and give an account of himself.

“My dear Mr. Frank, your account is not clear!” I said, laughing. “What in the world were you doing at Saratoga?” I must add that his humility had completely disarmed me; I was ashamed of the brutality with which I had received him, and convinced afresh that he was the best fellow in the world.

“What was I doing at Saratoga? I was trying hard to forget you!”

This was Mr. Frank’s rejoinder, and I give it exactly as he uttered it; or, rather, not exactly, inasmuch as I cannot give the tone—the quick, startling tremor of his voice. But those are the words with which he answered my superficially intended question. I saw in a moment that he meant a great deal by them—I became aware that we were suddenly in deep waters; that *he* was, at least, and that he was trying to draw me into the stream. My surprise was immense, complete; I had absolutely not suspected what he went on to say to me. He said many things—but I needn’t write them here. It is not in detail that I see the propriety of narrating this incident; I suppose a woman may be trusted to remember the form of such assurances. Let me simply say that the poor, dear young man has an idea that he wants to marry me. For a moment—just a moment—I thought he was jesting; then I saw, in the twilight, that he was pale with seriousness. He is perfectly sincere. It is strange, but it is real, and, moreover, it is his own affair. For myself, when I have said I was amazed, I have said everything; *en tête-à-tête* with myself, I needn’t blush and protest. I was not in the least annoyed or alarmed; I was filled with kindness and consideration, and I was extremely interested. He talked to me for a quarter of an hour; it seemed a very long time. I asked him to go away; not to wait till Eunice and Mrs. Ermine should come back. Of course I refused him, by the way.

It was the last thing I was expecting at this time of day, and it gave me a great deal to think of. I lay awake that night; I found I was more agitated than I supposed, and all sorts of visions came and went in my head. I shall not marry the young Adrian: I am bound to say that vision was not one of them; but as I thought over what he had said to me, it became more clear, more conceivable. I began now to be a little surprised at my surprise. It appears that I have had the honor to please him from the first. When he began to come to see us, it was not for Eunice; it was for me. He made a general confession on this subject. He was afraid of me; he thought me proud, sarcastic, cold, a hundred horrid things; it didn’t seem to him possible that we should ever be on a footing of familiarity which would enable him to propose to me. He regarded me, in short, as unattainable, out of the question, and made up his mind to admire me forever in silence. (In plain English, I suppose he thought I was too old, and he has simply got used to the difference in our years.) But he wished to be near me, to see me, and hear me (I am really writing more details than seem worth while);

so that when his step-brother recommended him to try and marry Eunice, he jumped at the opportunity to make good his place. This situation reconciled everything. He could oblige his brother, he could pay a high compliment to my cousin, and he could see me every day or two. He was convinced from the first that he was in no danger; he was morally sure that Eunice would never smile upon his suit. He didn't know why, and he doesn't know why yet; it was only an instinct. That suit was avowedly perfunctory; still, the young Adrian has been a great comedian. He assured me that if he had proved to be wrong, and Eunice had suddenly accepted him, he would have gone with her to the altar, and made her an excellent husband; for he would have acquired in this manner the certainty of seeing for the rest of his life a great deal of me! To think of one's possessing, all unexpected, this miraculous influence! When he came down here, after Eunice had refused him, it was simply for the pleasure of living in the house with me; from that moment there was no comedy—everything was clear and comfortable betwixt him and Eunice. I asked him if he meant by this that she knew of the sentiments he entertained for her companion, and he answered that he had never breathed a word on this subject, and flattered himself that he had kept the thing dark. He had no reason to believe that she guessed his motives, and I may add that I have none either; they are altogether too extraordinary! As I have said, it was simply time, and the privilege of seeing more of me, that had dispelled his hesitation. I didn't reason with him; and though once I was fairly enlightened, I gave him the most respectful attention; I didn't appear to consider his request too seriously. But I *did* touch upon the fact that I am five or six years older than he: I suppose I needn't mention that it was not in a spirit of coquetry. His rejoinder was very gallant; but it belongs to the class of details. He is really in love,—heaven forgive him! but I shall not marry him. How strange are the passions of men!

I saw Mr. Frank the next day. I had given him leave to come back at noon. He joined me in the grounds, where, as usual, I had set up my easel. I left it to his discretion to call first at the house and explain both his absence and his presence to Eunice and Mrs. Ermine,—the latter especially,—ignorant, as yet, of his visit the night before, of which I had not spoken to them. He sat down beside me on a garden-chair and watched me as I went on with my work. For half an hour very few words passed between us. I felt that he was happy to sit there, to be near me, to

see me—strange as it seems! And, for myself, there was a certain sweetness in knowing it, though it was the sweetness of charity, not of elation or triumph. He must have seen I was only pretending to paint—if he followed my brush, which I suppose he didn't. My mind was full of a determination I had arrived at, after many waverings, in the hours of the night. It had come to me toward morning as a kind of inspiration. I could never marry him, but was there not some way in which I could utilize his devotion? At the present moment, only forty-eight hours later, it seems strange, unreal, almost grotesque; but for ten minutes I thought I saw the light. As we sat there under the great trees, in the stillness of the noon, I suddenly turned and said to him:

"I thank you for everything you have told me; it gives me very nearly all the pleasure you could wish. I believe in you; I accept every assurance of your devotion. I think that devotion is capable of going very far; and I am going to put it to a tremendous test, one of the greatest, probably, to which a man was ever subjected."

He stared, leaning forward, with his hands on his knees. "Any test—any test—" he murmured.

"Don't give up Eunice, then; make another trial. I wish her to marry you!"

My words may have sounded like an atrocious joke, but they represented for me a great deal of hope and cheer. They brought a deep blush into Adrian Frank's face. He winced a little, as if he had been struck by a hand whose blow he could not return, and the tears suddenly started to his eyes. "Oh, Miss Condit!" he exclaimed.

What I saw before me was bright and definite; his distress seemed to me no obstacle, and I went on with a serenity of which I longed to make him perceive the underlying support. "Of course, what I say seems to you like a deliberate insult; but nothing would induce me to give you pain if it were possible to spare you. But it isn't possible, my dear friend; it isn't possible. There is pain for you in the best thing I can say to you; there are situations in life in which we can only accept our pain. I can never marry you; I shall never marry any one. I am an old maid, and how can an old maid have a husband? I will be your friend, your sister, your brother, your mother, but I will never be your wife. I should like immensely to be your brother; for I don't like the brother you have got, and I think you deserve a better one. I believe, as I tell you, in everything you have said to me—in your affection, your tenderness, your honesty, the full consideration you have given to the whole matter. I

am happier and richer for knowing it all; and I can assure you that it gives something to life which life didn't have before. We shall be good friends, dear friends, always, whatever happens. But I can't be your wife—I want you for some one else. You will say I have changed—that I ought to have spoken in this way three months ago. But I haven't changed—it is circumstances that have changed. I see reasons for your marrying my cousin that I didn't see then. I can't say that she will listen to you now, any more than she did then; I don't speak of her; I speak only of you and of myself. I wish you to make another attempt, and I wish you to make it, this time, with my full confidence and support. Moreover, I attach a condition to it,—a condition I will tell you presently. Do you think me slightly demented, malignantly perverse, atrociously cruel? If you could see the bottom of my heart, you would find something there which, I think, would almost give you joy. To ask you to do something you don't want to do as a substitute for something you desire, and to attach to the hard achievement a condition which will require a good deal of thinking of and will certainly make it harder—you may well believe I have some extraordinary reason for taking such a line as this. For remember, to begin with, that I can never marry you."

"Never—never—never?"

"Never, never, never!"

"And what is your extraordinary reason?"

"Simply that I wish Eunice to have your protection, your kindness, your fortune."

"My fortune?"

"She has lost her own. She will be poor."

"Pray, how has she lost it?" the poor fellow asked, beginning to frown, and more and more bewildered.

"I can't tell you that, and you must never ask. But the fact is certain. The greater part of her property has gone; she has known it for some little time."

"For some little time? Why, she never showed any change."

"You never saw it, that was all. You were thinking of me," and I believe I accompanied this remark with a smile—a smile which was most inconsiderate, for it could only mystify him more. I think at first he scarcely believed me.

"What a singular time to choose to give a large party!" he exclaimed, looking at me with eyes quite unlike his old—or, rather, his young—ones; eyes that, instead of overlooking half the things before them (which was their former habit), tried to see a great deal more in my face, in my words, than was visible on the surface. I don't know what poor Adrian Franksaw—I shall never know all that he saw.

"I agree with you that it was a very singular time," I said. "You don't understand me—you can't—I don't expect you to," I went on. "That is what I mean by devotion, and that is the kind of appeal I make to you: to take me on trust, to act in the dark, to do something simply because I wish it."

He looked at me as if he would fathom the depths of my soul, and my soul had never seemed to myself so deep. "To marry your cousin,—that's all?" he said, with a strange little laugh.

"Oh, no, it's not all: to be very kind to her as well."

"To give her plenty of money, above all?"

"You make me feel very ridiculous; but I should not make this request of you if you had not a fortune."

"She can have my money without marrying me."

"That's absurd. How could she take your money?"

"How, then, can she take me?"

"That's exactly what I wish to see. I told you with my own lips, weeks ago, that she would only marry a man she should love; and I may seem to contradict myself in taking up now a supposition so different. But, as I tell you, everything has changed."

"You think her capable, in other words, of marrying for money?"

"For money? Is your money all there is of you? Is there a better fellow than you—is there a more perfect gentleman?"

He turned away his face at this, leaned it in his hands, and groaned. I pitied him, but I wonder now that I shouldn't have pitied him more; that my pity should not have checked me. But I was too full of my idea.

"It's like a fate," he murmured; "first my brother, and then you. I can't understand."

"Yes, I know your brother wants it—wants it now more than ever. But I don't care what your brother wants; and my idea is entirely independent of his. I have not the least conviction that you will succeed at first any better than you have done already. But it may be only a question of time, if you will wait and watch, and let me help you. You know you asked me to help you before, and then I wouldn't. But I repeat it again and again, at present everything is changed. Let me wait with you, let me watch with you. If you succeed, you will be very dear to me; if you fail, you will be still more so. You see, it's an act of devotion, if there ever was one. I am quite aware that I ask of you something unprecedented and extraordinary. Oh, it may easily be too much for you. I can only put it before you—that's all; and, as I say, I can help you. You will both be

my children—I shall be near you always. If you can't marry me, perhaps you will make up your mind that this is the next best thing. You know you said that last night, yourself."

He had begun to listen to me a little, as if he were being persuaded. "Of course, I should let her know that I love you."

"She is capable of saying that you can't love me more than she does."

"I don't believe she is capable of saying any such folly. But we shall see."

"Yes; but not to-day, not to-morrow. Not at all for the present. You must wait a great many months."

"I will wait as long as you please."

"And you mustn't say a word to me of the kind you said last night."

"Is that your condition?"

"Oh, no; my condition is a very different matter, and very difficult. It will probably spoil everything."

"Please, then, let me hear it at once."

"It is very hard for me to mention it; you must give me time." I turned back to my little easel and began to daub again; but I think my hand trembled, for my heart was beating fast. There was a silence of many moments; I couldn't make up my mind to speak.

"How in the world has she lost her money?" Mr. Frank asked, abruptly, as if the question had just come into his mind. "Hasn't my brother the charge of her affairs?"

"Mr. Caliph is her trustee. I can't tell you how the losses have occurred."

He got up quickly. "Do you mean that they have occurred through *him*?"

I looked up at him, and there was something in his face which made me leave my work and rise also. "I will tell you my condition now," I said. "It is that you should ask no questions—not one!" This was not what I had had in my mind; but I had not courage for more, and this had to serve.

He had turned very pale, and I laid my hand on his arm, while he looked at me as if he wished to wrest my secret out of my eyes. My secret, I call it, by courtesy; God knows I had come terribly near telling it. God will forgive me, but Eunice probably will not. Had I broken my vow, or had I kept it? I asked myself this, and the answer, so far as I read it in Mr. Frank's eyes, was not reassuring. I dreaded his next question; but when it came it was not what I had expected. Something violent took place in his own mind—something I couldn't follow.

"If I do what you ask me, what will be my reward?"

"You will make me very happy."

"And what shall I make your cousin?—God help us!"

VOL. XXVII.—27.

"Less wretched than she is to-day."

"Is she 'wretched'?" he asked, frowning as he did before—a most distressing change in his fair countenance.

"Ah, when I think that I have to tell you that,—that you have never noticed it,—I despair!" I exclaimed, with a laugh.

I had laid my hand on his arm, and he placed his right hand upon it, holding it there. He kept it a moment in his grasp, and then he said, "Don't despair!"

"Promise me to wait," I answered. "Everything is in your waiting."

"I promise you." After which he asked me to kiss him, and I did so on the lips. It was as if he were starting on a journey—leaving me for a long time.

"Will you come when I send for you?" I asked.

"I adore you!" he said; and he turned quickly away, to leave the place without going near the house. I watched him, and in a moment he was gone. He has not re-appeared; and when I found, at lunch, that neither Eunice nor Mrs. Ermine alluded to his visit, I determined to keep the matter to myself. I said nothing about it, and up to the moment Eunice was taken ill—the next evening—he was not mentioned between us. I believe Mrs. Ermine more than once gave herself up to wonder as to his whereabouts, and declared that he had not the perfect manners of his step-brother, who was a religious observer of the *convenances*; but I think I managed to listen without confusion. Nevertheless, I had a bad conscience, and I have it still. It throbs a good deal as I sit there with Eunice in her darkened room. I *have* given her away; I *have* broken my vow. But what I wrote above is not true; she *will* forgive me! I sat at my easel for an hour after Mr. Frank left me, and then suddenly I found that I had cured myself of my folly by giving it out. It was the result of a sudden passion of desire to do something for Eunice. Passion is blind, and when I opened my eyes I saw ten thousand difficulties; that is, I saw one, which contained all the rest. That evening I wrote to Mr. Frank, to his New York address, to tell him that I had had a fit of madness, and that it had passed away; but that I was sorry to say it was not any more possible for me to marry him. I have had no answer to this letter; but what answer can he make to that last declaration? He will continue to adore me. How strange are the passions of men!

New York, November 20.—I have been silent for three months, for good reasons. Eunice was ill for many weeks, but there was never a moment when I was really alarmed about her; I knew she would recover. In

the last days of October she was strong enough to be brought up to town, where she had business to transact, and now she is almost herself again. I say almost, advisedly; for she will never be herself,—her old, sweet, trustful self, as far as I am concerned. She has simply not forgiven me! Strange things have happened—things that I didn't dare to consider too closely, lest I should not forgive myself. Eunice is in complete possession of her property! Mr. Caliph has made over to her everything—everything that had passed away; everything of which, three months ago, he could give no account whatever. He was with her in the country for a long day before we came up to town (during which I took care not to meet her), and after our return he was in and out of this house repeatedly. I once asked Eunice what he had to say to her, and she answered that he was “explaining.” A day or two later, she told me that he had given a complete account of her affairs; everything was in order; she had been wrong in what she told me before. Beyond this little statement, however, she did no further penance for the impression she had given of Mr. Caliph's earlier conduct. She doesn't yet know what to think; she only feels that if she has recovered her property there has been some interference; and she traces, or at least imputes, such interference to me. If I have interfered, I have broken my vow; and for this, as I say, the gentle creature can't forgive me. If the passions of men are strange, the passions of women are stranger still! It was sweeter for her to suffer at Mr. Caliph's hands than to receive her simple dues from them. She looks at me askance, and her coldness shows through a conscientious effort not to let me see the change in her feeling. Then she is puzzled and mystified; she can't tell what has happened, or how and why it has happened. She has waked up from her illness into a different world—a world in which Mr. Caliph's accounts were correct after all; in which, with the washing away of his stains, the color has been quite washed out of his rich physiognomy. She vaguely feels that a sacrifice, a great effort of some kind, has been made for her, whereas her plan of life was to make the sacrifices and efforts herself. Yet she asks me no questions; the property is her right, after all, and I think there are certain things she is afraid to know. But I am more afraid than she, for it comes over me that a great sacrifice has indeed been made. I have not seen Adrian Frank since he parted from me under the trees three months ago. He has gone to Europe, and the day before he left I got a note from him. It contained only these words: “When you send for me I will

come. I am waiting, as you told me.” It is my belief that up to the moment I spoke of Eunice's loss of money, and requested him to ask no questions, he had not definitely suspected his noble kinsman, but that my words kindled a train that lay all ready. He went away then to his shame, to the intolerable weight of it, and to heaven knows what sickening explanations with his step-brother! That gentleman has a still more brilliant bloom; he looks to my mind exactly as people look who have accepted a sacrifice; and he hasn't had another word to say about Eunice's marrying Mr. Adrian Frank. Mrs. Ermine sticks to her idea that Mr. Caliph and Eunice will make a match; but my belief is that Eunice is cured. Oh, yes, she is cured! But I have done more than I meant to do, and I have not done it as I meant to do it; and I am very weary, and I shall write no more.

November 27.—Oh, yes, Eunice is cured! And that is what she has not forgiven me. Mr. Caliph told her yesterday that Mr. Frank meant to spend the winter in Rome.

December 3.—I have decided to return to Europe, and have written about my apartment in Rome. I shall leave New York, if possible, on the 10th. Eunice tells me she can easily believe I shall be happier there.

December 7.—I *must* note something I had the satisfaction to-day to say to Mr. Caliph. He has not been here for three weeks, but this afternoon he came to call. He is no longer the trustee; he is only the visitor. I was alone in the library, into which he was ushered; and it was ten minutes before Eunice appeared. We had some talk, though my disgust for him is now unspeakable. At first, it was of a very perfunctory kind; but suddenly he said, with more than his old impudence, “That was a most extraordinary interview of ours, at Cornerville!” I was surprised at his saying only this, for I expected him to take his revenge on me by some means or other for having put his brother on the scent of his misdeeds. I can only account for his silence on that subject by the supposition that Mr. Frank has been able to extract from him some pledge that I shall not be molested. He was, however, such an image of unrighteous success that the sight of him filled me with gall, and I tried to think of something which would make him smart.

“I don't know what you have done, nor how you have done it,” I said; “but you took a very roundabout way to arrive at certain ends. There was a time when you might have married Eunice.”

It was, of course, nothing new that we were frank with each other, and he only repeated, smiling, “Married Eunice?”

"She was very much in love with you last spring."

"Very much in love with me?"

"Oh, it's over now. Can't you imagine that? She's cured."

He broke into a laugh, but I felt I had startled him.

"You are the most delightful woman!" he cried.

"Think how much simpler it would have been—I mean originally, when things were right, if they ever were right. Don't you see my point? But now it's too late. She has seen you when you were not on show. I assure you she is cured!"

At this moment Eunice came in, and just afterward I left the room. I am sure it was a revelation, and that I have given him a *mauvais quart d'heure*.

Rome, February 23.—When I came back to this dear place, Adrian Frank was not here, and I learned that he had gone to Sicily. A week ago I wrote to him: "You said you would come if I should send for you. I should be glad if you would come now." Last evening he appeared, and I told him that I could no longer endure my suspense in regard to a certain subject. Would he kindly inform me what he had done in New York after he left me under the trees at Cornerville? Of what sacrifice had he been guilty; to what high generosity—terrible to me to think of—had he committed himself? He would tell me very little; but he is almost a poor man. He has just enough income to live in Italy.

May 9.—Mrs. Ermine has taken it into her head to write to me. I have heard from her three times; and in her last letter, received

yesterday, she returns to her old refrain that Eunice and Mr. Caliph will soon be united. I don't know what may be going on; but can it be possible that I put it into his head? Truly, I have a felicitous touch!

May 15.—I told Adrian yesterday that I would marry him if ever Eunice should marry Mr. Caliph. It was the first time I had mentioned his step-brother's name to him since the explanation I had attempted to have with him after he came back to Rome; and he evidently didn't like it at all.

In the Tyrol, August.—I sent Mrs. Ermine a little water-color in return for her last letter, for I can't write to her, and that is easier. She now writes me again, in order to get another water-color. She speaks, of course, of Eunice and Mr. Caliph, and for the first time there appears a certain reality in what she says. She complains that Eunice is very slow in coming to the point, and relates that poor Mr. Caliph, who has taken her into his confidence, seems at times almost to despair. Nothing would suit him better, of course, than to appropriate two fortunes: two are so much better than one. But however much he may have explained, he can hardly have explained everything. Adrian Frank is in Scotland; in writing to him, three days ago, I had occasion to repeat that I will marry him on the day on which a certain other marriage takes place. In that way, I am safe. I shall send another water-color to Mrs. Ermine. Water-colors or no, Eunice doesn't write to me. It is clear that she hasn't forgiven me! She regards me as perjured; and, of course, I am. Perhaps she will marry him, after all.

Henry James.

DAWN.

AGAINST the radiance of the coming dawn
 Rose-shadowed on the threshold stands a youth,
 Stiller than silence: when he came, in truth,
 Silence grew audible and sound was born,
 And earth was flushed with flowers. As I gaze,
 Some half-familiar grace in floating hair,
 And eager, curving foot and downcast air,
 Betray the charm of the averted face.
 Why dost thou tarry here, O stranger-guest?
 Whence comest thou? I said, and lo! he is gone;
 And now I count alone the weary hours,
 Hoping for naught until the rosy east
 Once more shall throb with promise of the dawn—
 And then? Who knows the perfume of to-morrow's flowers?

A. W. W.

THE BREAD-WINNERS.*

XV.

THE WHIP OF THE SCYTHIANS.

FARNHAM and Temple walked hastily back to where they had left Kendall with the rest of the company. They found him standing like a statue just where he had been placed by Farnham. The men were ranged in the shadow of the shrubbery and the ivy-clad angle of the house. The moon shone full on the open stretch of lawn, and outside the gates a black mass on the sidewalk and the street showed that the mob had not left the place. But it seemed sluggish and silent.

"Have they done anything new?" asked Farnham.

"Nothin', but fire a shot or two—went agin the wall overhead; and once they heaved a lot of rocks, but it was too fur—didn't git more'n half way. That's all."

"We don't want to stand here looking at each other all night," said Farnham.

"Let's go out and tell them it's bed-time," suggested Temple.

"Agreed!" said Farnham. He turned to his men, and in a voice at first so low that it could not have been heard ten feet away, yet so clear that every syllable was caught by his soldiers, he gave the words of command.

"Company, attention! Right, forward. Fours right. Double time. March!"

The last words rang out clear and loud, and startled the sullen crowd in the street. There was a hurried, irresolute movement among them, which increased as the compact little corps dashed out of the shadow into the clear moonlight and rushed with the rapid but measured pace of veterans across the lawn. A few missiles were thrown, without effect. One or two shots were heard, followed by a yell in the street—which showed that some rioter in his excitement had wounded one of his own comrades. Farnham and his little band took only a moment to reach the gate, and the crowd recoiled as they burst through into the street. At the first onslaught the rioters ran in both directions, leaving the street clear immediately in front of the gates.

The instant his company reached the middle of the avenue, Arthur, seeing that the

greater number of the divided mob had gone to the left, shouted:

"Fours left. March—guide right."

The little phalanx wheeled instantly and made rapid play with their clubs, but only for a moment. The crowd began to feel the mysterious power which discipline backed by law always exerts, and they ran at full speed up the street to the corner and there dispersed. The formation of the veterans was not even broken. They turned at Farnham's order, faced to the rear, and advanced in double time upon the smaller crowd which still lingered a little way beyond the gate.

In this last group there was but one man who stood his ground and struck out for himself. It was a tall young fellow with fair hair and beard, armed with a carpenter's hammer, with which he maintained so formidable an attitude that, although two or three policemen were opposed to him, they were wary about closing in upon him. Farnham, seeing that this was all there was left of the fight, ordered the men to fall back, and, approaching the recalcitrant, said sharply:

"Drop that hammer, and surrender! We are officers of the law, and if you resist any longer you'll be hurt."

"I don't mind that. I was waiting for *you*," the man said, and made a quick and savage rush and blow at Farnham. In all his campaigns, he had never before had so much use for his careful broadsword training as now. With his policeman's club against the workman's hammer, he defended himself with such address that in a few seconds, before his men could interfere, his adversary was disarmed and stretched on the sidewalk by a blow over the head. He struggled to rise, but was seized by two men and held fast.

"Don't hit him," said Farnham. "I think I have seen this man somewhere."

"Why," said Kendall, "that's Sam Sleeney, a carpenter in Dean street. He orter be in better business."

"Yes, I remember," said Farnham; "he is a Reformer. Put him with the others."

As they were tying his hands, Sam turned to Farnham and said, in a manner which was made dignified by its slow, energetic malice, "You've beat me to-night, but I will get even with you yet—as sure as there's a God."

"That's reasonably sure," said Farnham;

"but in the meanwhile, we'll put you where you can cool off a little."

The street was now cleared; the last fugitives were out of sight. Farnham returned to his garden, and then divided his men into squads for patrolling the neighborhood. They waited for half an hour, and, finding all was still quiet, then made arrangements for passing the night. Farnham made Temple go into the house with him, and asked Budsey to bring some sherry. "It is not so good as your Santa Rita," he said; "but the exercise in the night air will give it a relish."

When the wine came, the men filled and drank, in sober American fashion, without words; but in the heart of each there was the thought of eternal friendship, founded upon brave and loyal service.

"Budsey," said Farnham, "give all the men a glass of this wine."

"Not this, sir?" said Budsey, aghast.

"I said this," replied Farnham. "Perhaps they won't enjoy it, but I shall enjoy giving it to them."

Farnham and Temple were eating some bread and cheese and talking over the evening, when Budsey came back with something which approached a smile upon his grave countenance.

"Did they like it?" asked Farnham.

"Half of 'em said they was temperance and wouldn't 'ave any. Some of the rest said—you will excuse me, sir—as it was d—— poor cider," and Budsey went out of the room with a suspicious convulsion of the back.

"I'll go on that," said Mr. Temple. "Good-night. I think we will have good news in the morning. There will be an attack made on those men at Riverley to-morrow which will melt them like an iceberg in Tartarus." Mr. Temple was not classical, and, of course, did not say Tartarus.

Farnham was left alone. The reaction from the excitement of the last few hours was settling upon him. The glow of the fight and his success in it were dying away. Midnight was near, and a deep silence was falling upon the city. There was no sound of bells, of steam-whistles, or of rushing trains. The breeze could be heard in the quiet, stirring the young, soft leaves. Farnham felt sore, beaten, discomfited. He smiled a little bitterly to himself when he considered that the cause of his feeling of discouragement was that Alice Belding had spoken to him with coldness and shyness when she opened her door. He could not help saying to himself, "I deserved a kinder greeting than she gave me. She evidently wished me to understand that I am not to be permitted any further intimacy. I have forfeited that by presuming to

love her. But how lovely she is! When she took her mother in her arms, I thought of all the Greek heroines I ever read about. Still, 'if she be not fair for me'—if I am not to be either lover or friend—this is no place for me."

The clock on the mantel struck midnight. "A strange night," he mused. "There is one sweet and one bitter thing about it. I have done her a service, and she did not care."

He went to the door to speak to Kendall. "I think our work is over for to-night. Have our prisoners taken down to the Refrigerator and turned over to the ordinary police. I will make charges to-morrow. Then divide the men into watches and make yourself as comfortable as you can. If anything happens, call me. If nothing happens, good-night."

He returned to his library, turned down the gas, threw himself on the sofa, and was soon asleep; even before Alice, who sat, unhappy, as youth is unhappy, by an open window, her eyes full of tears, her heart full of remorse. "It is too wretched to think of," she bemoaned herself. "He is the only man in the world, and I have driven him away. It never can be made right again; I am punished justly. If I thought he would take me, I believe I could go this minute and throw myself at his feet. But he would smile, and raise me up, and make some pretty speech, very gentle, and very dreadful, and bring me back to mamma, and then I should die."

But at nineteen well-nourished maidens do not pass the night in mourning, however heavy their hearts may be, and Alice slept at last, and perhaps was happier in her innocent dreams.

The night passed without further incident, and the next day, though it may have shown favorable signs to practiced eyes, seemed very much, to the public, like the day which had preceded it. There were fewer shops closed in the back streets; there were not so many parties of wandering apostles of plunder going about to warn laborers away from their work. But in the principal avenues and in the public squares there were the same dense crowds of idlers, some listless and some excited, ready to believe the wildest rumors and to applaud the craziest oratory. Speakers were not lacking; besides the agitators of the town, several had come in from neighboring places, and they were preaching, with fervor and perspiration, from street corners and from barrel-heads in the beer-houses, the dignity of manhood and the overthrow of tyrants.

Bott, who had quite distinguished himself during the last few days, was not to be seen. He had passed the night in the station-house,

and, on brief examination before a police-justice at an early hour of the morning, on complaint of Farnham and Temple, had been, together with the man captured in Mrs. Belding's drawing-room, bound over to stand his trial for house-breaking at the next term of court. He displayed the most abject terror before his trial, and would have made a full confession of the whole affair had Offitt not had the address to convey to him the assurance that, if he stood firm, the Brotherhood of Bread-winners would attend to his case and be responsible for his safety. Relying upon this, he plucked up his spirits and bore himself with characteristic impudence in the presence of the police-justice, insisting upon being called Professor Bott, giving his profession as inspirational orator, his religion the divinity of humanity. When bound over for trial, he rose and gained a round of applause from the idlers in the court-room by shouting, "I appeal from this outrage to the power of the people and the judgment of history."

This was his last recorded oration; for we may as well say at once that, a month later, he stood his trial without help from any Brotherhood, and passed away from public life, though not entirely from public employment, as he is now usefully and unobtrusively engaged in making shoes in the State penitentiary—and is said "to take serious views of life."

The cases of Sleeney and the men who were taken in the street by Farnham's policemen were also disposed of summarily through his intervention. He could not help liking the fair-bearded carpenter, although he had been caught in such bad company, and so charged him merely with riotous conduct in the public streets, for which the penalty was a light fine and a few days' detention. Sleeney seemed conscious of his clemency, but gave him no look or expression of gratitude. He was too bitter at heart to feel gratitude, and too awkward to feign it.

About noon, a piece of news arrived which produced a distinct impression of discouragement among the strikers. It was announced in the public square that the railway blockade was broken in Clevalo, a city to the east of Buffland about a hundred miles. The hands had accepted the terms of the employers and had gone to work again. An orator tried to break the force of this announcement by depreciating the pluck of the Clevalo men. "Why, gentlemen!" he screamed, "a ten-year-old boy in this town has got twice the sand of a Clevalo man. They just *beg* the bosses to kick 'em. When they are fired out of a shop door, they sneak down the chimbley

and whine to be took on again. We aint made of that kind of stuff."

But this haughty style of eloquence did not avail to inspirit the crowd, especially as the orator was just then interrupted to allow another dispatch to be read, which said that the citizens of a town to the south had risen in mass and taken the station there from the hands of the strikers. This news produced a feeling of isolation and discouragement which grew to positive panic, an hour later, on the report that a brigade of regular troops was on its way to Buffland to restore order. The report was of course unfounded, as a brigade of regular troops could not be got together in this country in much less time than it would take to build a city; but even the name of the phantom army had its effect, and the crowds began to disperse from that time. The final blow was struck, however, later in the day.

Farnham learned it from Mr. Temple, at whose counting-room he had called, as usual, for news. Mr. Temple greeted him with a volley of exulting oaths.

"It's all up. You know what I told you last night about the attack that was preparing on Riverley. I went out there myself, this forenoon. I knew some of the strikers, and I thought I would see if the — — — would let me send my horse Blue Ruin through to Rochester to-morrow. He is entered for the races there, you know, and I didn't want, by — — —, to miss my engagements, understand? Well, as I drove out there, after I got about half way, it began to occur to me that I never saw so many women since the Lord made me. The road was full of them in carts, buggies, horse-back, and afoot. I thought a committee of 'em was going; but I suppose they couldn't trust a committee, and so they all went. There were so many of 'em I couldn't drive fast, and so I got there about the same time the head of the column began to arrive. You never saw anything like it in your life. The strikers had been living out there in a good deal of style—with sentries and republican government and all that. By the great hokey-pokey! they couldn't keep it up a minute when their wives came. They knew 'em too well. They just bulged in without rhyme or rule. Every woman went for her husband and told him to pack up and go home. Some of 'em—the artful kind—begged and wheedled and cried; said they were so tired—wanted their sweethearts again. But the bigger part talked hard sense,—told 'em their lazy picnic had lasted long enough, that there was no meat in the house, and that they had got to come home and go to work. The

siege didn't last half an hour. The men brazened it out awhile; some were rough; told their wives to dry up, and one big fellow slapped his wife for crying. By jingo! it wasn't half a flash before another fellow slapped *him*, and there they had it, rolling over and over on the grass, till the others pulled them apart by the legs. It was a gone case from the start. They held a meeting off-hand; the women stayed by to watch proceedings, and, not to make a long story about it, when I started back a delegation of the strikers came with me to see the president of the roads, and trains will run through to-night as usual. I am devilish glad of it, for my part. There is nothing in Rochester of any force but Rosin-the-Bow, and my horse can show him the way around the track as if he was getting a dollar an hour as a guide."

"That *is* good news certainly. Is it generally known in the city?"

"I think not. It was too late for the afternoon papers. I told Jimmy Nelson, and he tore down to the depot to save what is left of his fruit. He swore so about it that I was quite shocked."

"What about the mill hands?" asked Farnham.

"The whole thing will now collapse at once. We shall receive the proposition of the men who left us to-morrow, and reëngage on our own terms, next day, as many as we want. We shan't be hard on them. But one or two gifted orators will have to take the road. They are fit for nothing but Congress, and they can't all go from this district. If I were you, Arthur, by the way, I wouldn't muster out that army of yours till to-morrow. But I don't think there will be any more calls in your neighborhood. You are too inhospitable to visitors."

The sun was almost setting as Farnham walked through the public square on his way home. He could hardly believe so sudden a change could have fallen upon the busy scene of a few hours before. The square was almost deserted. Its holiday appearance was gone. A few men occupied the benches. One or two groups stood beneath the trees and conversed in under-tones. The orators had sought their hiding-places, unnecessarily—too fearful of the vengeance which never, in this happy country, attends the exercise of unbridled "slack jaw." As Arthur walked over the asphalt pavement there was nothing to remind him of the great crowds of the last few days but the shells of the pea-nuts crunching under his feet. It seems as if the American workman can never properly invoke the spirit of liberty without a pocketful of this democratic nut.

As he drew near his house, Farnham caught a glimpse of light drapery upon Mrs. Belding's piazza, and went over to relieve her from anxiety by telling her the news of the day. When he had got half way across the lawn, he saw Alice rise from beside her mother as if to go. Mrs. Belding signed for her to resume her seat. Farnham felt a slight sensation of anger. "It is unworthy of her," he thought, "to avoid me in that manner. I must let her see she is in no danger from me."

He gave his hand cordially to Mrs. Belding and bowed to Alice without a word. He then briefly recounted the news to the elder lady, and assured her that there was no probability of any farther disturbance of the peace.

"But we shall have our policemen here all the same to-night, so that you may sleep with a double sense of security."

"I am sure you are very good," she said. "I don't know what we should have done without you last night, *and* Mr. Temple. When it comes to ear-rings, there's no telling what they wouldn't have done."

"Two of your guests are in jail, with good prospects of their remaining there. The others, I learn, were thieves from out of town; I doubt if we shall capture them."

"For goodness' sake, let them run. I never want to see them again. That ugly creature who went up with Alice for the money—you caught him? I am so glad. The impudence of the creature! going upstairs with my daughter, as if she was not to be trusted. Well," she added candidly, "she wasn't that time, but it was none of *his* business."

Here Alice and Farnham both laughed out, and the sound of the other's voice was very pleasant to each of them, though they did not look toward each other.

"I am beginning to think that the world is growing too wicked for single women," Mrs. Belding continued, philosophically. "Men can take care of themselves in so many ways. They can use a club as you do —"

"Daily and habitually," assented Arthur.

"Or they can make a speech about Ireland and the old flag, as Mr. Belding used to; or they can swear like Mr. Temple. By the way, Alice, you were not here when Mr. Temple swore so at those thieves. I was scandalized, but I had to admit it was very appropriate."

"I was also away from the room," said Farnham; "but I can readily believe the comminatory clauses must have been very cogent."

"Oh, yes! and such a nice woman *she* is."

"Yes, Mrs. Temple is charming," said Farnham, rising.

"Arthur, do not go! Stay to dinner. It

will be ready in one moment. It will strengthen our nerves to have a man dine with us, especially a liberating hero like you. Why, you seemed to me last night like Perseus in the picture, coming to rescue What's-her-name from the rock."

Farnham glanced at Alice. Her eyes were fixed upon the ground; her fingers were tightly clasped. She was wishing with all her energy that he would stay, waiting to catch his first word of assent, but unable to utter a syllable.

"Alice," said Mrs. Belding rather sharply, "I think Arthur does not regard my invitation as quite sufficient. Will you give it your approval?"

Alice raised her face at these words and looked up at Farnham. It was a beautiful face at all times, and now it was rosy with confusion, and the eyes were timid but kind. She said with lips that trembled a little: "I should be very glad to have Captain Farnham stay to dinner."

She had waited too long, and the words were a little too formal, and Arthur excused himself on the plea of having to look out for his cohort, and went home to a lonely dinner.

XVI.

OFFITT DIGS A PIT.

A WEEK had passed by; the great strike was already almost forgotten. A few poor workmen had lost their places. A few agitators had been dismissed for excellent reasons, having no relation with the strike. The mayor had recovered from his panic, and was beginning to work for a renomination, on the strength of his masterly dealing with the labor difficulties, in which, as he handsomely said in a circular composed by himself and signed by his friends, he "nobly accomplished the duty allotted him of preserving the rights of property while respecting the rights of the people, of keeping the peace according to his oath, and keeping faith with the masses, to which he belonged, in their struggle against monopoly."

The rich and prosperous people, as their manner is, congratulated themselves on their escape, and gave no thought to the questions which had come so near to an issue of fire and blood. In this city of two hundred thousand people, two or three dozen politicians continued as before to govern it, to assess and to spend its taxes, to use it as their property and their chattel. The rich and intelligent kept on making money, building fine houses, and bringing up children to hate politics as

they did, and in fine to fatten themselves as sheep which should be mutton whenever the butcher was ready. There was hardly a millionaire on Algonquin avenue who knew where the ward meetings of his party were held. There was not an Irish laborer in the city but knew his way to his ward club as well as to mass.

Among those who had taken part in the late exciting events and had now reverted to private life was Sam Sleeney. His short sentence had expired; he had paid his fine and come back to Matchin's. But he was not the quiet, contented workman he had been. He was sour, sullen, and discontented. He nourished a dull grudge against the world. He had tried to renew friendly relations with Maud, but she had repulsed him with positive scorn. Her mind was full of her new prospects, and she did not care to waste time with him. The scene in the rose-house rankled in his heart; he could not but think that her mind had been poisoned by Farnham, and his hate gained intensity every hour.

In this frame of mind he fell easily into the control of Offitt. That worthy had not come under the notice of the law for the part he took in the attack on the Belding house; he had not been recognized by Farnham's men, nor denounced by his associates; and so, after a day or two of prudential hiding, he came to the surface again. He met Sam at the very door of the House of Correction, sympathized with him, flattered him, gained his full confidence at last, and held him ready for some purpose which was vague even in his own brain. He was determined to gain possession of Maud, and he felt it must be through some crime, the manner of which was not quite clear to him. If he could use Sam to accomplish his purpose and save his own skin, that would be best. His mind ran constantly upon theft, forgery, burglary, and murder; but he could frame no scheme which did not involve risks that turned him sick. If he could hit upon something where he might furnish the brains, and Sam the physical force and the risk! He dwelt upon this day and night. He urged Sam to talk of his own troubles; of the Matchins; at last, of Maud and his love, and it was not long before the tortured fellow had told him what he saw in the rose-house. Strangely enough, the thought of his fiancée leaning on the shoulder of another man did not in the least diminish the ardor of Offitt. His passion was entirely free from respect or good-will. He used the story to whet the edge of Sam's hatred against Farnham.

"Why, Sam, my boy," he would say, "your honor is at stake."

"I would as soon kill him as eat," Sam answered. "But what good would that do me? She cares no more for me than she does for you."

Offitt was sitting alone in his room one afternoon; his eyes were staring blankly at the opposite wall; his clinched hands were cold as ice. He had been sitting in that way motionless for an hour, a prey to a terrible excitement.

It had come about in this way. He had met in one of the shops he frequented a machinist who rented one of Farnham's houses. Offitt had asked him at noon-time to come out and drink a glass of beer with him. The man complied, and was especially careful to bring his waistcoat with him, saying with a laugh, "I lose my shelter if I lose that."

"What do you mean?" asked Offitt.

"I've got a quarter's rent in there for Cap Farnham."

"Why are you carrying it around all day?"

"Well, you know, Farnham is a good sort of fellow, and to keep us from losing time he lets us come to his house in the evening, after working hours, on quarter-day, instead of going to his office in the day-time. You see, I trot up there after supper and get rid of this wad."

Offitt's eyes twinkled like those of an adder.

"How many of you do this?"

"Oh, a good many,—most everybody in our ward and some in the Nineteenth."

"A good bit of money?" said Offitt carelessly, though his mouth worked nervously.

"You bet your boots! If I had all the cash he takes in to-night, I'd buy an island and shoot the machine business. Well, I must be gettin' back. So long."

Offitt had walked directly home after this conversation, looking neither to the right nor the left, like a man asleep. He had gone to his room, locked his door behind him, and sat down upon the edge of his bed and given himself up to an eager dream of crime. His heart beat, now fast, now slow; a cold sweat enveloped him; he felt from time to time half suffocated.

Suddenly he heard a loud knocking at his door—not as if made by the hand, but as if some one were hammering. He started and gasped with a choking rattle in his throat. His eyes seemed straining from their sockets. He opened his lips, but no sound came forth.

The sharp rapping was repeated, once and again. He made no answer. Then a loud voice said:

"Hello, Andy, you asleep?"

He threw himself back on his pillow and said yawningly, "Yes. That you, Sam? Why don't you come in?"

"'Cause the door's locked."

He rose and let Sleeney in; then threw himself back on the bed, stretching and gaping.

"What did you make that infernal racket with?"

"My new hammer," said Sam. "I just bought it to-day. Lost my old one the night we give Farnham the shiveree."

"Lemme see it." Offitt took it in his hand and balanced and tested it. "Pretty good hammer. Handle's a leetle thick, but—pretty good hammer."

"Ought to be," said Sam. "Paid enough for it."

"Where d'you get it?"

"Ware & Harden's."

"Sam," said Offitt,—he was still holding the hammer and giving himself light taps on the head with it,— "Sam."

"Well, you said that before."

Offitt opened his mouth twice to speak and shut it again.

"What are you doin'?" asked Sleeney.

"Trying to catch flies?"

"Sam," said Offitt at last, slowly and with effort, "if I was you, the first thing I did with that hammer, I'd crack Art Farnham's cocoa-nut."

"Well, Andy, go and crack it yourself if you are so keen to have it done. You're mixing yourself rather too much in my affairs, anyhow," said Sam, who was nettled by these too frequent suggestions of Offitt that his honor required repair.

"Sam Sleeney," said Offitt, in an impressive voice, "I'm one of the kind that stands by my friends. If you mean what you have been saying to me, I'll go up with you this very night, and we will together take it out of that aristocrat. Now, that's business."

Sleeney looked at his friend in surprise and with some distrust. The offer was so generous and reckless, that he could not help asking himself what was its motive. He looked so long and so stupidly at Offitt, that the latter at last divined his feeling. He thought that, without telling Sleeney the whole scheme, he would test him one step farther.

"I don't doubt," he said, carelessly, "but what we could pay ourselves well for the job, —spoil the 'Gyptians, you know,—forage on the enemy. Plenty of portables in them houses, eh!"

"I never said"—Sam spoke slowly and deliberately—"I wanted to 'sassinate him, or rob him, or burgle him. If I could catch him and lick him, in a fair fight, I'd do it; and I wouldn't care how hard I hit him, or what with."

"All right," said Offitt, curtly. "You met him once in a fair fight, and he licked you."

And you tried him another way,—courtin' the same girl,—and he beat you there. But it's all right. I've got nothin' against him, if you haint. Lemme mark your name on this hammer," and, turning the conversation so quickly that Sleeny had no opportunity to resent the last taunt, he took his knife and began dexterously and swiftly to cut Sam's initials in the handle of his hammer. Before, however, he had half completed his self-imposed task, he exclaimed, "This is dry work. Let's go out and get some beer. I'll finish your hammer and bring it around after supper."

"There's one S on it," said Sam; "that's enough."

"One S enough! It might mean Smith, or Schneider, or Sullivan. No, sir. I'll put two on in the highest style of art, and then everybody will know and respect Sam Sleeny's tool."

They passed out of the room together, and drank their beer at a neighboring garden. They were both rather silent and preoccupied. As they parted, Offitt said, "I've got a scheme on hand for raising the wind, I want to talk to you about. Be at my room to-night between nine and ten, and wait till I come, if I am out. Don't fail." Sam stared a little, but promised, asking no questions.

When Offitt came back, he locked the door again behind him. He bustled about the room as if preparing to move. He had little to pack; a few shabby clothes were thrown into a small trunk, a pile of letters and papers were hastily torn up and pitched into the untidy grate. All this while he muttered to himself as if to keep himself in company. He said: "I had to take the other shoot—he hadn't the sand to help—I couldn't tell him any more. * * * I wonder if she will go with me when I come to-night—ready? I shall feel I deserve her anyhow. She don't treat me as she did him, according to Sam's story. She makes me keep my distance. She hasn't even shook hands with me since we was engaged. I'll pay her for that after awhile." He walked up and down his room with his head thrown back and his nostrils distended. "I shall risk my neck, I know; but it won't be the first time, and I never will have such a reason again. She beats anything I ever saw. I've got to have the money—to suit such a woman. * * * I'm almost sorry for Sam—but the Lord made some men to be other men's fools. * * *"

This was the staple of his musings; other things less edifying still may be omitted.

While he was engaged in this manner he heard a timid knock at his door. "Another visitor? I'm getting popular," he said, and went to open the door.

A seedy, forlorn-looking man came in; he took off his shabby hat and held it under his arm.

He said, "Good-evenin'," in a tone a little above a whisper.

"Well, what's the matter?" asked Offitt.

"Have you heered about Brother Bowersox?"

"Never mind the brothering—that's played out. What is there about Bowersox?"

"He's dangerous; they don't think he'll live through the night."

"Well, what of it?"

This was not encouraging, but the poor Bread-winner ventured to say, "I thought some of the Brothers"—

But Offitt closed the subject by a brutal laugh. "The Brothers are looking out for themselves these times. The less said about the Brotherhood the better. It's up the spout, do you hear?"

The poor fellow shrunk away into his ragged clothes, and went out with a submissive "Good-evenin'."

"I'll never found another Brotherhood," Offitt said to himself. "It's more trouble than it brings in."

It was now growing dark. He took his hat and went down the stairs and out into the street. He entered a restaurant and ordered a beefsteak, which he ate, paid for, and departed after a short chat with the waiter, whom he knew. He went around the corner, entered another eating-house, called for a cup of coffee and a roll. There also he was careful to speak with the man who served him, slapping him on the shoulder with familiarity. He went into a drug store a little later and bought a glass of soda-water, dropping the glass on the marble floor, and paying for it after some controversy. He then walked up to Dean street. He found the family all together in the sitting-room. He chatted awhile with them, and asked for Sleeny.

"I don't really know where Sam is. He aint so reg'lar in his hours as he used to be," said Saul. "I hope he aint gettin' wild."

"I hope not," said Offitt, in a tone of real distress—then, after a pause, "You needn't mention my havin' asked for him. He may be sensitive about it."

As he came away, Maud followed him to the door. He whispered, "Be ready, my beauty, to start at a moment's notice. The money is on the way. You shall live like a queen before many days are gone."

"We shall see," she answered, with a smile, but shutting the door between them.

He clinched his fists and muttered, "I'll figure it all up and take my pay, Missy. She's worth it. I will have to do some crooked

things to get her; but by —, I'd kill a dozen men and hang another, just to stand by and see her braid her hair."

Returning to his house, he ran nimbly up the stairs, half fearing to find Sleeney there, but he had not yet arrived. He seized the hammer, put it in his pocket, and came down again. Still intent upon accounting for as much of the evening as possible, he thought of a variety-show in the neighborhood, and went there. He spoke to some of the loafers at the door. He then walked to the box-office and asked for a ticket, addressing the man who sold it to him as "Jimmy," and asking how business was. The man handed him his ticket without any reply, but turned to a friend beside him, and said, "Who is that cheeky brother that knows me so well?"

"Oh! that's a rounder by the name of Offitt. He is a sort of Reformer—makes speeches to the puddlers on the rights of man."

"Seems rather fresh," said Jimmy.

"A little brine wouldn't hurt him."

Offitt strolled into the theater, which was well filled. The curtain was down at the moment, and he walked the full extent of the center aisle to the orchestra, looking about him as if in search of some one. He saw one or two acquaintances and nodded to them. He then walked back and took a seat near the door. The curtain rose, and the star of the evening bounded upon the stage,—a strapping young woman in the dress of an army officer. She was greeted with applause before she began her song, and with her first notes Offitt quietly went out. He looked at the clock on the City Hall, and saw that he had no more time to kill. He walked, without hurrying or loitering, up the shady side of the street till he came to the quarter where Farnham lived. He then crossed into the wide avenue, and, looking swiftly about him, approached the open gates of Farnham's place. Two or three men were coming out, one or two were going in. He waited till the former had turned down the street, and the latter were on the door-step. He then walked briskly up the path to the house; but instead of mounting the steps, he turned to the left and lay down under the library windows behind a clump of lilacs.

"If they catch me here," he thought, "they can only take me for a tramp and give me the grand bounce."

The windows opened upon a stone platform a few feet from the ground. He could hear the sound of voices within. At last he heard the men rise, push back their chairs, and say "Good-night." He heard their heavy shoes on the front steps. "Now for it," he

whispered. But at that moment a belated tenant came in. He wanted to talk of some repairs to his house. Offitt lay down again, resting his head on his arm. The soft turf, the stillness, the warmth of the summer night lulled him into drowsiness. In spite of the reason he had for keeping awake, his eyes were closing and his senses were fading, when a shrill whistle startled him into broad wakefulness. It was the melancholy note of a whip-poor-will in the branches of a lime-tree in the garden. Offitt listened for the sound of voices in the library. He heard nothing. "Can I have slept through—no, there is a light." A shadow fell across the window. The heavy tread of Budsey approached. Farnham's voice was heard: "Never mind the windows, Budsey. I will close them and the front door. I will wait here awhile; somebody else may come. You can go to bed."

"Good-night, sir."

"Good-night."

Offitt waited only a moment. He rose and looked cautiously in at the window. Farnham was seated at his desk. He had sorted, in the methodical way peculiar to men who have held command in the army, the papers which he had been using with his tenants and the money he had received from them.

They were arranged on the desk before him in neat bundles, ready to be transferred to the safe, across the room. He had taken up his pen to make some final indorsement.

Offitt drew off his shoes, leaped upon the platform, and entered the library as swiftly and noiselessly as a panther walking over sand.

XVII.

IN AND OUT OF WINDOWS.

ALICE BELDING was seated before her glass braiding her long hair. Her mother had come in from her own room, as her custom often was, to chat with her daughter in the half hour before bed-time. It gratified at once her maternal love and her pride to watch the exquisite beauty of her child, as she sat, dressed in a white wrapper that made her seem still taller than she was, combing and braiding the luxuriant tresses that gave under the light every tint and reflection of which gold is capable. The pink and pearl of the round arm as the loose sleeve would slip to the elbow, the poise of the proud head, the full white column of the neck, the soft curve of cheek and chin,—all this delighted her as it would have delighted a lover. But with all her light-headedness, there was enough of

discretion, or perhaps of innate New England reserve, to keep her from ever expressing to Alice her pleasure in her beauty. So the wholesome-minded girl never imagined the admiration of which she was the object, and thought that her mother only liked to chat a little before sleeping. They talked of trivial matters, of the tea at Mrs. Hyson's, of Formosa Hyson's purple dress which made her sallow than ever, of rain and fair weather.

"I think," said Mrs. Belding, "that Phrasy Dallas gets more and more stylish every day. I don't wonder at Arthur Farnham's devotion. That would make an excellent match—they are both so dreadfully clever. By the way, he has not been here this week. And I declare! I don't believe you have written him that note of thanks yet."

"No," said Alice, smiling—she had schooled herself by this time to speak of him carelessly. "I was too much frightened to thank him on the spot, and now it would be ancient history. We must save our thanks till we see him."

"I want to see him about other things. You must write and ask him to dinner tomorrow or next day."

"Don't you think he would like it better if *you* would write?"

"There you are again—as if it mattered. Write that 'Mamma bids me.' There, your hair is braided. Write the note now, and I will send it over in the morning before he gets away."

Alice rose and walked to her escritoire, her long robe trailing, her thick braids hanging almost to the floor, her fair cheek touched with a delicate spot of color at the thought of writing a formal note to the man she worshiped. She took a pen and wrote "My dear Mr. Farnham," and the conventional address made her heart flutter and her eyes grow dim. While she was writing, she heard her mother say:

"What a joke!"

She looked up, and saw that Mrs. Belding had picked up her opera-glass and was looking through it at something out of the window.

"Do you know, Alice," she said, laughing, "since that ailantus tree was cut down, you can see straight into his library from here. There he is now, sitting at his desk."

"Mamma!" pleaded Alice, rising and trying to take the glass away from her. "Don't do that, I beg!"

"Nonsense," said her mother, keeping her away with one hand and holding the glass with the other. "There comes Budsey to close the blinds. The show is over. No; he goes away, leaving them open."

"Mamma, I will leave the room if——"

"My goodness! look at that!" cried the

widow, putting the glass in her daughter's hand and sinking into a chair with fright.

Alice, filled with a nameless dread, saw her mother was pale and trembling, and took the glass. She dropped it in an instant, and leaning from the window sent forth once more that cry of love and alarm, which rang through the stillness of night with all the power of her young throat:

"Arthur!"

She turned, and sped down the stairs and across the lawn like an arrow shot for life or death from a long-bow.

Farnham heard the sweet, strong voice ringing out of the stillness like the cry of an angel in a vision, and raised his head with a startled movement from the desk where he was writing. Offitt heard it, too, as he raised his hand to strike a deadly blow; and though it did not withhold him from his murderous purpose, it disturbed somewhat the precision of his hand. The hammer descended a little to the right of where he had intended to strike. It made a deep and cruel gash, and felled Farnham to the floor, but it did not kill him. He rose, giddy and faint with the blow and half-blinded with the blood that poured down over his right eye. He clapped his hand, with a soldier's instinct, to the place where his sword-hilt was not, and then staggered, rather than rushed, at his assailant, to grapple him with his naked hands. Offitt struck him once more, and he fell headlong on the floor, in the blaze of a myriad lights that flashed all at once into deep darkness and silence.

The assassin, seeing that his victim no longer moved, threw down his reeking weapon, and, seizing the packages of money on the desk, thrust them into his pockets. He stepped back through the open window and stooped to pick up his shoes. As he rose, he saw a sight which for an instant froze him with terror. A tall and beautiful form, dressed all in white, was swiftly gliding toward him over the grass. It drew near, and he saw its pale features set in a terrible expression of pity and horror. It seemed to him like an avenging spirit. He shut his eyes for a moment in abject fright, and the phantom swept by him and leaped like a white doe upon the platform, through the open window, and out of his sight. He ran to the gate, quaking and trembling, then walked quietly to the nearest corner, where he sat down upon the curb-stone and put on his shoes.

Mrs. Belding followed, as rapidly as she could, the swift flight of her daughter; but it was some minutes after the young girl had leaped through the window that her mother walked breathlessly through the front door

and the hall into the library. She saw there a sight which made her shudder and turn faint. Alice was sitting on the floor, holding in her lap the blood-dabbled head of Farnham. Beside her stood a glass of water, a pitcher, and several towels. Some of them were red and saturated, some were still fresh and neatly folded. She was carefully cleansing and wiping the white forehead of the lifeless man of the last red drop.

"Oh, Alice, what is this?" cried her mother.

"He is dead!" she answered, in a hoarse, strained voice. "I feared so when I first came in. He was lying on his face. I lifted him up, but he could not see me. I kissed him, hoping he might kiss me again. But he did not. Then I saw this water on the stand over there. I remembered there were always towels there in the billiard-room. I ran and got them, and washed the blood away from his face. See, his face is not hurt. I am glad of that. But there is a dreadful wound in his head." She dropped her voice to a choking whisper at these words.

Her mother gazed at her with speechless consternation. Had the shock deprived her of reason?

"Alice," she said, "this is no place for you. I will call the servants and send for a surgeon, and you must go home."

"Oh, no, mamma. I see I have frightened you, but there is no need to be frightened. Yes, call the servants, but do not let them come in here for awhile, not till the doctors come. They can do no good. He is dead."

Mrs. Belding had risen and rung the bell violently.

"Do, mamma, see the servants in the hall outside. Don't let them come in for a moment. Do! I pray! I pray! I will do anything for you."

There was such intensity of passion in the girl's prayer that her mother yielded, and when the servants came running in, half-dressed, in answer to the bell, she stepped outside the door and said, "Captain Farnham has been badly hurt. Two of you go for the nearest doctors. You need not come in at present. My daughter and I will take care of him."

She went back, closing the door behind her. Alice was smiling. "There, you are a dear! I will love you forever for that! It is only for a moment. The doctors will soon be here, and then I must give him up."

"Oh, Alice," the poor lady whimpered, "why do you talk so wildly? What do you mean?"

"Don't cry, mamma! It is only for a moment. It is all very simple. I am not crazy. He was my lover!"

"Heaven help us!"

"Yes, this dear man, this noble man offered me his love, and I refused it. I may have been crazy then, but I am not now. I can love him now. I will be his widow—if I was not his wife. We will be two widows together—always. Now you know I am doing nothing wrong or wild. He is mine."

"Give me one of those towels," she exclaimed, suddenly. "I can tie up his head so that it will stop bleeding till the doctors come."

She took the towels, tore strips from her own dress, and in a few moments, with singular skill and tenderness, she had stopped the flow of blood from the wound.

"There! He looks almost as if he were asleep, does he not? Oh, my love, my love!"

Up to this moment she had not shed one tear. Her voice was strained, choked, and sobbing, but her eyes were dry. She kissed him on his brow and his mouth. She bent over him and laid her smooth cheek to his. She murmured:

"Good-bye, good-bye, till I come to you, my own love!"

All at once she raised her head with a strange light in her eyes. "Mamma!" she cried, "see how warm his cheek is. Heaven is merciful! perhaps he is alive."

She put both arms about him, and, gently but powerfully lifting his dead weight of head and shoulders, drew him to her heart. She held him to her warm bosom, rocking him to and fro. "Oh, my beloved!" she murmured, "if you will live, I will be so good to you."

She lowered him again, resting his head on her lap. A drop of blood, from the napkin in which his head was wrapped, had touched the bosom of her dress, staining it as if a cherry had been crushed there. She sat, gazing with an anguish of hope upon his pale face. A shudder ran through him, and he opened his eyes—only for a moment. He groaned, and slowly closed them.

The tears could no longer be restrained. They fell like a summer shower from her eyes, while she sobbed, "Thank God! my darling is not dead."

Her quick ear caught footsteps at the outer door. "Here, mamma, take my place. Let me hide before all those men come in."

In a moment she had leaped through the window, whence she ran through the dewy grass to her home.

An hour afterward her mother returned, escorted by one of the surgeons. She found Alice in bed, peacefully sleeping. As Mrs. Belding approached the bedside, Alice woke and smiled. "I know without your telling me, mamma. He will live. I began to pray

for him,—but I felt sure he would live, and so I gave thanks instead."

"You are a strange girl," said Mrs. Belding, gravely. "But you are right. Dr. Cutts says, if he escapes without fever, there is nothing very serious in the wound itself. The blow that made that gash in his head was not the one which made him unconscious. They found another, behind his ear; the skin was not broken. There was a bump about as big as a walnut. They said it was concussion of the brain, but no fracture anywhere. By the way, Dr. Cutts complimented me very handsomely on the way I had managed the case before his arrival. He said there was positively a professional excellence about my bandage. You may imagine I did not set him right."

Alice, laughing and blushing, said, "I will allow you all the credit."

Mrs. Belding kissed her and said "Good-night," and walked to the door. There she paused a moment, and came back to the bed. "I think, after all, I had better say now what I thought of keeping till to-morrow. I thank you for your confidence to-night, and shall respect it. But you will see, I am sure, the necessity of being very circumspect, under the circumstances. If you should want to do anything for Arthur while he is ill, I should feel it my duty to forbid it."

Alice received this charge with frank, open eyes. "I should not dream of such a thing," she said. "If he had died, I should have been his widow; but as he is to live, he must come for me if he wants me. I was very silly about him, but I must take the consequences. I can't now take advantage of the poor fellow by saving his life and establishing a claim on it. So I will promise anything you want. I am so happy that I will promise easily. But I am also very sleepy."

The beautiful eyelids were indeed heavy and drooping. The night's excitement had left her wearied and utterly content. She fell asleep even as her mother kissed her forehead.

The feeling of Offitt as he left Algonquin avenue and struck into a side street was one of pure exultation. He had accomplished the boldest act of his life. He had shown address, skill, and courage. He had done a thing which had appalled him in the contemplation merely on account of its physical difficulties and dangers. He had done it successfully. He had a large amount of money in his pocket—enough to carry his bride to the ends of the earth. When it was gone—well, at worst, he could leave her and shift for himself again. He had not a particle of regret or remorse; and, in fact, these sentiments are

far rarer than moralists would have us believe. A ruffian who commits a crime usually glories in it. It exalts him in his own eyes, all the more that he is compelled to keep silent about it. As Offitt walked rapidly in the direction of Dean street, the only shadow on his exultation was his sudden perception of the fact that he had better not tell Maud what he had done. In all his plans he had promised himself the pleasure of telling her that she was avenged upon her enemy by the hands of her lover; he had thought he might extort his first kiss by that heroic avowal; but now, as he walked stealthily down the silent street, he saw that nobody in the universe could be made his confidant.

"I'll never own it, in earth or hell," he said to himself.

When he reached Matchin's cottage, all was dark and still. He tried to attract Maud's attention by throwing soft clods of earth against her window, but her sleep was too sound. He was afraid to throw pebbles for fear of breaking the panes and waking the family. He went into the little yard adjoining the shop, and found a ladder. He brought it out and placed it against the wall. He perceived now for the first time that his hands were sticky. He gazed at them a moment. "Oh, yes," he said to himself, "when he fell I held out my hands to keep his head from touching my clothes. Careless trick! Ought to have washed them, first thing." Then, struck by a sudden idea, he went to the well-curb and slightly moistened his fingers. He then rubbed them on the door-knob and the edge of the door of the cottage, and pressed them several times in different places on the ladder. "Not a bad scheme," he said, chuckling. He then went again to the well and washed his hands thoroughly, afterward taking a handful of earth and rubbing them till they were as dirty as usual.

After making all these preparations for future contingencies, he mounted the ladder and tried to raise the window. It was already open a few inches to admit the air, but was fastened there, and he could not stir it. He began to call and whistle in as low and penetrating a tone as he could manage, and at last awoke Maud, whose bed was only a few feet away. She started up with a low cry of alarm, but saw in a moment who it was.

"Well, what on earth are you doing here? Go away this minute, or I'll call my father."

"Let me in, and I will tell you."

"I'll do nothing of the sort. Begone, this instant."

"Maud, don't be foolish," he pleaded, in real alarm as he saw that she was angry and insulted. "I have done as you told me. I

have wealth for us both, and I have"—he had almost betrayed himself, but he concluded—"I have come to take you away forever."

"Come to-morrow, at a decent hour, and I will talk to you."

"Now, Maud, my beauty, don't believe I am humbugging. I brought a lot of money for you to look at—I knew you wanted to be sure. See here!" He drew from his pocket a package of bank bills—he saw a glittering stain on them. He put them in the other pocket of his coat and took out another package. "And here's another. I've got a dozen like them. Handle 'em yourself." He put them in through the window. Maud was so near that she could take the bills by putting out her hand. She saw there was a large amount of money there—more than she had ever seen before.

"Come, my beauty," he said, "this is only spending-money for a bridal tour. There are millions behind it. Get up and put on your dress. I will wait below here. We can take the midnight train east, be married at Clevalo, and sail for Paris the next day. That's the world for you to shine in. Come! Waste no time. No tellin' what may happen to-morrow."

She was strongly tempted. She had no longer any doubt of his wealth. He was not precisely a hero in appearance, but she had never insisted upon that—her romance having been always of a practical kind. She was about to assent—and to seal her doom—when she suddenly remembered that all her best clothes were in her mother's closet, which was larger than hers, and that she could not get them without passing through the room where her parents were asleep. That ended the discussion. It was out of the question that she should marry this magnificent stranger in her every-day dress and cotton stockings. It was equally impossible that she should give that reason to any man. So she said, with dignity:

"Mr. Offitt, it is not proper for me to continue this conversation any longer. You ought to see it aint. I shall be happy to see you to-morrow."

Offitt descended the ladder, grinding out curses between his set teeth. A hate, as keen as his passion, for the foolish girl fired him. "Think," he hissed, "a man that killed, half an hour ago, the biggest swell in Buffland, to be treated that way by a carpenter's wench. Wait awhile, Miss; it'll come my innings." He lifted up the ladder, carried it carefully around the house, and leaned it against the wall under the window of the room occupied by Sleeney.

He hurried back to his lodging in Perry Place, where he found Sam Sleeney lying asleep on his bed. He was not very graciously greeted by his drowsy visitor.

"Why didn't you stay out all night?" Sam growled. "Where have you been, anyhow?"

"I've been at the variety-show, and it was the boss fraud of the season."

"You staid so long you must have liked it."

"I was waiting to see just how bad a show could be and not spoil."

"What did you want to see me about to-night?"

"The fact is, I expected to meet a man around at the Varieties who was to go in with us into a big thing. But he wasn't there. I'll nail him to-morrow, and then we can talk. It's big money, Sammy, and no discount. What would you think of a thousand dollars a month?"

"I'd a heap rather see it than hear you chin about it. Give me my hammer, and I'll go home."

"Why, I took it round to your shop this evening, and I tossed it in through the window. I meant to throw it upon the table, but it went over, I think from the sound, and dropped on the floor. You will find it among the shavings, I reckon."

"Well, I'm off," said Sam, by way of good-night.

"All right. Guess I'll see you to-morrow."

Offitt waited till he could hear the heavy tread of Sleeney completing the first flight of stairs and going around to the head of the second. He then shut and locked his door, and hung his hat over the key-hole. He turned up his lamp and sat down by the table to count his night's gains. The first package he took from his pocket had a glittering stain upon the outside bill. He separated the stained bill carefully from the rest, and held it a moment in his hand as if in doubt. He walked to his wash-stand, but at the moment of touching his pitcher he stopped short. He took out his handkerchief, but shook his head and put it back. Finally, he lighted a match, applied it to the corner of the bill, and watched it take fire and consume, until his fingers were scorched by the blaze. "Pity!" he whispered—"good money like that."

He seated himself again and began with a fierce, sustained delight to arrange and sort the bank-bills, laying the larger denominations by themselves, smoothing them down with a quick and tender touch, a kindling eye, and a beating heart. In his whole life, past and future, there was not such another moment of enjoyment. Money is, of course, precious and acceptable to all men except idiots. But,

if it means much to the good and virtuous, how infinitely more it means to the thoroughly depraved—the instant gratification of every savage and hungry devil of a passion which their vile natures harbor. Though the first and principal thing Offitt thought of was the possession of Maud Matchin, his excited fancy did not stop there. A long gallery of vicious pictures stretched out before his flaming eyes, as he reckoned up the harvest of his hand. The mere thought that each bill represented a dinner, where he might eat and drink what he liked, was enough to inebriate a starved

rogue whose excesses had always been limited by his poverty.

When he had counted and sorted his cash, he took enough for his immediate needs and put it in his wallet. The rest he made up into convenient packages, which he tied compactly with twine and disposed in his various pockets. "I'll chance it," he thought, after some deliberation. "If they get me, they can get the money, too. But they sha'n't get it without me."

He threw himself on his bed, and slept soundly till morning.

(To be continued.)

THE MISER.

HOARDING up gold as each swift summer flies
 Unto a bitter season that he fears,
 The miser shuts the portal of his tears,
 And bars out Mercy, with her piteous eyes.
 But when Death enters, in unwelcome guise,
 "Poor fool, and wasteful of the lavish years!"

Avenging Conscience shrieks into his ears,
 And "Fool!" the murmur of the world replies.
 If so late wealth can bring no pleasure in,
 Be not to niggard spirits so akin:

But give me kisses, give me love, my sweet!
 Hoard not the coin of passion in thy breast,
 But spend it freely. Short is life at best,
 And Time speeds onward with remorseless feet.

TEN YEARS.

TEN winters has the north wind hurried by,
 Licking the streamlets with its frozen tongue;
 Ten summers through the boisterous robin sung
 Since, arm in arm together, you and I
 Walked from this church beneath a flawless sky.
 So many years! It seemed the air yet rung
 With wedding marches yonder piers among,
 So swift the happy seasons o'er us fly!
 And when the vexing thoughts I cannot quell,
 Which come a-tiptoe at the beck of care,
 About my spirit weave their dreary spell,
 Your voice, resounding through the hollow air,
 Smites on my quickened conscience like the bell
 That calls a sinner to forgotten prayer.

Andrew B. Saxton.

AN AVERAGE MAN.*

BY ROBERT GRANT,

Author of "The Little Tin Gods on Wheels," "Confessions of a Frivolous Girl," etc.

I.

It was a fine moonlight night in early winter. The vicinity of Madison Square was a blaze of light. The theaters were just over, and a stream of people was pouring along the pavements. Horse-cars, packed to overflowing, jingled by. Democratic omnibuses thundered over the road-bed, side by side with smartly equipped coupés aglow with lanterns. The huge plate-glass windows of the restaurants flashed a dazzling welcome. All was glitter and roar and rush and hurry. The universal movement was of a race where each one fears to be left behind. It is here that the well-known avenues of fashion and trade intersect like the blades of a vast pair of shears, and focus the rumble, bustle, and glare of the metropolis.

Among the crowd that on this particular night peopled this famous New York thoroughfare, where Virtue and Vice touched each other's cheek,—where Plenty delights to flaunt, and Want to sun itself,—were two young men whom a less hurried gait distinguished from the average passer. They had been to the play, and the larger of the two—a compact, powerfully built fellow, whose hands were deep in the pockets of his ulster—softly hummed, between the puffs at his cigarette, an air from the reigning burlesque of the day. They entered Delmonico's, and crossing the floor of the restaurant established themselves at one of the tables.

"Bring a chicken salad, Alphonse, and a quart of that dry Monopole," said he of the ulster, whose name was Woodbury Stoughton, to the sinuous waiter at his shoulder. "I drink Monopole entirely now," he added sentimentally, turning to his friend; and his glance began to wander in note of the occupants of the apartment, which was gay with patrons.

Now that one saw him distinctly, he was a handsome young man, with a full round face, void of much color, large brown eyes fringed by dark lashes, and a thick and somewhat blunt nose. Save for a crinkling mustache that, without shading the curves of his firm, humorous mouth, stood out beyond his cheeks, he was smoothly shaven; but his complexion about the lower jaw had the bluish tinge

peculiar to those whose beard is dark. Both he and his *vis-à-vis*, Arthur Remington, were in the neighborhood of twenty-five. The latter lacked the robust beauty of his friend. His was a more delicate mold,—a slim figure, somewhat above the average height, and a spare cast of countenance, with fresh-colored, prominent features. He had a thoughtful, intelligent expression, and eyes that were earnest and nervous. He looked a little tired, and, while waiting for the supper, ate bread and butter with a mechanical eagerness.

"I notice," continued Stoughton, drumming with his fingers carelessly on the table-cloth, "the bride, Mrs. Tom Fielding, is back again. She looks lovely as ever; I don't see that her damask cheek shows any traces of the traditional worm."

"She was Miss Ethel Linton, wasn't she?" asked Remington, turning slightly in the direction indicated. The lady in question was one of a merry party at the other side of the room.

"Yes. The story is, you know, she was in love with Willis Blake, but her stern parent lit down on her. Willis hadn't a dollar to write after his name; and Tom Fielding stood all ready at the castle gate, so to speak, a-combing his milk-white steed. They say she and old man Linton had some pretty lively times together; but in the end Tom carried off the daughter."

"I've heard something of that sort before. Poor girl! I pity her."

"Well, I don't know. It isn't such a bad thing, now, to marry a million. Tom isn't overburdened with intellect, to be sure; but I guess he's a decent sort of fellow, and will know enough to let her have her head. There's no use looking a gift horse in the mouth merely because he has no brains. Ah! here comes the salad."

"By the way," said Stoughton presently, "talking of the other sex, I met that little Cambridge girl you used to be so sweet on in the street yesterday."

"What! Maud Bolles?"

"Yes, Maud Bolles—as if you didn't know well enough! She's married, she tells me, and to one of those scientific duffers. She was quite vivacious for her, and informed me that her husband was engaged at present in

weighing thirty guinea-pigs before and after meals, with a view to 'physiological induction.' Well, here's luck!" and Stoughton emptied his champagne glass.

Remington laughed. "You always were hard on those Cambridge girls, Wood. I suppose they were rather provincial as a lot, but somehow or other I used to like them. They seemed to appeal to the best side of me, and had the effect of a sort of moral tonic. I dare say it would have been a first-rate thing for me if I'd married Maud Bolles."

"Pshaw, my dear fellow! Compare her, for instance, with the girls one meets in New York. She can't hold a candle to them for genuine attraction. Spiritual graces are all very well; but — dash it, Arthur — the body counts for something. She had a pretty face, that was all."

"Oh, yes! You're right enough, I dare say. It's strange how things happen in this world. I was pretty well cut up because she would not accept me Class-Day evening," Remington leaned his head on his hand thoughtfully. "Perhaps now I'm glad she didn't; and yet my reasons somehow don't do me proud, as Tom Walker used to say."

"Well, it'll be all the same a hundred years hence, my dear fellow. Some more salad?"

"No, I believe not, thank you. It's curious, isn't it," he continued, "how a fellow grows more worldly in spite of himself? New York knocks the romance out of one very fast. I should like to be able to look at things from the same ideal point of view I used to, a few years ago. I suppose I'm wiser in some ways to-day; but I'm a cold, calculating creature compared to what I was then. This city life doesn't leave one much time for theorizing. What a whirl it is!" he added, reflectively, glancing about him; "and it seems to increase every day."

Stoughton scowled, as if irritated by this reminder of current existence, and buried his face in his glass. He set it down with emphasis. "It's all a race for wealth here. A man amounts to nothing in New York unless he has money." He poured out some more champagne gloomily. "Our people have no idea of enjoyment. They don't understand the meaning of the word. Our ancestors — the progenitors of those prim maidens you were admiring just now — went on the principle that everything except money-getting was wrong, and here you have the result. American civilization is based on the theory that life is a sort of 'twenty-minutes-for-dinner' at a way-station, and consequently every one keeps in such a state of nervousness, lest the train may start without him, that a com-

fortable square meal is out of the question. If a fellow happened to dawdle over a dish and smack his lips a little, he was sure to hear some one whisper, 'It'll be a warm day for that shrimp before long.' Our fathers were taught from the cradle that the man who lingers in this world over the peaches and cream is bound to get *left*."

Remington laughed. "At least, the present generation is not under the influence of any such delusion."

"Exactly, my dear fellow; but it doesn't know how to *enjoy*. That's the point. Beauty and repose are sealed doors to our race." And Stoughton proceeded further to illustrate his argument with the somewhat disdainful air common to him when roused. He admitted, he said, that it had dawned even upon our people that, after all, happiness is legitimate in this human sphere. The trouble was, nobody understood how to set about obtaining it. Our organisms had become so habituated, in former generations, to judging everything by so-called standards of man's invention, which he had had the presumption to dub divine, that they had become starved and contracted. Our sense of the beautiful, the artistic, the exquisite in life was false and illiterate. We had evolved as national traits a cold, lofty moral standard, not lived up to, and an exceeding commercial cleverness. We had made money, and how were we spending it? In tasteless extravagance and ostentation.

Remington was silent a moment. "Yes; and yet," said he, "underneath it all there lies something better. I believe that, like our fathers, we too are not content with the peaches and cream. We are at heart an earnest people."

"There spoke the spirit of some Puritan ancestor. My dear fellow, life is meant to be enjoyed. Why not get all the pleasure one can out of it, while it lasts?" And Stoughton sat back in his chair vehemently. His tone betrayed the irritation of one conscious of somewhat sharing at heart, against his will, his opponent's sentiments.

It happened at this moment that a party of three or four young men entered the restaurant, and passed close to the table where Remington and Stoughton were sitting. One of these was a thick-set and rather coarse-looking fellow, who swaggered a little as he walked, with a bullet head and a dogged sort of expression about the mouth that suggested a bull-terrier. The points of his dress were exaggerated and somewhat careless. He darted around him a pair of keen, dark eyes, as if to take in at a breath the occupants of the place. Catching sight of Stoughton, he nodded good-humoredly, and, bending over,

whispered across the back of his hand, in passing: "I bought that of yours at seventy-five. It closed six bid, and none offered."

"Hold on a minute, Finchley," said Stoughton, reaching out to detain the new-comer. "Is it going higher? How do things look?"

The broker placed his hand on the other's shoulder, and replied in a confidential tone: "I am a bull myself upon the situation. We may have temporary reactions, but I look for higher prices. Mr. Gould's brokers," he added, with an increasing earnestness of whisper calculated to convey the impression that his words were not intended for the public, "have been large buyers to-day. The earnings of the roads continue to be enormous. Take your purchase, for instance; the possibilities of that stock are something tremendous. Its land-grant alone is an empire in itself,—an empire in itself." He dwelt upon the last expression with an air of satisfaction. In the very ugliness of his smile there was something dangerously winning.

"Who's that?" inquired Remington, as the broker rejoined his friends.

"That?" said Stoughton absently, as if lost in calculation. "Oh," he continued, "don't you know Finchley? He's in J. C. Withington & Company. He used to be a clerk in their concern, but proved so serviceable they took him into partnership. I guess he makes his fifteen thousand a year fast enough."

"He isn't very much to look at."

"No, he's a genuine cad; but he's smart. That's the sort of man, Arthur," he added presently, "to get on in New York. He isn't troubled by any of the subtle considerations that trouble you and me. He'd call that kind of thing filigree work. He knows what he wants to do, and has it all cut out for him. It's his ambition in life to make a million, and he will before he's forty, if his luck doesn't go back on him. Any theory of living not bottomed on the Almighty Dollar would probably strike him as 'hole-in-the-sky.' I tell you what, old man, we're too well educated, we've got too many fine-spun ideas, to succeed in this place." Stoughton spoke a little bitterly. He paused, and chancing to look up, a strange expression came over him. "Shylock has a daughter," he murmured, and nodded toward the door-way.

Remington turned his head in the direction indicated, and his glance fell upon a young girl standing on the threshold, as if in search of some one in the restaurant. She was wrapped in a white opera-cloak. The light threw her figure, which was sufficiently tall, into perfect relief. Remington felt that he had rarely, if ever, seen such a beautiful being. Her person had exchanged the more

fragile grace of extreme maidenhood for a mature but equally symmetrical luxuriance of form. Her large blue eyes and round cheeks—tinged with the delicate olive of the brunette, yet suffused with color, and soft with the bloom peculiar to youth—were crowned with a superabundance of fluffy golden hair, that strayed far down upon her forehead in rebellious tangles. Her mouth was slightly prominent,—her lips full, unwavering, and so brightly red as to display to advantage the whiteness of her small, regular, and almost cruelly incisive teeth. The exuberance of the smile by which she now indicated her discovery of the object of her scrutiny betrayed a keen enjoyment of life, and a plentiful fund of vitality. There was something vigorous, fearless, almost bold, still not unrefined, in her expression. One realized the presence of a splendid animal. You felt, in regard to her possibilities, as one feels in gazing on a massive block of shining marble before the sculptor's hand has fashioned it.

She was accompanied by a slim youth of albino type and lackadaisical demeanor.

Remington had started at the apparition. "Who is she, Wood?" and his face wore a half-puzzled, half-amused look.

"Miss Idlewild, daughter of Peter Idlewild, the banker and railway magnate. She's a stunner, isn't she? Nothing of the pocket Venus about her; it's the genuine article."

Remington seemed lost in thought. "Yes, it must be the same," he muttered to himself. "But they're not Jews, surely?" he suddenly asked of his friend, recalling the other's previous remark.

"My language was merely metaphorical. I have no cause, my dear fellow, to doubt her Aryan descent," said Stoughton, with a laugh. "But whence all this mysterious cogitation? Do you know her?"

"It was on a steam-boat, four summers ago. I was going to Bar Harbor. It was the end of my Junior year, and I was feeling terribly blue, I remember, over a condition in chemistry," said Remington, musingly. "There happened to be very few people on board, and I found myself sitting next to this girl, near the bow. She wasn't as pretty as she is now, and was more slender-looking; but she'd have passed in a crowd even then. Somehow or other we got into conversation. I think it was a shoal of porpoises that brought us together. She inquired of a deck-hand if they were whales, and——"

"And you were *on deck* with an answer," laughed Stoughton. "I've been there myself."

"Exactly. She asked me what time it was, which broke the ice completely. I discovered

she was traveling entirely alone, and was on the way to visit some relatives in Maine. She seemed inclined to be communicative, and told me that her name was Isabel Idlewild, that her mother was dead, and her father in business in New York. 'And when I'm eighteen,' she said, 'I'm going to live there, and keep house for him. That'll be in two years. I'm only sixteen now. Don't you think I look older than that?' I remember it all distinctly, as if it had been yesterday. There was a moon, and after supper we went and sat aft of the paddle-box, where we could see the glitter on our wake. She produced, from a little reticule she carried, some oranges and a paper of chocolates, which she insisted on my sharing. 'Oh!' she exclaimed, 'isn't it lovely?' "

"What, the confectionery?"

"No, you unsentimental cynic. She had reference to the moon and the general surroundings. 'I suppose,' said she, with a little sidelong glance I have never forgotten, 'it's perfectly dreadful of me to be talking to you and telling you all these things. Do you know, the last words my folks said to me before I left home were that I mustn't talk to any one. But I do like company; don't you, Mr. — what did you say your name was?' "

"Num, num!" articulated Stoughton, banteringlly.

" 'I didn't say,' said I with a laugh. 'Oh,' said she, 'how unkind! but you will write it in my album, I know. I always make my traveling friends write their names in my album'; and therewith she ferreted out of the aforesaid reticule a small autograph-book."

"Did you write it?"

"Yes. I thought at first of writing a fictitious name; but, as I never expected to see her again, I didn't care much. We sat out until about ten o'clock," continued Remington, "and then she said it was time for her to go to bed. I tried to make her stay up longer, but she wouldn't. I walked with her to the head of the staircase. She was to land at an early hour in the morning. 'You will write to me?' she said, putting out her hand. 'Of course,' replied I, a little staggered withal. 'Address Maud Vandyke, care of the post-master,' she continued; 'my folks mightn't like it if they knew I was corresponding. Good-night!' and I have never seen her since until to-day. She landed before I was up."

"And you never wrote to her?"

"No. I don't know why exactly, but I never did. I wonder if she'd remember me. I've half a mind to speak to her," said Remington, turning slightly so as to command a glimpse of the young beauty, who had joined

some friends at a distant table. "You say her father is a banker?"

"Yes. Peter Idlewild & Company. That's he at the table with her. The blonde youth is her brother. The old man is one of your self-made chaps, who came to New York as a boy, without a dollar in his pocket, and has laid up a colossal fortune. Now he's trying to get into society on the strength of his money," said Stoughton. "I'll introduce you, if you like."

"What! do you know her?"

"A little," replied Stoughton, with a grin. "I met her at Newport last summer, once or twice. They had the Spencer Colgate cottage. They're rich, you know, and were invited about more or less. She's a *débutante*. The second wife, who is quite presentable, is anxious to cut a dash 'in the swim.' That's their new house on Fifth avenue, near Sixty-second street,—the one that looks big enough for a palace. I'm invited to a blow-out there next week. Come on; I'll introduce you."

Remington offering no objection, the other presently led the way across to where the Idlewilds were sitting. The party included the second Mrs. Idlewild, a beautifully dressed but languid-looking woman, considerably her husband's junior.

"Why, Mr. Stoughton, how *do* you do? We haven't met for ever so long," exclaimed the girl with a frank graciousness, putting out her hand. "I'm real glad to see you again." Her face wore an exuberance of expression unusual with those whom familiarity with the world has taught to temper the display of their emotions.

"Permit me, Miss Idlewild, to present my friend, Mr. Remington." Stoughton spoke with the air of subtle gallantry, of self-mortification, that charms a woman.

As Remington's eyes encountered those of the young beauty she blushed. "I think we have met before, Miss Idlewild," he said.

"I remember perfectly." She looked him now full in the face with fearless, wide-open eyes, her head coquettishly poised on one side. Stoughton had turned to speak with her parents. "But you never wrote"; and a mischievous smile parted her red lips, between which her small white teeth shone like pearls.

"I was afraid you wouldn't answer me. But is there no way in which I can condone my offense?"

"Oh," she cried, "I'll forgive you if you come and see me, Mr. Remington. And where have you been all these years? Let me see! Why, it's four since we met,—four years last summer. Father sent for me that autumn, and I've lived here ever since. Father's married again. That's mother with

him. Do you think I've changed much, Mr. Remington?"

"I think you've become very beautiful," whispered the young man.

"Really?" She darted a pleased little glance at him, then dropped her eyes confusedly. "Oh, but you mustn't say things like that. I'm grown up now, and am going to be dreadfully proper," she said, drawing herself up with mock dignity. "You know I'm just 'out' now, and — oh, Mr. Remington, I want you to come to my party. It's next week, and I'll get mother to send you an invitation." She paused a moment while Remington bowed his acknowledgments. "It is funny, isn't it, we should meet again after so long?" she said. "What a nice time we had that evening! Do you remember how lovely it was on deck, — and the chocolates, and the album, and all? I suppose it was dreadfully improper of me, wasn't it? Well, I shall make up for it by being a perfect icicle. Do tell me, Mr. Remington, is Mr. Stoughton a great friend of yours?"

Remington answered that they had always been intimate. "We were classmates in college."

"Really? Oh, then he must be, of course. He's very handsome, *isn't* he? But I'm afraid of him," she added, with a little laugh. "I always feel as if he didn't quite approve of me." As she glanced in the direction of Stoughton, who was still conversing with her parents, Remington detected, as he thought, a trace of something half defiant, as it were, in her eyes. "But I want to introduce you to father, Mr. Remington."

Peter Idlewild was a well-preserved man about sixty years old, of sturdy frame. His face was one which would at once command the attention. A large, beak-like nose; a deep-red complexion; a solid jaw; a firm mouth, the expression of which was shaded but not concealed by a stubby, bristling, iron-gray mustache, a trifle lighter than his still abundant hair; and a pair of glittering, deep-set eyes, of cold, metallic light, guarded by bushy eyebrows of that same iron-gray, — such were its distinguishing features; and, as an offset to these sterner lineaments, a smile — his daughter's smile intensified — suggesting confidences and a deep interest in your welfare, and breathing that peculiar power which word-painters of our day style magnetism. One saw at a glance that it was from him that the daughter had inherited her superb physique and vigor.

"Father, this is Mr. Remington. Mr. Remington and I are old friends"; and she shot a demure smile at the young man.

"How do you do, sir? I am very happy

to make your acquaintance, sir," said Mr. Idlewild, in a deep bass voice, — "very happy to make your acquaintance."

He introduced Remington to his wife, and insisted upon ordering more champagne. His voice and gestures were those of one who courts notoriety. It almost seemed that, as if aware good breeding lies beyond the compass of even an iron will or cunning fancy, he enjoyed a revenge in flaunting his wealth in the face of the community. In his presence, however, one felt unconsciously a dwarfing of self, if no effort were made to withstand its influence, — realized the fascination that flows from a superior, mastering vitality. After the first outburst of hospitality, he sat back in his chair sipping his wine with an important and sphinx-like gravity, while Remington talked to his wife.

"Mr. Stoughton tells me you were classmates at Harvard, Mr. Remington. We saw Mr. Stoughton quite frequently last summer at Newport. I suppose you know Newport very well?" said Mrs. Idlewild in her listless way. "I shall be glad to see you at our house on Wednesday of next week. My daughter expects a few of her friends."

A few minutes later Mrs. Idlewild rose to depart. There was some little delay about the carriage, and the young men stood chatting with Miss Isabel in the vestibule. While thus engaged, the gay party previously alluded to passed out, with velvet step, and wafting a faint odor as of violets. A tall, lithe young woman of graceful bearing turned her face, which peeped forth from the folds of the drapery wound about her head, back over her shoulder, and nodded in a friendly manner to Woodbury Stoughton. He raised his hat, and flew to her side.

"Permit me to see you to your carriage, Mrs. Fielding."

The aristocratic poise of her head, the springy piquancy of her motions, suggested a thorough-bred race-horse. Her face expressed excessive refinement and some physical delicacy. It was pretty, but pale and a trifle pinched. Its features were small, save a long, thin, pointed nose. The first bloom of youth was gone. Her beauty was that of a Marshal Niel rose, of which just the edges of the leaves have begun to curl and faintly to discolor.

"That's the bride, Mrs. Tom Fielding," whispered Miss Idlewild to Remington. "I saw her at Newport, when she was Miss Linton. She's lovely, isn't she?"

"Yes. That sleepy-looking man with the brown beard is her husband. What a heavenly night! It reminds me of four years ago."

She was tripping to the carriage now on the arm of the young man. "Wasn't it lovely! Ah, but you never wrote!" she murmured banteringly, and her clear, unconventional laugh fell upon the night air.

Stoughton, who had seen Mrs. Fielding into her coupé, came hurrying forward to offer his assistance, and a few merry words passed between the party. "Good-night, gentlemen, good-night," said the deep bass of Mr. Idlewild. The young men lifted their hats, and the powerful, prancing horses bore away their lovely burden.

II.

THE young men lit their cigarettes, and sauntered slowly along the pavement. The night was cool and tranquil. The moon had set, but the heavens were brilliant with the frosty glitter which the stars emit in the clear atmosphere of winter. Much of the roar and bustle of the neighborhood had subsided; yet the reverberations of Broadway, dulled by distance, still fell upon the ear like the ceaseless rush of a river heard by one who wakes at night amid the deathly stillness of the woods. The ferrules of their canes struck the sidewalk with the sharp, distinct ring that betokens quiet surroundings.

Their homes lay at some little distance up-town, and they walked and smoked, lost in their own reflections. How susceptible we mortals are to the influences of the natural forces! Our nervous systems respond to the waves of light and sound, to shadow and to luster, to silence and to turmoil, even as the chords of a piano to pressure upon the keys. Who shall escape his moods? We vary from hour to hour. A kiss, a crowd, a peaceful night, an apple-blossom, the pale cold face of one beloved,—what a widely opposite effect each one of these has upon the organism! And what, indeed, is human nature but a series of varied and recurring emotions, strung like pearls upon the thread of individual existence, which is bounded by mystery at either end?

Arthur Remington and Woodbury Stoughton had alike reached one of those halting-places in the struggle for existence, where even the most impetuous and least self-questioning natures have the desire and opportunity to pause and think. The precious boon of pondering on what has been and is to be, out of the sweep of the current, was theirs for a moment. This had been more literally true of their condition three months previous, at which time they had returned to New York to settle down to the serious business of life, as it is called. The

eight preceding years had been passed away from their native city. They both had been graduated at Harvard, and subsequently had studied law and spent a year in traveling abroad. Now they had come back to earn their living, after having enjoyed the best advantages our civilization affords in the way of education. The social position of both was likewise of the best. They belonged to families that had for several generations been people of consideration in society. But although this was the case, each had his way to make in the world. Beyond some five thousand dollars apiece, they had nothing of their own. Their fathers, as is generally the case in America, had made every effort to give them an excellent education, and now expected them to take care of themselves as soon as possible. The fathers were neither of them men of large fortune, and had need of all their income to provide for the expenses of a handsome establishment and growing family. The young men still lived at home. They had just been admitted to the bar, and had set up law offices of their own.

Woodbury Stoughton habitually produced the effect of an indifferent and rather lazy person, with a dash of the cynic. His conversation and bearing were apt to suggest one to whom enthusiasm or serious endeavor was at least distasteful, if not a theme for satire. It had been seemingly his desire while in college to figure as a skeptic of all that was intangible and otherwise than mundane. Watching him stroll along the streets of Cambridge, with an air both fastidious and reserved, a bull-pup at his heels, his fellows tacitly pigeon-holed him as an embryo Chesterfield. For, despite his apathetic ways, there were curious whispers in circulation concerning him. His intimates declared that he was immensely clever. It was said he had read everything. Besides, he was a handsome fellow, of commanding presence, and even those who resented his exclusive demeanor could not deny his ability to converse fluently and with pungency. Several years of schooling abroad as a child had given him a familiarity with foreign languages that served as an additional means of prestige. It came, in short, to be currently stated that, if Woodbury Stoughton only chose to work, he could have any place on the rank-list,—a measure of praise much more flattering in the eyes of his classmates than actual success would have been. He apparently, however, studied but little the college requirements, preferring—as those who voiced his utterances said—to read in self-chosen directions. He professed to be especially enamored of literature which presented most vividly the

philosophy of an epigrammatic pessimism. Aphorisms from Voltaire, La Rochefoucauld, and others of that class, were constantly on his lips.

The young ladies of the university town, who—with the example of the Trojan Helen constantly in mind, so to speak—were invariably suspicious of Parisian manners, did not approve of Mr. Stoughton. To begin with, he seemed to prefer the parties in the adjacent Boston to their own “sociables,” which was an excellent reason for suspecting him of an inclination toward worldliness; and when it was whispered about that he was acquainted with several actresses, the Puritan maidens took refuge in the dreadful anathema that there “was nothing in him.” They even took Arthur Remington, who was a favorite in Cambridge social circles, to task for his intimacy with the handsome Lothario. Miss Bolles, who was rightly supposed to possess great influence with the former, was deputed to inquire what there was to recommend Mr. Stoughton.

“Isn’t he dreadfully fast?” asked the suburban beauty, with a severe look in her serious face.

“Not in the least. Why, how could you have got such an idea?” answered Remington. “He’s fond of having a good time, like the rest of us, but that’s all. No; Woodbury Stoughton is one of the ablest men in the class.”

“Didn’t he stand very low on the rank-list last year?”

“That’s no test. He could have had *any* rank if he had chosen to study.”

Miss Bolles, far from convinced, shook her head. To have the opportunity of improving one’s self and not to do so, seemed to her earnest spirit quite incomprehensible. How many young men there were through the country struggling to obtain the means for a college education, and here was a man—and with natural ability, too—throwing away his advantages! It was simply dreadful, and Mr. Remington was to blame in seeking to defend him.

Nevertheless, the same young ladies regarded this black sheep with a certain awe that was not perhaps void of secret admiration. They could not help admitting that he was handsome. When they met him in the streets they bowed with frigidity, to be sure; but there was an excitement about the encounter for which they could not exactly account, and which the more analytical were conscious was not consistent with the disapproval they harbored. As time went on, indeed, a Miss Margaret Lamb, one of the sweetest and most simple-minded of the set,

allowed herself to become intimate with Stoughton, who had made an exception in her favor in his criticism of Cambridge manners. She presently gave it to be known that she had no idea there was so much *in* Mr. Stoughton, and that he was really very much in earnest, and *so* clever. Some of her companions, as a consequence, modified a little their views in his regard; but the majority preferred to think that Margaret had fallen a victim to her own vanity.

Remington, on the other hand, had been looked upon in his college days as a tolerably easy-going fellow, with amiable, unpretentious manners. There was a nervous energy about him always seeking vent, which had made him conspicuous in various fields of college enterprise. His exertions in the line of athletics, theatricals, and the like, were a contrast to the elegant inactivity of Stoughton, who used to smile withal at the other’s restlessness. He enjoyed life with a keenness that was visible in his expression. In the way of studies he, too, had been negligent, but from a buoyant heedlessness rather than premeditation. It was always his intention to work, and his penitence for his idleness was as sincere as it was apt to prove transitory. But, though impetuous and volatile, there had ever been a current of earnest seriousness beneath the bubbling surface of his days. There were those among his classmates who styled him visionary, and instanced in support thereof his rhapsodizing talk at times, and the tendency he showed for the discussion of serious and sentimental problems with his girl intimates. His devotion to Miss Bolles was a well-known circumstance, and some of his associates, be it said to their shame, looked upon the pale, slim professor’s daughter, whose face reflected the fervor of her earnest views of life, in the light of an infliction. In fact, before the close of his under-graduate course, the influences of sobering reflection had begun to manifest themselves in his conduct, and he became much more assiduous at his studies. Commencement-Day found him above the middle of his class on the rank-list; but, to the surprise of almost everybody, Woodbury Stoughton’s percentage for the Senior year was but two or three removed from the highest.

Remington was one of the few to whom Stoughton’s sudden prowess was no revelation. He was quite aware of the fire that burned beneath his friend’s calm and indifferent exterior—a fire which Stoughton had ever shrunk from acknowledging, but which was just as real as the restless energy which showed itself in the other’s very eyes. Their intimacy had been a singular one. The dissimilarity of their traits had seemingly attracted them

toward each other. The calm, passive force of Stoughton, his deliberate ways, suggestive of reserve power, and his casuistic cleverness had alike appealed to his more plastic companion; and the former had in turn silently watched, with a curious interest, the development of Remington's nervous nature. They were known as great cronies; but their bond of sympathy largely consisted in antagonism to each other's ideas. Stoughton had not been able to disguise from his friend the secret ambition within him; but even in confidential moments his attitude was apologetic, as if he considered all enthusiasm a weakness. While unable to conceal his own susceptibility to the aspirations common to the sober moments of youth, he inveighed against the same as stumbling-blocks in the path of happiness.

Many were the rambles they used to take together on Sunday afternoons, when their classmates who lived in Boston had gone home. They were wont to discuss all sorts of questions, and with great heat, too; for Stoughton was a bitter opponent of authority, and resented the old-time arguments upon which his comrade founded his conclusions. And Remington, while he deplored the upsetting of the opinions he fancied established forever, could not help admitting that the other was very clever, and that, perhaps, what he said regarding the automatism of human beings might have some truth in it. For Woodbury Stoughton professed great admiration for the doctrines of the materialists, and delighted to style himself a victim of the idiosyncrasies of his ancestors. He used to quote the Frenchman's remark that "to reform a man you must begin with his grandmother," and claimed the laws of heredity to be the arbiters of fate. Opinions? Beliefs? Who dared claim (so he argued) that any one set of opinions or beliefs bore the stamp of a supernatural approval? Who was prepared to assert that what men symbolized as divine commands was aught but accumulated human experience of what had been best for the race, —handed down through the centuries from father to son, until it had crystallized as an instinct of the organism and been accredited to a God? Best,—and what was best? The eternal strife went on, and on, and on. Still, the stronger survived and the weaker perished. To earn their bread, a pitiful mass of beings toiled day in, day out, in reeking factories and workshops, and in the bowels of the earth, that their more prosperous brethren might live in luxury. Here, too, the teachings of one were stamped with the disapproval of his neighbor. What some called right there were others to stigmatize as wrong. The laws of human device varied with suc-

ceeding generations, and those of nature ever found a new interpretation. Still, a portion claimed as of divine revelation doctrines to which the rest refused their faith, and the creeds of the world were as diverse as its peoples. And so from age to age man labored his allotted time, died, and was gathered to his fathers; and what came after, no one, not even the wisest, knew.

Those delightful four years of undergraduate life came to an end at last. Class-Day was at hand, and after that they were both to enter the law school. Remington was chosen one of the marshals of his class, an office which is commonly the reward of popularity; and his spirits were of the best as he stood under the flower-belted memorial elm, conducting what is familiarly known to Harvard men as "the exercises at the tree." During these rites, which are witnessed annually by enthusiastic audiences of maidens in muslin and their chaperons, ranged on benches around two sides of a quadrangle or looking down from the dormitory window-seats overhead, the graduating class, having exchanged the spick-and-span apparel of the morning for highly nondescript garments, commit every kind of student eccentricity. They cheer the favorite professors, the victorious "crews" and "nines," and even extend their patronage to the college "goodies," which is the still more aged title of the venerable dames who have the charge of rooms. When at last subjects for applause are no longer to be found, the heroes of the occasion, hand clasped in hand, begin to revolve about the ancient tree, which wears a vast band of choice flowers around its trunk, far removed from the grasp of the tallest of the revelers. The younger classes also rise from the turf upon which they have been lounging, and form three other rings, which begin to revolve with alternate motion. The Sophomores follow the movement of the graduating class, but the Juniors and Freshmen turn from right to left. The class song is sung, and after it "Fair Harvard," the darling air of the university; and then, as the tripping feet speed faster, the voices take up the burden of "Auld Lang Syne" and lift it to the stars. The pace grows frantic now; the arms swing with wild, ecstatic energy; and at a given signal the two hundred youths, who are supposed to be men from this day forth, rush in an indiscriminate mass toward the elm to tear the flowers from their resting-place. Regardless of appearances, or even of justice, they swarm up the mammoth trunk on the backs of each other. The giant lifts the nimble stripling upon his shoulders until his fingers touch

the posies, and robs him to the last bud as he hauls him down. It is *saute qui peut* with a vengeance. The weakest go to the wall, or rather to the earth, and the strong man carries off the prize to his Dulcinea. It is a mimic foretaste of the great world into which they will be let loose upon the morrow.

So at least had reflected Woodbury Stoughton, as he stood a little apart watching the scrimmage with a smile that was half disdainful. He was too lazy, as he would have expressed it, to make so much exertion for the sake of a few roses. There was nobody in especial to whom he wished to present them, and he would get heated for nothing. Therefore, he let the others do the climbing, and amused himself with the sight of their vicissitudes. He would have to encounter plenty of rough-and-tumble in the struggle of the next few years without beginning now. Holloa! there was Arthur Remington barking up the tree, like a good one. Smithson, the university stroke, had him by the legs, and was lifting him toward the goal. A little farther,—there, he had a handful now, and looked with beaming, mocking eyes triumphantly down at the envious faces below. "This way, that's a good fellow, Remington," "Remember your friends," "Pull him down," and the like, rose from a score of throats, until attention was diverted by the success of another aspirant who had clambered to eminence under cover of the confusion. Just then, Remington, who was casting favors right and left, caught sight of Stoughton looking up at him, and with a simple wave of his arm tossed in his direction a choice bunch of red roses which he had intended to reserve for himself. A dozen hands grasped at them as they floated downward, but Stoughton was not the man to suffer himself to be robbed under his very eyes. He strove valiantly for his property, and succeeded in carrying off the major portion of the blushing blossoms. While he was battling, the patience of the stalwart Smithson apparently gave way, and with it the support of Remington, who came tumbling to the earth, clinching however with the tenacity of desperation a few crumpled remains of flowers. The tree was entirely stripped now. In fact, the work of demolition had been vastly shorter than has been its narration, and the crowd, well pleased at the success of the spectacle, already was beginning to scatter in the direction of the "teas."

A spur in the side of Remington's native energy had been the desire to obtain from the rose-belt a *bouquet de corsage* for Miss Bolles, to whom he had promised to show later on in the evening, when the band began

to play and the college-green was alive with lanterns, the room that he had occupied during the four years of his student life. It was a sorry-looking bunch that he had carried off, so he reflected, as he presented them to the young lady, with a stammering, half audible remark, embodying the hope that she would keep them to remember him by. Nor did they look much better, as he scanned them by and by, from a seat beside his study-table, nestling in her waistband. Miss Bolles had possession of the cushioned window-seat, and her slim, girlish profile, surmounted by a jaunty chip hat and large white feather, were outlined as in a frame against the evening air. She held between her thumb and finger the cord of the shade, and gently and pensively swayed the tassel to and fro, while the strains of music and hum of voices floated up from below.

He had been too generous at the tree. He ought to have kept the best for her instead of giving them away. He had been in a position to win for her the choicest of all, and yet there was nothing to show for his endeavors but these faded sprigs. What had Woodbury done with his? he wondered. He had seen Miss Lamb wandering about at Jack Hewson's tea looking quite disconsolate, despite the attendance of a cavalier or two. Very likely Woodbury had found her by this time.

What was he doing here himself? Why had he persuaded Miss Bolles to climb the winding, narrow staircase to his nest in the top story of old Holworthy? He had been looking forward for weeks to this interview, and now it had come. Neither of them had spoken for several minutes. She was listening to the music. How pretty she looked, he thought, as he stealthily gazed at her. His heart was beating like a trip-hammer. Ought he to say anything to her? Would she like it if he did? Did he want to say anything to her, and what was there to say? He loved her—yes, he loved her; but somehow he wasn't ready to be married yet. What would his family say? He had his own way to make in the world. He was ready to work, he was eager to work. He would go out on a sheep-farm or do anything to make money, if only he was sure she cared for him. Yes, come what might, he would tell her his secret,—if it was a secret,—and have it over with. He never could be happy without her, he was sure of that.

So he had presently broken the silence, which was becoming somewhat awkward, with a sententious little speech that was so suggestive of sentiment as to cause Miss Bolles to draw her wrap about her shoulders

with a slight shiver and say she thought it really was time for her to be going. But the young lover would pay no attention to the hint. She should not escape him now. He never might have such an opportunity again. And he rushed to his fate very glibly when once the ice was broken, for he told the sweet descendant of the Puritans he had loved her ever since he had seen her first; that she was the dearest girl in the world, and had so much influence over him that if she would only say she loved him just a little, he would be very, very happy. He called her "Maud," too, and drawing his chair to the window-seat tried to take her hand, which she, poor girl, would not let him have. She sat silent and trembling, nor did she say a word until he had finished. Then she told him quietly, and even a little coldly, that what he asked was quite impossible. She had enjoyed their friendship very much, of course; but the idea of anything else had never entered her head.

"I am so sorry for you, Mr. Remington, but you must try and get on without me. I am not half so good a girl as you make me out to be," and she smiled faintly at her admirer. "I only wish I were," she added, and she covered her face with her hands as she spoke.

Half an hour later, after he had conducted Miss Bolles back to her party and bade her a rather stiff and funeral farewell, Remington took a bee-line for one of the clubs. He felt angry and, as if it were incumbent upon him to do something desperate in retaliation for his discomfiture, he would get drunk. He remembered that Harry Loring had, according to popular report, gone on a prolonged spree of ten days after being thrown over by a certain Miss Bowdoin, and he could now sympathize acutely with his action. The lights in the yard were dying out rapidly, and most of the guests had gone home. The songs of students who had exchanged feminine society for mild bacchanalia were beginning to be audible in the distance, and the greensward was fast assuming the appearance of a deserted battlefield.

As Remington was hurried on by the impetuosity of this mood, he was startled at hearing a voice close at hand ask him whither he was going so fast. Turning his head sharply, he found himself face to face with Woodbury Stoughton, who was sitting placidly smoking a pipe on the fence which bordered the sidewalk. The shade of a large tree concealed his figure from the careless passer.

"Holloa, Wood," exclaimed Remington, and he came to a halt. "What in the world are you doing here?"

"Reflecting, my dear fellow. Nothing worse, I assure you. I've been here most of

the evening." He smoked in silence for a minute. "You see, I was afraid if I went into the yard I might be led into saying something foolish. The last thing my mother said to me before I left home at Christmas was, that I must be careful not to do anything foolish. I've been following her advice; that's all."

Remington nervously switched off the head of an innocent dandelion with his cane. "I've been making a fool of myself to-night," he said.

"I think very likely," said Stoughton. "Did she accept you?" he inquired, presently.

"No."

"Well, you've got off better than I feared. If any one would have guaranteed me the same result, I might have had a pleasant evening; but I didn't dare to risk it." As he spoke, Stoughton looked down half-regretfully at a bunch of withered roses which adorned his lapel. Remington recognized them as the same he had thrown to him from the tree.

"I saw Miss Lamb at Jack Hewson's tea," said Remington.

"She's a nice girl,—a very nice girl." Stoughton shook his head slowly from side to side, and took another puff. "I'd told her that already though, so there was no use in my repeating it to her to-night. It was all I meant to tell her." He spoke the last words with a quiet deliberation. Presently he gave a deep sigh, and, rising, knocked the ashes out of his pipe against the fence. "'To-morrow, to fresh woods and pastures new.' Come on, old fellow. It's the luckiest thing in the world she refused you, and you'll think so, too, before you're a week older."

This prediction did not turn out to be exactly true; for, despite a consciousness that there was a certain compensation in still being free, and not having to go out to a sheep-farm immediately, Remington felt very gloomy for a number of weeks. Stoughton rallied him upon his despondency, and adduced many excellent reasons why he should be thankful that Miss Bolles had given him the mitten. They passed most of the summer, after graduation, at Newport; and it must be confessed that, when the time came for them to enter the law school, Remington did not experience any special elation at the idea of meeting his would-be sweetheart once more. Indeed, he had come to see that there were many things to be considered in the matter; that is to say, his youth, lack of means, and unsettled prospects in life did not warrant him in contracting an engagement. It was better as it was, perhaps. If he continued to love Miss Bolles three years hence, when he had begun to practice law, he would try his fortune again.

Until then he must be content to take his chance; and it was a little surprising to himself, withal, to observe how calmly he was able to face the prospect of taking his chance.

Those next two years at the law school were years of genuine hard study on the part of both Remington and Stoughton. It is very apt to be the case that those who have been easy-going students while under-graduates turn out wonderful workers as soon as they enter the professional schools. They each managed to spend so many hours a day over their law-books that the termination of the course found them thoroughly fagged out, and a year abroad was decreed as the needful tonic in the premises. Miss Bolles must have been a most unsophisticated young person, for Remington left Cambridge this second time with scarcely a pang at parting. Indeed, it is doubtful if there was any formal leave-taking between them. He had found her manner toward him, on his return from Newport, so cool (which was doubtless caused by a conscientious wish to avoid encouragement) that he soon began to plead the multiplicity of his legal duties as an excuse for not making more frequent visits. He scarcely ever went to the Cambridge sociables, and their opportunities for meeting were very few. Miss Margaret Lamb was in poor health during the greater portion of the two years, and Stoughton used to send her fruit and flowers occasionally. She was said to have played too much tennis at Bar Harbor; but, as her father, Professor George Lamb, happened to have been one of the original holders of Agueville and Talpeak Railway stock, she was able to have the best medical attendance.

"Only think," said Stoughton, the evening after their final law examinations, as he and his friend sat on the steps of Dane Hall, taking a last retrospective survey—"Only think, if I'd married Margaret Lamb, what a bonanza I should have struck! Somebody was saying yesterday that the professor is worth a cool million."

"And she's an only daughter," added Remington.

Thus had passed the days of their novitiate. A three months' experience of actual life had already begun to color the current of their ideas. Just as buds, which, fashioned through long months of dark, silent growth, burst into light and prominence beneath a spring day's varying sun and shower, impulses and impressions hitherto unknown to them were welling up under contact with the workaday world. They were passing through the disillusionizing process common to all carefully educated young men. The realities of life were very different from what they had pict-

ured them at the university. They had come to New York with the knowledge of their superiority to the mass of mankind, and confident of recognition. They were anxious to shine in their calling, to make money, to become prominent in the community; and though indefinite as to the precise methods, they had never doubted their ability to do so. But the result thus far had been quite removed from their expectation. They had found their theories and refinements of little apparent avail for the wear and tear of downtown life.

The discovery had been more or less mortifying. Stoughton, reserved, dignified, almost phlegmatic in his apparent indifference, yet eager at heart; Remington, nervous, impetuous, scarcely less clever,—they alike felt a certain chagrin at the realization of their (so to speak) helplessness among their fellows. The very qualities that distinguished them from the multitude seemed to unfit them for competition, to bar them from success.

Upon the mind of each the effect had been peculiar. To Remington, the most serious shock had been a keener appreciation of the force of materialism, a rude revolutionizing of his emotional side; but the feeling aroused in Stoughton was distinctly one of thwarted ambition and wounded vanity. Accustomed hitherto, almost without exertion, to be easily first, he had looked forward—vaguely, perhaps, yet confidently—to a conspicuous recognition. He had supposed the accomplished ability of which he knew himself to be possessed would be a free pass to advancement; instead of which he saw himself outstripped by men of Finchley's stripe,—men whom he sneered at, but whom he now secretly envied.

Such reflections were a part of their thoughts this evening, as they pursued their way in company up Fifth avenue. Stoughton's home was the nearer, and they stood for a moment chatting at the corner where it was necessary for him to branch off. To-morrow was Sunday. For the coming week they found themselves deep in engagements.

"There's no rest for the weary in this life," said Remington, with a sigh. "However, we can sleep late to-morrow; that's one comfort. By Jove, it's a fine night!" Carelessly swinging his cane, he gazed up at the clear heavens.

"Right you are," answered Stoughton, absently. "It's a strange world, Arthur," he continued, suddenly pulling himself together. "Well, as the bard says,

"If you can't get in by the golden gate,
Climb over the garden wall."

Good-night!"

"Good-night!" And the young men parted.

III.

It was usual with Remington and Stoughton to remain down-town until late in the afternoon, returning just in time to get ready for dinner. They were apt to walk the distance, so as to obtain a little fresh air and exercise. Sometimes they took the "Elevated," and tried to make a few calls at the afternoon tea hour. The gay season had begun, and invitations to all sorts of entertainments were pouring in upon them. Their social position gave them the *entrée* to the most agreeable houses in town.

One afternoon, shortly after the episode at Delmonico's, Stoughton carried his friend to call on Mrs. Fielding. She lived on Fifth avenue in the vicinity of Sixtieth street. The irreproachable man-servant who answered the bell had reached a period of life equally removed from the rawness of youth and the seediness of age. With a demeanor subdued, and not too unctuous to be consistent with a proper self-respect, he aided them to take off their overcoats in a large hall, exquisitely furnished in the spirit of the modern school of high art.

"What name shall I say, sir?"

"Mr. Remington, please."

"Thank you, sir." The servant drew aside the portière which hung across the door-way of the adjoining room: "Mr. Woodbury Stoughton — Mr. Remington."

Remington found himself in a spacious parlor, dim with faint daylight, strained through colored shades, and the afterglow of a wood fire. A maze of low tables, footstools, and other tasteful-looking knickknacks separated the young men from their hostess, whose sofa was beside the distant hearth. She laid aside the volume which lay open on her lap and rose to greet them with a cordial smile.

She was dressed simply, in a loose-fitting costume of some cashmere material of a neutral, greenish-brown tint. A single pale pink rose, with a dash of deeper color at the tips of its leaves, lay on her bosom. Remington noticed the same excessively refined delicacy of feature that had struck him the evening he had seen her at Delmonico's; but, in this dimmer light, no suggestion of meagerness marred the fascination of her pretty face. The apartment was in harmony with its mistress, a soothing pleasure to the eye that appreciates true elegance and grace. That perfection of effect, of which the heightening charm is an apparent absence of art, was there completely realized.

"You see, Mrs. Fielding," said Stoughton, "I have taken an early advantage of your

permission to bring my friend Mr. Remington to visit you."

"You are very good; Mr. Remington is welcome both on your account and on his own," she said in a sweet, low voice, and with a manner slightly languid, but completely gracious. "I know your mother and sisters very well, Mr. Remington," she continued, as she gave the young man her thin white hand. "Your mother is well, I hope?"

"Yes; she and my sister Mabel are in Boston for a few days." Despite her unaffected simplicity Remington blushed, with a sense of that discrepancy which exists between Sèvres china and common ware.

"Ah, how charming! Pray sit down, Mr. Remington." She reestablished herself on the lounge, and touched a little bell on the table beside her, which emitted a musical sound. The decorous man-servant appeared.

"The tea, Dawson."

Mrs. Fielding leaned back against the cushions. "You have come back to New York to stay, I hope, Mr. Remington."

"Yes, I believe so, Mrs. Fielding."

"I tell Mr. Remington," said Stoughton, "that if he desires to be a success, he must write himself down in Mrs. Fielding's good graces."

"I am sure Mr. Remington needs no assistance from any one to win his way," she said with a pleasant smile; "I can see he is clever."

Remington laughed confusedly. "Oh, I assure you that is quite a mistake," he murmured. Then, with an attempt at effusiveness which sounded a little elaborate: "I shall try to convince Mrs. Fielding of my desire for her favorable opinion."

The tea-things, a dainty Wedgwood service of quaint design, were brought in by Dawson and placed on the low plush-covered table at her elbow. She proceeded to make the tea while Stoughton told a bit or two of society news in his amusing vein.

"I saw you the other evening at Delmonico's, I think, Mr. Remington," said Mrs. Fielding presently. "That Miss Idlewild is a lovely-looking girl. Do you know her well?"

"Only slightly."

Stoughton gave an amused laugh. "You must not question him too closely there, Mrs. Fielding. I suspect Mr. Remington of being a gay deceiver."

"Indeed," she murmured softly. She was pouring out tea into one of the quaint little cups, and, as she spoke, raised her eyes therefrom and let them fall inquiringly on Remington. "Are you, too, of the faithless kind?" she asked with a sigh of simulated despair.

"Oh, I trust not," he answered, with a

nervous laugh; and as her glance encountered his, he blushed.

"Perhaps Mr. Remington will make a confidante of me some day when he comes to see me alone. I can keep a secret. Do you take tea, Mr. Remington?" she asked, with her head poised on one side, and another sly, blithe glance at the young man.

Remington disliked tea. "If you please," he answered.

"One lump, or two?" and she gracefully balanced the second bit of sugar in a lilliputian pair of tongs above the smoking beverage. "But stay; I will leave it in the saucer, and you shall choose for yourself," she added airily, before Remington could reply.

As he rose to receive his cup from her hand the portière was drawn aside, and the voice of Dawson announced "Miss Tremaine—Miss Lawton—Miss Crosby."

"How sweet of you, my dears!" Mrs. Fielding embraced all of the trio, who, kept in countenance by the superiority of their numbers, all chattered effusively at the same moment. They were young girls, dressed tastefully and in the height of fashion.

Miss Tremaine was a tall, gaunt girl, with large bones and a long neck, which gave her something of a giraffe-like demeanor. She was eminently vivacious, and began at once to relate in a chattering but spirited tone the latest social intelligence. "Oh, Ethel," she cried, turning toward Mrs. Fielding, "have you heard that the Guards have been ordered to the war in the Transvaal? Isn't it quite too distressing for poor dear Lady Poppleton? You know 'Beauty' will have to go. You remember 'Beauty,' of course?"

"What, the little one with the straw whiskers?"

"No, dear, that was 'Adonis.' 'Beauty' is the clever one with the large eyes, who stopped, when he was out here, at the Dudley Robinsons'."

Remington found himself beside Miss Lawton, a young lady in the vicinity of twenty-three, who possessed a pretty, round, florid face, with its traditional accompaniments of blue eyes and flaxen hair, but was short and dumpy. They had already met at a ball or two. Unlike Miss Tremaine, the still hunt was her method, and for some minutes she was very undemonstrative; but when the ice was once broken, her chirpy prattle had the easy flow of a brook in early summer.

"Weren't you at Bar Harbor last summer, Mr. Remington?"

"Yes, for a short time."

"I thought I saw you there. I staid eight weeks, and was dreadfully sorry to come home. It was my fifth season there. Isn't it

a fascinating place? I do think it's the nicest place to go to in the summer I know of. Some people call it rowdy; I don't; do you, Mr. Remington? Mamma is always complaining about my being such a *gad* down there, as she calls it; but I can't see the harm of seeing people naturally, can you? I make up for it by being frightfully proper in town. That reminds me, parties are beginning early this year. I suppose you will go about a great deal this winter, Mr. Remington. Mrs. David Kochlin's cards are out for a large *musical*, and the George Butts—this was told me in strict confidence, so you must not say I told you—are to give a ball soon. Their daughter Pauline is a *débutante*. And then the Idlewilds. Do you know the Idlewilds, Mr. Remington?"

"A little."

"Oh, really! I don't know them, but they've sent me an invitation. I think I shall go. I hear the house is perfectly fascinating. Mamma doesn't approve much of my going, but it will be such fun. Mr. Stoughton is a great friend of yours, isn't he? I think he's so nice! He's a lawyer, I hear. I should think the law would be frightfully stupid. Oh, but how dreadful of me! Perhaps you're a lawyer, Mr. Remington!" She stopped short with a little gasp, and then, in response to Remington's amused nod,—“What, really? Well, you'll forgive me, wont you, Mr. Remington?"

"What is that, Florence, I hear about forgiving?" exclaimed Mrs. Fielding, turning toward them. "You are getting on quite too fast. I can't have you monopolizing Mr. Remington altogether. You must beware of Miss Lawton, Mr. Remington; she is dangerous."

"I have discovered that already," said the young man, with a significant smile.

"Ah, now," cried Miss Lawton in her demure way, "how unkind! And all, Ethel, because I didn't happen to know that he's a lawyer."

"I have no doubt it was all your fault, dear. But you haven't drunk your tea, Mr. Remington. It is quite cold. I am going to give you another cup. Yes, I insist; and you shall sit over here where Miss Lawton cannot engross your attention."

As Remington crossed over to the vacant place on Mrs. Fielding's lounge, his glance fell upon Miss Crosby, who was listening intently to something Stoughton was saying. Remington had been introduced to her a few evenings before, and although he had exchanged but a few words with her, the agreeable impression thereof had lingered with him a little. She was a cousin of Mrs. Fielding,

and had much of her physique. The refined delicacy of her features was animated by the wistful interest of budding womanhood. One became aware at first that she had sympathetic brown eyes and a quiet manner.

"Tell me," said Mrs. Fielding, interrupting his momentary reverie with a beseeching little air as of a desire for confidence, "how do you think you are going to like New York?"

A few minutes later Remington found himself talking to his fair hostess with a freedom that was delightful, and yet surprising to himself withal. The peculiar air of sympathy with which she listened to what he had to say drew from him, almost unwittingly, a frank exposure of his ideas. It was easy to be unreserved, for she seemed so quick to catch his meaning, so appreciative of mere suggestions of thought. She was, besides, graceful and pleasing. Her air expressed the perfection of natural elegance. She must be very clever,—and yet how young-looking she was. Her years could be scarcely greater in number than his own. But women mature so much faster than men. He was a mere boy beside her.

He spoke of his travels, of the chitchat of the day, and of the defects of the reigning prima donna. Then, as he felt himself understood, he dwelt a little on his impressions of the great city. Money was the ruling spirit of the age, and the seeming dearth of lofty ambitions a depressing evil.

"I am so glad to hear you talk so," she murmured. "It is refreshing to meet a man who cares for something beyond dollars and cents." She sighed gently. "And so you are a lawyer, Mr. Remington?"

"Yes, I have decided on the law as a profession."

"How interesting!" and she gently knocked together in her clasped hands a pair of silver bracelets which she had untwisted from her arms.

"Scarcely interesting, I fear," replied Remington with a little laugh, which betrayed, however, that he was pleased. "Your sex is wont to apply that adjective less indulgently."

"Ah, but I cannot agree with you. It must be grand to be a lawyer and have important cases—or causes, you see I am ignorant of the precise term—to defend." She leaned back against the cushions and looked at him earnestly from under her penthouse lids.

Remington blushed and his eyes fell. He nervously indented with the point of his cane one of the flowers which patterned the carpet. "Perhaps—when you have them to defend. I am only a beginner."

"Yes, but everything has a beginning," she murmured in low, sweet tones.

"True." There was a pause, as if each were wrapt in thought. Remington reached out his hand and took from the plush table the volume she had been reading. "Permit me," he said. "Ah, Swinburne!" and he opened the book and began to turn over the pages.

"Do you know him, Mr. Remington?"

"A little." His eyes caught a passage which he paused to dwell upon.

"What is it, Mr. Remington?" and she bent over so that she might share the page with the young man. "'Before Dawn.' That is one of my favorites. Is it not lovely?"

They were silent for a moment. It was the last stanza of the poem which had attracted Remington's attention, and, as he came to it again in conclusion, he nodded his head in acquiescence with her enthusiasm. Mrs. Fielding repeated in soft murmur the lines that had struck his fancy:

"So hath it been, so be it;
For who shall live and flee it?
But look that no man see it
Or hear it unaware:
Lest all who love and choose him
See love and so refuse him,
For all who find him lose him;
But all have found him fair."

"Adorable, are they not?" she continued. "There is a wealth of deliciousness in Swinburne." And her pupils, dilated with their sense of enjoyment, sought his own.

"Exquisite," he replied; but, although the effect of the words just read was vastly soothing, he was not greatly concerned with their meaning. Without knowing exactly why, he was conscious of a vague delight he had no desire to analyze,—perhaps lest he might arouse that bugbear of a moral censor. The atmosphere of this refined, charming woman had the effect upon him as of violets on the sense of smell, or smooth rich cream upon the palate. What Stoughton had said regarding her previous attachment occurred to him. She had been married about a year ago, and had recently returned home from abroad. What was her purpose, her object in life now? he wondered. What were her feelings, her thoughts, her ideas?

"You are fond of reading—of books?" he inquired, gently.

"Yes,—that is, of real books, Mr. Remington. I sometimes think," she went on to say, "we have no literature in this country. The characters in our novels and poems are wanting in color and spontaneity. They are cardboard men and women, rather than flesh and blood. We lack passion as a nation—does

it not strike you so, Mr. Remington? We are artificial and cold. We are forever repressing ourselves." She gave a little shiver, and the curve of her lips wore for an instant the shadow of something half-bitter, half-weary.

"Yes," he answered: but before he could proceed, he became aware that the others had risen and were shaking hands with Mrs. Fielding. He stood up mechanically.

"I'm afraid you think I'm very dreadful, Mr. Remington," piped Miss Lawton wistfully, as she tripped past him. He found himself beside Miss Crosby.

"I know one of your sisters, Mr. Remington," she said softly. "We were at school together. Have you returned to New York for good?"

"For better or for worse, Miss Crosby," answered Remington, with a smile; "or rather, I should say, for richer or for poorer."

"Yes?" She pronounced the word with a little laugh and a sweet sibilation of the final consonant. There was an eloquent earnestness about her expression as she gazed at him that made Remington almost regret his flippancy.

It was a look Dorothy Crosby's face was apt to assume at such times as her imagination was appealed to, especially during conversations with the other sex, or when in the presence of fine scenery or listening to music. If her nervous system was powerfully affected, as often happened where beautiful music was concerned, the expression in question savored of a pleasure that was almost pain. Her large luminous brown eyes, looking out from a physiognomy noticeably delicate and refined, heightened the natural effect of this peculiarity, which had already caused her to be described in society as "interesting." She generally carried her head a little on one side at such moments. Young men sometimes made the mistake of ascribing this intensity of expression to the effect of their identities instead of to the interest of her own reflections.

She was a *débutante*. She lived alone with her mother, who was a widow. Her sister, Mrs. Charles Maclane, a beauty of the grand, dashing type, whose regular features were for several seasons a source of heart-ache to youthful admirers of classical loveliness, had made a brilliant match, it was considered, in dowering with her charms the hearth of a young millionaire. Marian Crosby, as her name was prior to that step, had, to be a little metaphorical, made a triumphal march to the altar over a route strewn with bleeding hearts. In short, she had been widely admired and had flirted desperately. The world

said she came well by this behavior, for her mother—whom no one, to judge from the demure repose of that good lady's maturity, would have ventured to suspect of early diablerie—had been just such another when she was a girl in Baltimore. The latter, however, unlike her elder daughter, had wedded a poor man. Mr. Crosby's fascinations had carried her maiden heart by storm, and she had followed the young lawyer to his simple home in New York. He was nevertheless, though comparatively penniless, an aristocrat by birth; and to his charming ways were added the more substantial advantage of good parts and a scholarly ambition. Had his health been able to withstand the strain of a rigorous devotion to his profession, distinction would doubtless in time have blessed their lot; but such was not to be, and shortly after Dorothy's birth Mrs. Crosby was left a widow.

Dorothy was like her father in person; and with the paternal form she had inherited that mixture of the serious and the gay which had marked his temperament. Coupled with intelligence of expression, she possessed to a high degree the ineffable air of refinement, the modest grace and finish of bearing, that are the outcome of generations of good breeding alone, and without which the self-possessed independence and smartness supposed to be the boasted heritage of American girls are but garish virtues. Her blood and nurture rendered her proof against everything that lacked delicacy. There are dispositions which, recognizing things of unrefined or sensual purport to be hurtful, bravely put them aside and cease to regret the self-denial; but to Dorothy aught that savored of coarseness in thought or action gave absolute pain. Such things were as repugnant and foreign to her nature as soot to the surface of the lily. She had been born so, and doubtless the purity and delicacy were no more to her merit than it is creditable to you and me that we do not use our rudimentary organs or have ceased to believe in witches. She could not help being what she was. Some one before her in the ancestral line had striven to be pure and refined, and Dorothy was the result of such endeavor. And thereby hangs a philosophy. We bear fruit in our descendants, and individual effort is the secret of the progress of the world. A man's possibilities are decided in his mother's womb. Each one of us mortals has his limits—his gamut, so to speak; and the best performer cannot strike a note to thrill the soul from a low-priced instrument. Life is a growth, and whosoever touches the stops aright will, though he play

himself a feeble strain, transmit to his children the power for sweeter melody.

The strenuous voice of Miss Tremaine, urging upon Miss Crosby the necessity of immediate departure, interrupted their conversation. Remington turned to proffer his own adieus.

"I hope you will come to see me very soon, Mr. Remington." Mrs. Fielding's eyes, as they met his, seemed liquid with a mute solicitation for sympathy. Her loose, open

sleeve, receding up her outstretched arm, displayed a frail, snow-white wrist.

The wished-for epigram failed to respond to his need. "I shall be very happy to, I'm sure," he replied; and he coveted the half-audacious badinage of Stoughton's farewell.

The young men walked along Fifth avenue with the attractive trio, and Remington, as he left Miss Crosby on her threshold, obtained her promise to dance the german with him at the Idlewilds'.

(To be continued.)

AT THE GRAVE OF CHARLES WOLFE.

Wolfe, the poet, is buried in Clonmel Parish Churchyard. Queenstown, of which this is the cemetery, was early a resort for consumptives.

WHERE the graves are many, we looked for one.
 Oh, the Irish rose was red,
 And the dark stones saddened the setting sun
 With the names of the early dead.
 Then a child who, somehow, had heard of *him*
 In the land we love so well,
 Kept lifting the grass till the dew was dim
 In the churchyard of Clonmel.

The sexton came. "Can you tell us where
 Charles Wolfe is buried?" "I can.
 See, that is his grave in the corner there.
 (Ay, he was a clever man
 If God had spared him!) It's many that come
 To be looking for him!" said he.
 But the boy kept whispering, "Not a drum
 Was heard" — in the dusk to me.

(Then the gray man tore a vine from the wall
 Of the roofless church where he lay,
 And the leaves that the withering year let fall
 He swept with the ivy away;
 And, as we read on the rock the words
 That, writ in the moss, we found,
 Right over his bosom a shower of birds
 In music fell to the ground.)

Young Poet, I wonder did you care,
 Did it move you in your rest,
 To hear that child in his golden hair
 From the mighty woods of the West,
 Repeating your verse of his own sweet will,
 To the sound of the twilight bell,
 Years after your beating heart was still
 In the churchyard of Clonmel?

S. M. B. Piatt.

ORIGINAL DOCUMENTS OF THE NEW TESTAMENT.

ST. JOHN AS A SCRIBE. (FROM A TENTH CENTURY MS.)

IT is well known to those who have, in any degree, busied themselves with the investigation of the fountains of the text of the New Testament, as presented to us by modern scholars, that, in the vast majority of doubtful passages, the multitudinous authorities in the shape of manuscripts, versions, and fathers are reduced to two, viz.: the Sinaitic manuscript discovered by Tischendorf in the Convent of St. Catharine on Mount Sinai, and the Vatican manuscript preserved in the great Roman library. Without entering into the romantic history of the discovery of the first, or the almost equally romantic attempts to collate the jealously guarded text of the second, it is sufficient to remark that the most recent results of criticism, as given in the New Testament of Westcott and Hort, lead us to the conclusion that no readings of B (the Vatican manuscript) can safely be rejected; and that the text of the two manuscripts is much older than the vellum on which they are written, and cannot be far removed from the autographs themselves. Against these results, by means of which such preëminence is given to these documents as to make them outweigh a crowd of lesser

and later witnesses, very grave (not to say violent) objections are periodically made. Mr. McLellan, for instance, maintains that the characteristic of modern textual criticism is servile submission to two Egyptian (!) manuscripts of the fourth century, and that the New Testament has been forced into the bondage of Egypt! And Mr. Burgon believes the very citadel of revealed truth to be undergoing assault and battery, and that it is the business of every faithful man to bestir himself, "*ne quid detrimenti civitas Dei capiat.*"

Into the dust and heat of this arena it is no part of ours to venture; but the question presents itself here, as in so many other similar disputes, whether there be not some shorter way to obtain a correct estimate of the worth of these early manuscripts, without coming between the spears of the specialists. May it not be possible, by a purely paleographical argument, with no theological conscience at all, to determine for ourselves whether the manuscripts in question do really diverge from a point near the autographs? Is there no way of putting into the witness-box the very scribes who wrote the manuscripts, and of making them tell what it was that they really copied from in preparing those magnificent vellum books of the fourth century which are so much loved by one school of critics and reviled by the other? In order to do this, we begin with a few simple preliminary considerations, and ask ourselves what we know about the ways of that important race of men whom the printing-press abolished,—the copyists or scribes. Above is a picture from a tenth century manuscript of the Gospels, described in Montfaucon's *Bibliotheca Coisliniana*. It represents St. John at work, writing or copying his own Gospel. His writing-desk is fitted with a double ink-stand for red and black inks, a pen-cutter, a sponge for erasing a passage wrongly written, etc. The pages, open on the desk, contain the words with which the Gospel begins, and are evidently meant to represent leaves of a vellum book; a new leaf lies on the writer's knee; moreover, the writing is uncial (or in the great character), and is ornamented with breathings and accents. Observe, also, that the writing is abbreviated in an unusual manner. The artist, then, has represented St. John using writing materials of his own time, and is apparently unaware that the original

manuscript of the Gospel must have been written upon paper rather than vellum, and without breathings or accents, and certainly without any such abbreviation of the word Logos as the scribe suggests. He imagines

ST. MARK AS A SCRIBE. (FROM A SIXTH CENTURY MS.)

St. John to be a scribe of an order not very different from himself.

If, on the other hand, we examine the accompanying sketch of St. Mark as a scribe, taken from the recently discovered sixth century manuscript of the Gospels, the Codex Rossanensis, we shall see that there is a distinct consciousness in the mind of the artist that the Gospels were not always nor originally written upon vellum. Instead of a sheet of vellum, we have a long strip of writing material, which can hardly be anything else than a roll of papyrus. It is to this material that our minds must revert also if we would form an idea of the appearance of an original MS. of the Gospels. Such paper is prepared from thin layers of the stem of an Egyptian reed, pressed and smoothed and polished, and trimmed into the single sheets which, when glued together, form the roll or book. The appearance presented by such a roll, when opened, would be that of a great many narrow columns of writing standing side by side. Now, if any one were to open the pages of the Vatican or the Sinaitic manuscript, he would be struck with a precisely similar appearance: in the first he would see six narrow columns facing him, and in the second eight columns of writing; and almost the first thought that would occur to the mind would be that each of these manuscripts was closely related to a papyrus roll of the New Testament, since they still bear traces of the arrangement of text peculiar to such rolls. And

this discovery at once provokes our closer scrutiny, since we know for certain that in some of the Epistles paper, and not parchment, was employed, and have good reason for believing it to have been the more usual material.

Before determining the character of the rolls, we note two or three other peculiarities of the early scribes; and, first of all, that they were trained, not only to write in large character and continuously, but also to write lines of given length. The importance of such a custom is obvious: it furnished a means of measuring the contents of the book, was a convenience in determining the pay of the scribe, and was an important help in the citation of passages at a time when the uniformity of printed editions was unknown. To have engaged a scribe, for instance, to write at so much per hundred lines would have been absurd, unless the lines had been specified within certain narrow limits. In order to fix the line, two methods were adopted, the models corresponding to which were selected from the principal poems of the Greek and Latin literature. First of all, there was the long line, or hexameter, taken from the Iliad or Odyssey; and this seems to have been the pattern most commonly used. If it was too long for the width of the strips of paper upon which the scribe was writing, he divided the number of syllables or letters which such a line ought to contain into two or three parts, and wrote his hexameter as two or three lines. The effect would be just as if one were to print an edition of "Evangeline" as follows:

This is the forest primeval the
murmuring pines and the hemlocks
bearded with moss and in garments
green indistinct in the twilight.

A little examination shows that this mode of writing survives in the Vatican Codex. The average length of such a line is about sixteen syllables, and the half lines as we find them in the manuscript in question are found to contain seven or eight syllables, with occasional exceptions. If, for instance, we were to represent the opening of the Gospel of John in English, after the fashion in which it is arranged in the Vatican Codex, we should have—

In the beginning was the Word
and the Word was with God and the
Word was God the same was in the
beginning with God all things were

And better evidence still may be found in the case where St. James has fallen into an accidental hexameter, which is found to

occupy exactly two lines of the manuscript, and may be represented by

Every gift that is
good and every boon that
is matchless.

The second pattern was the meter used by the Greek tragedians and known as the iambic trimeter, a verse of twelve syllables, which may be divided in the same way as the previous pattern. Precisely similar inquiry shows that this divided line is the base of the Sinaitic manuscript: if, for instance, we take the iambic verse which St. Paul quotes from Menander, to the effect that "Evil communications corrupt good manners," we should find that the passage occupied two lines exactly in the manuscript. Although this type of writing is not so common as the other, yet I believe it can be shown that it was the very line employed by Josephus in writing his Antiquities, to say nothing of other early writers.

We have now advanced in our investigation by an important step; for in establishing the existence of pattern lines, we have quantities which are capable of very little variation, and must have remained very nearly the same since they first appeared in the written text. Every scribe who copies such a line has a tendency to preserve the line intact, because he recognizes it as the literary model. If he diverges from it at all, it will probably soon become a wide variation, such as we find in many irregularly written manuscripts of later times. The next peculiarity lies in the fact that, the sheets and rolls of paper being prepared and sold in given sizes, a special number of lines comes to be allotted to each page, so that a scribe has not only a tendency to write pattern lines, but, if he is in the habit of employing paper of a given size, his tendency is to write pages of given size, containing a given number of lines. In fact, before writing a page, he generally rules the paper with the number of lines which he considers proper. The last peculiarity is this: that the early scribes were far more careful than we are in the point of finishing the sheet of paper on which they were writing: if, for instance, a letter was written on a roll of five columns, the fifth column would be generally found to be almost as completely filled as the preceding four. Whether this was a feature of polite education, or whether it was simply due in many cases to the economy of paper, it is impossible to say; but I think we shall be able to establish the statement with a good degree of certainty. St. John, for instance, in his Second and Third Epistles, complains in most definite language of having many things to say for which paper and ink did

not suffice; and it would be very unlikely that a person should make such a statement and then leave the last sheet of paper blank. Curiously, too, as may easily be noticed even in the English translation, the two Epistles are precisely of the same length, and must therefore have been written upon the same space of paper. We shall show presently that each of them was a roll of five columns.

It must now be clear that, if the habits of the scribes (and this term is not limited to professional writers) be as we have intimated, it ought to be possible to restore approximately the original pages of the New Testament writers, and of the Epistles in particular, as soon as we can determine the original size of the pages which they wrote; and this possibility may be realized in the following manner:

The writer of the Vatican Codex arranged his text so as to place on each page three columns of forty-two lines each. If we divide each of these triple columns into three equal parts, and place these parts in succession so as to form a roll, it will be found that the greater part of the Epistles in the New Testament at once divide into fully written rolls, after the manner previously indicated. For instance, each of the two shorter Epistles of John occupies in the Vatican manuscript a column of forty-two lines, and twenty-seven lines; so that each of them is within a single line of five pages, such as would be formed by dividing the columns into sections of fourteen lines: for $3 \times 14 = 42$, and $2 \times 14 = 28$. If, then, we represent the subdivided page, consisting of fourteen lines, each of which is a half hexameter or near it, by the letter V, we should represent a complete page of the manuscript by

v v v
v v v
v v v

or, in other words, the manuscript was reduced from a papyrus roll by arranging the pages of the roll, nine in a square. And by the same method of representation, each of the shorter Epistles of St. John is represented by

v v .
v v .
v . .

The appearance of such a roll in its original form may be gathered from the accompanying figure (page 308).

Without making any of the previous assumptions as to model lines and pattern-pages, an observation of the manuscript itself will

show that there is a curious persistence in the way the separate Epistles have of ending two-thirds down the Vatican column; and this at once invites the subdivision which we made; and without going unduly into detail, we simply remark that every one of the Epistles of John, the Epistles of Jude and James, and the Epistles to the Galatians and II. Corinthians end at the place in the column which we have indicated,—a very remarkable peculiarity, and one for which the scribe who copied the manuscripts is certainly not responsible. He might, perhaps, have schemed to end his separate documents with the end of the columns, but no possible inducement existed for ending them two-thirds down the page. The peculiarity is, therefore, antecedent to the period of production of the manuscript.

When we turn to the Sinaitic manuscript, we shall find, in a similar manner, that the four columns, each of forty-eight lines, which go to make up a page of the document immediately suggest a subdivision of each column into four equal parts; and when this is done, we at once find that a number of the remaining books divide into fully written paper rolls.

In each of these subdivisions there are, as previously explained, twelve half-iambic lines; and if each subdivision be denoted by the sign S, the whole page is represented by

S	S	S	S
S	S	S	S
S	S	S	S
S	S	S	S

or, in other words, the scribe reduced his papyrus document to the vellum by placing sixteen of the papyrus pages in a square. In this case also the subdivision was suggested by the persistent way in which the several books ended at the twelfth, twenty-fourth, and thirty-sixth lines of the columns.

We shall verify the accuracy of this supposition, as to the mode of composition of the manuscript, by referring to some curious blunders of the scribe; but before passing to these, we stop and examine the point which the argument has reached. By a very simple process of section, we have reproduced a series of papyrus rolls of the books of the New Testament of two distinct types, and in either case not infrequently fully written on the last sheet of the roll. Now we need scarcely say that, if a series of documents were written or printed in any regular form so as to occupy complete pages, this fullness of the pages will disappear as soon as ever the pattern of the original writing is deserted; and further, if the original writings were not written on full rolls, no

ΙΩΑΝΟΥ Β

οὐτοῦ πατρός ἐκ θεοῦ καὶ γὰρ ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	οὐτοῦ πατρός ἐκ θεοῦ καὶ γὰρ ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	οὐτοῦ πατρός ἐκ θεοῦ καὶ γὰρ ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	οὐτοῦ πατρός ἐκ θεοῦ καὶ γὰρ ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη
ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη
ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη
ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη	ὁ υἱὸς ἐκ τοῦ πνεύματος ἐγενήθη

amount of change of style or size of page would ever bring them into a series of fully written pages. It follows, therefore, that the papyrus rolls which we have artificially constructed must be extremely close imitations, both as to lines and pages, of the actual autograph rolls. The truth of the theory will, however, be most apparent in the smaller documents, where various readings exercise less disturbance.

The two great manuscripts are, therefore, closely related to the very autographs of the New Testament, which was the point which we started to establish.

But now we return to the actual subdivision of the pages of the Sinaitic manuscript, and verify the method by the consideration of some indubitable errors into which the copyist has fallen: the errors shall be represented as nearly as possible by their English equivalents.

In the twelfth verse of the Epistle of Jude the scribe of the Sinaitic Codex ought to have written the words, "*These are spots in your love feasts,*" etc.; but by mistake he wandered to a passage some verses lower down, and began to write "*These are murmurers, complainers,*" etc., continuing for some lines, until he found out his mistake and proceeded to transcribe the passage correctly, leaving the erroneous words in the text, where they may still be seen. When we restore the document by the process of subdivision, the error explains itself; both of the passages confounded together are the first lines of pages, and the scribe has simply mistaken his page, or wandered from it in search of the words "*These are,*" which begin the two paragraphs.

The next instance is a still more eccentric mistake. In copying the First Epistle of Peter, at chap. ii. v. 12, the scribe seems to have finished a page, and was to resume with the words "*glory to God in the day of visitation*"; but upon returning to his work, he opened at the Second Epistle of Peter by mistake, and began to look along the pages for his catch-word "*glory*"; having found it in the sentence "*glory they do not tremble to blaspheme,*" or, as in the ordinary version, "*they are not afraid to speak evil of dignities,*" he proceeded to copy, waking up after awhile to the sense of his error, which still disfigures the Sinaitic manuscript. But the second passage would not have misled him, if the pages had not been subdivided as shown in the previous investigation, for it is only on such a hypothesis that the words in question are found at the top of a page at all.

One other instance shall be given, as it is an interesting example of a place where the critics and revisers, by extreme adherence

to the letter of the oldest authorities, have perpetuated the blunder of a scribe. The margin of the revised version in II. Peter iii. 11 directs us to read, "The earth and the works that are therein shall be discovered." "Discovered" is more elegant English for "found," and makes very doubtful sense. In the fifteenth verse of the same chapter the sentence reads, "That ye may be FOUND of him in peace." As soon as the pages are arranged in our hypothetical papyrus roll, it is at once seen that this is an exactly similar error to the preceding, and arises from the wandering of a scribe's eye from the top of a column to the top of an almost adjacent column. The error is more unfortunate, because it happens to disfigure first-class manuscripts.

It is needless to say that, if the theory implied in the foregoing pages be a correct one, it must have a very important weight in the criticism of the text; and the more so, as it is derived from considerations of a distinctly non-subjective character. We shall illustrate its use in the criticism of a very important passage in the Gospel of John, at the close of the seventh chapter, which the critics and revisers mark with brackets as being, probably, not authentic.

The passage describes an occasion on which, to quote Professor Seeley's fine judgment in "*Ecce Homo,*"

"He (Jesus) exhibited a profound delicacy, of which there is no other example in the ancient world, and which anticipates and excels all that is noblest in chivalrous and finest in modern manners."

In another passage, he refers to it as follows:

"A remarkable story which appears in St. John's biography, though it is apparently an interpolation in that place, may serve this purpose, and will at the same time illustrate the difference between scholastic and living or instinctive virtue. Some of the leading religious men of Jerusalem had detected a woman in adultery. It occurred to them that the case afforded a good opportunity of making an experiment upon Christ. They might use it to discover how he regarded the Mosaic law. That he was heterodox on the subject of that law they had reason to believe, for he had openly quoted some Mosaic maxims and declared them at least incomplete, substituting for them new rules of his own, which, at least in some cases, appeared to abrogate the old. It might be possible, by means of this woman, to satisfy at once themselves and the people of his heterodoxy. They asked for his judgment. A judgment he gave them; but quite different, both in matter and manner from what they had expected. In thinking of the case they had forgotten the woman, they had forgotten even the deed. What became of the criminal appeared to them wholly unimportant; toward her crime or her character they had no feeling whatever, not even hatred, much less pity or sympathetic shame. If they had been asked about her, they might probably have answered, with Mephistopheles, 'She is not the first,' nor would they have thought their answer fiendish, but only

practical and business-like. But the judgment of Christ was upon them, making all things new, and shining like the lightning from one end of the heaven to the other."

When we come to examine the passage in question, the very simple process of counting the letters, or, if we like, of writing the passage out in lines of the same length as those in the Vatican Codex, establishes that there are fifty-six lines of this size in the passage whose authenticity is questioned. And since we have already determined that the model of writing adopted by St. John is a page containing fourteen lines of the same kind that are found in the Vatican manuscript, it is clear that the doubtful passage is, in reality, four pages of the papyrus roll of St. John; as far, at least, as its size is concerned.

We have further to remark, that the passage, as found in ordinary Bibles, breaks the thread of the narrative; indeed, this is one of the main reasons which made the critics decree its non-authenticity. A little examination will show that the four pages really belong to the close of the fifth chapter, where they form a continuous narrative with the preceding account. This may be seen by comparing the discussion between Jesus and the Pharisees in chap. v., in which he challenged them with their non-belief in Moses, with the opening words of the Pharisees on the next morning, to wit, that "Moses, in the law, said * * * but what sayest thou?" And a little study of the text will show that, when the passage is restored in this way, not only does the objection of discontinuity disappear, but the pages are found to fall into line with the preceding pages, as ought to be the case if they were really a portion of the original roll lost or wantonly excised.

It will have been observed that, in the passage quoted from "Ecce Homo," the critical judgment of the writer admits that the passage in question is an interpolation *in its present position*; and this perception that the section is out of its right place, but that it is an integral part of the Gospel, is shared by

another writer of great insight, Mr. George MacDonald: a man who might well have been one of the prophets of this generation if he had spoken more in his own voice, and less through the mouth-pieces of imaginary curates. In concluding with a quotation from his "Thomas Wingfold," we must premise that the writer has fallen into the error of supposing that the earliest authority for the disputed passage is the Codex Alexandrinus of the British Museum. Now, the leaves of this manuscript are lost at the point in question, and a very simple reckoning will show that they cannot possibly have contained the section. The missing matter would be far too much for the lost leaves. With this exception, we may hear what MacDonald has to say upon the point:

"I don't know quite what to think about that story of the woman they brought to Jesus in the Temple, I mean how it got into that nook of the Gospel of St. John, where it has no right place. They didn't bring her for healing, or for the rebuke of the demon, but for condemnation; only they came to the wrong man for that. They dared not carry out the law of stoning, as they would have liked, I suppose, even if Jesus had condemned her; but perhaps they hoped rather to entrap him who was the friend of the sinners into saying something against the law. But what I want is to know how it got there; just there, I mean, between the seventh and eighth chapters of St. John's Gospel. There is no doubt of its being an interpolation—that the twelfth verse, I think it is, ought to join on to the fifty-second. The Alexandrinus manuscript is the only one of the three oldest that has it, and it is the latest of the three. I did think once, but hastily, that it was our Lord's text for saying *I am the light of the world*, but it follows quite as well on his offer of living water. One can easily see how the place would appear a very suitable one to any presumptuous scribe who wished to settle the question of where it should stand. * * * The tale must be a true one, only—to think of just this one story, of the tenderest righteousness, floating about like a holy waif through the world of letters! a sweet, gray dove of promise that can find no rest for the sole of its foot! Just this one story, of all stories, a kind of outcast." * * *

It will easily be seen that the method of restoration of an ancient document which we have employed is not limited to the Greek New Testament, but might be illustrated, if space permitted, by examples drawn from all parts of the field of classical literature.

J. Rendel Harris.

JOHNS HOPKINS UNIVERSITY.

TOPICS OF THE TIME.

Central Park in Danger.

WE have a comely city, we of New York,—a city of extraordinary natural advantages, some of which remain neglected, but many of which we have skillfully availed ourselves of for purposes of beauty and recreation. The trouble with us is that we do not fully know, appreciate, and cherish what we have. New Yorkers, as a class, seem to be more bent upon getting on in the world,—reaching out for something beyond,—than upon enjoying, providing for, and jealously guarding what they already possess. The city, collectively considered, is supposed to be proud, for instance, of its Central Park, and yet for years it has permitted the affairs of this same much-vaunted and really much-enjoyed pleasure-ground to be grossly mismanaged—until, to-day, notwithstanding the existence of a Board of Commissioners charged with the custody of its affairs, the only trustworthy and vigilant guardians of the Park are the newspapers of the city, which keep a sharp look-out, and now and again sound a note of alarm when some new act of vandalism is threatened.

At the moment of writing, the press is once again in full cry. The Board of Commissioners has succeeded in getting rid, one after another, of the two eminent experts, Messrs. Vaux and Parsons, whose engagement in the service of the Board was, not long ago, hailed as the beginning of a new *régime*; and, meantime, the Commissioners, it seems, propose to go to work and destroy, for the purposes of a menagerie, one of the prettiest and rarest spots in the whole Park. There being now no expert connected with the management of the Park, the proposed desecration is, of course, not recommended by any official whom the public are willing to accept as both competent and responsible; and it is known that the experts who have recently been forced to resign their positions would never have consented to the ruin of the meadow which the newspapers have been trying so hard to save.

We say that the newspapers are looking after the affairs of the Park with commendable zeal. But on the part of the general community there appears, at least, to be an apathy which we suspect would not exist, under the same circumstances, in any other large city of this continent. Park management by newspaper evidently works better in New York than park management by commissioners,—as said commissioners have been managing these many years. (Or shall we call it park butchery, tempered by newspaper criticism?) But if the people of this city had the proper feeling of citizenship, they would long ago have done something more effectual than grumbling by proxy. Yet, that the public are displeased with the present state of affairs there is not the slightest doubt. That the indignation is gathering force and intensity there is some reason to hope.

When the public does become thoroughly aroused, we believe that it will demand a more radical cure for the present evils of park management than has yet

been applied. One trouble with the Board, as at present constituted, is that the number of commissioners established—namely, four—makes it difficult to arrive at a majority vote for any measure. It has been found by experience that the Board is much more likely to be at a dead-lock of two to two than it is to reach a decision by a majority vote of three to one. This is in part the origin of the pitiable wrangling that, for the past half a dozen years (with rare intervals of apparent peace), has made the published proceedings of the Board of Commissioners of the Department of Public Parks a disgrace to the city. Of late, secret executive sessions have been instituted, and newspaper readers have been spared those grotesque accounts of meetings of the Board, which, at times in the past, have seemed more like reports of the inelegant altercations of pot-house politicians than the recorded debates of high public officials having in charge a costly and magnificent work of art.

When the public does act in good earnest—and, judging by analogy, it is sure to do so sooner or later—it will, we say, insist upon a radical cure. It will strike both at the membership and organization of the Board; and it will insist, moreover, upon the retention in the management of the Park of the very best and the very best known experts. Landscape gardening, architecture, and tree-planting are arts and occupations which ordinary business men, or politicians, or engineers, no matter how well trained and competent in their own lines, should not undertake without skilled and responsible advice. It happens that, just at present, one of the ruling four has more knowledge of a kind which should be valuable to a Commissioner than has often been the case with members of the Board. But this gentleman does not, we are sure, claim to be an expert on all the points covered by Messrs. Vaux and Parsons, nor has he the definite authority of an expert with his compeers of the Board, nor has his reputation as an “expert” been increased in the community by his having countenanced the installation of the menagerie in the South Meadow, and the consequent ruin of what we are inclined to believe the most beautiful glade of the whole Park.

In a word, the Department has forfeited the confidence of the public; every man in the Board pulls his own way; the experts are gone; the entire service is demoralized; and the Central Park is daily and hourly in danger.

The Spiritual Effects of Drunkenness.

THE curse of drunkenness, on the side of its physical devastations, has been abundantly depicted by the advocates of the temperance reform. The amount of grain consumed in the manufacture of intoxicating liquors; the number of men whose labor is worse than wasted in producing and in vending them; the number of lives destroyed by them; the number of paupers and insane persons whose woes are traceable to this source;

the effects upon the health of individuals of the habitual use of intoxicants,—all these things are frequently set forth with sufficient fullness in impressive rhetoric. Some allowances must be made for the over-statement of zealous advocates; but there are facts enough, of an appalling nature, in these representations, to call for the most serious thought.

But the worst side of drunkenness is not that which appears in these familiar figures. The most frightful effects of the drink-habit are not those which can be tabulated in statistics and reported in the census. It is not the waste of corn, nor the destruction of property, nor the increase of taxes, nor even the ruin of physical health, nor the loss of life, which most impresses the mind of the thoughtful observer of inebriety. It is the effect of this vice upon the characters of men, as it is exhibited to him, day by day, in his ordinary intercourse with them. It is in the spiritual realm that the ravages of strong drink are most terrible.

Body and mind are so closely related that when the one suffers the other must share the suffering; and the injury of the physical health resulting from intemperate drinking must, therefore, be accompanied by similar injury of the mental and moral powers. But the inclination of the popular thought is so strongly toward the investigation of physical phenomena, that the spiritual consequences of drunkenness are often overlooked. Degeneration of tissue is more palpable than degeneracy of spirit; a lesion of the brain more startling than a breach of faith; but the deeper fact, of which the senses take no note, is the more important fact; and it would be well if the attention of men could be fixed upon it.

The phenomena to which we have referred often report themselves to the quickened perceptions of those who stand nearest to the habitual drinker. Many a mother observes, with a heart that grows heavier day by day, the signs of moral decay in the character of her son. It is not the flushed face and the heavy eyes that trouble her most; it is the evidence that his mind is becoming duller and fouler, his sensibilities less acute, his sense of honor less commanding. She discovers that his loyalty to truth is somewhat impaired; that he deceives her frequently, without compunction. This effect is often observed in the character of the inebriate. Truthfulness is the fundamental virtue; when it is impaired the character is undermined; and strong drink makes a deadly assault upon it. Coupled with this loss of truthfulness is that weakening of the will which always accompanies chronic alcoholism. The man loses, little by little, the mastery over himself; the regal faculties are in chains. How many of his broken promises are due to a debilitated will, and how many to a decay of his veraciousness, it would be impossible for the victim himself to determine. Doubtless his intention to break off his evil habit is sometimes honest, and the failure is due to the paralysis of his will; doubtless he often asseverates that such is his purpose at the moment when he is

contriving how he shall obtain the next dram. It is pitiful to mark the gradual decay of these prime elements of manliness in the character of the man who is addicted to strong drink.

This loss of self-respect, the lowering of ambition, and the fading out of hope are signs of the progress of this disease in the character. It is a mournful spectacle—that of the brave, ingenuous, high-spirited man sinking steadily down into the degradation of inebriety; but how many such spectacles are visible all over the land! And it is not in the character of those alone who are notorious drunkards that such tendencies appear. They are often distinctly seen in the lives of men who are never drunk. Sir Henry Thompson's testimony is emphatic to the effect that "the habitual use of fermented liquors, to an extent far short of what is necessary to produce intoxication, injures the body and diminishes the mental power." If, as he testifies, a large proportion of the most painful and dangerous maladies of the body are due to "the use of fermented liquors, taken in the quantity which is conventionally deemed moderate," then it is certain that such use of them must result also in serious injuries to the mental and moral nature. Who does not know reputable gentlemen, physicians, artists, clergymen even, who were never drunk in their lives, and never will be, but who reveal, in conversation and in conduct, certain melancholy effects of the drinking habit? The brain is so often inflamed with alcohol that its functions are imperfectly performed; and there is a perceptible loss of mental power and of moral tone. The drinker is not conscious of this loss; but those who know him best are painfully aware that his perceptions are less keen, his judgments less sound, his temper less serene, his spiritual vision less clear, because he carries every day a little too long at the wine. Even those who refuse to entertain ascetic theories respecting these beverages may be able to see that there are uses of them that stop short of drunkenness, and that are still extremely hurtful to the mind and the heart as well as the body. That conventional idea of moderation, to which Sir Henry Thompson refers, is quite elastic; the term is stretched to cover habits that are steadily despoiling the life of its rarest fruits. The drinking habit is often defended by reputable gentlemen to whom the very thought of a debauch would be shocking, but to whom, if it were only lawful, in the tender and just solicitude of friendship, such words as these might be spoken: "It is true that you are not drunkards, and may never be; but if you could know, what is too evident to those who love you best, how your character is slowly losing the firmness of its texture and the fineness of its outline; how your art deteriorates in the delicacy of its touch; how the atmosphere of your life seems to grow murky and the sky lowers gloomily above you,—you would not think your daily indulgence harmless in its measure. It is in just such lives as yours that drink exhibits some of its most mournful tragedies."

OPEN LETTERS.

Recent American Novels.*

I WONDER if others have noticed as I have the large crop of novelists which has sprung up of late, and the number of works of fiction we have been favored with? I imagine that some of us are prone to under-rate both the quality and the quantity of current fiction. It is true that Mr. Cable and Mrs. Burnett have been silent for the time being, though Mr. Cable's silence is now broken. But without these two the list is far from short. There is Mr. Bret Harte speaking again with all his early vigor and point in a story of the Carquinez Woods. A rare impressionist in his own way, is he not, as he tells how tremendous influences of sunset and atmosphere overshadow the mighty forest of redwoods, and how in those shadows a deeper shade moves restlessly to and fro? A delightful bogey of the night turns into a wild beast no less thrilling; and when its slayer, the half-breed Cherokee and hero, steps from the flies—the heart of a redwood—on to the big stage of the forest so well described, one has the sensation that only boys are supposed to feel when they read their first dime novel. Mr. Harte appears to be able to take what is fine in the adventurous and thrilling quality of the dime novel and clothe it in English that charms one with its exactness and has the indefinable touch that constitutes style. Sometimes the dramatic is very near being overdone in the Carquinez Woods; perhaps the close is indefensibly hurried. It is an error one forgives because of other admirable qualities. Mr. Hawthorne is less forgivable. In "Fortune's Fool," he opens with strong and romantic figures, three in number, carries them through far too many adventures, unless he meant to write a "juvenile," and crushes all sympathy by a blood-and-thunder series of useless crimes. Judge Tourgée would also be dramatic, if possible, in "Hot Plowshares"; but while the dramatic is introduced unnecessarily, there are other passages which are successful in the same attempt, and which will serve as excuse for the abundant failures. Not the dramatic, but the historical, is the aim of Judge Tourgée, and in this field there are few authors who seek to rival him. Perhaps Mr. Hawthorne may be called historical in his other novel, "Dust," a charming but very irregular romance of London in the early part of the century, in which the author has, for

* In the Carquinez Woods. By Bret Harte. Houghton, Mifflin & Co.

Fortune's Fool. By Julian Hawthorne. James R. Osgood & Co.
Hot Plowshares. By Albion W. Tourgée. Fords, Howard & Hulbert.

A Newport Aquarelle. Roberts Brothers.

But Yet a Woman. By Arthur Sherburne Hardy. Houghton, Mifflin & Co.

Dr. Claudius. By F. Marion Crawford. Macmillan & Co.

the sake of picturesqueness, taken the liberty of giving to Englishmen of 1825 the ways and looks of men of 1750. The perspective of Judge Tourgée in "Hot Plowshares" is crude but bold; his coloring is somewhat lurid; his plots are needlessly crowded with incident; his text is out of all kindness long. Yet he gains continually one good trait or another, and shows at his best in this novel, which is the last in time of production, although the first in point of chronology, of his series of historical novels. Still another novel, midway between the historical and the romantic, is Mr. King's "Gentle Savage," who is more soberly a half-breed than the heroes of Mr. Harte and Mr. Hawthorne.

Among the realists, Mr. Henry James comes forward with "The Siege of London," a work by no means among his best, but interesting and able, as all his work is. Have you remarked how Mr. James brings lessons to bear on small but important points of etiquette? He is a Chesterfield in a gentle and roundabout way. One might suspect in him, hidden carefully under the assumption of art for art's sake, a mind not a little didactic in its leanings. Mr. Howells does not so impress me. And yet Mr. Howells really does set out to instruct much more than Mr. James; he hardly conceals, under "A Woman's Reason," a lesson peculiarly fitted for the time, for the country, and above all for his home by adoption, Massachusetts. The upshot of the troubles of his heroine, while trying to earn her own living, is that most women are only fitted by nature to aid a man in the struggle for existence, and when there is no man to lean on, and the woman must work, it generally turns out that her education has been such as to unfit her pretty effectually for any labor for which demand exists in the markets of the world. Much the same conclusion was reached in "Dr. Breen's Practice"; but it was not so clearly, not so finely, put. I have hardly anything but admiration for "A Woman's Reason." Unquestionably Mr. Howells has never before written so finely as regards diction and style nor so acutely as regards observation of the ways of women in his part of the world. I forgive him gladly the exaggerated morality of his heroine. I forgive him, too, the making such an odious prig as Ray anything but a poor stick; such hypocritical humility as his deserves at least one good chastisement to make a gentleman of him, and it is hard to take him for a gentleman as he is. A little well-dressed "cad," our cousins of London would call him. I forgive, also, the unreality of the auctioneer's trick and the qualms of conscience incidental thereto. What may not be forgiven a writer who can set so quietly and handsomely before the people that read his work the radical error in the education of their daughters? Few girls would have the pluck to fight so long against fate as Helen Harkness did, even if they strained ideas of honesty and honor so near to cracking as she. Still fewer, so few as not to be worth reckoning, are those who will even have a chance at a Lord Rainford. Mr. Howells has lived in Massachusetts, where "cultured" and "educated"

girls are at a maximum and young men able to afford the luxury of a rich man's wife are at a minimum. He sees the difficulty, defines the error, and goes as near as he dares to suggest a remedy without becoming absolutely didactic.

Miss Woolson was in a vein of uncommon power and delicacy when she wrote "For the Major." Its morality is very high, without loss to the charming quality of the work; as a whole, the slender fabric rises to the atmosphere of the ideal. Like Mr. Howells, she has forborne the attempt to gain picturesqueness by a foreign setting; more, even, than Mr. Howells, who makes some play of Pacific steamers, storms, wrecks, and Robinson Crusoe life on an atoll island. Her realism and her morality are in sharp contrast with the first novel by Mr. Crawford, that delightfully fresh romance of the Himalayas and the Indian jungles, "Mr. Isaacs."

This opens a large field of morals and ethics, without taking the first step to decide matters one way or another, or leaving the reader any better prepared to come to a decision. A true novice, Mr. Crawford broached questions that all the world is trying to solve—polygamy, Mohammedanism, Mormonism, spiritualism. His English girl in love with a Persian diamond-merchant, when regarded realistically, will not bear considering, so impossible is her attitude, so phenomenal her appearance in her own nation and station. Her death is no solution of the question; it is a mere begging of it. Another realist, but with a dash of the romancist, is the anonymous pen that wrote "A Newport Aquarelle." Evidently this is by a woman; equally so, by a new-comer. She has facility rather than experience, and offers a light and not displeasing sketch of the outside of Newport life—a guide-book to Newport picnics and polo matches, with one or two excellent touches of real womanliness toward the end. The plot is somewhat strained, and it has a flavor of the didactic in the moralizing parts. Like Mr. Crawford, a college professor seeks in "But Yet a Woman" the picturesqueness in a foreign setting which is very much harder to show in home pictures. Professor Hardy chose a cheap and pointless title for his first venture, which has far more romance in it than reality. It is full of sparkling things, good points smartly and well expressed, but it has not one really well-drawn, well-pondered character, and its close is too melodramatic to be in keeping with the excellent quality of many passages. Romance of the worst and the best kind appears in "Dr. Claudius," the second venture by Mr. Crawford. It has happy passages, but verges on the ridiculous from the overcharging of colors. Beginning well, the realism in the character of Barker ends in arrant nonsense; it is somebody else, not Barker, whom Mr. Crawford is drawing at the close. The book is dislocated in the middle, and the latter half is unworthy of the author. What a breaking down from the really delightful love-making between Dr. Claudius and the heroine in the beginning! As for Mr. Crawford's New York lawyer, he is too preposterous a creation to be mentioned as a creation at all. No human being has seen such a man in the flesh in New York or elsewhere. Neither has a man like Dr. Claudius ever been seen; but in him exaggeration is pleasantly romantic until it is grossly overdone and the

character ruined by its untrained and hasty creator. But perhaps the truest idealist of the year is Miss Woolson. Observe in "For the Major" how she finds that idealism on the soberest, most patient study of the real. She has painted life on its good side. A true woman, she defends her sex very nobly and subtly by showing a couple of women sacrificing their time to an old man, husband of the one, father of the other. The elder lady paints her face, wears false hair, and lives a daily lie, to save her husband, slowly dying of a weakened brain, from the shock of disillusionment. The younger, to shield her step-mother, allows the man she loves to misconstrue her attentions to that step-mother's son, who is a roving character and turns up unexpectedly now and then, first for aid, then for final care. As characters of women, we enjoy these quiet ladies more than Mr. Howells's heroine, with her straining over *noblesse oblige*. Somehow it is hard to imagine all the crises of conscientiousness in Boston on the part of the heroine and her guardian. But we must not forget that Mr. Howells had far the harder picture to paint.

Now let us see what the chief novels of the season tell us as to the locality of their scenes. Foreign-laid novels are Mr. Hawthorne's "Dust," Mr. Hardy's "But Yet a Woman," Mr. James's "The Siege of London," and Mr. Crawford's "Mr. Isaacs." Home-laid novels are Judge Tourgée's "Hot Plowshares," Miss Woolson's "For the Major," Mr. Harte's "In the Carquinez Woods," and the anonymous "A Newport Aquarelle." Novels laid partly at home, partly abroad, are Mr. Howells's "A Woman's Reason," Mr. Crawford's "Dr. Claudius," Mr. Hawthorne's "Fortune's Fool," and Mr. King's "The Gentle Savage." The foreign and home books are thus exactly balanced, being four each. We see from this that novelists here find it profitable to give foreign scenes, and in some cases ("Mr. Isaacs" and "But Yet a Woman") foreign characters. I do not agree with people who demand of the novelists America and Americans, from a motive that is patriotic in its origin. It is a narrow and ignominious patriotism, for the most part, that quarrels with the right of the artist to choose his ground and persons. At the same time it seems to me that, in estimating the success of a novel with the public, the reviewers do not sufficiently bear in mind the fact that to draw home characters acceptably is much harder than to draw foreigners, for the reason that readers are much more able to criticise the former understandingly; while if the scenes are foreign, they have to take them and the actors in them largely on faith. Very few people here have been in India long enough to be able to say whether "Mr. Isaacs" is accurate in its descriptions; the bulk of its readers swallow it all, like any other fairy tale. So "But Yet a Woman" is accepted on its own assumption, as depicting French people of the upper class in Paris. But a novelette like Miss Woolson's, a sketch like "A Newport Aquarelle," and, above all, a careful and very serious literary study like "A Woman's Reason," have in almost every other reader a fairly competent critic. It is only just that this point should be brought out much more clearly than it ever has been hitherto.

Suppose we recapitulate and divide up our novel-mongers of the season,—good, bad, and indifferent,—

in accordance with the strongest trait of their works this year, into (1) ideal, (2) romantic, (3) dramatic, (4) historical, (5) moral, (6) didactic, (7) realistic; then we get for (1) Miss Woolson, (2) Mr. Crawford and Mr. King, (3) Mr. Harte and Mr. Hawthorne, (4) Judge Tourgée, (5) Miss Woolson and Mr. Howells, (6) Mr. Howells and Mr. James, (7) Messrs. Howells, James, and King, and Miss Woolson. I may be wrong; but it seems to me that by classifying in this way one gets a clearer idea of the conscious and unconscious aim of these various writers, and brings into relief the really important elements in books which are necessarily complex mixtures in different proportions of all the above seven qualities. The field for the novelist is immense, the demand is great, the prizes are immediate and rich. Few novels reach the higher planes of literary art. Unfortunately there is every inducement for flashy and crude work. No wonder novelists feel that the sooner they rush into print the better, for the poorest and hastiest work often brings in most money; and if they have a good idea, ten to one it will occur to somebody else who wields the pen of the ready writer and appear before the month is up. Much trash is published, that we all know. Among the twelve novels considered above, much trash is distributed. Yet, perhaps, without the trash no general interest will awake; without the interest of the general, no keen competition will set in between publishers; and without keen competition no great novels of the future will be forthcoming. Meantime, with so many practiced and conscientious workmen and workwomen on hand, I for one do not despair of the republic of letters. Novels are not epics, but they are the books that are read to-day. The public has a right to demand that they shall contain the best the writer can afford; and people should feel individually bound to encourage those novelists who seem to aim for and reach the highest standard of literary art by the simplest, most obvious course—by purchasing their books.

Alfred Arden.

"The Temperance Outlook."

EDITOR OF THE CENTURY:

Sir: The article with the above title, under "Topics of the Time," in the September number of your magazine, calls for something to be said upon the other side; and presuming upon the spirit of fairness which has always characterized THE CENTURY and its predecessor, I shall ask to be heard in opposition to your views.

It is conceded that there is considerable force in your first objection to constitutional prohibition; yet that kind of legislation is justified by precedent. There is probably no State constitution which does not contain more or fewer of such "specific applications of principle"; and though it seems more appropriate to have laws enacted by the Legislature, composed of the representatives of the people, yet if the people, in their capacity as the primary source of all political power, see fit to indulge in legislation, they are perfectly competent to do so; and perhaps it is not unreasonable for them to do this where the object, as in this case, is to make the legislation more permanent, and not subject to repeal by a temporary change in

public sentiment or by the accidents arising from exciting partisan contests.

Your second objection rests upon assumptions which are unsound, or upon asserted facts which are not facts. You say, "This movement makes no distinction between things that differ. Fermented wine differs as widely from distilled rum or whisky as coffee differs from opium, and yet this prohibitory movement ties them up in the same bundle and puts one label on the whole! Human reason revolts at such arbitrary dealing." I think it will be found, on investigation, that the human reason which revolts at this dealing is the reason belonging to a class of persons who have been educated to use fermented wine, and to think the use of rum and whisky vulgar. Fermented wine does not differ from distilled rum and whisky as coffee differs from opium. The difference between fermented and distilled liquors is a difference in degree only, and not in character or quality. The active element in all of them is alcohol; and if that were eliminated from them, no one would drink either. The alcohol in the fermented wine is the same as that in the brandy distilled from it. The latter contains four or five times the amount of alcohol which the wine did before the distillation,—that process having merely removed a large portion of the water which the wine contained; and the difference between them is the same as the difference between the punch which the novice in tipping delights in and the "whisky straight" which the old toper swallows with equal satisfaction. Both are drinking diluted alcohol,—the one drink simply containing a larger amount of nature's own beverage than the other.

Perhaps some "men will not believe that a glass of wine at the dinner-table and a glass of whisky at the bar are the same thing"; but they nevertheless produce the same effect; and the only difference worth noting is that the latter is regarded in polite society as more vulgar. Both produce intoxication, and both are damaging to the drinker. It may be less disgraceful to eat one's opium at home than to take it in a pipe at Ah Ching's den; but the result to the individual who uses it will be no worse (physically, at least) in the latter than in the former. It will require a few more glasses of wine or beer at the dinner-table to intoxicate the drinker, but it will accomplish that result just as effectually as the whisky that is dispensed at the bucket-shop on the corner. And as for a glass of wine being the beginning of drunkenness, the experience of mankind for a thousand years and more has demonstrated the soundness of the theory; and although some men have heard this declaration with disgust, and have sneered at the fanatics who have urged it, yet a large portion of these same men, in their subsequent years, proved the correctness of the unsavory assertion. It is seldom, indeed, that men learn to be drunkards by drinking whisky, brandy, or any other distilled liquors, which usually contain fifty per cent. or more of pure alcohol, and never without diluting these liquors till the drink contains as small a percentage of alcohol as champagne. They commence with the lighter beverages or fermented liquors,—beer, cider, and wine; and in the use of these they can and do become as grossly intoxicated as they afterward do upon the stronger drinks. Alcohol creates and

strengthens a thirst for itself, and that thirst grows constantly, so that it is continually demanding a larger amount for its satisfaction. Thus, drunkenness grows from a glass of wine; and even so long ago as the days of the deluge, the drunken Noah would undoubtedly have resorted to whisky, had there been a distillery or licensed grog-shop convenient to Mount Ararat. If some people have heard, *ad nauseam*, the assertion that wine is often the beginning of drunkenness, they are like the members of the human family generally, who thus listen to unwelcome truths.

You speak of the impropriety of "classing the fermented juice of the grape from nature's own process with the results of the manufacture through man's alembics." Fermentation is, of course, nature's own process, and so is distillation. But left alone, without the aid of man, nature produces no alcohol; at least, none in any appreciable quantity. Wine and whisky are alike the products of man's skill and labor, using nature's own processes in their manufacture. But it does not follow that wine and beer are innocuous, even if they are produced by nature's own process, and without the aid of man; nor that rum and whisky are necessarily poisonous, because they "are the results of the manufacture through man's alembics." The deadly nightshade is "the result of nature's own process," but it is as destructive of animal life as are any of the products of man's manufacture. It is impossible to make a "discrimination between alcoholic liquors that are hurtful and those that are (in moderate use) healthful," because none are healthful. The alcohol which you abominate in whisky and gin is the same alcohol which the total-abstinence people abominate in wine and beer also.

The total abstiners occupy a position where they cannot be affected by the cry of fanaticism; for the total-abstinence principle or theory rests mainly upon the fact, now fully demonstrated by science and confirmed by experience, that *alcohol is a poison*. This being so, it cannot form an important element in a healthful beverage; and its use as a beverage must be injurious and destructive to health and life, at least when used in a quantity sufficient to produce an effect which may be either seen or felt. The experience of humanity for many generations proves that such is the effect of its use. But because we and our fathers, for hundreds of years, have been educated with the idea that this fiery liquid is not only not poisonous, but, used in a certain way, is healthful, nutritious, and a conservator of life,—an *aqua vite*,—we find it difficult to rid ourselves of this notion, and to learn how deadly and dangerous an agent it is. And many have not only had this error firmly rooted in their minds, but have also learned to love these fermented liquids so much that that love warps their judgment; and seeing the community laid waste by intemperance, and unwilling to admit that their favorite beverages have helped to produce the drunkenness that stirs us to action, they make their war against the distilled liquors, and thereby

"Compound for sins they are inclined to,
By damning those they have no mind to."

The total-abstinence people being in the right, fidelity to truth and to their convictions compels them to

pursue the course which you condemn. To do otherwise would be to stultify themselves and justly subject them to the charge of pandering to falsehood, while professing a desire to suppress it. Knowing that alcohol is a poison, they must of necessity denounce its use, whether it is mingled with twice or six times its weight of water. And they must be allowed to differ with you in opinion as to the character of the legislation which they have defeated. They have never opposed the enactment of any laws "exactly suited to diminish the curse and destroy the political power of the rum interest"; but they have opposed, and will continue to oppose, the enactment of laws which are claimed to be in the interest of temperance, but which in reality are well calculated to strengthen the interests of the rum power.

Walter Farrington.

Hurricane Reform.

THE nostrum of constitutional prohibition of the liquor traffic, which is now pressed in many quarters as the panacea for the evils of intemperance, is a dose that should be well shaken before taken. Prohibition is one thing, and it may, in certain states of society, be a very good thing. But constitutional prohibition is quite another thing; and there are those who might under certain circumstances favor prohibition, but who would never, under any circumstances, consent to introduce prohibitory legislation into the organic law of the State. Such an attempt to forestall public sentiment, and to prevent the free expression of the popular will in legislation, ought not to be made and is not likely to succeed.

There are quite a number of methods of dealing by law with the evils of intemperance. No one of these methods will be found practicable in every community; much depends on the sentiments and the habits of the community. The people ought to be free to adopt those measures which seem to be the best adapted to their condition, and there ought to be no obstruction in the way of their changing a method which has proved ineffectual for one that promises better results. If they come to the conclusion that prohibition is the best method, they ought to be free to try it, and there should be nothing in their constitution to forbid the experiment. If they think that a combination of high license or stringent taxation with local option would be more effectual, they should not be debarred from trying that. But this scheme of constitutional prohibition shuts the Legislature up to one method. It is prohibition or nothing. So long as the Legislature is continuously and heartily favorable to prohibition, we shall have prohibition; whenever a Legislature that does not favor prohibition shall assemble, the prohibitory law will be repealed, or amended so that it will have no force, and then we shall have free liquor. One runs no risk in saying that there are but few States in this Union in which the Legislature will be continuously and heartily in favor of prohibition. In States where the public sentiment tends so strongly in this direction that such a Legislature could be kept in power, there is no need of any constitutional provision. The only State in which prohibition has been successful is Maine, whose constitution has until the last winter been silent

on the subject. In those States where the public sentiment cannot be relied on to send back a prohibitory Legislature term after term, the evil would remain, much of the time, wholly free from legal restraint, in spite of the constitutional provision.

In Ohio, after a long era of free rum,—the natural fruit of a constitutional provision forbidding license,—we have at last succeeded in securing a tax law, with a local-option section by which municipalities are empowered to prohibit the sale of liquor within their limits. The law seems to be based on a sound principle,—that of laying a special burden upon a business which is confessedly detrimental to the public welfare,—and there is no difficulty in enforcing it. It is compelling the liquor-sellers to contribute nearly two millions of dollars a year as a special tax to the treasury of the State. Doubtless this law can be improved. The tax ought to be heavier than it is, and it can be made heavier year by year. The privilege of local option ought to be extended to counties as well as to municipal corporations—the township in this State being a somewhat incoherent political division. With some such modifications, this law would probably prove about as effectual in restraining the evils of drunkenness as any law that we are likely to secure at present. But a strenuous effort is now making to pass a prohibitory amendment to the constitution. Under this amendment, the present law would, of course, be null and void. Whether anything would be gained by this change may well be doubted. The present law does not suppress all the evils of intemperance, but it does lessen them somewhat; it has closed a large number of the worst grogeries in the State, it has imposed a heavy fine upon the liquor business, and it is certain that it can be enforced in all parts of the State.

Could a prohibitory law be thus enforced? I have frequently put this question to my prohibitory friends, and they all, with one accord, confess that it could not. In the smaller communities it could be executed, they say; but not in Cincinnati, nor in Cleveland, nor in Columbus, nor in Toledo, nor in any other of a dozen cities or large towns that could be named—of course, not at present. "But," they say, "we are going to work up a public sentiment that will enforce it by and by." I confess that this seems to me a curious proceeding. It is proposed to enact a law which is sure to be trampled under foot by a good half of the population, and then, after enacting it, and while it is being mocked at and dishonored, to proceed to create the public sentiment which shall make it effective! The child Alice, in Mr. Carroll's fairy tale, found something like this in Looking-glass Land, but I never heard before of applying such principles to problems of statesmanship.

What the success of this attempt to introduce prohibition into the constitution of Ohio may be, I will not try to predict; before these words are in print the result will be known. But inasmuch as the same effort is making in other States, it may be well to consider the consequences of such a provision. These amendments all forbid the manufacture and sale as a beverage of all alcoholic liquors. The execution of a law based on this amendment would be a difficult undertaking. So far as the retailing of liquor in saloons is concerned, the problem is simple; the phrase "as a beverage" is easily applied to this part of the business. But how could it be determined whether the

manufacturer was manufacturing it to be used "as a beverage" or for use in the arts? Beer, of course, is used almost exclusively as a beverage, and the brewer could not shield his business against the prohibition. If the law were enforced the breweries would be closed. But the distillers could claim that they were manufacturing liquor not to be used as a beverage, but for other purposes; that they were selling it to the wholesale dealers with the understanding that it should be used for other purposes; and I am unable to see how the law could be successfully enforced against them. In this case the distilleries would all be running, and the breweries all closed; we should have an abundant supply of the stronger intoxicants, and a small supply of the lighter beverages; it would be difficult to get lager-beer and easy to get whisky. Perhaps the history of Scotland would then be repeated in our country. The date I am not able to mention; but students of history will recall the legislation which forbade or sharply restricted the manufacture of ale in Scotland, with the purpose of giving a monopoly of the business to the English brewers. The Scotch in anger forsook their ale and drank whisky instead, and the result was a swift and terrible increase of drunkenness. The excise returns of Great Britain to-day show that the average Englishman consumes nearly three times as much malt every year as the average Scotchman, and only one-third as much spirits. Scotland, as its best men sorrowfully confess, is one of the most intemperate countries in the world, and this sad result is partly due to the selfish and mischievous legislation to which I have referred.

There are a good many among us to whom a sharp reduction in the supply of both the stronger and the milder kinds of intoxicants would cause no inconvenience or regret; but even to us there appears to be a choice between evils; and we should be sorry to see whisky taking the place of beer as the popular beverage. Legislation having that tendency would certainly be ill-advised.

I find another serious difficulty with this prohibitory amendment. If it should accomplish the purpose of its authors, it would, of course, destroy the larger part of the capital now invested in the manufacture of spirituous and fermented liquors. Now I confess that I never look with enthusiasm on a big distillery or a big brewery. It is not a kind of business in which I should engage. I would starve first. It is a wonder to me that kind-hearted and otherwise reputable men (for there are such) should be willing, in view of the evils that flow from it, to get their living by it. Nevertheless, these men have embarked all their capital in the business, and it seems to me a harsh and inequitable procedure to sweep their property out of existence by an act of the Legislature. Even these men have some rights, and the State cannot afford to ignore them.

I have been reading an admirable speech lately delivered by the Hon. John Bright, at the opening of a coffee-house in Birmingham. Mr. Bright has long been a total abstainer; he believes himself to be a thorough-going temperance man; but he protests with vigor against such sweeping measures. "I am against dealing," he says, "with a question of this nature, affecting the interests of so many people, by what you may call a hurricane. That is fit only for times of revolution. I should like to deal with it in a

more just, and what I call more statesmanlike manner, according to the legislation that becomes an intelligent people in a tranquil time." Mr. Bright contends that, "if a trade in the country is permitted by law, that trade has a right to be defended by law." The liquor trade has been permitted, and is now permitted, and "it has a right to demand that it should not be subjected to violent and hasty legislation." The simple justice of this sentiment ought to be apparent to all fair-minded men. If for a long period of time men have been allowed, without censure of the law, to invest their capital in any kind of property, that property should not be extinguished by law without giving them some compensation. At any rate, some time ought to be given them to dispose of it, or turn it to other uses. It is quite possible that the people may come to the conclusion that a trade long permitted and protected by law is contrary to public morals or public policy, and may resolve upon extinguishing it, but the interests of the men engaged in it ought to be fairly considered. Slavery was a great wrong, and ought to have been abolished; but it would not have been right to abolish slavery in a time of peace by an act of Congress, without providing compensation to the owners of the slaves. It might justly be enacted, as in New York, that all persons born after a certain day should be free. The liquor business should be dealt with in some such manner. It could be restricted more summarily, no doubt; but some regard should certainly be paid to the property rights of the men who are engaged in it.

I am perfectly well aware of the answer that will be made to these suggestions. It will be said that the writer is undoubtedly a wine-bibber, probably a "rummy," and possibly in the pay of a Liquor Dealers' League. What will be charged upon Mr. Bright, I forbear to predict. But it is easy to anticipate the reception which awaits all moderate counsels in the camp of the professional temperance reformers. I see that *THE CENTURY* has been suffering this sort of violence, and am reminded of the treatment Dr. Holland received in his day from the same hands. The following brief paragraph on the temperance question, quoted from one of his "Topics," is particularly timely at this moment:

"It would be impossible for any set of men to manifest greater bigotry and intolerance toward all who have seen fit to differ with them on moral and legal measures, than have characterized those zealous and thoroughly well-meaning reformers who, through various organizations, have assumed the custody and management of this question. Editors who have undertaken to discuss the question independently—as they are in the habit of discussing all public questions—have been snubbed and maligned until they have dropped it in disgust, and turned the whole matter over to those who have doubted or denounced them."

This extract will show that Dr. Holland, though dead, yet speaketh in a way that should cause a tingling in the ears of a large number of temperance reformers.

More About "Law-and-Order Leagues."

I HAVE read with pleasure the editorial in the October number of *THE CENTURY* on "Law-and-Order Leagues," and also E. V. Smalley's letter on

the enforcement of law. Your article probably answered his questions, but permit me to add a word of information, through your columns, with reference to the work that is being done in this direction, especially in the State of Illinois and in the city of Chicago. At the present time Law-and-Order Leagues are being organized all over the country, and on the 22d of February last a delegate convention was held in Boston, which resulted in the organization of a National Citizens' Law-and-Order League. This League is now ready to assist any community in organizing an auxiliary association. I shall be happy to furnish any information upon this subject that may be desired. The practicability of the suggestions made by Mr. Smalley has been fully demonstrated. To illustrate: We have had in Illinois for ten years a law that any person who shall sell or give liquor to a minor (without orders from his parents, guardian, or physician) or to a drunkard shall be subject to a fine or imprisonment. No effort was made to enforce this law until 1877, when a Citizens' League was organized in Chicago with the specific purpose of enforcing the law in relation to minors. In two years the law was so well enforced that the police reports show a decrease of one-third in the arrests of minors as compared with the arrests in the two years previous to the organization of the League. In other words, the actual number of criminals among boys and girls was decreased one-third. The law with regard to both minors and drunkards is now enforced, and our three agents who devote all their time to the work report the arrest and prosecution of an average of eighty-five saloon-keepers every month, and the conviction of more than two-thirds this number.

We have about four thousand saloons in Chicago. Many of them are notoriously vicious places, and their proprietors do not scruple to further their own interests whether in accordance with law or not. But so strong has our Citizens' League grown in the esteem of the public, that the Saloon-keepers' Organization has incorporated a clause in the constitution of its society to the effect that no one who sells liquor to a minor or a drunkard, knowingly, shall be eligible to membership in this society. It is now not infrequent for saloon-keepers to inform the League of other saloon-keepers who are violating the law.

If such an organization can live and do good in this city, in which the government is almost entirely controlled by the liquor interest; it certainly ought to live and do much more good in cities less under the control of the saloon element.

Through the efforts of the Chicago League, a bill was passed at the last Legislature, increasing the saloon license from \$52 to \$500 (license to sell beer only, \$150). This law is now being vigorously enforced.

Yours truly,

J. C. Shaffer,

Sec. National Law-and-Order League.

126 WASHINGTON ST. CHICAGO.

A Word about Christmas.

WHEN what was designed to be a pleasure becomes a burden, it is time to stop and examine it carefully, and see if it is the thing itself which has grown to be such a weight, or whether it is simply an awkward manner of carrying it. Certainly there must be some-

thing wrong in any celebration of Christmas which results in serious fatigue of mind and body. During the first three months of the year, nothing is more commonly given as a reason for ill health than an overstrain during the holidays. "She got so worn out at Christmas," or "She worked too hard in finishing her Christmas presents," or "The week before Christmas she was tired out with shopping," are excuses which appear as surely as January and February come. The question must occur sometimes to every one, whether all this worry and wear of heart and hand and brain are really worth while. Is there not some better way of celebrating this day of days than for women to wear themselves out in making or buying pretty trifles for people who already have more than they can find room for? Setting aside all effort of eyes and fingers, the mental strain is intense. Merely to devise presents for a dozen or more people, which must be appropriate and acceptable, and which they do not already possess, and which no one else is likely to hit upon, is enough to wear upon the strongest brain; and when one's means are not unlimited, and the question of economy must come in, the matter is still more complicated. The agony of indecision, the weighing of rival merits in this and that, the distress when the article which is finally decided upon does not seem as fascinating as one had hoped, the endless round of shopping, the packing to send to distant friends, the frantic effort to finish at the last moment something which ought to have been done long ago, result in a relapse when all is over into a complete weariness of mind and body which unfits one for either giving or receiving pleasure. Now, when all this is looked at soberly, does it pay? It is a remarkable fact that, although Christmas has been kept on the twenty-fifth day of December for more than a thousand years, its arrival seems as unexpected as if it had been appointed by the President. No one is ready for it, although last year every one resolved to be so, and about the middle of December there begins

a rush and hurry which is really more wearing than a May moving.

It seems to be a part of the fierce activity of our time and country that even our pleasures must be enjoyed at high pressure. While it is almost impossible, in matters of business, to act upon the kindly suggestions of intelligent critics that we should take things more leisurely, surely, in matters of enjoyment, we might make an effort to be less overworked. Cannot the keeping of Christmas, for example, be made to consist in other things than gifts? Let the giving be for the children and those to whom our gifts are real necessities. As a people, we are very negligent in the matter of keeping birthdays. If these festivals were made more of in the family, especially among the elder members, we should not find that we were losing the blessedness of giving and the happiness of receiving, even if we did omit presents at Christmas time. In many large families a mutual understanding that the Christmas gifts were all to be for the children would be an immense relief, although, perhaps, no one would be quite willing to acknowledge it. Sometimes a large circle of brothers and sisters can unite in a gift, in that way making it possible to give something of more value, and at the same time to lessen the difficult task of selection.

Above all things, if you give presents, be more anxious to give something which "supplies a want" than to send some pretty trifle which can only prove in the end an additional care. A little forethought and friendly putting of yourself in another's place will make this possible. In the great world of books something can be found to suit every taste. Flowers are always a graceful gift, and can never become burdensome by lasting after one has grown tired of them. There are numberless other things which can be procured, without a wear and tear of mind and body which make the recipient feel as David did of the water from the well of Bethlehem, that what cost so much was too valuable to be accepted.

Susan Anna Brown.

BRIC-À-BRAC.

The Fool.

From Ivan Tourguéneff's "Poems in Prose."

THERE lived a fool in the world. For a long time he remained content and happy; but slowly rumors reached him that everywhere he was held to be a brainless idiot.

Grieved was the fool, and began to think how he could stop these slanders. A sudden idea lightened his poor, darkened brain, and without delay he began to execute it.

He met an acquaintance on the street, who praised highly a renowned painter.

"Mercy!" exclaimed the fool, "this painter is almost forgotten. You do not know that? I did not expect to find you so naïf. You are behind the time!"

His acquaintance blushed, and hurriedly agreed with the fool.

"What a beautiful book I read to-day!" another acquaintance said to him.

"Beg pardon! are you not ashamed? This book is good for nothing; all have long ago abandoned it."

And this acquaintance also made haste to quickly agree with the fool.

"What a marvelous man is my friend, N. N.!" said a third acquaintance to the fool.

"Why!" exclaimed the fool, "N. N. is known to be a scoundrel! to have robbed all his relatives! Who does not know that? I pity you!"

The third acquaintance did as the others, and forgot his friend. Whomsoever or whatsoever was praised in the presence of the fool, he made always a similar reply, adding sometimes the refrain, "And you believe yet in authorities?"

"Malicious, captious man!" began the fool's acquaintances to say of him, "but what a head!" "And

what a tongue!" added others. "Ah! he is a man of talent!"

It ended in a publisher's asking the fool to control the critical section of his paper; and he began to beguile everybody, without changing his expressions or exclamations.

And now he who inveighed so much against authorities is himself an authority, and the youth worship and fear him. And what are the poor youth to do? If even it is not proper, generally speaking, to worship, fail to do it here and you will be pronounced stupid. Fools can make their way among cowards!

Translated by Borys F. Gorow.

Song of the "New Grounds."

'Way down in de slashes whar de cypus grow so tall,
Oh, de pine-tree got to come down an' de black-gum got to fall;
Don't you hear dem axes holler? don't you hear dem niggers call,—
'Way down whar de cypus grow so tall?

'Way down ermongst de briers whar de raccoon lub to play,
Oh, de pile o' bresh is burnin' an' a-blazin' all de day;
An' de fox-squ'el got to git out an' de 'possum couldn't stay,
'Way down whar de raccoon lub to play!

'Way down in de new groun's whar de big old white-oaks grow,
You nebber hear sich racket in dat neighborhood befo';
Dem niggers keep a-choppin' tell de sun done settle low,
'Way down whar de big old white-oaks grow!

'Way down whar de gra'-vine use to clam aroun' de tree,
Whar de akuns kep' a-droppin' an' de sweet-gum use to be,
Dem cutters keep a-choppin' down de stumpy cypus-knee,
Whar de gra'-vine use to clam aroun' de tree!

Oh, de young corn gwine to come up whar de cypus use to grow;
Oh,—how you do, Miss Susy gal,—de time is comin', sho!
When you hab to roun' de hill o' corn an' chop de cotton-grow,
'Way down whar de cypus use to grow!

'Way down in de new groun's whar' de wild-grape hang so high,
Whar de big owl lub to holler an' de wild-duck lub to fly,
Dem birds is got to scatter, for de plantin' time is nigh;
'Way down whar de wild-grape hang so high!

'Way down amongst de slashes, whar de scaly-barks so fine,
An' de hick'y-nut is growin' long beside de muscadine,
Dem varmint hear de racket an' dey all 'ill soon be gwine,
'Way down whar de scaly-barks so fine!

J. A. Macon.

Nancy.

AN IDYL OF THE KITCHEN.

IN brown holland apron she stood in the kitchen;
Her sleeves were rolled up, and her cheeks all aglow;
Her hair was coiled neatly; when I, indiscreetly,
Stood watching while Nancy was kneading the dough.

Now, who could be neater, or brighter, or sweeter,
Or who hum a song so delightfully low,
Or who look so slender, so graceful, so tender,
As Nancy, sweet Nancy, while kneading the dough?

How deftly she pressed it, and squeezed it, caressed it,
And twisted and turned it, now quick and now slow.
Ah, me, but that madness I've paid for in sadness!
'Twas my heart she was kneading as well as the dough.

At last, when she turned for her pan to the dresser,
She saw me and blushed, and said shyly, "Please, go,
Or my bread I'll be spoiling, in spite of my toiling,
If you stand here and watch while I'm kneading the dough."

I begged for permission to stay. She'd not listen;
The sweet little tyrant said, "No, sir! no! no!"
Yet when I had vanished on being thus banished,
My heart staid with Nancy while kneading the dough.

I'm dreaming, sweet Nancy, and see you in fancy;
Your heart, love, has softened and pitied my woe,
And we, dear, are rich in a dainty wee kitchen
Where Nancy, my Nancy, stands kneading the dough.

John A. Fraser, Jr.

Love's Chase.

AFTER READING HERRICK.

"It must be sweet to be in love,—
At least, so all the maidens prove it.
Alas! my heart's so hard," she sighed,
"I fear that love will never move it;
For, out of books, I cannot find
A single lover to my mind.

"I've thought of all the lads I know,
And on each one have long reflected;
But since I find they all have faults,
Perforce I've every one rejected."
She leaned against the window there,
A charming picture of despair.

But growing weary soon, she cried,
Her dull looks changing all to laughter,
"Cupid, I've chased you long enough—
I think it's your turn to come after!"
But those who knew the maid aver
That it was *I* who followed her.

THE CENTURY MAGAZINE.

VOL. XXVII.

JANUARY, 1884.

No. 3.

HOWEVER unpatriotic a Scotchman may appear in the eyes of local advocates of "Scotland for the Scotch," there is one point in which he will share the sentiment of the patriots. He will admire Edinburgh, and be difficult to convince that any town in the kingdom has a more beautiful situation, or remains more rich in memories of the eventful past. When one speaks of Edinburgh, one means, of course, chiefly the Old Town. The new town has little to boast of except comfort, and the unalterable charm of her situation, with its view of the hills, of the sea, and of the serrated front of the ancient city. Mr. Ruskin has said so much against the architecture of the new town that it seems superfluous to add a malison to his maledictions. The new houses are very solid, and built of good gray stone, which has a tendency to grow dark, and to wear the solemn gloom admired in the respectable quarters of Bath. To me Bath always appears to have been built out of grave-stones, funereal slabs of a moderate antiquity. New Edinburgh is not so bad as Bath, of course, and stone walls can never seem so squalid and skimped as the London houses of dirty, yellowish

brick. But, on the whole, the new town reflects in her architecture a life of prosperity, without much stir or excitement; and the spires and towers of the various churches and public buildings can be credited at most only with good intentions. The sentimental traveler soon leaves New Edinburgh, with her steep ways, her grim monumental Moray Place, her streets where the grass grows long and green in the early autumn, for the picturesque and historical wynds and closes of the ancient town. Probably the majority of the dwellers in the new town pay very few visits to the decaying houses of their ancestors. They are proud of the old town, of Auld Reekie, but they do not often cross the ravine and climb the Mound and moralize over the scenes of old forays and fights, of murders and martyrdoms. To tell the truth, there are features in the old town that rather repel the curious. You may be inured to all the odors of Cologne, you may have traveled (in the interests of *bric-à-brac*) into the Jews' quarters in Italian towns, but nowhere will you have faced such dirt as in the closes and wynds of Edinburgh. Some of these lanes leading into the High street or the Cowgate

—lanes walled with high-roofed mansions of Scotch nobles and judges in past centuries—are homes of the most abominable filth. The gutter down the middle of the steep, narrow causeway is an open sewer; the grimy women come out and hospitably offer to let you view the rooms for which they pay rent, and only very keen curiosity will tempt you to accept the offer. The condition of the children playing in these fetid places cannot decently be described. Overhead, out of most windows, stretch poles on which a few rags of clothes are drying and dripping. The poles are the substitutes for the bleaching greens of civilization, and they are everywhere to be seen poked out of windows, even in the wider streets of old Edinburgh. Everything breathes of cholera, of plague, and of that ancient "pest" so often mentioned in civic annals; yet it sometimes happens that, from the black mouths of these closes, you can see the green sides of the hills quite near at hand. Within a mile or less are the smooth slopes and fresh sward of Arthur's Seat or Salisbury Crag; or

perhaps, beyond the farther mouth of the wynd, there is a glimpse of the blue waters of the Frith of Forth. Thus, it is not strange that the dwellers in the new town visit the old as rarely as possible, except for purposes of charity, or on a raid after blue china and old chairs. Between people living in Ainslie Place and people living in the Playhouse Close, the narrow ravine beneath the Castle, is "a great gulf fixed." On the south side of the little glen where the railway runs, the folk dwell in sanitary conditions not very much altered from those of the fourteenth century. There is gas, of course, instead of the oil lamps which of old were sometimes burned between five and nine in the winter evenings. The roofs are not thatched; great stacks of heather and peat or turf are not piled up on either hand of the door, as in the past. An unfortunate small boy, three hundred years ago, lighted one of these piles of heather "in a waggishness," as Bacon says, and was himself burned at the stake for the crime, by way of encouraging other boys not

A RAINY NIGHT, LOOKING TOWARD OLD TOWN OR NORTH BRIDGE.

CANDLE-MAKERS' ROW.

to indulge in such high spirits. From these dangers the old town is now free; but in many of the wynds the dirt still reminds one of what Smollett's congenial muse described in "Humphrey Clinker." The crowding of human beings in these "lands"—houses fourteen stories high, crowded with scores of families—is probably about as bad as ever it was. The old conditions of life made these tall houses necessary, and the poor people who now inhabit them remain where they do partly out of carelessness, partly for want of cheap accommodations elsewhere. London has probably no such black rookeries as swarm in Edinburgh.

The original causes which made the streets so narrow and so high are plainly written on the configuration of the soil. Without going deep into the history of Edinburgh, without

grubbing among Roman remains and relics of the bronze and stone ages (for, if once we fall into that pit, we may never scramble out again), it is plain that the steep isolated rock of the Castle first tempted people to dwell here. It is like the crag of the Acropolis at Athens, or Ithome, or Hissarlik. A sketch of mediæval Athens, recently republished, shows that the town stretched in a rough oblong east of the Acropolis rock, exactly as old walled Edinburgh clung to the rock of the Castle. That rock was a commanding spot, easily rendered all but impregnable, and so far from the sea that precautions could be taken in time against invaders by water. The conditions are exactly those which, according to Thucydides, were preferred by founders of cities in the ancient days when Greeks were half barbarians. Here,

DOOR-WAY, LADY STAIRS CLOSE.

then, the Celtic tribes and the unknown earlier races would make their clay fort; the slopes of Arthur's Seat they tilled, like South Sea islanders, on the terrace system; and to the rock they would drive their cattle on alarm of war. Then, as always happened, a village grew beneath the protecting shade of the Castle rock, and that village developed into Edinburgh. But, from its neighborhood to the English border (whence the road along the sea is not difficult), Edinburgh was always exposed to the southern fire and sword. Again and again her gates were forced, her houses were burned, her people fled to the Castle and to the shelter of the surrounding forests. Naturally, then, the city huddled herself together as close as might be under the shadow of the Castle. Every house beyond the city walls was certain to be robbed and burned whenever a hostile force came against the town. Edinburgh had been walled in 1450, and so narrow was the circumvallation that the Cowgate was beyond the circle of towers. The wealthy dwellers in the Cowgate "were out in the open country." Any visitor to Edinburgh has only to stand where the Cowgate begins and look back to the Castle to understand how narrow were the limits of the mediæval town, and what urgent need there was to pile the houses "close and high." After the fatal battle of Flodden (1513),—a battle still remembered by the border people as a day of sorrow,—new walls were built round Edinburgh, and "the Flodden wall" included the Cowgate. "The whole length of the old wall was about one mile, that of the new was one mile three furlongs," says Mr. Grant, in his "Old and New Edinburgh." So prudent were the citizens that, for two hundred and fifty years, scarcely a house arose beyond the Flodden wall. And it is

within this miserably contracted territory, in the dark and burrowing lanes, that the poor of Edinburgh still herd, still regard the curious visitor with curiosity scarcely less than his own. So much it is necessary to say about the old town, lest the stranger who examines it should complain that he has been taken without warning into a pestilent, malodorous home of dirt and disease. He is now fairly warned, and he must console himself with the thought that the dirt is historical, the disease romantic,—a slight survival, from the unrivaled filth and pestilence of mediæval Scotland.

"In Athens," says Cicero, "every stone you tread on has its history." As much may be said for old Edinburgh, where the very nuisances are historical, and the wind brings you a realistic whiff of the middle ages. The old ruined castles all around have each its legend, clinging to the place like the ivy, haunting it like the ghost of the murdered man or child so often found built up within the thick masonry of the walls. What a dreadful mystery of old times these walled-up skeletons might unfold if they could speak! In what midnight murder or brawl over cards and wine, or in what bitter family feud about charters and settlements, did *he* perish whose bones were found walled up among the ruins of Craigmillar? What was the secret of that infant's birth, who, dead, had no other grave than the "stone shroud" of the castle wall within Queen Mary's chamber? There comes no answer out of darkness and the dust, nor can we well believe that some of these dead people, thus consigned *in pacem*, were sacrificed (according to the practice of the Black Art) to secure the safety of the buildings. The times were too late for such deeds in Scotland, and the dead men surely perished in some other cause. But if their secret is well kept, some, at least, of the other secrets of the town have come into the light of day, and are recorded in the annals of history and the black calendar of crime. The Scotch of the middle ages (which in Scotland lasted till 1745) were a wild, passionate, revengeful race. They yielded not in fury, and cruelty, and pride to the violent nobles of the Italian towns of Perugia and Verona. In such streets as the West Bow and the Cowgate and Canongate, it is easily seen that most of the ancient houses are as strong as fortresses. Observe the clean-cut line of the thick walls, the narrow entrances, the lintels each carved with a text, more for magic than in piety, the small windows heavily barred. The arms cut above the lintel may be the bearings of noble houses, Douglasses, Carrs, Scotts, or the trade blazon of the weavers or the saddlers.

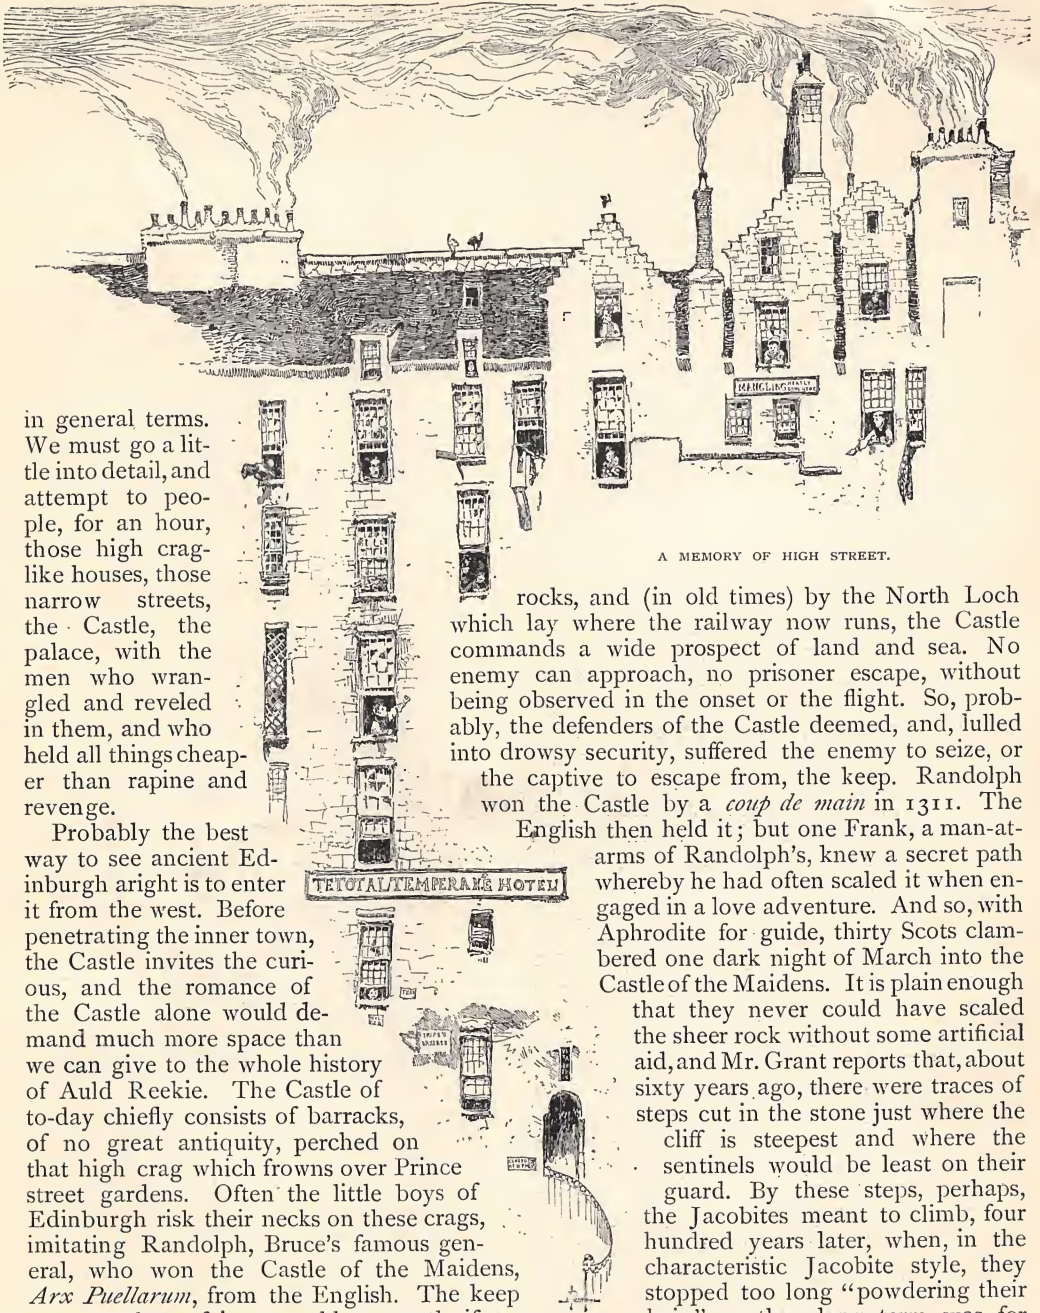

But everywhere the houses are strong enough to stand an irregular siege, and in no town in the British isles could street fighting be so dangerous and so protracted. Such houses were first the homes of a *noblesse* who shrank from no treachery and no violence. The cellars served well enough to lodge a captured judge in before he was carried on a rider's saddle to the dungeon of some keep in lonely Liddesdale. The sudden steps on the uneven floor, in dark corners, answered admirably for the purpose of stabbing a guest as he stumbled. The barred windows might long keep a deserted wife a prisoner, till it became convenient to remove her to some even more inaccessible retreat in an island of the western seas. In these recesses noble ladies have practiced sorcery, melting the waxen effigies and burning the hair of their enemies. Through these strait house-doors burghers have fled in terror, and wounded men have been dragged in hastily, when the slogan of the Border war was heard in the midnight streets, when torches flared above the thrusts of spears and swords and the noise of smitten shields. In shy corners of these closes, on a later day, gentlemen have found what Sir William Hope in his "Scots Fencing Master" calls "an occasion," that is, a chance for a sudden informal duel. Then, as the city expanded beyond the Flodden wall, and the gentry built houses in the new streets, or migrated to London, the old town fortresses fell into the hands of the most desperate of the poor. The properties and actors were changed, but the old drama went on, and the Irish murderers, Burke and Hare, counted their victims by the score, till one of them (*more Hibernico*) turned informer and had his comrade hanged. Even out of the net-work of narrow lanes, in the wider places of the city, the game of revenge, of bloodshed, of burning, went on in the open day. The gallows of the Grass Market saw brave men "testify" to the most various causes, to faith and loyalty, to reason and freedom. The stake had its share of gentle and simple, when old women of the people and beautiful daughters of noble houses were burned indifferently for the crying sin of witchcraft. Every room of each old prison—the Castle *oubliettes* and the Tolbooth—has its romance, its tale of some scarcely credible escape by royal prince or daring smuggler. The Scotch people, that is now so "dour," so prosperous and law-abiding, has the fiercest strain in its blood. Our fathers sowed their wild oats in rapine and slaughter and fire, while the children have subsided into a peaceful but not unadventurous race. Or perhaps, after all, it was chiefly the ravenous, arrogant nobles, so proud, so brave, and so

poor, that outdid in old Edinburgh the feats of the Baglioni. In the endless feuds and wars and party strifes, the Maiden (our Scotch guillotine) and the sword, poison, and the halter cut off the fiercer stocks of the Scotch *noblesse*, and in the struggle for existence

LADY STAIRS CLOSE.

victory remained with the quieter folk, whose necks were not eternally in peril. To understand what manner of men the "forbears" of the Scotch were, it is not enough to speak

A MEMORY OF HIGH STREET.

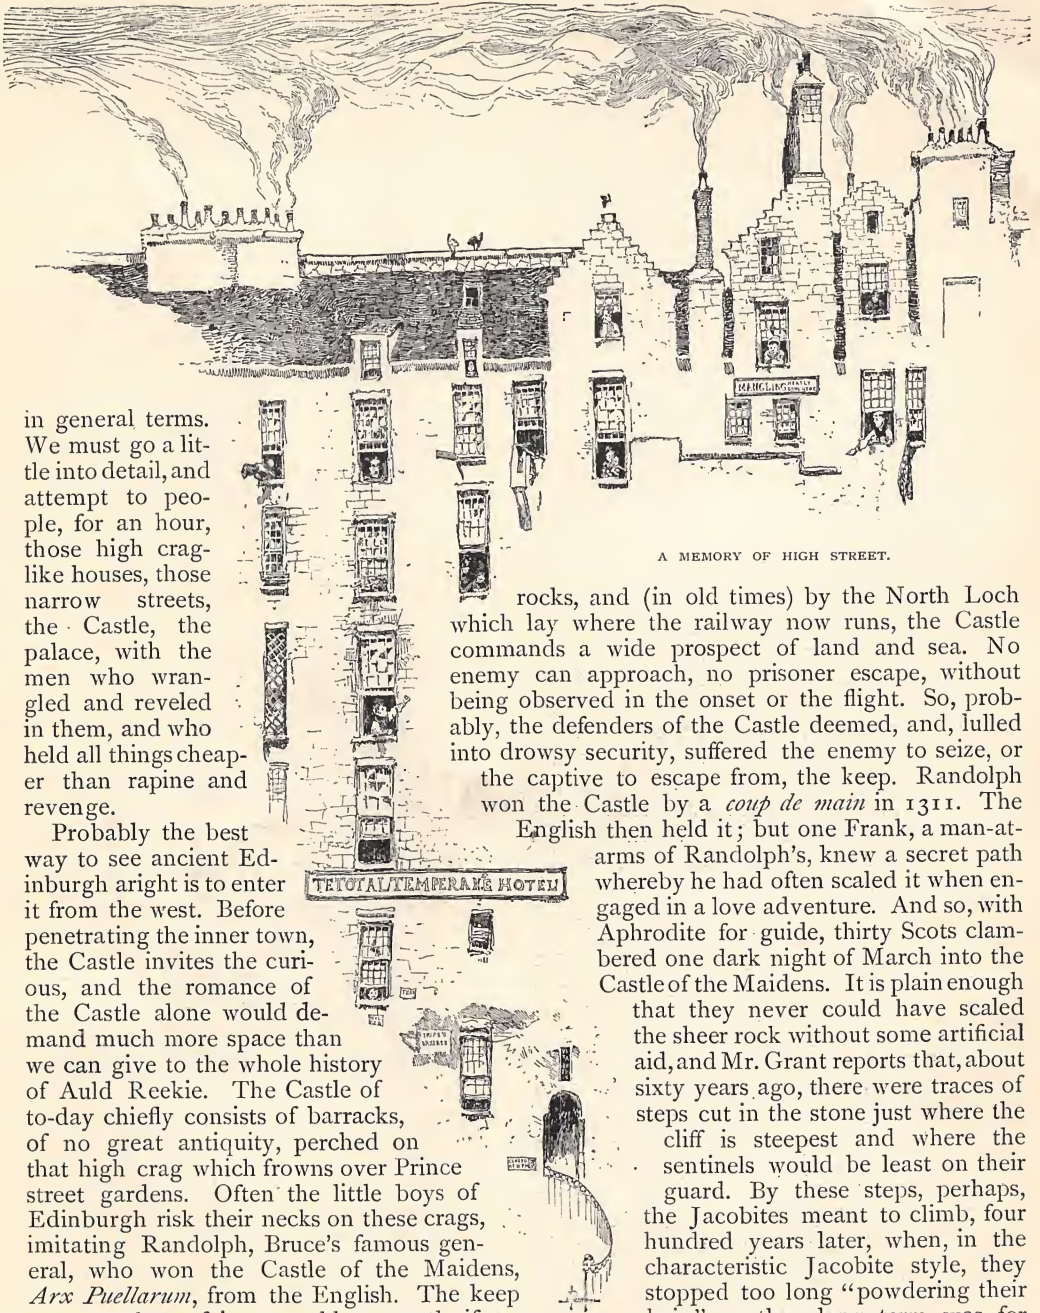

in general terms. We must go a little into detail, and attempt to people, for an hour, those high crag-like houses, those narrow streets, the Castle, the palace, with the men who wrangled and reveled in them, and who held all things cheaper than rapine and revenge.

Probably the best way to see ancient Edinburgh aright is to enter it from the west. Before penetrating the inner town, the Castle invites the curious, and the romance of the Castle alone would demand much more space than we can give to the whole history of Auld Reekie. The Castle of to-day chiefly consists of barracks, of no great antiquity, perched on that high crag which frowns over Prince street gardens. Often the little boys of Edinburgh risk their necks on these crags, imitating Randolph, Bruce's famous general, who won the Castle of the Maidens, *Arx Puellarum*, from the English. The keep seems a place of impregnable strength, if we think of the conditions of war before the invention of heavy siege pieces and modern artillery. From the dungeon prisons hewn in the rock, too, one might guess that even so ingenious a captive as Baron Trenck could never have escaped. Yet the whole history of Edinburgh Castle is a long tale of escapes and captures. Placed on such a height, its front secured by the perpendicular black

rocks, and (in old times) by the North Loch which lay where the railway now runs, the Castle commands a wide prospect of land and sea. No enemy can approach, no prisoner escape, without being observed in the onset or the flight. So, probably, the defenders of the Castle deemed, and, lulled into drowsy security, suffered the enemy to seize, or the captive to escape from, the keep. Randolph won the Castle by a *coup de main* in 1311. The

English then held it; but one Frank, a man-at-arms of Randolph's, knew a secret path whereby he had often scaled it when engaged in a love adventure. And so, with Aphrodite for guide, thirty Scots clambered one dark night of March into the Castle of the Maidens. It is plain enough that they never could have scaled the sheer rock without some artificial aid, and Mr. Grant reports that, about sixty years ago, there were traces of steps cut in the stone just where the cliff is steepest and where the sentinels would be least on their guard. By these steps, perhaps, the Jacobites meant to climb, four hundred years later, when, in the characteristic Jacobite style, they stopped too long "powdering their hair," as the slang term was for

drinking,—*Pulveris exigui jactus*. By that little toss of powder the plot was ruined, and the house of Hanover kept possession of the Castle. In 1337 the English again held the Castle, and were again driven out by a *ruse* of the most obvious character, a trick as transparent as that of the Trojan horse. In the Castle the fatal dish of the black bull's head was cooked for Earl Douglas in 1440. It would

By these steps, perhaps, the Jacobites meant to climb, four hundred years later, when, in the characteristic Jacobite style, they stopped too long "powdering their hair," as the slang term was for

drinking,—*Pulveris exigui jactus*. By that little toss of powder the plot was ruined, and the house of Hanover kept possession of the Castle. In 1337 the English again held the Castle, and were again driven out by a *ruse* of the most obvious character, a trick as transparent as that of the Trojan horse. In the Castle the fatal dish of the black bull's head was cooked for Earl Douglas in 1440. It would

be interesting to know whence the Scotch derived this *plat*, so conspicuous in their culinary history, and as purely national a delicacy as "sheep's head" or haggis. I do not know that the black bull's head was ever introduced at English, Irish, or Continental tables, and no mention of the dainty occurs, as far as I am aware, in the records of any savage or classical people. When one powerful party leader had so far overcome the suspicions of a rival as to induce that rival to accept an invitation to dinner, then the host went smiling home, consulted his cook, and hinted that a black bull's head might as well be added to the *menu*. When this ominous dish was brought to the table, the wretched guest knew that his last hour had arrived. And this was what befell young Douglas. The people expressed their horror of the deed in a ballad, of which, apparently, but one verse

survives, though more may perhaps be known to the learning of Professor Child :

"Edinburgh Castle, towne and tower,
God grant thou sink for sinne,
And that even for the black dinner
Earle Douglas got therein."

If "sinne" could sink town and tower, Edinburgh would centuries since have been with "Memphis and Babylon and either Thebes." In those old times, when a Scotch prince hated a man, he very commonly acted on the maxim, "If you want a thing well done, do it yourself," and dirked his foe with his own hand. This was the custom of the Duke of Albany, brother of James III., who slew John of Scougal, and in other ways so conducted himself that, in 1482, he was consigned to prison in the Castle. Thence Albany deemed that he was not likely to come

JOHN KNOX'S HOUSE.

HOUSE OF BOSWELL AND HUME, JAMES COURT.

forth alive, especially as his brother Mar had mysteriously vanished—so mysteriously, indeed, that even now the manner of Mar's fate is unknown. Albany's friends sent a small ship to wait in the harbor of Leith, and a hamper of wine easily found admission to Albany's rooms in the castle. The hamper contained ropes as well as wine, and when Albany had made his keepers drunk with the liquor, had dirked them, and thrown their mail-clad bodies to grill on the fire, he escaped to the ship at Leith by aid of the rope. But the favorite way of escaping had a bland and child-like simplicity. The captive's wife paid him a visit, the pair exchanged clothes, and the prisoner walked out in the lady's petticoats! This old trick was played in the Castle as often as the "confidence trick" in the capitals of modern civilization. Apparently it never missed fire, and we may conclude that in every case the turnkeys were bribed. The only prisoner of note who ever failed was the first Marquis of Argyll, in 1601. The Marchioness came to see him in a sedan chair;

he assumed her dress and coif, and stepped into the sedan. But presently he lost heart and stepped out again, though what he was afraid of it is difficult to guess. He could only die once, his execution was certain, and he might as well be shot privately, in the attempt to run away, as be decapitated publicly in the town where the great Montrose, his enemy, was done to death. When the Marquis's son, in his turn, was confined in the Castle, his ready brain conceived the novel idea of escaping, not in the dress of a lady, but in that of the lackey of his daughter-in-law. He let the lady's train drop in the mud, whereon, with the wit and coolness of a daughter of the Lindsays, she switched the dripping silk in his face, crying, "Thou careless loon." Then the soldiers laughed, and Argyll, for that time, got clean away. A most spirited escape, not from the Castle, but from the Tolbooth prison, was arranged and executed in 1783 by James Hay, a lad of eighteen, but of precocious parts, who had been sentenced to death for robbery. Old Hay, the father,

got the turnkey to drink with him, made him "no *that* fu'," but still "wi' a gey drap in his ee," and then induced the confiding jailer to go out and order some more whisky. The moment the turnkey had gone, old Hay cried (in a capital imitation of the jailer's voice), "Turn your hand," whereon the porter opened the prison door. Young Hay was off like a shot through the open prison gate, made for the Greyfriars Kirk-yard, scaled the wall, and hid himself in the vault of "bloody Mackenzie," the persecutor of the Covenanters. The vault, of course, was haunted by the ensanguined specter of Sir George Mackenzie; so no one looked *there* for young Hay, whose school-fellows of Heriot's Hospital, like bricks of boys, supplied him with food for six weeks. Then young Hay escaped, scot-free, to Holland. I don't know why it is, but I am glad he got off. All this happened precisely one hundred years ago, and it is something to think of in Greyfriars Church-yard, among the crumbling black grave-stones and ivy green, still haunted by memories of the Covenanters. One might prose for hours over the Castle, and the regalia, and the Mons Meg, that half-mythical piece of ordnance; but all these things are written even in unassuming sixpenny guide-books. It is time to leave the *Arx Puellarum* and enter the city by the West Port. I like to think that "Claverse," that bonny Dundee, when he went northward, "wherever the spirit of Montrose might lead him," clattered with his men down these narrow streets.

"As he rode down the sanctified bends of the Bow,
Each carlin was flying and shaking
her pow;
But the young plants o' grace they
looked couthie and slee,
Said "Good luck to thy
bonnets, thou bonny
Dundee."

The gate on the West Port was a favorite place for exhibiting the heads of traitors or martyrs, or, when traitors or martyrs happened to be scarce, of any culprits that chanced to be convenient. Here also, two hundred years ago, was spiked the red right hand of Chieslie of Dalry, who slew Lockhart. The houses have the old "crow-step" on the gable, a series of narrow

stairs whereby the little sweeps in times past were wont to scale the chimneys. Fortunately the den of iniquity, down Tanner's close, where Hare and Burke carried on a wholesale business in murder, has long perished. Perished, too, but only within the last five years, has the house of Major Weir, the most horribly haunted place in Edinburgh, worse than even Mary King's ruined close, where the blue specters of those who died in the great plague used to walk. If Hawthorne had been an Edinburgh man, he would have made the dwelling of Major Weir immortal in romance. The legend has that blending of Puritanism, of superstition, of horror, which Hawthorne enjoyed; and over all these is a veil of mystery, which seems to lift for a moment only to leave one more puzzled and confused. The house of Major Weir was not precisely in the West Bow; but the tall, gaunt building stood back within a black narrow court of its own, a court with a dark, hungry, and unsatisfied look, fit home for an hypocrite with a heart full of secrets and half-mad unimaginable desires. Nor did jor dwell alone; his sister, a of about the same age, shared the house and the partnership in the mystery of iniquity.

So the legend runs; for, at this distance of time, and with the evidence before us, it is impossible to feel certain that

THE TOLBOOTH, HIGH STREET.

ALLAN RAMSAY'S SHOP IN HIGH STREET.

Major Weir was not an honorable man enough whose brain, perhaps, was turned in his extreme age by sickness and religious mania. The major had been an officer in the army which (in 1641) protected the Scotch settlers then recently planted in the North of Ireland. In 1650 he was one of the guard which attended the execution of the great Montrose. Like many soldiers of that age, Major Weir was, in religion, extremely evangelical, and his sermons and prayers met with much acceptance in "the sanctified bends of the Bow." It was observed that he could only be eloquent when he leaned on his favorite stick, "all of one piece of thorn-wood with a bent head." Probably much of Major Weir's evil fame rises from nothing more serious than his fondness for this black stick, which it was his trick of manner to fondle. But, if we were still as superstitious as our ancestors of two centuries ago, what young man of fashion who takes his "crook" everywhere into society would be safe from suspicion of sorcery? When the major was about seventy, he fell into a heavy sickness, which, according to some authorities, "affected his mind so much that he made open and voluntary confession of all his wickedness." Probably

enough the malady "affected his mind," which would then play, in a fearsome fashion, with horrors of sin and the dread beliefs of Calvinism. The Lord Provost of the period, like a sensible man, at first treated the confession as mere raving. But, plied probably by the superstitious, and by the Royalist enemies whom the major is sure to have made, the Provost finally arrested Weir, his sister, and his black stick. In prison the poor wretch stuck to his "confession," but refused to pray. "As I am to go to the devil, I do not wish to anger him!" he screamed. On April 9, 1670, he was sentenced to be strangled and burned, while his sister was merely to be hanged. When his dead body fell into the fire, his stick twisted and writhed in unholy fashion, and "was as long in burning as the major." As to the confessions of the major's sister, we have them on the excellent authority of "Satan's Invisible World Discovered,"—evidence which would not now drown a kitten, much less hang a woman. Major Weir's house was long uninhabited after his execution. When some one did occupy it, in the beginning of this century, he was startled by the apparition of a shadowy being like a calf. This is the third

case of a ghostly calf which I have met with in a life-long study of ghost stories. One of the other calves haunted the place where an idiot boy had been slain. The third appeared in France, to two lads, and is mentioned in M. d'Assier's recent volume on "Posthumous Man" (*L'homme d'outre-tombe*).

One follows the winding of the West Port to the Grass Market, a wide, airy place (for

still remember "Claverse" and "bloody Dalziel" with a curse. The peasant populations of the Lowland counties have not the deathless Celtic memory of grievances; but the persecutors of the Covenanters they have never forgotten nor forgiven, and they still speak of the bones of murdered saints, found in the beds and "brae-hags" of burns, where Claverhouse came on them at their prayers,

IMPRESSIONS OF GRASS MARKET.

the old town), from the crown of whose causeway many an old Covenanting hero, trailing his tortured limbs to the gallows, took his farewell of the sky, and the green hills, and the sea. From the gallows platform the eye can glance to the north and the west,—to the "hills of the robbers" beyond the Forth, and to where the setting sun slants on moors and morasses, faint and far away, the hiding-places of the "persecuted remnant." In Scotland, the popular tradition is all on the side of the Covenanters. We read Sir Walter's works, and give our hearts to the gallant Grahames, to Montrose and Dundee; but the people

and where his musketeers shot them even on their knees. With such stories my own childhood was fed, and even Sir Walter's magic has never quite cast the glamour over the more splendid and romantic party that stood for the Church and the King. But Scots of all historical parties may find in the Grass Market a sacred place; for here were done to death brave men and fair women of every creed and character. Among others, on February 17th, 1688, fell precious Mr. Renwick, the preacher. Quite lately I came across Mr. Renwick's last dying speech and confession, a sordid little fly-leaf, in a cheap book-stall. This ex-

THE COWGATE, FROM GEORGE THE FOURTH'S BRIDGE.

cellent martyr frankly admitted that he had always preached the righteousness of resisting his lawful king in arms. This was all very well; but the odd thing was to find Renwick full of indignant surprise at his own execution. It never seemed to occur to him that the corollary of his doctrine was the king's right to put him to death if he could catch him. This is a logical deficiency which one has observed in certain homicidal patriots of a much later epoch than 1688. The ancient stone-socket of the gallows-tree has long been removed from the Grass Market. In its place you may observe stones laid down in the shape of a St. Andrew's cross in the pavement; just as opposite the windows of Baliol, in the Broad street, Oxford, a small cross in the roadway marks the spot where Ridley and Latimer were burned at the stake. The

shop of the dyer on whose pole Porteous was hanged (as we have all read in the "Heart of Midlothian") has also disappeared. "Though much is taken, much remains," however; for example, the neighboring church and church-yard that of old belonged to the Greyfriars. Here is the flat tombstone on which the Solemn League and Covenant was signed by men desperately anxious to bring back the mastodon, Theocracy; here are the graves of martyrs and of persecutors; and here is the vault of which we have already spoken, haunted by the red specter of Bloody Mackenzie. And here "Greyfriars Bobby" lay, a faithful terrier, watching for many years on the grave of his dead master. People fed poor Bobby; otherwise he would have starved; and I presume he occasionally relaxed himself by cheyving one of the too numerous cats

which haunt the rusty-green grass and bushes of the old church-yard.

Leaving the Greyfriars, one naturally turns down the Cowgate, the fashionable quarter before Flodden fight—"being deemed open and airy." The Cowgate dives down a deep and narrow ravine, a kind of cañon, and high above it, as if in mid-air, passes the arch of George the Fourth's bridge. The Cowgate is like a Highland torrent of turbid population, flowing through its narrow and precipitous glen, and receiving at every turn the tributary streams of a score of dirty wynds, pouring in from either hand. The Cowgate, it is said, was originally the "Sou'-gate," or Southern Gate, and had nothing to do with kine. But this, to my mind, is contradicted by the fact that a writer of 1500-1530 calls the street *Via Vaccarum*, "the Street of the Cows," where, as he adds, you find *omnia magnifica*—everything handsome—about it. Now, it is not likely that the name of a new suburb would so rapidly be changed from South Gate to *Via Vaccarum*, or "Kowgaitt" (1518). But a short distance on the right hand of the Cowgate—attained by walking down Robertson's Wynd—was the Kirk of Fields, "St. Mary's of the Fields." The buildings of the University of Edinburgh now occupy most of the site of the house. It was an ill-famed, half-abandoned place, almost in the country, when Darnley was strangled there and when the mansion of the Kirk o' Fields was blown up. The very next wynd to Robertson's, namely, Niddry's, led you straight to the old High School, where George Sinclair shot the city officer dead at the great barring out, and where Scott had his schooling, and fought his "battle of the cross causeway,"—stones being the weapons, in very much later times. But the old High School has long ceased to exist. It was entered by a portal in a tower, very like the ancient entrance to the new buildings of the University in St. Andrews. The new High School is a handsome Greek edifice, near the south side of Calton Hill, and has no traditions of the famous elder world. The difficulty in writing about Edinburgh is that "one cannot see the town for the houses." So many legends cling to these black and narrow lanes and these "dour" old piles of masonry, that one is tempted to go on telling story after story, and neglecting the general effect. But this one more anecdote I cannot resist the temptation to steal from Mr. Grant's great treasure-house of traditions. Sir Walter Scott had a grand-aunt, who was all that a Scotch grand-aunt should be—a lady of an ancient house, with a memory well stored with legends. When she was a little girl, this Aunt

Margaret was residing at Swinton House, in Berwickshire, and happened to wander, in the listless fashion of childhood unemployed, into the dining-room. There sat a lady "beau-

A WYND.

tiful as an enchanted queen," and engaged in taking the refreshment of tea. Now, children have not a gift of beholding the thing that either is not, or is hidden by a veil from older eyes, that one might set this apparition down as a ghost or a day-dream. But the beautiful lady broke silence, and begged little Margaret to speak first to her mother, *by herself*, of what "she had witnessed." When the family came home from church, Margaret was advised to say nothing about the beautiful lady. Yet she was not a ghost after all, but a woman of flesh and (in the strictest sense) of blood. These things happened shortly after "the Fifteen," when many English officials were in Edinburgh. Among them was a Captain Cayley, who had grievously insulted a beautiful and very young lady, Mrs. Macfarlane. In penitence, or impudence, he then ventured

THE CANONGATE.

to call at Mrs. Macfarlane's house, near the Cowgate. What passed between them is not certainly known, but Cayley was shot dead, and Mrs. Macfarlane walked out and was no more beheld at that season. She it was whom little Margaret Swinton saw in Swinton House in Berwickshire, where the homicidal fair was concealed in the secret chamber with the sliding panel, which old Scotch families often found so convenient. So one goes down the Cowgate, past the site of College Wynd, where Scott was born, and where Oliver Goldsmith, though but a medical student, and a poor one to boot, swaggered in "a superfine small hatt," brave with eight shillings' worth of silver lace, and a "sky-blue satin, rich black Genoa velvet, fine sky-blue shalloon, and *the best* superfine high claret-colored cloth." What a genius for dress had Oliver, who, even in years mature, wore a coat of Tyrian bloom! The odd thing is that Oliver actually *paid*, at least in part, for the splen-

dors that dazzled the College Wynd, and charmed all eyes in the Cowgate.

From the Cowgate one reaches the High street, the central way and great battle-field of the old turbulent Scotch. As late as the end of the sixteenth century, Scotland had her regular blood-feuds, like Corsica. If one gentleman slew another, no one was so mean as to seek a legal remedy (which, indeed, no one was likely to obtain), but kinsfolk waited till they had a chance to pink some member of the hostile family. Far away in Yarrow, near the Dowie Dens, where the knight was slain in the old ballad, there is an upland farm called Catslack. The green hills gather close together; their slopes are dank and thick with rushes round the narrow Catslack burn, which leaps down, with little links and little pools, to the Yarrow. There my first trout was caught, and there, in an even more remote antiquity (1596), did Sir James Douglas of Parkhead, a natural son of the Regent Mor-

ton, meet his deadly foe, Captain James Stewart. Chance or design brought them together on the borders of the way which threads the vale of Yarrow and leads from Moffat to Selkirk. There Sir James Douglas, having overpowered Stewart in fight, left his body to be devoured by dogs and birds, and rode away,

wentwater to the Edinburgh Cross. Many were the revenges of the old Scotch *noblesse*; and the William Stewart who slew Torthorwald was himself son of the William Stewart slain, years before, by Bothwell, another Douglas, in the Blackfriars Wynd.

Next to the High street and Cowgate, the

OLD HOUSES IN CANONGATE.

by Tinnies, and Hangingshaw, and Philiphaugh, through the oak wood, and below Black Andro, carrying the slain man's head on a spear. "Yarrow visited," indeed, with a vengeance! Now the house of Ochiltree, of which Stewart was a member, could not leave this shame unavenged. Accordingly, a trifle of twelve years afterward, Sir James, now Lord Torthorwald, was walking in the High street, and, as Homer says, "Death was not in his thoughts." There, however, he met William Stewart, a nephew of Captain Stewart, who drew his sword, and, without giving Torthorwald any "show," ran him through before he could defend himself. This was at the "Cross," hard by the great and splendid Church of St. Giles, in whose beautiful lantern cannon have been mounted to command the city, and in whose aisles Douglas and Albany built a chapel to expiate the murder of Rothesay, whom they starved to death. The cross where Stewart took his revenge on Torthorwald is now marked only by a kind of wheel of inlaid stones in the causeway. The bailies of 1756 swept it away, as bailies, town councilors, railway share-holders, and their like are always eager to destroy whatever is ancient or beautiful, from Der-

Canongate is the most famous of the ways through old Edinburgh. The Canons in Holyrood built and ruled over it,—a place without the walls, defended by the sanctity of the abbey and of the holy fathers. Yet the devil was once raised in the "back-green" of a house in the Canongate by Sir Lewis Bellenden, a lord of session, that is, a judge. Sir Lewis was so terrified "that he took sickness and thereof died," something like Semele, who perished after she beheld her heavenly lover in all his glory. We may trust that the learned judge raised the devil for no malignant purpose, but merely in the course of "psychical research." The visitor will notice the wide, wooden fronts of some of the old houses in the Canongate. According to tradition, these were fashioned out of the trees on the Borough Moor, a forest in the possession of the city. Beggars and robbers found this forest so convenient a shelter that the town council decided to fell it, and all the citizens received permission to carry off as much timber as they pleased, with which they faced their houses. But time wholly fails one to tell a tithe of the stories of the Canongate. The most horrible has for hero the gigantic idiot, son of an old

duke of Queensberry. One day the idiot was left unguarded, the house was empty of retainers, and the giant strayed into the kitchen. There he met one little boy turning the meat on the spit. When the family and servants came back, they found—but no, that is quite enough! The reader

SMOLLETT'S HOUSE.

may imagine what they found, or may consult original authorities. Nearly opposite the house of the dread ducal Cyclops and devourer of men is the "Golfers' Land," built by one Paterson, who was quite like an Olympian victor, for he and his ancestors had ten times won the champion medal at golf—an excellent and delightful game. Golf may be played wherever there is a wide enough space of broken grass-land; but he who would see the game in its glory and in its ancient seat (the most picturesque town north of the Forth) must go to St. Andrews. On the right hand of the Canongate is "the old Playhouse Close," one of the most characteristic of the antique wynds, and the home of the sorely persecuted stage in Presbyterian Scotland. And so, passing the White Horse Tavern, where Boswell entertained Johnson, and which, with its gables and dormer windows, is one of the best-preserved relics of the past, we go, by the quaint "Queen Mary's Bath," into the open free air, with the green slopes of Arthur's Seat on one hand, and

Holyrood on the other. It is pleasant to feel the salt breeze from the sea, and to leave behind the fume and reek, the memory and savor of crime and sin, the dust that may still have grains in it of burnt men's ashes, the gutters where blood has flowed so free, the historical ghosts and horrors of the old town and of old times.

Not here, nor to-day, is there room to speak of Holyrood; nor, indeed, does its tale require to be told. "A beggarly palace, in truth," Hogg found it, when he visited it with Shelley. A beggarly palace, perhaps, but one, in which it is difficult to be quite unmoved and untouched; for in the beggarly bed slept the fairest woman in the world, and in that hole of a boudoir Rizzio died, and up the winding-stair came Darnley, with Faldonside and the others that "made sikker." The view of the hill from the windows must be what Mary saw every morning, though probably the bare sides of Arthur's Seat were then wooded.

Of New Edinburgh I have not proposed to say much. A casual Scot whom Hogg (Shelley's Hogg, not the Shepherd) found in the streets assured him that "if all the buildings at Oxford and Cambridge were molded into one edifice, the effect would not be the same as that of Edinburgh University. It would be far inferior." The effect would not, indeed, be precisely the same. But if you took a few things out of Queen's, and blackened that college, the effect would not be wholly unlike that of Edinburgh University. The Register Office, according to Hogg's cicerone, was "the finest building in the habitable earth." We Scots have a "canty conceit o' oursel's," and New Edinburgh is the Sparta which we have adorned. The monuments on the Calton Hill cannot be observed without admiration. Here is a Greek ruin, a pepper-box, "very late and dreadfully debased," with other weird edifices, testifying, wildly and incoherently at once, to our feeling for art, and to our recognition of Dugald Stewart and Robert Burns.

The Register Office may or may not be the finest building in the habitable earth, but the distant views of Edinburgh, the general impressions from a dozen different points, are wonderful and memorable,—as pleasant and dear to look back upon or forward to as the glowing spectacle of Florence from any of her storied and sacred heights. Only, while in Florence all is color and brilliancy, with an evident and beautiful arrangement and order, Edinburgh depends for her charm on the smoke, the sea-haze, the mystery, broken by the faint and clear forms of the Castle Hill and its towery crown, by the ridge of the old city, the tall spires, and the lantern

of St. Giles, etched on the gray background. Behind all, on three sides, are the everlasting hills, and to the north the gray or glittering Frith, decked with flying sails, and studded with tiny islands. Two views of Edinburgh remain impressed most deeply on my memory. One was seen on a late afternoon of January from the Calton hill. At our feet the straight line of the lamps of Princes street twinkled away into the shadow. Beneath us was swathed in long folds a soft brown mist, from which the crests of houses, the spires of churches, the Castle rock, rose solemnly, their bases in shadow and darkness, their crowns clear against the upper sky. Farther away emerged from a fainter mist the deep folds and rolling ridges of the hills,—farther away, but yet, owing to some effect of light, the hills seemed quite near at hand, brooding about the town. The other is a summer view of Edinburgh, about five o'clock on a bright August afternoon, the town beheld from Fetter College, between the new city and the sea. Now the ocean of mist, from which the spires emerged, and above which stood the long castled line of houses, was blue or silvery gray; the city and its towers were white and distinct against a sky of deep, tender blue. Behind was Arthur's Seat, with its leonine air of watching over a trust. These are two beautiful views of Edinburgh, but she is beautiful from all points and in every light, beautiful especially,

perhaps,
from the

whence Marmion saw her before Flodden. The outlines of all the hills have a peculiar, almost a Greek grandeur and simplicity. Everywhere they are within sight, except when, from the crest of George street, you gaze down over the sloping land to the Frith and the Fifeshire plains, or when, from Princes street, across the gorge where the Norloch's waters lay, you watch the illumined heights and peaks of the old town,

QUEEN MARY'S BATH.

clear through the rainy air, reflected, with all their lamps, in the pools of water. This view Mr. Pennell has chosen, and none is more familiar and characteristic.

About the people of Edinburgh, so far, noth-

son and is Covenanting and Presbyterian enough to dance in Lent. Probably there is no more hospitable and amusing town in the kingdom. I remember a day of this last spring, a Sunday, which was horrible with

WHITE HORSE INN, WHERE JOHNSON STOPPED.

ing has been said. People are not like places, deaf and insensible, and it is a thankless job to criticise our contemporaries. Edinburgh cannot be said to be all that she was when it was a far cry to London, when Edinburgh was a capital indeed, with a literature and a brilliant society, and a school of art of her own. Now, London is within a brief nine hours' journey, and has drawn away the "county people"—the old families—from their old haunted *châteaux* to Belgravia and Mayfair. The artists, or many of them, have gone on where purchasers have gone before; and many of the members of the Academy in London are Scotch. Yet some remain in their own beautiful town and spurn the attractions of money and of a noisier fame. The same causes operate to withdraw men of letters from the capital of the Blackwoods and Constables, from the home of "Maga" and the "Edinburgh Review." The lights of London have a magnetic attraction, and people who resist them are usually either too indolent or too wise to be very ambitious. But "Maga" remains true to the city of Lockhart and Wilson, and has still her court of wits and scholars. The University, the Bar, the Army (as represented by the regiments at the Castle and Tuck's Lodge), these, with such of the surrounding lairds as prefer the comparative quiet of Edinburgh, make up the society of the place,—a society which has a winter sea-

howling east winds and tormented with dust. We struggled for a mile beyond the town, and found ourselves in a deep dell, a windless air; the trees were breaking into leaf, the primroses starred the banks, a clear trout-stream flowed singing through the midst of this sheltered paradise. This is the charm of Edinburgh. The unspoiled country lies within sight of her gates; the fields, and the hills, and the towns, and the sea, and the links of Musselburgh, whereon to play golf and forget this troublesome world, are all hard at hand. I do not imagine that the people of the old town think much of these advantages. The place is notorious for intoxicated Caledonians and temperance hotels.

Though Edinburgh has its drawbacks (something about them, more about its incommunicable charm, may be read in Mr. R. L. Stevenson's book on his native city)—though Edinburgh has its drawbacks, the position of a professor in the University, with half the year pure, untrammelled holiday, seems to be the true paradise of men of letters. So think all scribbling or bookish Scots, and I mean to send in my testimonials as soon as any pious founder endows a chair for the study of French fiction. Till then, only one's heart, or a great share of it,—*dimidium animæ mee*,—and one's memories, happy or sad, are in Edinburgh.

Andrew Lang.

THE BREAD-WINNERS.*

XVIII.

OFFITT PLANS A LONG JOURNEY.

THE bright sun and the morning noises of the city waked Offitt from his sleep. As he dressed himself, the weight of the packages in his pockets gave him a pleasant sensation to begin the day with. He felt as if he were entering upon a new state of existence—a life with plenty of money. He composed in his mind an elaborate breakfast as he walked down-stairs and took his way to a restaurant, which he entered with the assured step of a man of capital. He gave his order to the waiter with more decision than usual, and told him in closing “not to be all day about it, either.”

While waiting for his breakfast, he opened the morning “Bale-Fire” to see if there was any account of “The Algonquin Avenue Tragedy.” This was the phrase which he had arranged in his mind as the probable headline of the article. He had so convinced himself of the efficacy of his own precautions, that he anticipated the same pleasure in reading the comments upon his exploit that an author whose incognito is assured enjoys in reading the criticisms of his anonymous work. He was at first disappointed in seeing no allusion to the affair in the usual local columns, but, at last, he discovered in a corner of the paper this double-leaded postscript:

“We stop the press to state that an appalling crime was last night committed in Algonquin Avenue. The mansion of Arthur Farnham, Esq., was entered by burglars between ten and eleven o’clock, and that gentleman assaulted and probably murdered.”

“Full particulars in a later edition.”

“LATER.—Captain Farnham is still living, and some hopes are entertained of his recovery. The police have found the weapon with which the almost fatal blow was struck—a carpenter’s hammer marked with a letter S. It is thought this clew will lead to the detection of the guilty parties.”

Offitt was not entirely pleased with the tone of this notice. He had expected some reference to the address and daring of the burglar. But he smiled to himself, “Why should I care for Sam’s reputation?” and ate his breakfast with a good appetite. Before he had finished, however, he greatly modified his plan, which was to have the threads of evidence lead natu-

rally, of themselves, to the conviction of Sleeney. He determined to frighten Sam, if possible, out of the city, knowing that his flight would be conclusive evidence of guilt. He swallowed his coffee hurriedly and walked down to Dean street, where by good fortune he found Sam alone in the shop. He was kicking about a pile of shavings on the floor. He turned as Offitt entered and said: “Oh, there you are. I can’t find that hammer anywhere.”

Offitt’s face assumed a grieved expression. “Come, come, Sam, don’t stand me off that way. I’m your friend, if you’ve got one in the world. You mustn’t lose a minute more. You’ve got time now to catch the 8.40. Come, jump in a hack and be off.”

His earnestness and rapidity confused Sleeney, and drove all thoughts of the hammer from his mind. He stared at Offitt blankly, and said, “Why, what are you givin’ me now?”

“I’m a-givin’ you truth and friendship, and fewest words is best. Come, light out, and write where you stop. I’ll see you through.”

“See here,” roared Sam, “are you crazy or am I? Speak out! What’s up?”

“Oh! I’ve got to speak it out, raw and plain, have I? Very well! Art Farnham was attacked and nearly murdered last night, and if you didn’t do it, who did? Now come, for God’s sake, get off before the police get here. I never thought you had the sand—but I see you’ve got too much. Don’t lose time talking any more. I’m glad you’ve killed him. You done just right—but I don’t want to see you hung for it.”

His excitement and feigned earnestness had brought the tears to his eyes. Sam saw them and was convinced.

“Andy,” he said solemnly, “I know you’re my friend, and mean right. I’ll swear before God it wasn’t me, and I know nothing about it, and I wont run away.”

“But how will we prove it?” said Offitt, wringing his hands in distress. “Where was you last night from ten to eleven?”

“You know where I was—in your room. I went there just after nine, and fell asleep waiting for you.”

“Yes, of course, but who knows it? Sam, I believe you are innocent since you say so. But see the circumstances. You *have* talked about goin’ for him. You *have* had a fight

with him, and got put in jail for it, and —" he was about to mention the hammer, but was afraid—"I wish you would take my advice and go off for a week or so till the truth comes out. I'll lend you all the money you want. I'm flush this week."

"No, Andy," said Sleeney. "Nobody could be kinder than you. But I wont run away. They can't put a man where he wasn't."

"Very well," replied Offitt. "I admire your pluck, and I'll swear a blue streak for you when the time comes. And perhaps I had better get away now, so they wont know I've been with you."

Without a moment's delay he went to the chief of police and told him that he had a disagreeable duty to perform; that he knew the murderer of Captain Farnham; that the criminal was an intimate friend of his, a young man hitherto of good character named Sleeney.

"Ah-ha!" said the chief. "That was the fellow that Captain Farnham knocked down and arrested in the riot."

"The same," said Offitt. "He has since that been furious against the captain. I have reasoned with him over and over about it. Yesterday, he came to see me; showed me a hammer he had just bought at Ware & Harden's; said he was going to break Arthur Farnham's skull with it. I didn't believe he would, he had said it so often before. While we were talking, I took the hammer and cut his initial on it, a letter S." The chief nodded, with a broad smile. "He then left me, and came back to my room a little before midnight. He looked excited, and wanted me to go and get a drink with him. I declined, and he went off. This morning, when I heard about the murder, I said, 'He's the man that did the deed.'"

"You have not seen him since last night?"

"No; I suppose, of course, he has run away."

"Where did he live?"

"Dean street, at Matchin's, the carpenter."

The chief turned to his telegraphic operator and rapidly gave orders for the arrest of Sleeney by the police of the nearest station. He also sent for the clerks who were on duty the day before at Ware & Harden's.

"Mr. —, I did not get your name," he said to Offitt, who gave him his name and address. "You have acted the part of a good citizen."

"The most painful act of my life," Offitt murmured.

"Of course. But duty before everything. I will have to ask you to wait a little while in the adjoining room till we see whether this man can be found."

Offitt was shown into a small room, barely furnished, with two doors—the one through which he had just come, and one opening apparently into the main corridor of the building. Offitt, as soon as he was alone, walked stealthily to the latter door and tried to open it. It was locked, and there was no key. He glanced at the window; there was an iron grating inside the sash, which was padlocked. A cold sweat bathed him from head to foot. He sank into a chair, trembling like a leaf. He felt for his handkerchief to wipe his wet forehead. His hand touched one of the packages of money. He bounded from his chair in sudden joy. "They did not search me, so they don't suspect. It is only to make sure of my evidence that they keep me here." Nevertheless, the time went heavily. At last, an officer came in and said he was to come to the police-justice's for the preliminary examination of Sleeney.

"They have caught him, then?" he asked, with assumed eagerness and surprise. "He had not got away?"

"No," the man answered curtly.

They came to the court-room in a few steps. Sam was there between two policemen. As Offitt entered, he smiled and slightly nodded. One or two men who had been summoned as witnesses were standing near the justice. The proceedings were summary.

One of the policemen said that he had gone to Matchin's shop to arrest the prisoner; that the prisoner exhibited no surprise; his first words were, "Is Mr. Farnham dead yet?"

Offitt was then called upon, and he repeated, clearly and concisely, the story he had told the chief of police. When he had concluded, he was shown the hammer which had been picked up on the floor at Farnham's, and was asked, "Is that the hammer you refer to?"

"Yes, that is it."

These words were the signal for a terrible scene.

When Sleeney saw Offitt step forward and begin to give his evidence, he leaned over with a smile of pleased expectation upon his face. He had such confidence in his friend's voluble cleverness that he had no doubt Offitt would "talk him free" in a few minutes. He was confused a little by his opening words, not clearly seeing his drift; but as the story went on, and Offitt's atrocious falsehood became clear to his mind, he was dumb with stupefaction, and felt a strange curiosity wakening in him to see how the story would end. He did not for the moment see what object Offitt could have in lying so, until the thought occurred to him, "May be there's a reward out!" But when the blood-stained

hammer was shown and identified by Offitt, all doubt was cleared away in a flash from the dull brain of Sleeney. He saw the whole horrible plot of which he was the victim.

He rose from his seat before the officer could stop him, and roared like a lion in the toils, in a voice filled equally with agony and rage, "You murdering liar! I'll tear your heart out of you!"

There were a wide table and several chairs between them, but Sleeney was over them in an instant. Offitt tried to escape, but was so hemmed in that the infuriated man had him in his hands before the officers could interpose. If they had delayed a moment longer all would have been over, for already Sleeney's hands were at the throat of his betrayer. But two powerful policemen with their clubs soon separated the combatants, and Sleeney was dragged back and securely handcuffed.

Offitt, ghastly pale and trembling, had sunk upon a bench. The justice, looking at him narrowly, said, "The man is going to faint; loosen his collar."

"No," said Offitt, springing to his feet. "I am perfectly well."

In his struggle with Sleeney a button of his coat had been torn away. He asked a bystander for a pin, and carefully adjusted the garment. The thought in his mind was, "I don't mind being killed; but I thought he might tear off my coat, and show them my money." From this moment he kept his hand in such position that he might feel the packages in his pockets.

Sleeney was still panting and screaming execrations at Offitt. The justice turned to him with sternness, and said, "Silence there! Have you not sense enough to see how your ferocious attack on the witness damages you? If you can't restrain your devilish temper while your friend is giving his evidence, it will be all the worse for you."

"Judge," cried Sam, now fairly beside himself, "that's the murderer! I know it. I can prove it. He aint fit to live. I'll break his neck yet!"

Offitt raised his hands and eyes in deprecating sorrow.

"This is the wild talk of a desperate man," said the justice. "But you may as well tell us how you passed last evening."

"Certainly," said Offitt, consulting his memory. "Let me see. I took supper about seven at Duffer's; I went to Glauber's drug-store next and got a glass of soda water; if they don't know me, they'll remember my breaking a glass; then I made a visit at Mr. Matchin's on Dean street; then I went to the Orleans theater; I came out between the acts and got a cup of coffee at Mouchem's; then

I went back and stayed till the show was over; that was about half-past eleven. Then I went home and found Mr. Sleeney there."

"You had better go with Mr. Fangwell, and let him verify this statement," said the justice.

He then called the policeman who arrived first at Farnham's house the night before. He told his story and identified the hammer which had been shown to Offitt. A young man from Ware & Harden's swore that he had sold the hammer the day before to Sleeney, whom he knew. The justice held this evidence sufficient to justify Sleeney's detention.

"I should think so," said some of the bystanders. "If it don't hang him, there's a loud call for Judge Lynch."

"Silence!" said the justice. "The prisoner will be taken for the present to the city jail."

Sam was led out, and Offitt accompanied the chief of police back to the room he had just quitted. He remained there several hours, which seemed to him interminable. At last, however, the detective who had been sent to inquire as to the truth of the account he had given of himself, returned with a full confirmation of it, and Offitt was suffered to go, on his own engagement to give further evidence when called upon.

He left the City Hall with a great load off his mind. It was not without an effort that he had sworn away the character, the freedom, and perhaps the life of his comrade. If he could have accomplished his purpose without crushing Sleeney he would have preferred it. But the attack which his goaded victim had made upon him in the court-room was now a source of lively satisfaction to him. It created a strong prejudice against the prisoner; it caused the justice at once to believe him guilty, and gave Offitt himself an injured feeling that was extremely comforting in view of what was to happen to Sleeney.

He went along the street tapping his various pockets furtively as he walked. He was hungry. His diverse emotions had given him an appetite. He went into an eating-house and commanded a liberal supper. He had an odd fancy as he gave his order. "That's the sort of supper I would have if it was my last—if I was to be hanged to-morrow." He thought of Sleeney, and hoped they would treat him well in jail. He felt magnanimous toward him. "Who would have thought," he mused, "that Sam had such a devil of a temper? I 'most hope that Farnham wont die—it would be rough on Sam. Though perhaps that would be best all round," he added, thinking of Sam's purple face in the court-room and the eager grip of his fingers.

He came out of the eating-house into the gathering twilight. The lamps were springing into light in long straight lines down the dusky streets. The evening breeze blew in from the great lake, tempering the stale heat of the day. Boys were crying the late editions of the newspapers with "Full account! arrest o' the Farnham burglar!" He bought one, but did not stop to open it. He folded it into the smallest possible compass, and stuffed it into his pocket, "along with the other documents in the case," as he chuckled to himself. "I'll read all about it in the train to-morrow—business before pleasure," he continued, pleased with his wit.

Every moment he would put his hand into his side-pocket and feel the package containing the largest bills. He knew it was imprudent—that it might attract the attention of thieves or detectives; but to save his life he could not have kept from doing it. At last he scratched his hand on the pin which was doing duty for the button he had lost in his scuffle with Sleeney. "Ah!" he said to himself, with humorous banter, "it wont do to be married in a coat with a button off."

He went into a little basement shop where a sign announced that "Scouring and Repairing" were done. A small and bald Hamburger stepped forward, rubbing his hands. Offitt told him what he wanted, and the man got a needle and thread and selected from a large bowl of buttons on a shelf one that would suit. While he was sewing it on, he said:

"Derrible news apout Gabben Farnham."

"Yes," said Offitt. "Is he dead?"

"I don't know off he ish tet. Dey say he ish oud mid his het, und tat looksh mighty pad. But one ting ish goot; dey cotch de murterer."

"They have?" asked Offitt, with languid interest. "What sort of fellow is he?"

"Mutter Gottes!" said the little German; "de vorst kind. He would radder gill a man as drink a glass bier. He gome mighty near gillin' his pest vrient to-day in de gourt-house droben, ven he vas dellin' vat he knowed apout it alleweil."

"A regular fire-eater," said Offitt. "So you've finished, have you? How much for the job!"

The German was looking at a stain on the breast of the coat.

"Vot's dish?" he said. "Looksh like baint. Yust lemme take your coat off a minute and I gleans dot up like a nudel soup."

"Say, mind your own business, wont you?" growled Offitt. "Here's your money, and when I want any of your guff I'll let you know."

He hurried out, leaving the poor German amazed at the ill result of his effort to turn an honest penny and do a fellow-creature a service.

"Vunny beebles!" he said to himself. "But I got a kevarter off a tollar for a decent chob."

Offitt came out of the shop and walked at a rapid pace to Dean street. He was determined to make an end at once of Maud's scruples and coquetry. He said to himself, "If we are both alive to-morrow, we shall be married." He believed if he could have her to himself for half an hour, he could persuade her to come with him. He was busy all the way plotting to get her parents out of the house. It would be easy enough to get them out of the room; but he wanted them out of hearing, out of reach of a cry for help even.

He found them all together in the sitting-room. The arrest of Sleeney had fallen heavily upon them. They had no doubt of his guilt, from the reports they had heard; and their surprise and horror at his crime were not lessened, but rather increased, by their familiar affection for him.

"To think," said Saul to his wife, "that that boy has worked at the same bench and slept in the same house with me for so many years, and I never knowed the Satan that was in him!"

"It's in all of us, Saul," said Mrs. Matchin, trying to improve the occasion for the edification of her unbelieving husband.

Maud had felt mingled with her sorrow a suspicion of remorse. She could not help remembering that Sam considered Farnham his rival, with how little reason she knew better than any one. She could understand how her beauty might have driven him to violence; but when the story of the robbery transpired also, as it did in the course of the morning, she was greatly perplexed. When she joined in the lamentations of her parents and said she never could have believed that of Sam Sleeney, she was thinking of the theft, and not of the furious assault. When they had all, however, exhausted their limited store of reflections, a thing took place which increased the horror and the certainty of Mr. and Mrs. Matchin, and left Maud a prey to a keener doubt and anxiety than ever. Late in the afternoon a sharp-faced man, with a bright eye and a red mustache, came to the house and demanded in the name of the law to be shown Sam's bedroom. He made several notes and picked up some trifling articles, for which he gave Mr. Matchin receipts. Coming out of the room, he looked carefully at the door-knob. "Seems all right," he said.

Then turning to Matchin, he said, with professional severity, "What door did he generally come in by?"

"Sometimes one and sometimes another," said Saul, determined not to give any more information than he must.

"Well, I'll look at both," the detective said.

The first one stood his scrutiny without effect, but at the second his eye sparkled and his cheek flushed with pleasure, when he saw the faint, reddish-brown streaks which Offitt had left there the night before. He could not repress his exultation; turning to Saul, he said, "There's where he came in last night, any way."

"He didn't do no such a thing," replied Saul. "That door I locked myself last night before he came in."

"Oh, you did? So you're sure he came in at the other door, are you? We will see if he could get in any other way."

Walking around the corner, he saw the ladder where Offitt had left it.

"Hello! that's his window, aint it?"

Without waiting for an answer, the detective ran up the ladder, studying every inch of its surface as he ran. He came down positively radiant, and slapped Saul heartily on the shoulder.

"All right, old man. I'll trouble you to keep that ladder and that door just as they are. They are important papers. Why, don't you see?" he continued. "Bless your innocent old heart, he comes home with his hands just reg'larly dripping with murder. He fumbles at that door, finds it locked, and so gets that ladder, h'ists it up to the window, and hops into bed as easy as any Christian school-boy in town, and he thinks he's all right; but he never thinks of Tony Smart, your humble servant."

This view of the case was perfectly convincing to Saul, and also to his wife when he repeated it at the supper-table; but it struck Maud with a sudden chill. She remembered that when she had dismissed Offitt from that midnight conference at her casement, he had carefully taken the ladder away from her window, and had set it against the house some distance off. She had admired at the time his considerate chivalry, and thought how nice it was to have a lover so obedient and so careful of her reputation. But now the detective's ghastly discovery turned her thought in a direction which appalled her. Could it be possible? And all that money—where did it come from? As she sat with her parents in the gathering darkness, she kept her dreadful anxiety to herself. She had been hoping all day to see her lover; now she feared to have him come, lest her new

suspitions might be confirmed. She quickly resolved upon one thing: she would not go away with him that night—not until this horrible mystery was cleared up. If she was worth having, she was worth waiting for a little while.

They all three started as the door opened and Offitt came in. He wasted no time in salutations, but said at once, "It's a funny thing, but I have got a message for each of you. The district attorney saw me coming up this way, Mr. Matchin, and asked me to tell you to come down as quick as you can to his office—something very important, he said. And stranger than that, I met Mr. Wixham right out here by the corner, and he asked me if I was comin' here, and if I would ask you, Mrs. Matchin, to come right up to their house. Jurildy is sick and wants to see you, and he has run off for the doctor."

Both the old people bustled up at this authoritative summons, and Offitt as they went out said, "I'll stay awhile and keep Miss Maud from gettin' lonesome."

"I wish you would," said Mrs. Matchin. "The house seems eerie-like with Sam where he is."

Maud felt her heart sink at the prospect of being left alone with the man she had been longing all day to see. She said, "Mother, I think I ought to go with you!"

"No, indeed," her mother replied. "You aint wanted, and it wouldn't be polite to Mr. Offitt."

The moment they were gone, Offitt sprang to the side of Maud, and seized her hands.

"Now, my beauty, you will be mine. Put on your hat, and we will go."

She struggled to free her hands.

"Let go," she said; "you hurt me. Why are you in such a terrible hurry?"

"How can you ask? Your parents will be back in a few minutes. Of course, you know that story was only to get them out of our way. Come, my beautiful Maud! my joy, my queen! To-morrow, New York; next day, the sea; and then Europe and love and pleasure all your life!"

"I want to talk with you a minute," said Maud, in a voice which trembled in spite of her efforts. "I can't talk in the dark. Wait here till I get a lamp."

She slipped from the room before he could prevent her, and left him pacing the floor in a cold rage. It was only a moment, however, until she returned, bringing a lamp, which she placed on a table, and then asked him to be seated in a stiff, formal way, which at once irritated and enchanted him. He sat down and devoured her with his eyes. He was angry when she went for the lamp; but, as its

light fell on her rich, dark hair, her high color, and her long, graceful figure, as she leaned back in her chair, he felt that the tenderest conversation with her in the darkness would lose something of the pleasure that the eyes took in her. This he said to her, in his coarse but effective way.

She answered him with coquettish grace, willing to postpone the serious talk she dreaded so. But the conversation was in stronger hands than hers, and she found herself forced, in a few minutes, either to go with him or give a reason why.

"The fact is, then," she stammered, with a great effort, "I don't know you well enough yet. Why cannot you wait awhile?"

He laughed.

"Come with me, and you will know me better in a day than you would here in a year. Do not waste these precious moments. Our happiness depends upon it. We have everything we can desire. I cannot be myself here. I cannot disclose my rank and my wealth to these people who have only known me as an apostle of labor. I want to go where you will be a great lady. Oh, come!" he cried, with an outburst of pent-up fire, throwing himself on the floor at her feet and laying his head upon her knee. She was so moved by this sudden outbreak, which was wholly new to her experience, that she almost forgot her doubts and fears. But a remnant of practical sense asserted itself. She rose from her chair, commanded him once more to be seated, and said:

"I am afraid I am going to offend you, but I must ask you something."

"Ask me anything," he said, with a smile, "except to leave you."

She thought the phrase so pretty that she could hardly find courage to put her question. She blushed and stammered, and then, rushing at it with desperation, she said:

"That money — where did you get it?"

"I will tell you when we are married. It is a secret."

He tried still to smile, but she saw the laughter dying away from his face.

Her blood turned cold in her veins, but her heart grew stronger, and she determined to know the worst. She was not a refined or clever woman; but the depth of her trouble sharpened her wits, and she instinctively made use of her woman's wiles to extort the truth from the man who she knew was under the spell of her beauty, whatever else he was.

"Come here!" she said. Her face was pale, but her lips were smiling. "Get down there where you were!" she continued, with tender imperiousness. He obeyed her, hardly daring to trust his senses. "Now put your

hands between my hands," she said, still with that pale, singular smile, which filled him with unquiet transports, "and tell me the truth, you bad boy!"

"The truth!" with a beating of the heart which made his utterance thick; "the truth is that you are the most glorious woman in the world, and that you will be mine to-morrow."

"Perhaps," she almost whispered. "But you must tell me something else. I am afraid you are a naughty boy, and that you love me too much. I once told you I had an enemy, and that I wanted somebody to punish him. Did you go and punish him for me? — tell me that."

Her voice was soft and low and beguiling. She still smiled on him, leaving one hand in his, while she raised the forefinger of the other in coquettish admonition. The ruffian at her feet was inebriated with her beauty and her seductive playfulness. He thought she had divined his act — that she considered it a fine and heroic test of love to which she had subjected him. He did not hesitate an instant, but said:

"Yes, my beauty; and I am ready to do the same for anybody who gives you a cross look."

Now that she had gained the terrible truth, a sickening physical fear of the man came over her, and she felt herself growing faint. His voice sounded weak and distant as he said:

"Now you will go with me, wont you?"

She could make no answer. So he continued:

"Run and get your hat. Nothing else. We can buy all you want. And hurry. They may come back any moment."

She perceived a chance of escape and roused herself. She thought if she could only get out of the room she might save herself by flight or by outcry.

"Wait here," she said gently, "and be very quiet."

He kissed his fingers to her without a word. She opened the door into the next room, which was the kitchen and dining-room of the family, and there, not three feet from her, in the dim light, haggard and wan, bare-headed, his clothes in rags about him, she saw Sam Sleeney.

XIX.

A LEAP FOR SOMEBODY'S LIFE.

WHEN Sleeney was led from the room of the police-justice in the afternoon, he was plunged in a sort of stupor. He could not recover from the surprise and sense of outrage

with which he had listened to Offitt's story. What was to happen to him he accepted with a despair which did not trouble itself about the ethics of the transaction. It was a disaster, as a stroke of lightning might be. It seemed to him the work had been thoroughly and effectually done. He could see no way out of it; in fact, his respect for Offitt's intelligence was so great that he took it for granted Andy had committed no mistakes, but that he had made sure of his ruin. He must go to prison; if Farnham died, he must be hanged. He did not weary his mind in planning for his defense when his trial should come on. He took it for granted he should be convicted. But if he could get out of prison, even if it were only for a few hours, and see Andy Offitt once more—he felt the blood tingling through all his veins at the thought. This roused him from his lethargy and made him observant and alert. He began to complain of his handcuffs; they were in truth galling his wrists. It was not difficult for him to twist his hands so as to start the blood in one or two places. He showed these quietly to the policemen who sat with him in a small anteroom leading to the portion of the city jail where he was to be confined for the night. He seemed so peaceable and quiet that they took off the irons, saying good-naturedly, "I guess we can handle you." They were detained in this room for some time waiting for the warden of the jail to come and receive their prisoner. There were two windows, both giving view of a narrow street, where it was not bright at noonday, and began to grow dark at sunset with the shade of the high houses and the thick smoke of the quarter. The windows were open, as the room was in the third story, and was therefore considered absolutely safe. Sleeney got up several times and walked first to one window and then to another, casting quick but searching glances at the street and the walls. He saw that some five feet from one of the windows a tin pipe ran along the wall to the ground. The chances were ten to one that any one risking the leap would be dashed to pieces on the pavement below. But Sleeney could not get that pipe out of his head. "I might as well take my chance," said he to himself. "It would be no worse to die that way than to be hung." He grew afraid to trust himself in sight of the window and the pipe, it exercised so strong a fascination upon him. He sat down with his back to the light and leaned his head on his hands. But he could think of nothing but his leap for liberty. He felt in fancy his hands and knees claspings that slender ladder of safety; he began to think what he would do when he

struck the sidewalk, if no bones were broken. First, he would hide from pursuit, if possible. Then he would go to Dean street and get a last look at Maud, if he could; then his business would be to find Offitt. "If I find him," he thought, "I'll give them something to try me for." But finally he dismissed the matter from his mind, for this reason. He remembered seeing a friend, the year before, fall from a scaffolding and break his leg. The broken bone pierced through the leg of his trousers. This thought daunted him more than death on the gallows.

The door opened, and three or four policemen came in, each leading a man by the collar, the ordinary riffraff of the street, charged with petty offenses. One was very drunk and abusive. He attracted the attention of everybody in the room by his antics. He insisted on dancing a breakdown which he called the "essence of Jeems River"; and in the scuffle which followed, first one and then the other policeman in charge of Sleeney became involved. Sleeney was standing with his back to the window, quite alone. The temptation was too much for him. He leaped upon the sill, gave one mighty spring, caught the pipe, and slid safely to the ground. One or two passers-by saw him drop lightly to the sidewalk, but thought nothing of it. It was not the part of the jail in which prisoners were confined, and he might have been taken for a carpenter or plumber who chose that unusual way of coming from the roof. His hat blew off in his descent, but he did not waste time in looking for it. He walked slowly till he got to the corner, and then plunged through the dark and ill-smelling streets of the poor and crowded quarter, till he came by the open gate of a coal-yard. Seeing he was not pursued, he went in, concealed himself behind a pile of boards, and lay there until it was quite dark.

He then came out and walked through roundabout ways, avoiding the gas-lights and the broad thoroughfares, to Dean street. He climbed the fence and crept through the garden to the backdoor of the house. He had eaten nothing since early morning, and was beginning to be hungry. He saw there were no lights in the rear of the house, and thought if he could enter the kitchen he might get a loaf of bread without alarming the household. He tried the backdoor and found it fastened. But knowing the ways of the house, he raised the cellar-door, went down the steps, shut the door down upon himself, groped his way to the inner stairs, and so gained the kitchen. He was walking to the cupboard when the door opened and he saw Maud coming toward him.

She did not seem in the least startled to see him there. In the extremity of her terror, it may have seemed to her that he had been sent especially to her help. She walked up to him, laid her hands on his shoulders, and whispered, "Oh, Sam, I am so glad to see you. Save me! Don't let him touch me! He is in there."

Sam hardly knew if this were real or not. A wild fancy assailed him for an instant: was he killed in jumping from the window? Surely this could never happen to him on the earth; the girl who had always been so cold and proud to him was in his arms, her head on his shoulder, her warm breath on his cheek. She was asking his help against some danger.

"All right, Mattie," he whispered. "Nobody shall hurt you. Who is it?" He thought of no one but the police.

"Offitt," she said.

He brushed her aside as if she had been a cobweb on his path, and with a wild cry of joy and vengeance he burst through the half-open door. Offitt turned at the noise, and saw Sam coming, and knew that the end of his life was there. His heart was like water within him. He made a feeble effort at defense; but the carpenter, without a word, threw him on the floor, planted one knee on his chest, and with his bare hands made good the threat he had uttered in his agony in the court-room, twisting and breaking his neck.

Sleeny rose, pulled the cover from the center-table in the room, and threw it over the distorted face of the dead man.

Maud, driven out of her wits by the dreadful scene, had sunk in a rocking-chair, where, with her face in her hands, she was sobbing and moaning. Sam tried to get her to listen to him.

"Good-bye, Mattie. I shall never see you again, I suppose. I must run for my life. I want you to know I was innocent of what they charged me with——"

"Oh, I know that, Sam," she sobbed.

"God bless you, Mattie, for saying so. I don't care so much for what happens now. I am right glad I got here to save you from that——" he paused, searching for a word which would be descriptive and yet not improper in the presence of a lady; but his vocabulary was not rich and he said at last, "that snide. But I should have done that to him anyhow; so don't cry on that account. Mattie, will you tell me good-bye?" he asked, with bashful timidity.

She rose and gave him her hand; but her eyes happening to wander to the shapeless form lying in the corner, she hid her face again on his shoulder, and said with a fresh

burst of tears, "Oh, Sam, stay with me a little while. Don't leave me alone."

His mind traveled rapidly through the incidents that would result from his staying—prison, trial, and a darker contingency still rearing its horrible phantom in the distance. But she said, "You will stay till father comes, wont you?" and he answered simply:

"Yes, Mattie, if you want me to."

He led her to a seat and sat down beside her, to wait for his doom.

In a few minutes they heard a loud altercation outside the door. The voice of Saul Matchin was vehemently protesting, "I tell ye he aint here," and another voice responded:

"He was seen to climb the fence and to enter the house. We've got it surrounded, and there's no use for you to get yourself into trouble aidin' and abettin'."

Sam walked to the door and said to the policeman, with grim humor, "Come in! you'll find two murderers here, and neither one will show any fight."

The policemen blew their whistles to assemble the rest, and then came in warily, and two of them seized him at once.

"It's all very well to be meek and lowly, my friend," said one of them, "but you'll not play that on us twice—leastways," he added with sarcastic intention, "not twice the same day. See here, Tony Smart," addressing a third, who now entered, "lend a hand with these bracelets," and in a moment Sam was handcuffed and pinioned.

"Where's the other one you was talking about?" asked the policeman.

Sam pointed with his foot in the direction where Offitt lay. The policeman lifted the cloth, and dropped it again with a horror which his professional phlegm could not wholly disguise.

"Well, of all the owdacious villains ever I struck—— Who do you think it is?" he asked, turning to his associates.

"Who?"

"The witness this afternoon—Offitt. Well, my man," he said, turning to Sam, "you wanted to make a sure thing of it, I see. If you couldn't be hung for one, you would for the other."

"Sam!" said Saul Matchin, who, pale and trembling, had been a silent spectator of the scene so far, "for heaven's sake, tell us what all this means."

"Mind now," said the officer, "whatever you say will be reported."

"Very well, I've got nothing to hide," said Sam. "I'll tell you and Mother Matchin" (who had just come in and was staring about her with consternation, questioning Maud in dumb show) "the whole story. I

owe that to you, for you've always used me well. It's a mighty short one. That fellow Offitt robbed and tried to murder Captain Farnham last night, and then swore it on to me. I got away from the officers to-night, and come round here and found him 'saunting Mattie, and I twisted his neck for him. If it's a hanging matter to kill snakes, I'll have to stand it—that's all."

"Now, who do you think is going to believe that?" said the captain of the squad.

Maud rose and walked up to where Sam was standing, and said, "I know every word he has said is true. That man was the burglar at Captain Farnham's. He told me so himself to-night. He said he had the money in his pocket and wanted to make me go with him."

She spoke firmly and resolutely, but she could not bring herself to say anything of previous passages between them; and when she opened her lips to speak of the ladder, the woman was too strong within her, and she closed them again. "I'll never tell that unless they go to hang Sam, and then I won't tell anybody but the Governor," she swore to herself.

"It's easy to see about that story," said the officer, still incredulous.

They searched the clothing of Offitt, and the face of the officer, as one package of money after another was brought to light, was a singular study. The pleasure he felt in the recovery of the stolen goods was hardly equal to his professional chagrin at having caught the wrong man. He stood for a moment silent, after tying up all the packages in one.

"It's no use dodging," he said at last. "We have been barking up the wrong tree."

"I don't know about that," said the one called Tony Smart. "Who has identified this money? Who can answer for this young lady? How about them marks on the door and the ladder? Anyhow, there's enough to hold our prisoner on."

"Of course there is," said the captain. "He hadn't authority to go twisting people's necks in this county."

At this moment the wagon which had been sent for arrived. The body of Offitt was lifted in. The captain gathered up the money, notified Matchin that he and his family would be wanted as witnesses in the morning, and they all moved toward the door. Sam turned to say "Farewell." Pinioned as he was, he could not shake hands, and his voice faltered as he took leave of them. Maud's heart was not the most feeling one in the world, but her emotions had been deeply stirred by the swift succession of events; and as she saw

this young fellow going so bravely to meet an unknown fate, purely for her sake, the tears came to her eyes. She put out her hand to him; but she saw that his hands were fastened, and, seized with sudden pity, she put her arms about his neck and kissed him, whispering, "Keep up a good heart, Sam!" And he went away, in all his danger and ignominy, happier than he had been for many a day.

The probabilities of the case were much discussed that night at police head-quarters, in conferences from which the reporters were rigorously excluded; and the next morning the city newspapers reveled in the sensation. They vied with each other in inventing attractive head-lines and startling theories. The "Bale-Fire" began its leader with these impressive sentences: "Has a carnival of crime set in amongst us? Last night the drama of Algonquin Avenue was supplemented by the tragedy of Dean street, and the public, aghast, demands 'What next?' A second murder was accomplished by hands yet dripping with a previous crime. The patriotic witness who yesterday, with a bleeding heart, denounced the criminality of his friend, paid last night with his life for his fidelity." In another column it called for a "monument, by popular subscription, for Andrew Jackson Offitt, who died because he would not tell a lie." On the other hand, the "Morning Astral," representing the conservative opinion of the city, called for a suspension of judgment on the part of its candid readers; said that there were shady circumstances about the antecedents of Offitt, and intimated that documents of a compromising character had been found on his person; congratulated the city on the improved condition of Captain Farnham; and, trusting in the sagacity and diligence of the authorities, confidently awaited from them a solution of the mystery. Each of them, nevertheless, gave free space and license to their reporters, and Offitt was a saint, a miscreant, a disguised prince, and an escaped convict, according to the state of the reporter's imagination or his digestion; while the stories told of Sleeney varied from cannibalism to feats of herculean goodness. They all agreed reasonably well, however, as to the personal appearance of the two men; and from this fact it came about that, in the course of the morning, evidence was brought forward, from a totally unexpected quarter, which settled the question as to the burglary at Farnham's.

Mrs. Belding had been so busy the day before, in her constant attendance upon Farnham, that she had paid no attention to the story of the arrest. She had heard that

the man had been caught and his crime clearly established, and that he had been sent to jail for trial. Her first thought was, "I am glad I was not called upon to give evidence. It would have been very disagreeable to get up before a court-room full of men and say I looked with an opera-glass out of my daughter's window into a young man's house. I should have to mention Alice's name, too; and a young girl's name cannot be mentioned too seldom in the newspapers. In fact, twice in a life-time is often enough, and one of them should be a funeral notice."

But this morning, after calling at Farnham's and finding that he was getting on comfortably, she sat down to read the newspapers. Alice was sitting near her, with hands and lap full of some feminine handiwork. A happy smile played about her lips, for her mother had just repeated to her the surgeon's prediction that Captain Farnham would be well in a week or two. "He said the scalp wound was healing 'by the first intention,' which I thought was a funny phrase. I thought the maxim was that second thoughts were best." Alice had never mentioned Farnham's name since the first night, but he was rarely out of her mind, and the thought that his life was saved made every hour bright and festal. "He will be well," she thought. "He will have to come here to thank mamma for her care of him. I shall see him again and he shall not complain of me. If he should never speak to me again, I shall love him and be good to him always." She was yet too young and too innocent to know how impossible was the scheme of life she was proposing to herself, but she was thoroughly happy in it.

Mrs. Belding, as she read, grew perplexed and troubled. She threw down one newspaper and took up another, but evidently got no more comfort out of that. At last, she sighed and said, "Oh, dear! Oh, dear! I shall have to go down there after all. They have got the wrong man!"

Alice looked up with wondering eyes.

"These accounts all agree that the assassin is a tall, powerful young man, with yellow hair and beard. The real man was not more than medium height, very dark. Why, he was black and shiny as a cricket. I must go and tell them. I wonder who the lawyer is that does the indicting of people?"

"It must be the prosecuting attorney, Mr. Dalton," said Alice. "I heard he was elected this spring. You know him very well. You meet him everywhere."

"That elegant young fellow who leads Germans? Well, if that is not too absurd! I

never should have thought of him outside of a dress-coat. I don't mind a bit going to see him. Order the carriage, while I get my things on."

She drove down to the City Hall, and greatly astonished Mr. Dalton by walking into his office and requesting a moment's private conversation with him. Dalton was a dapper young man, exceedingly glib and well dressed, making his way in political and official, as he had already made it in social life. He greeted Mrs. Belding with effusion, and was anxious to know how he might serve her, having first cleared the room of the half-dozen politicians who did their lounging there.

"It is a most delicate matter for a lady to appear in, and I must ask you to keep my name as much in reserve as possible."

"Of course, you may count upon me," he answered, wondering where this strange exordium would lead to.

"You have got the wrong man. I am sure of it. It was not the blonde one. He was black as a cricket. I saw him as plainly as I see you. You know, we live next door to Captain Farnham——"

"Ah!" Dalton cried. "Certainly. I understand. This is very interesting. Pray go on."

With a few interruptions from him, full of tact and intelligence, she told the whole story, or as much of it as was required. She did not have to mention Alice's name, or the opera-glass; though the clever young man said to himself, "She is either growing very far-sighted, or she was scouring the heavens with a field-glass that night—perhaps looking for comets."

He rang his bell, and gave a message to an usher who appeared. "I will not ask you to wait long," he said, and turned the conversation upon the weather and social prospects for the season. In a few minutes the door opened, and Sleeney was brought into the room by an officer.

"Was this the man you saw, Mrs. Belding?" asked Dalton.

"Not the slightest resemblance. This one is much taller, and entirely different in color."

"That will do"; and Sleeney and the officer went out.

"Now, may I ask you to do a very disagreeable thing—to go with me to the Morgue and see the remains of what I am now sure is the real criminal?" Dalton asked.

"Oh, mercy! I would rather not. Is it necessary?"

"Not positively necessary, but it will enable me to dismiss the burglary case absolutely against young Sleeney."

"Very well; I'll go. I am so glad," she said to herself, "that I did not bring Alice."

They went in her carriage to the Morgue. Dalton said, "I want to make it as easy as I can for you. Please wait a moment in your carriage." He went in, and arranged that the face of Offitt, which was horrible, should be turned away as much as possible; the head and shoulders and back being left exposed, and the hat placed on the head. He then brought Mrs. Belding in.

"That is the man," she said, promptly, "or at least some one exactly like him."

"Thank you," he said, reconducting her to her carriage. "The first charge against Sleeney will be dismissed, though, of course, he must be held for this homicide."

A MONTH later Sleeney was tried for the killing of Offitt, on which occasion most of the facts of this history were given in evidence. Mrs. Belding had at last to tell what she knew in open court, and she had an evil quarter of an hour in the hands of Mr. Dalton, who seemed always on the point of asking some question which would bring her opera-glass into the newspapers; but he never proceeded to that extremity, and she came away with a better opinion of the profession than she had ever before entertained. "I suppose leading Germans humanizes even a lawyer somewhat," she observed, philosophically.

Maud Matchin was, however, the most important witness for the defense. She went upon the stand troubled with no abstract principles in regard to the administration of justice. She wanted Sam Sleeney to be set free, and she testified with an eye single to that purpose. She was perhaps a trifle too zealous; even the attorney for the defense bit his lip occasionally at her dashing introduction of wholly irrelevant matter in Sleeney's favor. But she was throughout true to herself also, and never gave the least intimation that Offitt had any right to consider himself a favored suitor. Perhaps she had attained the talent, so common in more sophisticated circles than any with which she was familiar, of forgetting all entanglements which it is not convenient to remember, and of facing a discarded lover with a visage of insolent unconcern and a heart unstirred by a memory.

The result of it all was, of course, that Sleeney was acquitted, though it came about in a way which may be worth recording. The jury found a verdict of "justifiable homicide," upon which the judge very properly sent them back to their room, as the verdict was flatly against the law and the evidence. They retired again, with stolid and unabashed pa-

tience, and soon re-appeared with a verdict of acquittal, on the ground of "emotional insanity." But this remarkable jury determined to do nothing by halves; and, fearing that the reputation of being queer might injure Sam in his business prospects, added to their verdict these thoughtful and considerate words, which yet remain on the record, to the lasting honor and glory of our system of trial by jury:

"And we hereby state that the prisoner was perfectly sane up to the moment he committed the rash act in question, and perfectly sane the moment after, and that, in our opinion, there is no probability that the malady will ever recur."

After this memorable deliverance, Sam shook hands cordially and gravely with each of the judicious jurymen, and then turned to where Maud was waiting for him, with a rosy and happy face and a sparkling eye. They walked slowly homeward together through the falling shadows.

Their lives were henceforth bound together for good or evil. We may not say how much of good or how much of evil was to be expected from wedlock between two natures so ill-regulated and untrained, where the woman brought into the partnership the wreck of ignoble ambitions and the man the memory of a crime.

XX.

"NOW, DO YOU REMEMBER?"

FARNHAM'S convalescence was rapid. When the first danger of fever was over, the wound on the head healed quickly, and one morning Mrs. Belding came home with the news that he was to drive out that afternoon. Alice sat in the shade by the front porch for an hour, waiting to see him pass; and when at last his carriage appeared, she rose and waved her handkerchief by way of greeting and congratulation. He bowed as he went by, and Alice retired to her own room, where she used her handkerchief once more to dry her wet and happy eyes.

It was not long after that Farnham came to dine with them. They both looked forward to this dinner as an occasion of very considerable importance. Each felt that much depended upon the demeanor of the other. Each was conscientiously resolved to do and to say nothing which should pain or embarrass the other. Each was dying to fall into the other's arms, but each only succeeded in convincing the other of his or her entire indifference and friendship.

As Farnham came in, Mrs. Belding went up to him with simple kindness, kissed him, and made him sit down. "You dear boy,"

she said, "you do not know how glad I am to see you here once more."

Alice looked on, almost jealous of her mother's privilege. Then she advanced with shy grace and took Arthur's hand, and asked, "Do you begin to feel quite strong again?"

Farnham smiled and answered, "Quite well, and the strength will soon come. The first symptom of returning vitality, Mrs. Belding, was my hostility to gruel and other phantom dishes. I have deliberately come to dinner to-day to dine."

"I am delighted to hear of your appetite," said Mrs. Belding; "but I think you may bear a little watching at the table yet," she added, in a tone of kindly menace. She was as good as her word, and exercised rather a stricter discipline at dinner than was agreeable to the convalescent, regulating his meat and wine according to lady-like ideas, which are somewhat oppressive to carnivorous man. But she was so kindly about it, and Alice aided and abetted with such bashful prettiness, that Farnham felt he could endure starvation with such accessories. Yet he was not wholly at ease. He had hoped, in the long hours of his confinement, to find the lady of his love kinder in voice and manner than when he saw her last; and now, when she was sweeter and more tender than he had ever seen her before, the self-tormenting mind of the lover began to suggest that if she loved him she would not be so kind. He listened to the soft, caressing tones of her voice as she spoke to him, which seemed to convey a blessing in every syllable; he met the wide, clear beauty of her glance, so sweet and bright that his own eyes could hardly support it; he saw the ready smile that came to the full, delicate mouth whenever he spoke; and, instead of being made happy by all this, he asked himself if it could mean anything except that she was sorry for him, and wanted to be very polite to him, as she could be nothing more. His heart sank within him at the thought; he became silent and constrained; and Alice wondered whether she had not gone too far in her resolute kindness. "Perhaps he has changed his mind," she thought, "and wishes me not to change mine." So these two people, whose hands and hearts were aching to come together, sat in the same drawing-room talking of commonplace things, while their spirits grew heavy as lead.

Mrs. Belding was herself aware of a certain constraint, and to dispel it asked Alice to sing; and Farnham adding his entreaties, she went to the piano, and said, as all girls say, "What shall I sing?"

She looked toward Farnham, but the mother answered, "Sing 'Douglas.'"

"Oh, no, mamma, not that."

"Why not? You were singing it last night. I like it better than any other of your songs."

"I do not want to sing it to-night."

Mrs. Belding persisted, until at last Alice said, with an odd expression of recklessness, "Oh, very well; if you must have it, I will sing it. But I hate these sentimental songs, that say so much and mean nothing." Striking the chords nervously, she sang, with a voice at first tremulous, but at last full of strong and deep feeling, that wail of hopeless love and sorrow:

"Could you come back to me, Douglas, Douglas,
In the old likeness that I knew,
I would be so faithful, so loving, Douglas,
Douglas, Douglas, tender and true."

There had been tears of vexation in her eyes when her mother had forced her to sing this song of all songs; but after she had begun, the music took her own heart by storm, and she sang as she had never sung before—no longer fearing, but hoping that the cry of her heart might reach her lover and tell him of her love. Farnham listened in transport; he had never until now heard her sing, and her beautiful voice seemed to him to complete the circle of her loveliness. He was so entranced by the full rich volume of her voice, and by the rapt beauty of her face as she sang, that he did not at first think of the words; but the significance of them seized him at last, and the thought that she was singing these words to him ran like fire through his veins. For a moment he gave himself up to the delicious consciousness that their souls were floating together upon that tide of melody. As the song died away and closed with a few muffled chords, he was on the point of throwing himself at her feet, and getting the prize which was waiting for him. But he suddenly bethought himself that she had sung the song unwillingly, and had taken care to say that the words meant nothing. He rose and thanked her for the music, complimented her singing warmly, and, bidding both ladies good-night, went home, thrilled through and through with a deeper emotion than he had yet known, but painfully puzzled and perplexed.

He sat for a long time in his library, trying to bring some order into his thoughts. He could not help feeling that his presence was an embarrassment and a care to Alice Belding. It was evident that she had a great friendship and regard for him, which he had troubled and disturbed by his ill-timed declaration. She could no longer be easy and natural with him; he ought not to stay to be an annoyance to her. It was also clear that he could not be himself in her presence; she

exercised too powerful an influence upon him to make it possible that he could go in and out of the house as a mere friend of the family. He was thus driven to the thought which always lay so near to the surface with him, as with so many of his kind: he would exile himself for a year or two, and take himself out of her way. The thought gave him no content. He could not escape a keen pang of jealousy when he thought of leaving her in her beautiful youth to the society of men who were so clearly inferior to her.

"I am inferior to her myself," he thought with genuine humility; "but I feel sure I can appreciate her better than any one else she will ever be likely to meet."

By and by he became aware that something was perplexing him, which was floating somewhere below the surface of his consciousness. A thousand thoughts, more or less puzzling, had arisen and been disposed of during the hour that had elapsed since he left Mrs. Belding's. But still he began to be sure that there was one groping for recognition which as yet he had not recognized. The more he dwelt upon it, the more it seemed to attach itself to the song Alice had sung, but he could not give it any definiteness. After he had gone to bed, this undefined impression of something significant attaching itself to the song besieged him, and worried him with tantalizing glimpses, until he went to sleep.

But Farnham was not a dreamer, and the morning, if it brought little comfort, brought at least decision. He made up his mind while dressing that he would sail by an early steamer for Japan. He sent a telegram to San Francisco, as soon as he had breakfasted, to inquire about accommodations, and busied himself during the day with arranging odds and ends of his affairs. Coming and going was easy to him, as he rarely speculated and never touched anything involving anxious risks. But in the afternoon an irresistible longing impelled him to the house of his neighbor.

"Why should I not allow myself this indulgence?" he thought. "It will be only civil to go over there and announce my departure. As all is over, I may at least take this last delight to my eyes and heart. And I want to hear that song again."

All day the song had been haunting him, not on account of anything in itself, but because it vaguely reminded him of something else—something of infinite importance, if he could only grasp it. It hung about him so persistently, this vague glimmer of suggestion, that he became annoyed, and said at last to himself, "It is time for me to be

changing my climate, if a ballad can play like that on my nerves."

He seized his hat and walked rapidly across the lawn, with the zest of air and motion natural to a strong man in convalescence. The pretty maid-servant smiled and bowed him into the cool, dim drawing-room, where Alice was seated at the piano. She rose and said instinctively to the servant, "Tell mamma Captain Farnham is here," and immediately repented as she saw his brow darken a little. He sat down beside her, and said:

"I come on a twofold errand. I want to say good-bye to you, and I want you to sing 'Douglas' for me once more."

"Why, where are you going?" she said, with a look of surprise and alarm.

"To Japan."

"But not at once, surely?"

"The first steamer I can find."

Alice tried to smile, but the attempt was a little woful.

"It will be a delightful journey, I am sure," she faltered, "but I can't get used to the idea of it all at once. It is the end of the world."

"I want to get there before the end comes. At the present rate of progress there is not more than a year's purchase of bric-à-brac left in the empire. I must hurry over and get my share. What can I do for you?" he continued, seeing that she sat silent, twisting her white fingers together. "Shall I not bring you the loot of a temple or two? They say the priests have become very corruptible since our missionaries got there—the false religion tumbling all to pieces before the true."

Still, she made no answer, and the fixed smile on her face looked as if she hardly heard what he was saying. But he went on in the same light, bantering tone.

"Shall I bring you back a jinrickshaw?"

"What in the world is that? But, no matter what it is, tell me, are you really going so soon?"

If Farnham had not been the most modest of men, the tone in which this question was asked would have taught him that he need not exile himself. But he answered seriously:

"Yes, I am really going."

"But why?" The question came from unwilling lips, but it would have its way. The challenge was more than Farnham could endure. He spoke out with quick and passionate earnestness:

"Must I tell you, then? Do you not know? I am going because you send me."

"Oh, no," she murmured, with flaming cheeks and downcast eyes.

"I am going because I love you, and I cannot bear to see you day by day, and know

that you are not for me. You are too young and too good to understand what I feel. If I were a saint like you, perhaps I might rejoice in your beauty and your grace without any selfish wish; but I cannot. If you are not to be mine, I cannot enjoy your presence. Every charm you have is an added injury, if I am to be indifferent to you."

Her hands flew up and covered her eyes. She was so happy that she feared he would see it and claim her too soon and too swiftly.

He mistook the gesture, and went on in his error.

"There! I have made you angry or wounded you again. It would be so continually if I should stay. I should be giving you offense every hour in the day. I cannot help loving you, any more than I can help breathing. This is nothing to you, or worse than nothing, but it is all my life to me. I do not know how it will end. You have filled every thought of my mind, every vein of my body. I am more you than myself. How can I separate myself from you?"

As he poured out these words, and much more, hot as a flood of molten metal, Alice slowly recovered her composure. She was absolutely and tranquilly happy—so perfectly at rest that she hardly cared for the pain her lover was confessing. She felt she could compensate him for everything, and every word he said filled her with a delight which she could not bear to lose by replying. She sat listening to him with half-shut eyes, determined not to answer until he had made an end of speaking. But she said to herself, with a tenderness which made her heart beat more than her lover's words, "How surprised he will be when I tell him he shall not go."

The rustling of Mrs. Belding's ample approach broke in upon her trance and Farnham's litany. He rose, not without some confusion, to greet her; and Alice, with bright and even playful eyes, said, "Mamma, what do you think this errant young cavalier has come to say to us?"

Mrs. Belding looked with puzzled inquiry from one to the other.

"Simply," continued Alice, "that he is off for Japan in a day or two, and he wants to know if we have any commissions for him."

"Nonsense! Arthur, I won't listen to it. Come over to dinner this evening and tell me all about it. I've got an appointment this very minute at our Oriental Gospel rooms, and cannot wait to talk to you now. But this evening you must tell me what it all means, and I hope you will have changed your mind by that time."

The good lady did not even sit down, but rustled briskly away. Perhaps she divined

more of what was toward than appeared; but she did as she would have wished to be done by when she was young, and left the young people to their own devices.

Farnham turned to Alice, who was still standing, and said, "Alice; my own love, can you not give me one word of hope to carry with me? I cannot forget you. My mind cannot change. Perhaps yours may, when the ocean is between us, and you have time to reflect on what I have said. I spoke too soon and too rashly; but I will make amends for that by long silence. Then perhaps you will forgive me—perhaps you will recall me. I will obey your call from the end of the world."

He held out his hand to her. She gave him hers with a firm, warm grasp. He might have taken courage from this, but her composure and her inscrutable smile daunted him.

"You are not going yet," she said. "You have forgotten what you came for."

"Yes—that song. I must hear it again. You must not think I am growing daft, but that song has haunted me all day in the strangest way. There is something in the way *you* sing it—the words and your voice together—that recalls some association too faint for me to grasp. I can neither remember what it is, nor forget it. I have tried to get it out of my mind, but I have an odd impression that I would better cherish it—that it is important to me—that life or death is not more important. There! I have confessed all my weakness to you, and now you will say that I need a few weeks of salt breeze."

"I will sing you the song first. Perhaps we may pluck out its mystery."

She preluded a moment, and sang, while Farnham waited with a strained sense of expectancy, as if something unspeakably solemn was impending. She sang with far more force and feeling than the night before. Her heart was full of her happy love, as yet unspoken, and her fancy was pleased with the thought that, under the safe cover of her music, she could declare her love without restraint. She sang with the innocent rapture of a mavis in spring, in notes as rich and ardent as her own maiden dreams. Farnham listened with a pleasure so keen that it bordered upon pain. When she came to the line,

"I would be so tender, so loving, Douglas,"

he started and leaned forward in his chair, holding his hands to his temples, and cried:

"Can't you help me to think what that reminds me of?"

Alice rose from the piano, flushing a pink as sweet and delicate as that of the roses in

her belt. She came forward a few paces, then stopped, and bent slightly toward him, with folded hands. In her long, white, clinging drapery, with her gold hair making the dim room bright, with her red lips parted in a tender but solemn smile, with something like a halo about her of youth and purity and ardor, she was a sight so beautiful that Arthur Farnham, as he gazed up at her, felt his heart grow heavy with an aching consciousness of her perfection that seemed to remove her forever from his reach. But the thought that was setting her pulses to beating was as sweetly human as that of any bride since Eve. She was saying to herself in the instant she stood motionless before him, looking like a pictured angel, "I know now what he means. He

loves me. I am sure of him. I have a right to give myself to him."

She held out her hands. He sprang up and seized them.

"Come," she said, "I know what you are trying to remember, and I will make you remember it."

He was not greatly surprised, for love is a dream, and dreams have their own probabilities. She led him to a sofa and seated him beside her. She put her arms around his neck and pressed his head to her beating heart, and said in a voice as soft as a mother's to an ailing child, "My beloved, if you will live, I will be so good to you." She kissed him and said gently,

"Now, do you remember?"

THE END.

AURORA.

WHAT purple seas have kissed thy skirts but newly?
 What hyacinthine shore
 Of Hellas, or what unawakened Thule,
 Embalmed thee, passing o'er?
 The Orient thee no further gift can render,
 Goddess mysterious, tender!
 Thou need'st not borrow of the fuller splendor
 Of him thou goest before.

That gushing fount, not filled for mortals sighing,
 Nor earthly eyes to see—
 That spring of youth, unchanging and undying,
 Hath poured its life in thee,
 And its cool spray about thee yet is clinging.
 Over the desert winging,
 Thou benedest low: gray Memnon greets thee, singing
 His ancient melody.

Thou usherest in the day with sweet assurance;
 Thou pourest out the dew;
 Rich life, by night subdued and held in durance,
 Pulses and springs anew.
 The gates of morning open wide before thee;
 Heaven bends gently o'er thee;
 And, gazing upward, eager to adore thee,
 Leaps the broad ocean blue.

Farewell! though but a moment thou hast lingered,
 Swift as the pinioned dove!
 Gone is that darkest hour which thou, warm-fingered,
 Dost charm from earth above.
 Onward! awaking in thy path forever
 New life and strong endeavor.
 May thy bright promises forsake us never—
 Fresh hope and boundless love!

Henry Tyrrell.

LOG OF AN OCEAN STUDIO.

YOU are not to take our title too seriously. From a serious point of view, it was not much of a studio; nor does this "rough log," as the sailors say, make a very strong appeal for solemn consideration. Such as it is, it has to do with the vacation fancies of seven artists voyaging to Antwerp. Their serious aim in crossing the sea was to visit the Paris Salon, and, after noting its degeneracy, to seek, each in his own way, for better counsel from the Old

Masters in Holland and Spain. Their bond of union during the ocean trip was partly fellowship, and partly the idea of decorating the walls and ceiling of one of the ship's cabins as a novel means of killing time—poor Time, who is never thought well of unless he is niggardly, and who is never more generous than at sea.

Four of our party, a twelvemonth before, had originated the idea during a similar trip in a sister ship. It had been their good fortune to have the ladies' cabin for their ocean studio. In fact, their novel scheme seemed to have been built upon a new principle in aesthetics: "Art for the sake of the ladies' cabin."

We went aboard our steamer in the firm belief that no other cabin would do. It was a bitter disappointment, therefore, to learn after we were well out to sea, that—excepting the little lounging room at the head of the main companion-way—the ladies' cabin was an artificially lighted room between decks. Both were impracticable. So the enterprise had to be remodeled on the basis of "art for art's sake," which any artist will tell you is something of a humbug.

When we arrived at the Jersey City wharf, on that early morning of a sunny third of June, the usual sailing-day comedy was briskly acting. Numerous large bouquets and floral designs mingled hot-house odors with the peculiar staleness of the saloon, making us hope that before dinner-time the

recipients would cast them overboard. A rose to somebody else's name never smells as sweet; besides, wilting flowers are hardly appropriate to a steam-ship—not to mention the extreme of ostentation and theatrical effect which the fashion has reached. I once knew a young man who sought to obviate the defect of a floral gift by presenting a fair voyager with a large bouquet of dried grasses. Naturally, the gift was construed in the Pickwickian sense. Shortly afterward he removed to the land of the cactus, which would seem to offer new scope to his fatal ingenuity.

Though steam-ships are the safest means of travel yet invented, one does not see friends embark in them without a livelier sense of their temerity as travelers; besides, the wide sea lends reality to the idea of separation. There was no lack of women's tears at our departure; but we bachelors shared in them only as the party was represented by the marine artist, and somebody remarked that his pretty daughter, trying to smile through a mist of tears, was his best picture. At that time the visitors had been sent ashore, and the ship was denoting eagerness to slip her leashes and begin the tireless chase over the billowy hill to Antwerp. I noticed that those who did not feel justified in demanding a plump kiss on the hurricane deck deemed they had a perfect right to signal tokens of affection while the steamer was gliding majestically from the wharf. In the initial letter to this paper, the artist has shown the most reposeful phase of an incident which came under our observation. The young man in the ulster had taken formal leave on deck of two young voyagers. While the whistle was warning river craft to make way for the leviathan, he signaled them to descend into the saloon. In a moment he was clasping two daintily-gloved hands reached out to him from adjoining port-holes. Then he got upon a friendly beam, and with masterly tip-toeing and needed dispatch, for the lines were cast off and the engine bell was tinkling, he plucked a kiss from each round, laughing window.

Once free from the wharf strings, our steamer was nearly as independent of the ordinary world as a miniature planet peopled to order. With the grand air and assurance of a steamer outward bound, we threaded the Narrows, spun round the half-circle of the lower bay, caromed, as it were, on the Hook, and went down to breakfast as we struck out

FAREWELL TO SANDY HOOK. PANEL BY A. A. ANDERSON.

to sea. That important factor in "civilizing the ship," the seating at table, had been cleverly managed by the chief steward. There seemed to be fewer heart-burnings than usual on the part of persons who, having formally recognized their own importance, looked in vain for a seat at the captain's table. At the board of honor were, of course, the good-looking young woman and her mother, the director of the steam-ship company and his family, the reverend, and the doctor of medicine. Titles of any kind are beacon-lights to the chief steward's eyes. Our captain was always genial at meals; but if the table of honor has a disadvantage, it is that the tone of the conversation at the captain's board is inclined to rise and fall with his

barometer. No matter how genial by nature, the captain by profession is necessarily a tyrant and a dogmatist. Our party had a table by itself in the coziest corner of the saloon, and the mother of one of Gérôme's pupils matronized us with graceful dignity. There were only forty people in the first cabin, which made the social ice rather easy to break. The case is different on the large steamers carrying three or four hundred first-class passengers. It is a study then to watch the segregation of the company into small groups. As fellow-travelers, New Yorkers may claim the palm for reserve. Not long since, two substantial men of Gotham, who had met on shipboard and had proved congenial, parted at Liverpool to meet again, as tourists

frequently do, in hotels, museums, and, finally, in the same compartment of a railway "coach." In the intimacy of that ride, one of them disclosed the name of the street adorned by his brown-stone front.

"What number?" asked the other, eagerly.
 "Fifty-four, east."

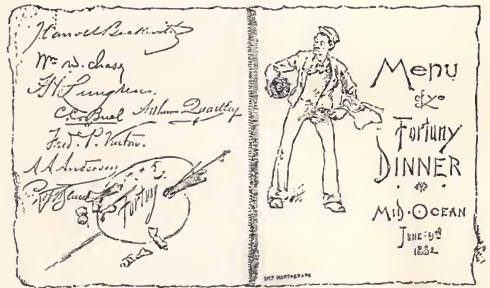

"Then you're my next-door neighbor but one, for my house is fifty, east!"

Like true citizens of Manhattan, they had lived up to its golden rule: Shun your neighbor as you would malaria.

Our first breakfast was a disorganized feast. Sea-cooks and stewards were still under the malign influence of the land. To call forth their best efforts, the ship must be in the toils of the sea, with the racks on the tables, the kettles spilling in the cook's galley, and the gymnastic stewards balancing soup-plates on their fingers and the ship on their feet. Everybody grumbles over the fare at sea, and, in general, there is too much reason for grumbling. There is always a profusion of eatables, seldom of the best quality, and less seldom served with an eye to the needs of the passengers. The waste is enormous. If the captain is an epicure, the outlook for the passengers will be better. But, practically, they cook for the ostrich-like digestions of the officers instead of for a multitude of squeamish sea-invalids. I am bound to say that on our studio-ship we were uncommonly well served. Yet we had a grievance that illustrates how natural it is at sea to grumble. On the fourth day the oranges gave out. No one knew better than the bachelor artists and their friends, the little children of the steerage, why the oranges prematurely failed; yet we grumbled, and one of the artists joined two grievances in volunteering to raise oranges from the seed in his state-room *in three days*. The gulf stream and south winds, and a southerly course to get below reported icebergs, and the raging fires under us, had combined to make our state-rooms tropical.

A dinner in honor of Fortuny was the memorable feast of the trip. His biographers have made the world believe he was born on the eleventh of June; but Fortuny's disciple in our party had private information that the great Spaniard was born on the ninth. With the connivance of the disciple of Velasquez, he surprised us with a Fortuny birthday dinner on the ninth, though during the morning the secret movements of the two had awakened suspicion. When we sat down as usual to six o'clock dinner we found at each plate a handsome *menu* on brown paper, part hektograph and part washed in with color; also, a large cake, with Fortuny's well-known signature imi-

tated in the frosting; smoking fish-balls, and delicious Boston baked beans, the product of the skill of one of the artists, an amateur *cordon bleu*, who had ingratiated himself with the chief cook; and, never to be forgotten, a moist dish of most excellent vivacity, put aboard as a surprise by a thoughtful member of the Tile Club, whom we were to meet later in Paris. Speeches and sentiments of local interest passed round the board. I remember somebody's saying, in a moment of enthusiasm, that "Fortuny was the most original painter of his age. If any one had said, ten years before he appeared, that there could be something new in art, the world would have replied, 'Not so, for art is exhausted!'" Toward the end,

COVER OF THE MENU.

a sententious person, looking out of the port-hole behind him upon the drear twilight ocean and comparing it with the merry scene inside, said, "A little sentiment makes a paradise of a sea-waste."

"You're wrong," replied the Boston cynic; "a little sentiment makes a paradise of a *small* waist."

On the third day the captain invited us to his cabin to judge for ourselves if its panels and oak-grained background would meet the requirements of a studio. It was an uncommonly large cabin, and the captain's personal trappings did not crowd much upon his charts and logarithms. It had a cozy look, with its sofa alcove and its red curtains, despite the overplus of chronometers and barometers. A miniature hall, with outer and inner doors, connected with the deck on the port and the starboard sides. Windows on three sides—for it was the forward cabin of the deck-house—commanded a view of the sea for half the circle of the horizon, and of the forward deck, with the busy sailors, the faithful lookout (always with his hands in his pockets), and about the foremast the group of steerage passengers, huddling like a remnant of the victims of the Deluge waiting on a hill-top for the rising flood.

Scarcely a word had been said of cabin decoration among ourselves. An overmastering *ennui* had settled upon us, a sort of mental seasickness, due, in part, to the steady rolling and teetering of the ship, and to the eternal *r-r-r-ker-chug! r-r-r-ker-chug!* of the engines which kept a tremor running through everything between keelson and topmast. Sackville suggests the feeling in a poem written in a man-of-war lying off the Flemish coast, which Locker has included in his admirable "*Lyra Elegantiarum*." He says:

"To all you ladies now on land,
We men at sea indite;
But first, would have you understand
How hard it is to write.

* * * * *

"For, tho' the muses should prove kind,
And fill our empty brain;
Yet, if rough Neptune rouse the wind
To wave the azure main,
Our paper, pen and ink, and we
Roll up and down our ships at sea."

One morning an artist tried to make a sketch of the sailors who were holy-stoning the deck, but the working mood staid with him only long enough to outline their picturesque shoes and ankles. Early on a dull evening another artist seated himself in the prow, and began sketching the ship from that teetering point of view. Five minutes later he was showered by the first billow we had shipped. The next morning a third artist remarked, in a half-hearted way: "I feel like doing a little sketching to-day; but if I were to go to work, the men who believe in mood would call me a mechanic. I think there's a good deal of humbug about mood." An hour later I saw him disposing himself to sketch in a quiet place under the lee of the engine-house. Not to disturb him, I took the windward deck for my promenade, and, on returning the second time from the bow, found the artist who believed in the humbug of mood on the quarter-deck, demurely watching a game of ring-toss.

Only one of the party made good use of his leisure. In view of his youth and rather fantastic taste, we were not surprised, when he appeared on the hurricane deck, one morning, in a shaggy Berri cap, a brown velvet jacket, dancing-pumps, and silk tie and silk stockings of the color of old gold. What a sailor to set before our one-eyed boatswain! The rest of us, who were affecting old clothes, did not approve of him. But the French governess did, and hour after hour piloted him through the French verbs. And here we may add that semi-attached to our party was an artist who

was voyaging in company with his *fiancée* and her mother—and doing it very well; also, a veteran artist, who regarded our professional

UNDER A FRENCH SKY. PANEL BY WILLIAM M. CHASE.

as well as our unprofessional proceedings with amiable contempt. "Let me give you some advice," he said to an artist who was belittling the work of a fellow-painter. "You talk too much in that vein; I've had some experience in it myself, and I've learned it's a

AT WORK IN THE CAPTAIN'S CABIN. BY ROBERT BLUM.

pretty safe rule to let other artists make as much reputation as they can."

For good nature and solid enjoyment of the voyage, nobody held a candle to our fellow-passenger, the Yankee skipper. He was a large, plain, quiet Bostonian, as close as an oyster about himself, but giving token of belonging to the old-fashioned race of New England sea-captains. His trowsers had a sedentary sag at the knee in harmony with the tried and true, steady-going air of his general make-up. He was the kind of man you would like to have with you if you were to be cast away at sea or lost in a wilderness. If a whale spouted within our dreary, disk-like world of water, he was sure to see it. No sail could dawn on our horizon unseen by his binocular. It encouraged early rising to know that the Yankee skipper would be found on deck with his gazette of ship's transactions and sea-happenings. Tobacco was his enemy, so we were a little surprised one evening to see him enter the blue atmosphere of the smoking-room where we were holding our usual after-dinner symposium. When anecdote and story had been the round, the skipper "took the floor" by a glance round the benches. "'Way back in 1850," he began, "I was six months sailing from New York to 'Frisco. Rounding the Horn, we fell in with the deadest calm I ever experienced. In the morning we sighted an albatross a little way off, as badly becalmed as we were, except that she could paddle, while we couldn't

make much headway sculling a full-rigger. We gave chase in the yawl, and caught the bird after a hard tussle; for, you see, she couldn't rise from the water without a breeze to help her spread her wings, and those wings on shipboard measured fifteen feet from tip to tip. Besides her crop was full, and may be she'd swallowed too much ballast for sky-sailing. We took a strip of sheet-copper, and with a marline-spike punctured in it the name of the ship and the date of capture. This we fastened round the bird's neck. When we got a breeze, we first made sail and then gave the albatross a chance to spread canvas. With a scream she flew off a little way, circled once or twice round the ship, and then set her rudder for the north pole. That bird was caught again, twenty-five hundred miles from Cape Horn, and carried into Callao. And I'll tell you how I know it. At Callao the captain of that ship wrote a letter to a New York newspaper, describing the capture of the albatross and the writing on the copper collar. My wife saw the paper, and in that way got news of our ship six months before my own letter reached her."

Silence followed the recital, until somebody expressed a regret that there were only two "marines" in the company to tell it to. "Pshaw!" exclaimed the skipper, a deeper color suffusing his face; "it's true, every word of it." By way of amends, a loud call was made for the elder marine's whaling story,

which always gains a good deal from the tar and tarpaulin manner in which it is told.

"You must fancy I'm Mr. Jones," he said, "a whaler's mate, spinning yarn for messmates. He shifts his quid and begins: We wuz all feelin' sort o' grumpy, for thar hadn't been no kind o' luck, when the lookout cries, 'Theer she blows!'—so I goes up to Cap'n Simmons an' sez I, 'Cap'n Simmons, she's a blower; shell I lower?'"

"Sez he: 'Mr. Jones, she *may* be a blower, but I don't see fitten fur tu lower.'"

"Then I goes forrard, and the man aloft sings out agin, 'Theer she blows!—an' she's a spermer!' So I goes agin to Cap'n Simmons an' sez I, 'Cap'n Simmons, she's a spermer an' a blower; shell I lower?'"

"Sez he: 'Mr. Jones, she *may* be a spermer an' she *may* be a blower, but I don't see fitten fur tu lower; but if so be *you* see fitten fur tu lower, w'y lower away an' be 'tarnally dashed tu yer.'"

"So I lowered away, an' when we come to about fifty yard o' the critter sez I, 'Hold on, boys, fur I'm death with the long harpoon!' An' I struck her fair, an' we towed her alongside the ship; an' when I come aboard, Cap'n Simmons stood in the gangway, an' sez he, 'Mr. Jones, you air an officer an' a gentleman, an' there's rum and terbacker in the locker—an' that of the very best quality—at yer service, sir, durin' this voyage.'"

"Then sez I, 'Cap'n Simmons, I'm a man as knows his dooty and does it, an' all I axes of you is *servility*—an' that of the commonest, dog-goned kind!'"

On the sixth morning two or three of the artists, nursing the mood lest it escape them, secretly spread their kits in the captain's cabin. By common consent, the right-hand panel of the sofa alcove was reserved for the captain's portrait. An excellent model was our commander. Every line of his figure proclaimed him master. "Captain" was in the tones of his voice, which, to the highest as well as the lowest subordinate, offered not the slightest invitation to a discussion. Every attitude, as he stood on the bridge mentally casting up the weather, nicknamed him "that harbitrary cove," as the London cabby designated John Forster. While he was being sketched, it was curious to note how the practiced eye of the

artist singled out the lines of character, as well as the subtleties of the costume which, hardly less than the curves of the face, helped to express the individuality. Ask an artist to draw from memory a caricature of a person he has seen, but whose features he has not studied. If he humors you, and appeals to your mem-

"CAPTAIN" WAS IN THE TONES OF HIS VOICE." PANEL BY FREDERIC P. VINTON.

ory to help him out with the facts, his questions will prove how superficially most of us observe. Twins never looked so much alike that an experienced portrait-painter would not individualize them at a glance.

Three could paint in the cabin at the same time, but, for the most part, if one was at work, the rest were content to sit in the captain's easy-chair and on his camp-stools, and even on his narrow bed, a cozy bunk on the port side, and keep up a ripple of chat and criticism. One day, when the captain's portrait was nearly finished, he said, by way of criticism, "I think you need a little more flesh on the starboard cheek." But little other comment fell from his lips regarding the pictures.

Three months later we discovered the captain's honest opinion. It was painted on the only panel that had been left vacant by us—the large panel of the port door. While the ship was lying in Antwerp, the captain engaged a local artist to paint a Norwegian water-fall on the door. It was a garish, painful daub. Without understanding just why the water-fall did not make the kind of a sensation he had arranged for the artists on their return to the ship for the homeward voyage, he consented to have it painted out.

Five of the six panels of the sofa alcove were sketched in and half finished in a few hours. Their growth thereafter was a matter of mood, with results of fluctuating value. In his effort to ballast the "starboard cheek" of the captain's portrait, the artist grew to hate the picture, erased it and began over again. In the next panel was painted a fanciful head to personify the comet of the previous winter. A striking effect was produced by the starlit hair streaming through a cold, dark-blue sky. There was along discussion over the manner in which the sketch had been developed, the verdict being that it was characteristic of the artist to paint the allegorical lady's cherry lips first of all. Somebody discovered the head of a Skye terrier in the hair. For a long time the artist stood out against amendments; then three or four clever strokes eliminated the dog.

A sullen coquette was the comet's right-hand neighbor. She wore a poke-bonnet surmounted by the jauntiest of orange feathers. Her entrance into society was effected in an incredibly short space of time, and we could not but admire the perfect manner in which the colors harmonized with themselves and with the pictures on either side. But there was a general outcry against her social status; and the painter, in the dumps, dropped his brush and left the creature hovering between the world of existence and the inferno of annihilation. The picture gave rise to an animated discussion. Such epithets as

"nightmare painter"—applied to an artist skilled in painting rainy street scenes by gaslight—and "painter of beautiful nothings" were bandied. This last was the retort direct

THE COMET. PANEL BY J. CARROLL BECKWITH.

of the "nightmare painter," and it seemed to be barbed with truth, for it called forth an instructive lecture on art methods, in about these words: "Very well—some artists paint pictures that are not even beautiful! You're all down on anything that is clever. Here's an artist, say, who succeeds by hard, patient effort; another will gain equal success by sheer cleverness. The first struggles with a commonplace subject, using a model for every little detail, from the sole of a slipper to the key-hole of a door; you call it high art. But, if the other does a dashing thing full of life and feeling, you call it mere *chic*!"

First to be finished was a pensive maiden in the next panel. In rich sealskin hat and cloak she was strolling near the sea on a raw November day. A feeling of romantic sadness pervaded the picture. The gossip of the stu-

dio assumed at once that the artist had drawn on his tender recollections for a subject. This he denied, but, as an expression of lack of confidence, the picture was entitled "The-Girl-he-left-behind-him-when-he-went-to-Munich." By way of confirmation, one of the artists improvised an anecdote to illustrate, as he said, how an artist may become so enamored of his art as to forget a live sweet-heart. "A New York artist," he began, "with a *remarkably fine studio* [cries of 'Hear! hear!'], was visited one Saturday afternoon, his 'show-day,' by two ladies, who behaved with singular constraint, and who were treated with that touching politeness with which the true artist seeks to overcome the natural embarrassment of visitors when brought face to face with the mute yet speaking witnesses of his genius. [Applause.] When the ladies withdrew, the artist turned to an old friend who appeared to be greatly amused, and asked:

"'Who are those people?'"

"'You mean to say you don't know?'"

"'I have a feeling that I ought, but I don't!'"

"'Not the pretty one?'"

"'Noteven the—she isn't pretty!'"

"'You thought she was ten years ago, when you started for Munich with her promise to marry you!'"

Our so-called "nightmare painter" professed to have an idea in his head for one of the end panels of the alcove. The first time he tried to express it a reasonable success was attained. He was far from satisfied, and, against the common voice of the studio, erased it thrice over. In a vexed mood, he determined to paint a picture of the pit of roaring darkness and fire which may be found in the center of every steamship,—though the passengers think little of it, seeing smoke and cinders pouring from the crater smoke-stack, without realizing that a volcano is raging beneath. He and I descended about forty feet, by means of the greasy steps and gratings of the engine-hold, the several floors and ladders of which were made of iron rods half an inch in diameter, with spaces between for ventilation. At the bottom we stood carefully one side. The rumble of the machinery was almost deafening. The mighty arms reaching down to the cranks of the great shaft turned it with the light-hearted ease of a boy's first five minutes at a grindstone. An engineer with a hand-lamp led

us into the shaft-tunnel. It might have been five feet square, but there seemed hardly room enough to walk between the spinning shaft, which was at one side, and the grimy wall. We stooped, instinctively, and gathered the skirts of our coats away from the shaft, which was revolving fifty-four times a minute, and at each revolution was forcing the ship through twenty-five feet of water. At the stern, where we were a hundred and twenty feet from the engine-room, our ears were filled with a buzzing as of ten thousand swarms of bees, so violently was the screw churning the brine in producing a speed of fifteen miles an hour. As we emerged from the tunnel, the engineers were helping a fourteen-year-old boy through a small hole in the floor. He was naked to his waist and smeared with rusty grime. He seemed to be completely exhausted. With a little oil-lamp to light the shallow cavern, he had been cleaning the bilge, a space about two feet deep over the keel and rapidly contracting on the sides. His had been a curious position,—twelve fiery furnaces above him, and a mile or two of salt sea underneath.

A narrow opening in the bulk-head admit-

IN THE FURNACE-HOLD. BY F. H. LUNGREN.

MOONLIGHT THROUGH THE LIFTING FOG. PANEL BY ARTHUR QUARTLEY.

ted us into the furnace-room, where there were two rows of fires, placed back to back, with six fires in a row. We remained perhaps five minutes, or until we were roasted out, though we were standing under the cold-air flues connecting with the curving trumpet-mouthed pipes which rise above the deck and are made to revolve to catch the freshest, strongest breeze that blows. Between the stirring and replenishing of the fires the room was filled with a whitish glare. When the

furnaces had been fed the half-naked stokers would stand under the air-shaft and wipe the perspiration from their faces and arms with a towel hanging at the belt. In that blanching pit nine coal-passers and twelve stokers were speeding their lives double-quick for \$17 and \$18 a month and "found," as the phrase runs, the finding consisting of the common seamen's mess and a stinking nest in the fore-castle. A strong young fellow will grow old at it, they said, in three years' time. But when

one breaks down, a score are ready to take his place. When the watch changes, passengers see the firemen shuffling, in wooden shoes, along the deck between their sleeping-pens and the iron ladders. Their pale, gaunt features and stooping shoulders tell a tragic story, which, however, cannot be fully understood before one has breathed the air of the furnace-hold. When human lives are so cheap, there is probably little incentive to give the same attention to improving the sanitary arrangements of the furnace-hold that is given to increasing the speed of the ship. One of the officers told me of an educated young Englishman who ran short of money in America, and, being too proud to send home for a remittance, worked his passage as a coal-passer and ash-heaver. He paid his passage with his life, for the exposure brought on a fatal illness.

A curious medley of nationalities were our ship's officers and crew. They would have made a notable collection in a museum of ethnology. Our captain, who was German-born, spoke English and Plattdeutsch besides his native tongue. He was sailing, under Belgian colors, a British-built ship owned by an American company. Our first officer was a "stub-and-twist" Englishman, with legs that seemed to be rooted to the deck. The second officer was a blonde-bearded Scotchman, the third a Welshman, and the fourth officer, I believe, was an Irishman. In the engine-room a similar mixture of races prevailed. Nearly every country of maritime Europe had contributed to the crew. Scotland claimed our one-eyed boatswain, a perfect *Dick Deadeye*, who "chalked our shoes" (as he called the swindle), for grog money, the first

THE GOOSE PASTURE. PANEL BY ROBERT BLUM.

time we ventured upon the forecabin. Peter, the saloon steward, had the responsibility of the bottles that adorned the swinging shelf over the tables, and sometimes this care was almost too much for his thirsty and phlegmatic nature. We remember the captain's formula for securing his presence in the studio. It was "Quartermaster!" in a thunderous voice. When that subaltern thrust his capless head into the doorway the same voice growled, "Call Peter!" Then came Peter's face, wreathed in smiles and frowns. We discovered the importance Peter attached to that rasping voice one evening when he was found peering about the hurricane deck in the dark. A call for "Peter" from an artist mimicking the captain made the poor fellow jump as if Satan's hand had been laid upon his shoulder.

Peter had his revenge the next afternoon when one of the artists, with the aid of a curly wig, painted face, and old clothes, got himself up to look like a drunken steerage passenger. Being a master of German dialect and something of an actor, the artist created a sensation on the hurricane deck, where the ladies were in a flutter of indignation. By the captain's order, Peter was put on the track of the masquerader, who slipped down the companion-way into the saloon. There Peter got him by the collar, and hustled him toward the deck with a dispatch that turned the joke on the joker.

The same afternoon two of the studio company got the boatswain's permission to climb the fore shrouds,—as if the boatswain had any permission to give. His one eye gleamed with delight when the officer on the bridge sent a quartermaster, first, to order them down, and

again, on their not complying, to "pull them down." They dropped to the deck and appealed to the captain, who was standing under the hurricane deck. The captain, from the companion-way, ordered the officer on duty not to interfere. "Now, climb away," he said. They sprang into the shrouds and clambered up the ratlines. The officer on the bridge, who had not understood the order, dispatched seaman after seaman to pull them down, while the captain each time called the seaman back, until, to save the officer from choking himself with passion, the captain showed himself. By that time the climbers were under the lubber-hole (which was out of their reach), and thinking of Black-eyed Susan's

"William, who high upon the yard
Rock'd with the billows to and fro."

Late on a wet, clammy evening, we were chatting with the captain about the relative merits of life ashore and on the seas. "Sea-faring's a hard life, at best," he said. "I'm a young man to wear captain's lace (he had not turned forty), and I've been on the sea since I was a boy. A steam-ship captain seldom gets more than \$2500 a year, which is small reward for the hardships and responsibilities of his life. On a crowded steamer a captain may often eke out his salary by giving up his cabin to a rich passenger, but at the cost of his own comfort." He was interrupted by a rap; the fourth officer opened the door to say, "The fo'sail's being

reefed, sir! — we're running into a fog." "Very well, blow the whistle," answered the captain, reaching at once for his heavy ulster, tarpaulin, and neck-wrap. "Here's a sample of our life," he said, as he enveloped himself. "Instead of being 'well,' it's particularly bad. I look for a long watch in the fog, with this temperature and the weather we've been having. You may not see me again this side of the Channel, for so long as this fog lasts I'm bound to be on the bridge. Good-night!" He hurried into the darkness and at regular intervals the whistle strove to fill all space with its deafening drone. In half an hour he came back smiling and covered with fog moisture "False alarm!"

Three of us went on deck, and, by a ruse we had practiced before, reached the forecastle without being seen by the watchful officer on the bridge. It was near midnight, and we knew we should be ordered below if we were detected. The jib was hauled down but not furled, and we made a screen of the folds. Such a black, weird night was worth enjoying. The fog had risen or been blown away by a south breeze that filled the square-sails of the foremast. In the dim light of the head-lantern the bellying sails looked like gray specters. Peering back over the slowly pitching and rolling ship, all we could see was the great black, spark-spotted serpent coiling from the smoke-stack, and the wet decks and bulwarks where the thin rays of the cabin lights

FLYING THE GREAT KITE. BY ROBERT BLUM.

were reflected. Nothing could be seen ahead except now and then a gray suggestion of a phosphorescent white-cap. If the Flying Dutchman had crossed our bows, we should not have been surprised. We counted the regular throbs of the engine and knew we were cutting the darkness at full speed. Two sea-dogs stood before us keeping lookout. "How do you like this life?" we asked of the big-bearded one. "Like it?" he muttered; "great heavens, I *have* to like it!" Ah, we thought, the sandy slopes of the sea are speckled with the bones of just such men as you!

Before we went below, the clouds broke away just enough to give us the weird effect of such a night, rifted now and then by a pale moonbeam. One of our marines painted the scene in a panel over the captain's chest of drawers, in a way that appealed to every seaman who saw it. The other marine filled the remaining end-panel of the alcove with a close-gathered group of seamen hoisting the top-sail in a rain-storm. And in it we fancied could be heard, above the wind, the boat-swain's pipe trilling like a shrill-voiced storm-bird.

Speaking of storm-birds, the ninth day out was enlivened by an incident which gave the marine artist his wished-for stormy petrel for a

model. A large flock of these sociable, untiring little birds, joined us before we were out of sight of Long Island. Two-thirds of them flew away in a body while we were off St. George's Shoals, leaving a flock of perhaps fifty, which followed us for nine days, making their graceful circlings over the boiling wake, and observing a certain order of precedence. When a mess from the scullery was thrown overboard, they would settle upon it and drift with it perhaps a mile away. But soon the leaders might be seen skimming the billows with quickened wing and taking up their old positions. Every night at sunset they disappeared, dropping, as we supposed, upon the water to sleep; but every morning before eight o'clock they would be in their old places, sailing back and forth over the wake in figure-eight curves. The morning they failed to re-appear we were only two days from Land's End. A strong head-wind had blown up during the night. It was evident to us, therefore, that these little steam-ship chasers had followed us so many days because the winds had steadily favored their overtaking us each morning by a rapid flight begun at the first streakings of the dawn. The head-wind must have been too strong for them; in fact, it held back the ship

twenty miles in twenty-four hours. The web feet. "Let him go," was shouted in sailors declared the head-wind was due to chorus by the by-standers; but one of the the sacrilege of catching one of the petrels, artists, thinking the opportunity to get a valu-

THE EMIGRANT MODEL. PANEL BY ROBERT BLUM.

the day before they disappeared. The manner of catching was this: A man who used to wrangle a good deal at table over ward politics in Philadelphia with another coffee-house politician, tied a piece of beef to a linen thread and threw a lot of slack thread overboard with it. One of the chickens got its wings caught in the snare and was drawn aboard. It was a wild, fluttering captive, with bright, bead-like eyes and dainty

able model too good to be lost, carried the bird to the ship's doctor to be chloroformed.

As for the head-wind, while it blew ill for the sailors, it was just what we wanted for flying an enormous kite we had constructed of stout ash sticks and a linen sheet. It was five feet high. On its face was painted a red-eyed monster intended to resemble the legendary dolphin. We had wheedled a new log-cord out of the boatswain for a kite-line, and fifty

feet or more of old rope for the tail. Our first experiments in flying it were failures, resulting in disaster to the kite and a narrow escape for the man who had hold of the line, and who was made to travel rapidly across the deck in a sitting posture. If the kite had not taken a header into the sea, it is possible he would have done so. Thoroughly strengthened and patched, the kite was now brought out to be launched on that head-wind. As a precautionary measure, the line was passed through a ring in the deck near the wheel-house, and the slack was given to an artist who promised not to let go even if he were drawn through the ring. Another artist was placed in charge of the line, with two others to support him. These three wore gloves, which were ripped and cut as the kite soared a hundred feet, and, owing to the strength of the wind, stood directly over our heads shaking its angry crest—but not for long. With a grand sweep “The Flying Dolphin” dove to port, skimmed the water, and soared again, but only to snap the quarter-inch hemp cord at the deck ring. Then with a back somersault it fluttered into the water and was lost to view in the froth of the wake. Kites of moderate, school-boy sizes had preceded the “Flying Dolphin” and also followed it so long as thread and twine could be raised by begging and bribing. The most successful were the small kites flown with strong linen thread. Some of these flew twelve or fifteen hundred feet from the ship, and, when the wind was astern, seemed to have the ship in tow. It was novel sport for a sea voyage, and picturesque enough to justify artist patronage, especially the day we had a kite up when a fog came on. We knew our lookout above the vapor was at its post by the faithful tug at the string. Tied

IN THE FOREST OF “CHIC.” PANEL
BY FREDERIC P. VINTON.

to the deck-railing and left to itself, it followed the wind round the heavens, and fouled the cord with the fore-topmast. A sailor ascended, and with much daring and patience carried the string round sails, spars, and shrouds. For a moment the fog opened, and revealed the kite shining in the upper sunlight. Several kites were left flying at night, tethered to the ship; but they invariably flew away before morning.

No day passed without a little serious work with brush and palette. A brawny emigrant with wooden shoes was painted in the alcove panel which had originally held the girl with the poke-bonnet and orange feather. And the “nightmare” artist, who had such trouble in realizing his idea, dashed it in one morning in an hour’s time. It was an impression in pink and gray,—a gay, young, old-fashioned beauty tripping along a country road. A fine flower panel, done with decorative effect, was worked principally with the palette-knife into the large space between the chest of drawers and the starboard door. Summer and winter landscapes were sketched on the odd panels scattered about the cabin walls. Occasionally the studio was honored with a call from the ladies, one of whom sat for her portrait. A tall panel was filled with a forest scene—a pleasing *tour de chic*. Somebody paid a compliment to the naturalness of the picture by asking, seriously, “What woods are those?”

The artist chuckled. “You remind me,” he answered, “of H——’s reply to the man who inquired the name of the mountains in a landscape he had evolved from his inner consciousness. ‘Ah, you don’t know those mountains?’ he said; ‘they are a part of the range that passes through the Tenth street studio building.’”

PETRELS FOLLOWING IN THE STEAMER'S WAKE. BY ARTHUR QUANTLEY.

For the sake of decorative unity, something had to be painted in the panels holding the chronometer and the barometer. The latter being in a round metallic case, it occurred to one of the artists to treat it as a cylinder revolving on the feet of a juggling clown, who, lying supinely beneath it, applied the rotary motion with two remarkably expressive black-and-yellow-striped legs. Underneath was painted the punning motto, "One 'fair' turn deserves another." The companion panel was a reminiscence of the Latin quarter, in the shape of a frivolous young man in full dress, dancing a jig with the chronometer held in his hands, over his head. The motto was "A Good Time." On the eleventh day, when the captain predicted we should see Bishop's Light, on the Scilly Islands, between seven and eight in the evening, two artists gave all their energies to decorating the ceiling with spreading branches of Japanese quince, the pink and white blossoms being deftly worked in with palette-knives.

That we were nearing land was apparent from the deep, long swell of the sea. Great billows rolled the length of the ship's sides, almost covering the bulwarks with their crests, and nearly revealing the keel in the deep trough following them. Everybody was on deck after dinner, looking into the grayish twilight off the port bow for the horizon star which should prove the captain a true sailor. A quarter of eight the captain drew the first officer's attention to a spot where he thought the light-house ought to be. They exchanged affirmative nods. Then the Yankee skipper brought his powerful binocular to bear, and gave us a peep at a yellow pin-point of light — a speck

in the eastern rim. That was a happy half hour, at the end of which Bishop's Light was nearly abreast; then the ship's course was shaped for Dover. Within the hour St. Agnes's revolving light flashed through the darkness, and after ten we were watching the red-and-white revolving light on Wolf's Island. Precisely at midnight, we passed the Lizard electric lights, blazing like twin suns on the cliffs of Merry England. We were about eight miles from the signal station. "Look out for fire-works," said the captain, going to the bridge. At the word, red fire blazed up at the prow, on the bridge, and at the stern, enveloping the ship in a spectacular glare which the clouds reflected back again. When we were in darkness once more, a blue light blazed up on the shore, assuring us that we had "spoken the Lizard," as the New York papers would say of us a few hours later.

A gale was at our back the next morning. With straining sails we scudded gloriously up the Channel, which was a greenish-drab, angry sea, dotted with every variety of craft that incited the marine artists to much rapid sketching in the short-hand of art. A Belgian pilot-boat intercepted us. It was a rough sea to maneuver in, but after an exciting twenty minutes, the chunky Dutch pilot and his leather bag were lifted safely over the bulwarks. At noon, we were off the Isle of Wight — which, to be appreciated, must be seen from the sea and bathed in such dreamy sunlight. We could have thrown a stone ashore, almost, as we passed St. Catherine's Light-house. Toward dark we scudded past Dungeness, looking bleak between angry water and tempest clouds. Behind its low

point was a forest of masts of vessels that had scampered in for shelter against the storm that was chasing us. Nearly four hours later Dover strand and the barracks half-way up the cliffs were revealed in dark outlines and straggling gas-lights. Passing the twin lights of Dover cliffs at midnight, we repeated with red lights the spectacular scene at the Lizard, and sailed out into the North Sea under a cold, blue-black sky. We remained on deck an hour watching the stars. It was a night to call up visions of old Norse jarls cruising in North Sea galleys.

At seven the next morning we were shivering in our warmest wraps in the lee of the deck-house, and wondering how soon the

muddy Scheldt would let us over the bar. Eager as we were to get ashore, the run up the river was too swift to satisfy our eyes. At the bend, not far above the Belgian line where Fort Liefkenshock frowned upon us with iron-plated front, the steeple of Antwerp Cathedral came in view. At the same moment the bunting, which had been drawn to all the mast-heads in little bundles confined by slip-nooses, was simultaneously shaken out to the breeze. As we glided into the river harbor under the escort of a tug-boat, the cathedral chimes were tinkling the "Mandolinata" in honor of noon of the fourteenth day of our voyage. By night-fall the artists had laid their wreath on the tomb of Rubens.

C. C. Buel.

IN HONOR OF RUBENS.

EARLY MORN.

WHEN sleep's soft thrall, with dawn of day, is breaking,
 With joy I see—just lifting up my head—
 Through the broad, bounteous windows near my bed,
 The first delicious glow of life awaking.
 I watch the bright, unruffled ocean, making
 The fair young morning blush with timid red
 To see her beauty mirrored there, and spread
 Far o'er the waves. I watch the tall ships taking,
 On flag and canvas, all the colors rare
 Of her sweet beauty and her rich attire;
 The violet veil that binds her golden hair,
 The chain of crimson rubies flashing fire;
 Until the blue, calm sky, with tender air,
 Charms the beloved morn to come up higher.

Caroline May.

TORU DUTT.

TORU DUTT.

IN the year 1876, there was issued from the Saptahiksambad Press, at Bhowanipore, a volume entitled "A Sheaf Gleaned in French Fields, by Toru Dutt." It contained in all one hundred and sixty-six poems, original compositions in English, or almost literal translations from the foremost of modern French poets, including Victor Hugo, Alfred de Musset, Béranger, Leconte de Lisle, Théophile Gautier, François Coppée, and Sully-Prudhomme—all notable for their brilliancy of word-painting and intricacy of form. A few copies of the book found their way to England, and were most kindly received. In 1878, a second edition appeared, containing forty-three additional poems and a prefatory memoir; whence it became known that the writer, who had been able to reproduce in one foreign tongue the best work of the most celebrated poets of still another foreign nation, was a Hindu girl, without a drop of European blood in her veins, who had died at the age of twenty-one, leaving indubitable proof of application and originality which, as one of the foremost of English reviewers recently remarked, would not have been surpassed by George Sand or George Eliot, had they been removed from us at a similar age.

Toru Dutt was the youngest of three children of the Baboo Govin Chunder Dutt, for many years an honorary magistrate and justice of the peace in Calcutta—a gentleman

of unusual culture and erudition. Of these three children, the eldest—a son, Abju—died in 1865, at the age of fourteen; the second, Aru, in 1874, at the age of twenty. Toru was born March 4, 1856. In 1869, the two sisters visited Europe in company with their father, remaining abroad for four years. With the exception of a few months in a French *pension*, the girls never attended school. Under their father's care, however, both became remarkable scholars, Toru acquiring a perfect mastery of French and English, a thorough knowledge of German, and, after her return to Calcutta, so great a familiarity with Sanskrit that she was enabled to make a number of translations in English blank verse from the "Vishnu Purana." While in England, the sisters attended the lectures for women at Cambridge University, and mingled to some extent in society.

"Not the least remarkable trait of Toru's mind," writes the Baboo, "was her wonderful memory. She could repeat by heart almost every piece she translated, and, whenever there was a hitch, it was only necessary to repeat a line or two of the translation to set her right, and draw out of her lips the original poem in its entirety. I have already said she read much. She read rapidly, too; but she never slurred over a difficulty when she was reading. Dictionaries, lexicons, and encyclopedias of all kinds were consulted until it was solved, and a note was taken afterward; the consequence was that explanations of hard words and phrases fixed themselves in her mind, and, whenever we had a dispute about the signification of any expression or sentence in Sanskrit, or French, or German, in seven or eight cases out of ten she would prove to be right. Sometimes I was so sure of my ground that I would say, 'Well, let us lay a wager.' The wager was ordinarily a rupee. But, when the authorities were consulted, she was almost always the winner. It was curious and very pleasant for me to watch her when she lost. First a bright smile, then thin fingers patting my grizzled cheek, then, perhaps, some quotation from Mrs. Barrett-Browning, her favorite poet, like this:

'Ah, my gossip, you are older, and more learned, and a man,'

or some similar pleasantry."

Toru's first venture in print was an exhaustive and learned essay on the writings

of Leconte de Lisle, which appeared in the "Bengal Magazine," in 1874, when she was only eighteen. At the same time she began the study of Sanskrit, following it with her customary energy until 1876, when her declining health would no longer permit of steady application. In the meantime, she had been composing either original or translated poetry in her native tongue in English, in French, and in German. Shortly after the publication of the "Sheaf Gleaned in French Fields," Toru fell ill. The same deadly disease which had carried off her sister—consumption—now fastened upon her. Gradually all literary work was given up. In the early spring of 1877 she was upon her death-bed; occasionally rallying, she sank lower and lower until, on the 30th of August, she passed away in her twenty-second year, "a firm believer in Christianity."

From the portrait of Toru accompanying this article (the copy of a photograph taken at the age of seventeen), the reader will observe that she must have possessed much personal beauty. The delicately rounded contour of the face, pure features, liquid black eyes, and heavy tresses of raven hair, were enough to distinguish their possessor, aside from their intellectual expression. It is a pleasant picture which the Baboo gives of the home circle when the two sisters, Aru and Toru, were its life and charm. In the performance of all the household duties which were incumbent upon them, both were exemplary. Fond of music and versed in the art, instrumental and vocal, their leisure moments were passed at the piano.

The "Sheaf Gleaned in French Fields" was, on the whole, the most important of the works of Toru Dutt. She left, besides, a novel in French, entitled "Le Journal de Mlle. D'Arvers," which was published in Paris early in 1879, edited, with a biographical and critical study of the author, by Mlle. Clarisse Bader, whose work upon "La Femme dans l'Inde Antique" had attracted Toru's attention and led to a brief correspondence. Toru also left eight chapters of an unfinished English romance entitled "Bianca; or, The Young Spanish Maiden," which is of interest only as being Toru's first venture in English prose. The language throughout is notable for its purity and grace, a few idiomatic errors alone marking the author as a foreigner. A number of original English poems were also found among Miss Dutt's manuscripts.

The "Sheaf Gleaned in French Fields" is a remarkable book. If the reader will imagine an American or English woman, not out of her teens, selecting something like two hundred of the best German poems of the age, and reproducing them in French with absolute

fidelity to the originals, and at the same time expressing herself in a pure and idiomatic style, he will have some idea of this collection. The interest of the poems does not arise from the fact that they are faithful translations. They are not *trans-lations* at all, as we ordinarily understand the term, but rather *trans-mutations*. The supreme test of a translation is in considering it as an original composition. The translations of Toru Dutt certainly endure such rigid examination, and there are several which defy the reader to detect, from any inherent quality, that they were not purely spontaneous productions. There are serious faults at times, but these faults arise from no awkwardness in reproducing the thought of the original author. The errors are in versification—a superfluous syllable, an uneven line, an arbitrary quantity, or an inverted phraseology; but a rugged grace of diction and spirited rhythm are uniformly characteristic of her work. Of the following poems, the first is the opening stanzas in a translation of an idyl by M. Arsène Houssaye, and the other a translation of one of Heinrich Heine's poems:

The rural sounds of eve were softly blending—
The fountain's murmur like a magic rhyme,
The bellow of the cattle homeward wending,
The distant steeple's melancholy chime;

The peasant's shouts that charm from distance borrow,
The greenfinch whirring in its amorous flight,
The cricket's chirp, the night-bird's song of sorrow,
The laugh of girls who beat the linen white.

The breeze scarce stirred the reeds beside the river,
The swallows saw their figures as they flew
In that clear mirror for a moment quiver,
Before they vanished in the clouds from view.

And school-boys, wilder than the winging swallows,
Far from the master with his look severe,
Bounded like fawns, to gather weeds, marsh-mallows,
And primrose blossoms to the young heart dear.

THE MESSAGE. (HEINRICH HEINE.)

To horse, my squire! To horse, and quick
Be winged like the hurricane!
Fly to the château on the plain,
And bring me news, for I am sick.

Glide 'mid the steeds, and ask a groom,
After some talk, this simple thing:
Of the two daughters of our king
Who is to wed, and when, and whom?

And if he tell thee 'tis the brown,
Come shortly back and let me know;
But if the blonde, ride soft and slow,—
The moonlight's pleasant on the down.

And as thou comest, faithful squire,
Get me a rope from shop or store.
And gently enter through this door,
And speak no word, but swift retire.

A number of poems in this volume are by Toru's sister Aru; none of them involves the difficult meters which make the work of the former so much more notable, but they show a remarkable facility.

In the two hundred and more poems included in the "Sheaf," Victor Hugo is represented by thirty-one, the Comte de Gramont by seventeen, Joséphin Soulayr by fourteen—and in all there are about one hundred authors. This includes nearly every form of versification, from the graceful Alexandrine of Soulayr to the Hugoesque meters of the author of "Les Châtiments"; from the sonnet of De Gramont to a sextine by the same author,—a form of verse which has been attempted in English only by two or three other writers.

In the notes which fill the concluding fifty pages of the volume, Toru has displayed a great deal of learning with rare critical ability. She has an epigrammatic way of summing up an author in a few words, as where she calls Victor de Laprade "a spiritual athlete," or remarks of Brizeux that his poems "want the Virgilian charm." Truly, the "Sheaf Gleaned in French Fields" is an extraordinary book; it may be said, without overstepping the limits of honest criticism, that no work within reach of the English reader affords so complete a survey of the French poets of the modern romantic school.

"Le Journal de Mlle. D'Arvers" was written by Toru partly in fulfillment of an agreement with her sister Aru, who was to illustrate the volume, she possessing considerable skill with her pencil; unhappily, her death prevented the consummation of the contract. The manuscript of this romance, written in French, was consigned by Toru to her father's hands while she was upon her death-bed. It was, as previously stated, published in Paris a few years ago, and immediately attracted wide attention. While dealing entirely with French characters, the romance is English in sentiment and is essentially a poem in prose. It appeals to the highest and tenderest emotions of our nature; it is permeated throughout with the influence of divine love, and certainly no one whose heart is touched by such influences will lay it aside without a tribute to the memory of Toru Dutt.

After the above was written a number of original and hitherto unpublished poems by Toru Dutt, from which we select two, were received from the Baboo, who kindly forwarded them at the request of the editor of this magazine: *

FRANCE.

1870.

Not dead—oh, no—she cannot die!
Only a swoon, from loss of blood!
Levite England passes her by—
Help, Samaritan! None is nigh;
Who shall stanch me this sanguine flood?

'Range the brown hair—it blinds her eyne;
Dash cold water over her face!
Drowned in her blood, she makes no sign,
Give her a draught of generous wine!
None heed, none hear, to do this grace.

Head of the human column, thus
Ever in swoon wilt thou remain?
Thought, Freedom, Truth, quenched ominous,
Whence then shall Hope arise for us,
Plunged in the darkness all again?

No! She stirs! There's a fire in her glance—
'Ware, oh, 'ware of that broken sword!
What, dare ye for an hour's mischance
Gather around her jeering France
Attila's own exultant horde!

Lo, she stands up,—stands up e'en now,
Strong once more for the battle fray.
Gleams bright the star that from her brow
Lightens the world. Bow, nations, bow—
Let her again lead on the way.

SONNET.—THE LOTUS.

Love came to Flora asking for a flower
That would of flowers be undisputed queen;
The lily and the rose long, long had been
Rivals for that high honor. Bards of power
Had sung their claims. "The rose can never tower
Like the pale lily, with her Juno mien."
"But is the lily lovelier?" Thus, between
Flower factions rang the strife in Psyche's bower.
"Give me a flower delicious as the rose,
And stately as the lily in her pride——"
"But of what color?" "Rose-red," Love first chose,
Then prayed: "No, lily-white, or both provide."
And Flora gave the lotus, "rose-red" dyed
And "lily-white," the queenliest flower that blows.

* Since this article was put in type, we have received a luxurious little volume of one hundred and thirty-nine pages, containing the original poems by Toru Dutt, and entitled "Ancient Ballads and Legends of Hindustan" (London: Kegan Paul, French & Co.). It also contains an interesting introductory memoir by Mr. Edmund W. Gosse.

AN AVERAGE MAN.*

BY ROBERT GRANT,

Author of "The Little Tin Gods on Wheels," "Confessions of a Frivolous Girl," etc.

IV.

PETER IDLEWILD had run away from home some fifty years ago without a dollar in his pocket. To-day he was one of the so-called railroad kings of the country. His native place was a small Massachusetts town, from which, at the age of fourteen, he had vanished in the wake of a traveling circus. The hard knocks incident to a tumbler's career had speedily dissipated the halo of hero-worship with which his youthful imagination had surrounded such a lot. During the next few years he became severally a bareback rider, a huckster of small confectioneries, and a lightning ticket agent. All these occupations, however, were but stepping-stones toward the realization of a wider ambition. The thrift and keen appreciation of the money-value of things peculiar to rustic New England were rife within him. By the time he was nineteen his savings permitted him to purchase a controlling interest in "The Fat Woman of Guinea," a side-show connected with the circus with which he had continued to travel. Severing the lady in question from the main company, he carried her about the country as an independent organization, with signal success. He was grown to be a strong, strapping fellow, with a sonorous voice and a happy gift of plausible statement. The village folk flocked to see his abnormal prodigy, who soon, however, became the nucleus of a considerable cabinet of curiosities. Money flowed in rapidly; but he was not a man to be satisfied with moderate profits. One fine day he sold out to a rival his entire live stock, not even exempting the foundress of his fortunes nor a peculiarly profitable "Tattooed Giant," and invested a portion of the proceeds in a well-stocked peddler's van.

Prospering here withal, he betook himself at the end of another five years to New York, to become the fountain-head from which a number of these itinerants were furnished with supplies. He was active and diligent, and his business thrived in pace with its increasing proportions. He launched out into new and various fields of enterprise. Omnibus and steam-boat lines, an express business, and even a hotel or two, were among the undertakings that were nursed into a lucra-

tive existence by his clear-sighted energy. All that he touched seemed literally to turn to gold, and men began to point to him as a capitalist. But even now his long-practiced caution stood him in good stead. As earlier in his career, he showed a willingness to allow others to reap what he was accustomed to call the "top-story profits." The eve of one of the most disastrous financial panics that had ever visited this country found him in a position of security. He had "salted down" into hard cash the gains from his outlying ventures, amounting to hundreds of thousands of dollars, which, after the storm was blown over, he concentrated in the banking house of Peter Idlewild & Company, thereafter to be one of the money powers of the city. He had had the shrewdness to foresee the immense future of the railroad systems of the nation, and by bold yet prudent investment and speculation his large wealth doubled and trebled itself. He had become a millionaire in the actual sense of the word.

His life, as this epitome shows, had embraced a wide and varied experience. He was essentially a self-made man. His was one of those iron constitutions that defy abuse. Fatigue was almost an unknown sensation to him. He could eat anything, and at any hour, with seeming impunity, and obtain the refreshment of sleep at a moment's will. He possessed, besides, that power of adaptability which is itself one of the keys to success. Unpolished, unfamiliar with the graces of language, he had ever been able to electrify a circle by his quaint utterances, the pithiness of which was enhanced by their very dearth of grammar. His fund of stories, animated by the indescribable broad humor native to our workaday population, was inexhaustible. The smoking-car and hotel corridor, the camp-fire and village, had alike known him well and accorded him a delighted audience.

We whose efforts in life have been less prosperous are prone to entertain some hero-worship regarding one so thoroughly successful in practical fields. We like to believe that he must have been actuated by broad and elevated principles, that he must have generalized with the well-balanced rapidity of genius, and been influenced by liberal impulses. And yet, if we were to weave

for Peter Idlewild such a vesture of idolatry, we should assuredly be doomed to disappointment. He had been completely a man of action, to whom theories were naught except in so far as they could be made use of to forward his personal interests. It may be doubted whether, after the primary romance of his boyhood had been rudely dispelled through an actual experience of the hardships of the tan-ring, he had ever allowed considerations of idealism to trouble him. Thrown upon the world and forced to win his way, he had made use of human nature and adapted himself to its many-sidedness, without becoming enslaved to what he regarded as its weakness. He appreciated the motive power and, at the same time, the limitations of theories and speculative opinions, and while humoring those of others had avoided partisanship himself. He had played upon, without sharing, the feelings and convictions of humanity.

But Dame Nature is a relentless creditor. There was one spot in the heart of Peter Idlewild that had escaped these benumbing methods. He cherished for his daughter Isabel an absorbing love. Her mother, a young woman from Western New York, whose acquaintance he had made during his peregrinations with the peddler's van, had died shortly after confinement. The baby girl, intrusted at first to the care of his own sister who still inhabited the New England homestead he had forsaken, had become, after she was able to run about freely, the constant companion of his wanderings. For a number of years she had shared with him this roving life; and when at last he was compelled by the requirements of education to send her back to his kinsfolk, she had yet ever lived in his thoughts and become a nucleus about which his possessions wound themselves with an ever-increasing tension.

As time went on he had come, as we have seen, to settle down in New York; and it had been half for Isabel's sake that he had married again,—this time a person of middle age and a certain social position, whom her friends declared to have accepted the banker on account of his money. Rugged and indifferent to the graces of life as he was himself, Peter Idlewild had perhaps secretly made up his mind that democracy avails women little, and that their only chance for prominence lies in social prestige. Content on his own part to drive fast horses in the comparative isolation of a single boon companion, he had begun to be eager, on his daughter's behalf, for the pass-word to good society. He had bought a house of astounding proportions, and had it furnished by an architect on a high scale of magnificence. He was just

about to give Isabel a "coming-out ball," to which he had invited upon the most trivial pretenses, in some cases in fact upon none at all, the greater portion of the fashion of the city. Nothing was good enough for his only child. She should have the best that money could bring; and there the old millionaire at least felt safe. He could slap his pocket with the sardonic consciousness that he held strong cards. It was his wont to tell the blooming girl, in moments of endearment, that she ought to be the wife of a duke; and who knows that in his heart, despite his plebeian tastes and instincts, he did not cherish some such future for her as an alliance with a titled foreigner?

Isabel in turn more than reciprocated the affection of her father. He was to her an idol upon which she lavished the wealth of her nature. To go to New York some day and keep house for him had been the Mecca of her girlish fancy, to which she had looked forward with an impatience but little concealed. This had come to pass when she was sixteen; but the sweetness of realization had been alloyed for her by the appearance on the scene of Peter Idlewild's second wife. The latter found the country girl sadly deficient in the usages of polite society, and for three years Isabel had been forced to submit to a series of refining processes at the dictation of her step-mother, which had resulted in an effectual removal of the young beauty's rougher edges.

Isabel's preceding years had been passed in a New England country town, under the tutelage of her father's sister, Submit Idlewild, or "Aunt Mitty," as she was commonly known. The latter was a spinster, whose native strength of character had developed in the direction of rigid views on the subject of discipline. She belonged essentially to the older generation, and had clung tenaciously to the letter and spirit of the Puritan code long after most of her neighbors had ceased to struggle against the encroachments of so-called progress. The young people of the day, in especial, incited her to ominous headshakings. Their easy-going independence and lack of reverence for age and authority were her favorite themes for homily. The linguistic and other accomplishments which were beginning to revolutionize the raw, though salutary, methods of New England education filled her with dismay. French she habitually stigmatized as a pack of nonsense, and "pianner playing" as a cloak for idleness.

But, with all this firmness of character, the sober-minded old maid had found in her niece a young person who kept her hands full. Isabel, in truth, had cost Aunt Mitty

a "peck o' trouble" to manage. As regards physique and vitality, she was preëminently her father's daughter. She possessed the same determined energy, and, as a complement thereto, a copious fund of animal spirits ready to overflow upon the slightest occasion. Naturally daring and self-reliant, the freedom of modern life had had for her a vivid attraction. Existence was to her a keen enjoyment, and she was impatient of the restrictions imposed by her relative. She had the stronger nature of the two, and, though the older woman contested every inch, victory generally remained with the splendid rebel.

A more politic or less conscientious person than Miss Submit Idlewild would have taken advantage, in these contests, of the impulsive nature of the young girl; for the latter had, beneath the harum-scarum of her irresponsible ways, a warm heart. An appeal to her feelings was a weapon which a greater strategist would have used with signal effect. But the very exuberance of Isabel's emotional side was a source of alarm, or at least a puzzle, to the sedate spinster, in whose ideas a rapid circulation of the blood was associated with innate depravity, as it were. And so, while in secret deeply attached to her niece, she had felt it necessary to repress displays of feeling on her own part as a check to the other's effusiveness.

The years had slipped away. This was the evening of Isabel's coming-out ball. She had already attended a number of entertainments at other houses, but to-night was to make her known to the gay world at large, or at least to such part of it as saw fit to conquer their prejudices to the extent of accepting Mr. and Mrs. Peter Idlewild's invitation. And most of them would succeed in doing this; for the house, as has been said, was reputedly worth while examining in person. Moreover, Mrs. Tom Fielding's answer to the surprise expressed by her husband at her willingness to accept courtesies from such mushroom members of society voiced the philosophy of many.

"Oh, my dear Tom," said the lady in question, "in three years everybody will visit the Idlewilds; and if one must take the plunge, it is best to do it with good grace, you know."

"Very well, dear," replied submissively her lord and master, whose objections were perhaps but a pretext to escape for once the rôle of tame bear in which he had begun to figure of late. It had already become his lot to be dragged about from house to house, evening after evening. His wife adored society, as she phrased it; and he, poor fellow, adored his wife. A simile of self-invention was a novel thing to be flitting through his brain, and he paused in his thought to grasp it more firmly.

A bear,—yes, that was what he was; a rough, dull-brained bear. Why hadn't he been born clever, like some fellows he knew? Perhaps if he had been less stupid, Ethel might have been ready to stay at home sometimes. It *was* tiresome for her, poor child. Thank Heaven! he had the means to gratify her every wish. How pretty, how delicate, how graceful she was, and how he loved her! If only he could feel sure that she loved him as he worshiped her, what a paradise life would be! But at the worst she was his,—she at least belonged to him, and no one could take her from him. Perhaps, too, some day she would grow to love him; and then——

"Why, Sleepy, what is the matter? You look positively inspired." And the subject of his reverie appeared almost amused at the rapt expression on the face of her husband, an epitome of whose wonted demeanor was contained in the pet name she had employed. She turned from the contemplation of her delicate face in the glass, to flash at her spouse that caressing smile which she had discovered to be the "open sesame" of her matrimonial status.

He looked awkward. "Nothing," he murmured; and then, simply, "I was thinking of you, Ethel."

"*Ça va sans dire*, my love, of course. You may order Holt for half-past ten." She smiled at him once more, and then as he passed out her glance strayed again to the mirror, whereon it lingered playfully and fondly, as if self-fascinated. She was in her boudoir. She was attired in a long, loose wrapper. Her hair had just been done. She leant forward to examine the effect more closely. Her lips were close to her own lips, and she seemed to be seeking the depths of her own eyes. They grew soft with the light of a sudden fancy.

"Narcisse?" she murmured.

She gazed, and now slowly the light seemed to fade from her face under the spell of her thought.

"Narcisse! Ah, yes, that is it; I love myself alone."

She leaned back in her chair and clasped her hands behind her head, still following in the glass the changing play of her expression. From gay it turned to grave, from grave to something more than that, half tired, half sad.

What was life to her but the admiration of her reflected beauty in the pool, as in the old-time myth? What other interest had she? Existence was so rapid, hollow, colorless. And yet once it was so different,—once, and that only a short two years ago. She loved then. Yes; but that was all over now. She had ceased to care; the wound had healed. She had been a romantic girl, and her father had

been right when he said she would get over it. "Ceased to care." Ah! why had she ceased to care? Why? Why was anything? Why had she become what she was, so hard, so indifferent, so cold? She was almost incapable of feeling now, and yet she was but twenty-five—a girl still. Why was she so miserable—she who ought to have been so happy. And how was it to end, what was to be the outcome of it all? She still lived, and she was but twenty-five. Her eyes dimmed with tears as she mused, and she covered her face with her thin, white hands.

There was a knock, and the maid entering held out toward her mistress a florist's box, with a blithe "*En voilà un autre, madame.*"

Ethel Fielding raised her head, and for a moment the sparkle of flattered pride danced in her eyes. There were those who said her face at times recalled the patrician qualities of her great-grandfather, Morris Linton, the caustic eloquence of whose thin lips had been the jeweled stiletto of the United States Senate in years long past. They had been an aristocratic race, these Lintons, and their motto, *Ab uno disce omnes*—"From one learn all"—was carved upon their foreheads, as it were.

Removing the cover and the dainty gauze of cotton-wool in which the bouquet was swathed, she revealed a mass of pale pink roses. A card, inclosed in a tiny envelope, lay half hidden amid their leaves. This she seized with avidity and read. Dropping the same upon her toilet-table, she lifted up the flowers and held them at arm's-length admiringly.

"Are they not lovely, Clementine?"

"Ah, oui, madame."

Ethel drank in their fragrance in a long, audible breath, pressing them against her face the while. Then, with the air of one who had exhausted a sensation, she thrust the bouquet into the hands of her maid and said briefly, "Put it with the others."

"*Bien, madame.*"

When Clementine was gone, Ethel stood for a moment pensively; then she picked up the card once more, and from her lips as she read fell a whispered "Mr. Donald Robinson." She shrugged her shoulders slightly, and stood looking into distance with a curious expression, hard, still yearning, about the mouth. The card had become a focus of nervous action, for she was bending it mechanically between her fingers.

"What is the use?" she said at length, slowly. "What can it lead to? And yet," she added through her teeth bitterly, "one must live."

Her eyes filled with tears. She picked up

a lace handkerchief and passed it across her face with anger. But the pent-up tears still flowed, and a look as of a groping for support—for something to soothe her sense of desolation—stole over her. Her glance fell upon the toilet-table, and with sudden transport she reached out for and clasped a miniature crucifix which lay thereon. Pressing it to her lips, she kissed with passionate tremor the sacred effigy, repeating the while, in whispers broken by sobs, "Thee only, blessed Saviour; thee only." She fell upon her knees and buried her face in her hands.

At this same hour Peter Idlewild was standing contemplatively on the threshold of his large ball-room, lustrous with its chandelier, mirrors, and smooth, inlaid floor, as yet untested by the foot of the dancer. He was in full dress. A brilliant solitaire blazed in his shirt-bosom in lieu of the ordinary triple studs of society. He softly slapped his snow-white kid gloves against the palm of his hand. From behind a recess skillfully concealed by large-leaved plants came the sounds of musicians tuning their instruments. None of the guests had as yet arrived. On a sofa close by in the adjacent parlor sat Mrs. Idlewild, in a claret-colored velvet and diamonds. She smoothed out the folds of her dress and leaned back against the cushions in languid complacency.

A buoyant step on the staircase announced the descent of Isabel. She entered the room beamingly. The virgin white of her *débutante* attire was relieved by a rose or two amid her masses of hair, and a superb necklace of pearls, the latest gift from her father.

Peter Idlewild turned at the sound of her step. "Well, Isabel!"

"Well, pa! Don't I look lovely?" and father and daughter gazed at one another for a moment with undisguised affection. The latter darted presently toward the ball-room.

"Oh, how perfectly fascinating the floor looks!" She clapped her hands together. "I'm just crazy to try it. Come, pa"; and seizing the old man, she tried to drag him forward. They executed a few clumsy movements together, the girl laughing merrily the while. Mrs. Idlewild stood watching them at the door.

"What geese you two are!" she murmured; "you will tumble her all to pieces."

This last sentence was called forth by the father's taking Isabel's cheeks between his hands, as they stopped almost breathless at the threshold, and kissing her smotheringly. She shook herself free from his embrace. "Oh, pa, you can't dance a bit!" she cried, as she pirouetted off gayly by herself.

"Isabel, Isabel, you will not look fit to be seen," besought Mrs. Idlewild, despairingly.

"How, ma?" and with the impetus of the waltz she sailed up to her mother's side.

"I have cautioned you so often, dear, against using that vulgar form of expression. If you say *how* when you mean *what*, people will set you down as uneducated."

"And pa's duke wont have me in consequence! That would be dreadful, ma." She laughed gleefully, and, passing her arm through that of her languid parent, led the way back into the parlor to where, upon a little table, several large bouquets lay together. "Don't they look too beautiful, ma?" She picked up one of them and buried her face amid its fragrance. "It would be rather nice to marry a duke, wouldn't it?" she said, reflectively. "Only think what fun it would be to be called 'My lady'! And one could use all sorts of expressions then without shocking anybody. People would observe, 'It is only her Grace's way'; and the way of a duchess must be correct, of course, ma."

At this moment the maid brought in another tell-tale green box.

"That makes four. What fun! *Merçi, Marie.*"

The French words, as pronounced by Isabel, had the effect of Mercy Murray. The fair perpetrator of this solecism proceeded to remove the wrappings of the box.

"Oh, ma, aint they perfectly lovely?" She disclosed admiringly a mass of magnificent deep-red roses. A card lay among them. "Mr. Woodbury Stoughton," she read aloud, half-wonderingly, and a faint flush crossed her cheek. "How nice of him!"

Mrs. Idlewild fanned herself, with an air of gratification. "He seems to have taken quite a fancy to you, Isabel."

"Pshaw, ma, I don't think he has at all."

The old man scanned the flowers ruminantly. "That young Stoughton sent them, did he? Humph! He must have a good deal of money to spare. You can't buy roses like that for nothing. What does he do for a living?" he inquired, abruptly.

"He's a lawyer, and doing very well, I hear," answered Mrs. Idlewild.

Isabel held the bouquet in her hand, and was picking over the exquisite buds pensively. "They are just too elegant for anything," she murmured. "I suppose they *did* cost all outdoors."

"Isabel!" groaned the mother, "where did you pick up such expressions?"

"By the way," said Mr. Idlewild, "did I tell you that I'd asked young Finchley to come to-night? He's a broker down-town, who sometimes does an odd job for me, and

smart as a steel-trap. He's with J. C. Withington & Company, and bound to get on."

"What does he look like, pa?"

"Look like? He looks like a man. Humph! There's nothing of the fashion-plate about *him*."

It happened, some ten minutes later, that the young man in question appeared upon the scene. Galling as the consciousness of being the first arrival must have been to Finchley, he entered the room with a crook to his elbow and tight compressure by a couple of fingers of the bit of white cuff protruding below his sleeve, that argued neither diffidence nor dismay. When he shook hands he dipped his body and crooked the other elbow in a masterly fashion. His efforts at politeness were so elaborate as to be almost audible.

His host received him with cordiality. Finchley, despite his self-assurance, was so far deprived, for a short spell, of his natural glibness as to confine his remarks to rather stilted praise of the new establishment. But presently, encouraged withal by the old man's friendliness, he began to feel himself at home, and make himself agreeable, which was more or less synonymous with talking about himself. He proceeded to tell Isabel, in his forceful, persuasive way, sundry facts connected with his personality. In addressing the other sex his winning, ugly smile was accompanied by a sort of leer. He had recently bought a driving-horse, which, he informed her, was the finest driving-horse in New York. In fact, it was characteristic of Finchley that everything he possessed was the finest of its kind. He took an almost enviable satisfaction in his doings and belongings, and in expatiating thereon to his acquaintances. He had a vivid sense of his own attainments, and was never slow to let people know that he had risen to his present position by dint of his individual exertions. In this connection, the dandified but well-bred young men for whom he carried stocks were a constant source of irritation to him. He sneered at their deportment, and, behind their backs, habitually characterized them as *snoobs*.

And in this lay one of the keys to Finchley's disposition. The real cause of his aversion to these fashionable customers was to be found in his secret consciousness of their superiority. He recognized at heart that they possessed an indescribable air of gentility that, despite his cleverness, he could not attain. His efforts, however carefully studied, resulted but in a vulgarity palpable to himself, yet the cause of which he failed to fathom. With all his air of assurance and boldness he knew himself deficient, and chafed

inwardly at the discovery. It was therefore a proud moment for him to have been invited to Peter Idlewild's ball, and he had taken care to make the most of the circumstance among the patrons of his office,—mentioning it quite accidentally, and with an air as if it were a matter of course.

Finchley was the son of respectable country trades-people. He had come to the great city at the age of sixteen, with his high-school education and a local prestige for *smartness* as his only capital. He had almost at once fallen upon his feet, as a firm of brokers to whom he applied for work, happening to be struck by his apt replies, engaged him as a clerk. But it is not everybody who falls upon his feet that can stand, and here Finchley had shown himself equal to his good fortune. His qualities were precisely suited to the needs of his employers, who from time to time had raised his salary during an apprenticeship of ten years, and had finally been led, by an intimation on his part of an intention to set up for himself, to offer him a share in their business. That had been some two years ago, and the firm of J. C. Withington & Company had as yet seen no reason to regret their decision. In fact, they had prospered exceedingly, and the new partner had developed a wonderful knack of obtaining custom. His statements were so volubly confident in tone, so bewilderingly bristling with figures, that the desire for opposition on the part of the listener vanished. There was nothing half-way in his judgments. He rarely qualified his remarks. There were those who said he would persuade an inquirer that white was black to-day and the contrary to-morrow,—but never that he was ambiguous or irresolute. He had been known to be a pronounced *bull* at the opening of the board and a relentless *bear* at its close; but if a customer were doubtful as to what course to pursue, he always found Finchley ready to decide the question for him and supply him with abundant reasons for his action.

He had prospered also financially himself, and now enjoyed a comfortable income for a young bachelor—or, verily, for a married man—in any place but New York. And here, indeed, it is Finchley's views that we are expressing. He had come, if the truth must be told, into the way of spending money almost with prodigality, and what others might consider a liberal competence seemed to him pitiful enough. He lived within his income, to be sure,—he was too shrewd a business man to commit so fatal an error as the reverse would imply,—but he already required a pretty handsome amount to supply his wants. This had come about by degrees.

While in the employ of the firm he had of course not been able, to any considerable extent, to indulge in extravagances; but the quality of his tastes had kept pace with his fortunes. He considered himself comfortably well off for the present, but the horoscope of his future embraced sums beside which his present affluence seemed a mere drop in the bucket. He intended to make a fortune; and there was so little doubt in his own mind as to his chances of success, that the thought of economy, in anything more than a loose sense, rarely, if ever, occurred to him. He always *talked poor*; but that was by way of comparison, not because he was conscious of any privations.

In his personal habits, as in the item of expenditure, Finchley had kept upon the sunny side of the line. No one could call him fast in the liberal interpretation of the word, and yet his mode of life was unmistakably luscious so far as concerned his creature comforts. He conformed to that which he saw about him, and, provided he had the example of others as an authority, was content to take the world as he found it, without troubling his head much as to how things ought to be. A man is meant to enjoy existence, and in order to enjoy it he must have money; such was the epitome of his philosophy. The world was good enough for him; so he phrased it. Accordingly, he took his cocktail socially, dined luxuriously, and played his occasional *full hand* for all it was worth, without any very definite moral twinges. He owned a neat open buggy, in which he drove the previously mentioned trotter, and he was altogether content with his present condition of life.

V.

AN hour later the scene was completely altered. The chain of connecting rooms was crowded with a gay, brilliant throng. A maze of dancers whirled over the ball-room floor, the entrance to which was beset by that somber body of unemployed men one sees at every large entertainment. In the main rooms—in one of which Mrs. Idlewild and Isabel were receiving—were grouped the elders and such of the youthful spirits as preferred the more tranquil joys of conversation to the attractions of Terpsichore. Despite the numbers, the large size of the house prevented the effect of a crush. Everything in the two lower stories was thrown open. There were charming corridors through which to wander, and hushed retiring-rooms—the library, the picture gallery, and a seductive little boudoir—for those in search of isolation. The hall was full of nooks and crannies, just large enough

to accommodate couples not averse to having their whispered confidences drowned by the peaceful splash of the neighboring fountain; and everywhere there were tasteful arrangements of flowers and beautiful ornaments and striking paintings to charm the gazer.

Arthur Remington and Woodbury Stoughton had come together, for they had been dining at the Sparrows' Nest,—a fraternity that had been brought into existence some two years before by a few fashionable but somewhat impecunious youths, who were barred by expense from joining one of the regular clubs. It was the fourth consecutive party at which they had been present this week, to say nothing of a dinner or two. The season was going to be a very gay one according to the authorities.

The young men were fairly in the whirl of New York life. They commonly rose in the morning at the latest possible moment consistent with reaching their offices at half-past nine. To be breathless and breakfastless on arrival down-town came to be with them no unusual occurrence. The twenty-four hours seemed excessively short, and they even begrudged the small allowance that it was necessary to devote to sleep. After a day of business they ordinarily reached home just in time to scramble into their dress-clothes. Dinner invitations, as well as those for later entertainments, were becoming very abundant. Rumor declared young men to be greatly in demand. The increasing corps of charming young ladies who composed "the blue-blood ballet," as Stoughton once phrased it, must be danced with by somebody. The older men grumbled at the lateness of the hours, and refused to stay to the german, so that partners were welcomed from among those new to the social stage.

But to-night there was a very large gathering of all ages. People were anxious to see the new house, concerning the magnificence of which there were such prodigious rumors.

Remington had become so far interested in Miss Dorothy Crosby, that her whereabouts was now what first occurred to him upon entering a ball-room. They had met a number of times. They had sat side by side at dinner only the evening before, and he was to dance the german with her to-night. There was something about the girl that appealed to him in the highest sense. She seemed to satisfy that thirsty yearning for ideality to which he was susceptible, though, if he had been asked to analyze why he liked her, his reply would probably have been that she was so refined and ladylike. Her disposition, too, seemed sweet, and her views of life were earnest and unworldly.

He was drawn to her all the more, though doubtless unconsciously, by the fact of his being rather disconsolate just now regarding his prospects. New York life was so very different from his expectation. The great ambition of everybody seemed to be to make an enormous fortune, and persons without means counted for very little. There was no repose. It was next to impossible not to be in a flurry and state of excitement most of the time. The competition was so great that one was obliged to overwork to avoid being left behind in the race. He had been warned, to be sure, that this was the case; but the reality exceeded the description. He had been taught as a child to believe that his countrymen were the superiors of other nations in the quality of their thought and the character of their ambitions, and he was loth to regard this as an illusion. Had he not always conceived this to be the land of noble aims and exalted views of living, as distinguished from the degeneracy of the older countries? And yet, looking about him, he could not clearly distinguish the superiority of his fellow-citizens in the matter of tone and aim. They were very clever; but he missed that tendency in the direction of the ideal which, during the reveries of his college days, he had felt sure he would encounter in real life. This, acting upon his mind already brought face to face with the problems of materialism, had awakened within him many a cynical thought.

But to-night he was happy at the prospect of a delightful evening. At least, he had come hither in that frame of mind; but, from his present post by the door, he could catch an occasional glimpse of Miss Crosby whirling through a ravishing waltz with a white-waist-coated exquisite, who wore a solitary stud that resembled a miniature plaque in his shirt-bosom. This was Ramsay Whiting, a young millionaire of good family, who happened as well to be very attractive and respectable. Remington was wondering who had sent her the second bouquet which she carried. He had himself committed the extravagance of sending her what would be ordinarily considered a handsome bunch of roses, but some other admirer had put his gift to the blush with a superb mass of Jacqueminots. He felt aggrieved without knowing exactly why. His sense of proprietorship, as it were, was offended.

When the waltz ceased he went up to speak to Miss Crosby. He was conscious of being a little glum, and the temper of his mood was not improved by the indifference of the young lady, who seemed to him much more partial to Mr. Whiting.

A few minutes later, Remington found

himself conveying Miss Lawton — whom his eye had chanced to fall upon after Miss Crosby went dancing off with Jack Idlewild, who had engaged her for the next waltz — through the various rooms. She was in her usual talkative mood, and began to entertain her escort in her demure way with a light, running prattle, interspersed by comments on the mutual acquaintances they encountered. He fancied himself quite happy and amused; but who does not know the heart-sickness of such peregrinations with the wrong girl?

"Oh, do look at Miss Nourse! I don't see why such large girls persist in wearing white! If I were her size, I should limit myself to black silks. I sometimes think I may grow to be just as large. I am positively afraid to be weighed, I have gained so much this winter. Dissipation seems to agree with me. . . I adore fountains, don't you, Mr. Remington?" she continued, as they strolled in the cue of couples through the spacious hall. "The splash is soothing to the nerves. But perhaps men don't have nerves. Yes, though, they must; for I was told yesterday that Mr. Harry Holmes is very ill with nervous prostration. But you seem preoccupied this evening, Mr. Remington, as if something were on your mind. I'm afraid I bore you dreadfully. Do take me straight to my chamber, Mrs. Hollis Beckford. Mamma couldn't come, so she promised to keep an eye on me. Don't I really bore you?" she went on to say, in response to the young man's iteration of never being more content in his life. "Still, I'm sure there's something on your mind. I do wish people could see into others' minds. It would be so convenient, wouldn't it? Oh, there's Mrs. Fielding, with Mr. Don. Robinson. How lovely she looks, doesn't she? I wonder who sent her all those flowers? Do you believe in a future life, Mr. Remington? They say, you know, Mr. Don. Robinson is an atheist. Isn't it a pity? — for he is rather fascinating to look at. I hear his wife feels dreadfully about it. That reminds me, talking of feeling badly, do you ever cry at the theater? Do you know, I went night before last to see 'The Two Orphans,' and positively I — Oh, is this our dance, Mr. Brumley? Well, I'll tell you the rest another time, Mr. Remington"; and Miss Lawton, turning back her head over her dumpy little shoulder, in mute pantomime of despair, was borne away by a somber youth in kid gloves much too large for him.

Miss Idlewild naturally was fettered to her mother's side during all the early portion of the evening, receiving the guests. Remington had said a few words to her upon entering,

and besought her to steal away for a waltz. "Oh, I can't, Mr. Remington. It wouldn't do at all. Wait until by and by, and then I'll give you one," she said effusively. She was looking her best. The increased flush of excitement was becoming to her. It had passed through Remington's mind, as he lingered for a moment watching her undergo the ordeal of reception, that he wished he could fall in love with her. She was certainly very beautiful, — twofold more beautiful, for instance, than Miss Crosby, — in the common sense of the word. Yet, much as he admired her, Isabel failed to inspire him as a whole. He was conscious of feeling himself in many ways her superior; or rather, perhaps, that she lacked those delicate qualities intimately associated with his vague ideal of what a woman ought to be. Perhaps it was his imagination, because he knew her origin; but was she not distinctly of the earth in her characteristics and tastes? And yet she was so frank, so guileless, so fresh and warm in all her ways! Whomsoever she did love she would love with her whole heart; there would be no lukewarmness in her passion. Calm analysis in such matters would be for her an impossibility.

The german came at last, and a magnificent affair it was, with its flowers and elaborate favors, which were each of an appreciable value. Isabel, who danced with Ramsay Whiting, was in a state of enthusiastic rapture over the *fun* of being *out*. She received an amount of attention well calculated to turn the head of any girl, for her free and naïve ways made her speedily a favorite. The older heads among the beaus were attracted to try their fascinations upon so charming a subject. She seemed to be perpetually waltzing, and whenever she resumed her seat there was always a semicircle of men about her chair. Prominent among these was Finchley, who — knowing but few people, and for once a little daunted by the consciousness of his own want of suppleness in social ways — stood his ground grimly among the worshipers of the young beauty. He seemed quite contemptuous of the conversation of the others, and the muscles of his face refused homage to the flow of badinage, save such as fell from Isabel's lips. He was anxious to get her things, to oblige her in some way. Why did he not dance? she asked. He never danced. Would he not like to know some one? Her father, she was sure, would be delighted to introduce him to any one he desired. No; he preferred to stay where he was, if she didn't object. He was quite happy there, he said; and he sought by dint of his leer to convey an idea of his content. She

was afraid he must find it terribly dull without dancing. The german was perfectly delightful, but unsatisfactory for conversation. One would just get settled, and somebody was sure to come up and take you out.

Remington, whose own partner was almost as great a favorite, found himself frequently in Miss Idlewild's neighborhood. He made her the recipient of his bouquet in the flower figure, and was presented by her in turn with a silver match-box. "Don't you like the favors?" she asked. "I thought it was nice to have them all different. Oh, I do think it's *such* fun, Mr. Remington. I had no idea I should enjoy society so much. Oh, thank you, Mr. Stoughton"; and Isabel rose to receive a bangle which the young man in question held out toward her. Again, as at Delmonico's, Remington noticed a curious expression in her face, and the flush on her cheek deepened as she sailed away in the waltz. He had watched her earlier in the evening with Stoughton, and been struck by a kind of embarrassed reticence in her manner. She was never like that to him. She always ran on in the most confidential strain. What was the trouble? he wondered. Could she be in love with Stoughton? Come to think of it, her bearing toward himself was somewhat as if he were a brother. If she cared very much for any one, she would probably be less frank. Well, even if she was in love with Stoughton, why should he care? He could not very well have told, if he had tried; but it is safe to say that no young man likes to have it made plain to him that he is regarded solely from a sisterly standpoint.

Remington had noticed, too, that Stoughton seemed to be quite devoted to Miss Crosby. Stoughton's own partner was Miss Tremaine, the giraffe-like young lady whom they had met at Mrs. Fielding's. She had, however, after the german was well under way, commenced a flirtation with Muchfeedi Pasha, a diplomat whom she had met the preceding winter in Washington. Miss Tremaine was no gosling. She had been out six winters, and understood perfectly how to arrange matters so as to obviate social suffering. She appreciated that Woodbury Stoughton had asked her to dance the german out of politeness, for he had staid at her mother's house in Newport the preceding summer. He had done his part in recognizing the obligation, and it was for her to make things as comfortable for him as possible. She was too sensible to imagine that he would care to talk to her all the evening, and she was certain she was not going to bore herself by a *tête-à-tête* with a boy like *him*. They could perfectly well each have a good time apart, and yet

preserve the form of union, after the manner of an ill-assorted couple that have agreed to keep the peace. She would have all the credit of having had a partner, and all the freedom that one sacrifices for such a trophy. There was a little boudoir adjoining the ball-room to which she accordingly removed herself with the aforesaid foreigner. "Be sure and tell me, Woodbury,"—she had called him by his Christian name since they were babies together,—“when our turn comes. Remember, for I dote on waltzing with you, you know.” At the other extremity of the same antechamber, Mrs. Fielding was ensconced with Mr. Don. Robinson.

The hours flew by, and it was now far into the night,—or, rather, early in the morning. The german was still being danced with vigor by a bevy of enthusiastic spirits, but there were gaps here and there in the circle that composed it. People had begun to go home, and a disposition to seek the seclusion of retired spots—where there was less liability to disturbance—had begun to show itself. It was pleasant to wander at will through the now thinned-out rooms and comment sympathetically on the taste of one's host, or sip an ice in the shadow of the library while your partner told you confidences about himself. The splash of the fountain was an attractive neighbor, especially where an arrangement of hot-house plants afforded two recesses within just the right ear-shot of its music.

"Let's sit down here, where it is cool, Mr. Stoughton," said Isabel. She was warm with the exercise of dancing, and a detached lobe of her hair, which had broken loose, gave her a somewhat disheveled appearance. This but increased, however, the effect of her beauty. She reached down to pick up a strip of tulle, trailing from her skirt. "Oh, mamma will be madder than a March hare," she exclaimed, as she gazed, half ruefully, half gleefully, at the havoc.

She tore the strip off short. "Please put it in your pocket, Mr. Stoughton. I haven't got any pocket. That's one of the disadvantages of being a girl. I should think you'd be awfully glad that you weren't born a girl."

"I should like to have been born anything half so lovely."

Isabel gave a flattered little laugh, accompanied by her artless "Really?" There was a pause. She sat with her eyes on her lap, and fingered thoughtfully the roses in her bouquet. She carried but one now; the others had been long since consigned to the table as too burdensome. Stoughton had recognized that it was to his that she had given the preference.

He sat watching her with all the rapt de-

votion of a lover in his manner. He was an adept at that sort of thing. It came to him as naturally as possible to give the impression to a woman that he was an admirer and perhaps a suppliant. His ordinary air suggested something of the kind, and when he saw fit to intensify it a little the guise was unmistakable. And yet, despite this ardent exterior, a curious train of thought was passing through his mind,—one that, as it were, irritated him. Did he really love this girl? Why was he paying her attention? She was very beautiful, very splendid, very attractive; but, did he love her? He had been more or less devoted to her ever since they had met at Newport the previous summer, and he had sent her flowers on several other occasions. She was full of enthusiasm and charm; but would she make him the wife pictured to himself in those ideal dreams for the future that he had cherished in secret? Her tastes, her ways, her thoughts, were wholly unlike his own. Compared with him she was illiterate, and her little lapses in grammar and grace stirred his sense of irony. Was she fit to be his helpmate in the struggle of life, to aid him with intelligent counsel and sympathy? She would love him with all her heart,—love him to distraction,—he did not doubt that; but, would it not be a fervid, unreasoning passion, an infatuation that saw in him no faults, that was—in short—as blind as it was doting? He had always believed he should marry a woman who would be able to understand and appreciate his ideas and interests, who would be a companion as well as a lover.

Why, then, was he hanging about this girl? Was it not largely because she was to be very rich, because her father was worth millions? If she had been penniless, would he ever have thought of her in the way of matrimony? He might have enjoyed amusing himself with her for a time on account of her originality or beauty, but the idea of marriage would never have occurred to him. He was going to offer himself to her because of her money. He was going to sacrifice his ideal to a consideration of worldliness. He would weary of Isabel. She would be sure to bore him after his passion began to cool.

He shook himself mentally. Bah! Bother such suggestions. She was a magnificent, lovely creature, and his scruples were but the sentimentality of a super-æsthetical fancy. The rest of the world consulted their material interests in the choice of a wife; and was he to fetter himself with moonshine,—with the shadow of a dream? The world was a practical place, and one must have money to live and get on. He was ambitious to succeed.

He wanted to make a name for himself. A rich wife would be worth to him ten years of struggle. Besides, she was beautiful, ornamental,—everything, in fact, to make him an object of envy.

Why was he sitting here so coldly, so impassively? Why was he reasoning so deliberately? Many men in his place would be thrilling with passion. Why did he not feel the desire to seize this lovely girl in his arms, to clasp her to his breast? It would be cruel, it would be wrong, but it would be human; and he—he with his fine-spun notions and Puritan blood—was void of humanity. One's vital current congealed in this northern latitude, and split hairs with one's intellect. His ancestors had bequeathed to him, forsooth, a goodly heritage.

From behind the shrubs on the other side of the fountain, a gentle laugh, which caused him a sensation of annoyance, fell on his ear.

It was that of Dorothy Crosby, *tête-à-tête* with Remington. Ah! there was a girl indeed! Was she not the kind of woman he had dreamed of. Was she not charming enough to satisfy his ideal? If she were rich as Miss Idlewild, would he not to-day be at her feet?

These thoughts sped through his brain in the few seconds of silence.

"I want to thank you, Mr. Stoughton, for these lovely roses. It was awfully kind of you to send them."

The words permeated his reverie, and—with a gesture as of a clearing away of mental cobwebs, a desire as it were to prove to himself that he really loved this girl—he bent forward eagerly. "I could not help sending them. I wanted to send them."

"Well, they are very pretty," she said, seemingly ignoring, save for a tell-tale blush, the vehemence of his tone. She leaned backward on the lounge and raised her eyes toward him experimentally, as the fascinated bird gazes at its magnetizer. But there was coquetry as well as curiosity, half-suspicion as well as a tribute to sorcery, in their blue depths. "Do you know, Mr. Stoughton, I sometimes think that you are laughing at me."

"Yes? Well, what can I do, Miss Idlewild, to assure you that such is not the case?—and that, on the contrary, I——"

"Do? I don't know that you can do anything. But really I often feel that you must be saying to yourself, 'How foolish that girl is!' Don't you, really? Just own up that you do occasionally; I think I should feel better"; and she laughed gleefully.

Stoughton shook his head and looked at her admiringly. How charming her *naïveté* was, to be sure. She was so bold with others, so coy and gentle with him.

"I come from the country, you know," she went on to say,—as if, the ice of her reserve once broken and possible doubts as to lurking irony dissipated, she rather enjoyed a free tongue,—“and am frightfully ignorant,—provincial, as ma calls it. Oh, the dear old country! I sometimes miss it so. I used to have splendid times there. I was a dreadful tomboy, I guess. Aunt Mitty always said so. That's pa's sister, who took care of me after I was too old to travel with the circus. Did you know that I once traveled with a circus, Mr. Stoughton?”

"No," said the young man.

"Well, I did. Does it shock you dreadfully? It was when I was quite little. I was on intimate terms with the Fat Woman, and the Three-legged Boy used to buy me candy. Pa said he had a *dash* on me."

She paused a moment, as they both laughed. "Oh, but those were delightful days. I wonder if I shall ever have such a good time again. Do you think, Mr. Stoughton, people have such a good time when they are grown up as they did when they were children?" she asked earnestly. Her face, when serious, had much of her father's firmness about the mouth, but the eyes were soft and far-away in their expression.

"Oh, yes, I think so. I enjoy myself more than I used to when I was younger," replied Stoughton.

"Do you?" she said, dreamily. "Well, you're a man. I think somehow it's harder for girls." She stopped for a second, reflectively. "You aint very well acquainted with pa, are you, Mr. Stoughton?"

"Not very well."

"I was thinking," she said, "what I should do if anything ever happened to pa. I care for pa, you know, more than for everything else in the whole world. He's been awfully good to me. My mother died when I was born,—that is, my real mother. Here's her picture." And Isabel, unclasping a bracelet from her arm, revealed a small tintype set in its back. It was the face of a pale, delicate woman, quite unlike that of the daughter, excepting for the eyes. Their shade was not discernible; but the same soft, yearning expression that one noticed at times in those of Isabel was plainly apparent.

Stoughton had taken the bracelet into his hand. "You do not look much like your mother," he said. "She must have been sligher than you."

"No," she answered, almost joyfully; "they tell me I am pa's daughter. I am about to be very like pa."

The young man still gazed from the one to the other. Ancestral portraits always inter-

ested him. He delighted to trace the signs of inheritance, and theorize therefrom. There must be a certain portion of the frail, sensitive mother in this blooming girl. It was easy to distinguish the father, but it was not from him that she had derived her gentleness of spirit.

"I wish ma had lived," she went on, as if in echo of his speculative mood; "I miss her dreadfully sometimes. Things puzzle me. Are men ever puzzled, Mr. Stoughton? I have been wondering lately why we are made, and what it all means. I never used to bother my head much about such matters. I simply lived on and was happy." She was silent a moment, and leaning forward clasped her hands over one of her knees in her absorption. "Do you go to church, Mr. Stoughton?" she asked presently.

Her simplicity touched the young man; but the feeling produced upon him was rather one of pity, in which he detected, so to speak, the germ of future boredom. For him, with his agnostic views, or at any rate his searching, rigid tests, this girl would be no fit helpmate. She was leagues behind him in the region of thought. She would be unable to understand, to follow him. But nevertheless he unconsciously shrank, in his response, from asserting his position.

"Not very often, I am afraid," he said.

"Neither does pa. Ma goes, though. She takes me to the Episcopal church." She paused again. "Do you believe all they say there is true?"

Stoughton hesitated. He leaned forward and spoke in a whispered tone, half impressive, half endearing: "Who can say in this world what is true and what is false, my dear Miss Idlewild?"

Meanwhile, upon the other side of the fountain, Remington was conversing with Miss Crosby, whom finally he had persuaded to desert the ball-room. She had been enjoying herself extremely, and her admirer would probably not have felt wholly flattered had he divined that her consent to exchange waltzing for a *tête-à-tête* proceeded mainly from the reflection that, by the latter course, she would be more likely to evade the scrutiny of her mother, whom she suspected of a design to carry her home prematurely. To have been taken out almost every turn in the german was an attention which had filled her cup of happiness quite to the overflowing point, and her vivacity rendered her more charming than ever in the eyes of her partner, who now was telling her some of his college experiences with a devoted air. Once established in a retired nook, she was quite reconciled to the situation. She liked Mr. Remington

very much. He had been very kind, and his bouquet was a beauty. It was *so* nice of him to send it. She had had a "perfectly splendid" time.

Remington finished a tale of hair-breadth escape from a proctor with some self-congratulation, for his companion's eyes were sparkling with keen interest. Animation was becoming to her, and made her thoughtful face very expressive.

"Men have such good times," she murmured, in a tone of arch despondency. "They have so much more freedom than we poor girls. I often wish I were a man. They have such opportunities."

She clasped her hands reflectively. "If I were a man, I'm certain I should be very ambitious," she went on to say.

"What would you do?"

"Oh, I don't know exactly. I think I should be a lawyer—and—and then go to Congress. My father was a lawyer, you know. But, of course, you wouldn't know. You are a lawyer, too, aren't you, Mr. Remington?"

"I believe so."

"You don't seem very enthusiastic on the subject. I used to think," she exclaimed, laughingly, with a sudden recurrence to her previous thought, "that I should like to be an author. I would give anything to be able to write poems or novels. But I never could, I'm sure. Do you write at all, Mr. Remington?"

"I wrote verses occasionally when I was in college."

"Oh, how interesting! Haven't you some with you that you can read to me?"

Remington laughed. "I don't, as a rule, carry verses concealed about my person, Miss Crosby. Besides, I have given up all that sort of thing now. I'm a worker, and have no time for the poetry of life."

His tone made her look serious again. "Do you have to work very hard?" she asked. "I think all the men in this country work too hard, don't you? Why should it be so?"

Remington answered that it was because they all wanted to make money. Everybody was afraid that some one else would get his business if he wasn't always on hand to look after it. He explained to her how difficult it was for a young fellow without influence to back him to get ahead. One might take great risks, of course, but then you were liable to lose everything. "You see," he added a little more gayly, "there are disadvantages in being a man after all. Girls remain at home and escape all these worries."

"Yes; but they have their own, Mr. Remington. A girl's life is so monotonous and

empty. Her occupations are all so petty. She has such a narrow field of usefulness, and there seems no way of doing anything great and noble. If one ever attempts what is out of the common run, people are sure to call you peculiar." She spoke with her head on one side, almost as though soliloquizing. "There is so much to do, Mr. Remington, when one considers the misery that exists in the world."

"I know," said Remington. He was silent for a moment. "It's a puzzling age to have been born in. I used to think in college that it would be all plain sailing, and if a man only lived up to his principles and was true to himself he would get on easily enough. But it's pretty hard work, holding on to one's ideals in this place. It sometimes seems as if the happiest men are the ones who try to get all the amusement they can out of life. Those who have been hewing at the granite wall of destiny for so many centuries, in the hope of solving the riddle of existence, do not seem to have made a great deal of progress."

"Oh, but don't you think the world is a great deal better than it used to be?" asked the girl, with a deep interest written on her thin, intellectual face.

"I don't know exactly what you mean by better. The world runs smoother, I think. People are more comfortable, and are willing to do more to make others comfortable. I dare say it is better."

She sat looking before her, lost in the pure reverie of budding womanhood, smelling now and again, with unconscious movement, of the roses sent by him over whose words she was grieving. "Life is a very strange thing, isn't it? But I don't believe men have been trying, all these thousands of years, to find out what it means, for nothing; do you? I can't help feeling that I am somebody, and that what I do in this world will make a difference somehow—somewhere. The trouble is, one can do so little. One is so powerless to make others happy."

"I should not think you would find much difficulty in doing that," he said significantly, in a quiet tone.

The girl roused herself from her abstraction, and, blushing, replied that he knew her very little. "Here is mamma come to capture me," she continued, and she rose to greet Mrs. Crosby, who stood at the entrance to their hiding-place.

"Dorothy, where *have* you been? I've been looking for you everywhere."

"Here, mamma, all the time since I stopped dancing. It is deliciously cool so near the fountain."

"Well, it's time to be going now; I do hope you haven't caught cold."

Ten minutes later Remington and Stoughton encountered each other in the supper-room, whither the need of a little refreshment after the labors of the evening had driven them.

"That Miss Crosby you were dancing with seems a nice girl," said Stoughton, as he impaled a raw oyster.

"She's very pleasant."

"She looks like a lady. It's a comfort to see a thorough-bred after so much of the imitation article. She's intelligent, too, isn't she?"

"I have found her so."

"Well," said Stoughton, presently, "I've had enough of this. Let's skip."

They both seemed thoughtful as they passed through the nearly empty rooms.

"It's a pity she's poor as a church mouse."

"Of whom are you speaking?" asked Remington.

"Miss Crosby, of course."

"Oh."

Further conversation on the point was interrupted by the appearance of Mrs. Tom Fielding, who came gliding down-stairs enveloped in swan's-down. The two young men hurried forward with offers to look after her carriage.

"Thank you; Mr. Fielding has ordered it, I believe."

Remington stood talking with her while she waited.

She took him playfully to task for having deserted her all the evening. "You must come and see me again soon, Mr. Remington. I was reading yesterday a new poet to whom I want to introduce you."

Remington bowed a smiling acquiescence. She was very charming, to be sure, he reflected, and quite too sylph-like to belong to the heavy-faced, big-bearded man who now stood vailing his impatience under a forced smile.

"You had better look after your friend; I fear he is a sad flirt. I thought the young lady was your peculiar province," whispered Mrs. Fielding, as she said good-night.

Remington's eyes, following the direction indicated, caught sight, through a vista of parlor reflected in a mirror, of Woodbury Stoughton leaning against a mantel-piece and looking down at Miss Idlewild. The girl was fastening in her bosom a brilliant rose, which he evidently had just given her.

Afterward, Remington remembered that Mrs. Fielding's face wore an expression that betokened annoyance almost, and he heard her tell her husband in the door-way that she felt tired.

(To be continued.)

MORE LIFE.

THIS listless pulsing of our life
Is not enough. The daily strife,
The dull, monotonous round
Palls on our spirits, and we waste
With eager passion to make haste—
We wither above ground.

We watch the opening of the flower
That drinks the sunlight for an hour,
Then hangs its head and dies;
And Hope, in some half-shaped refrain,
Goes sobbing through the restless brain
Her dim analogies.

Like a fair soul, yon splendid star
Glow in the darkening sky afar,
Its garments flashing light;
But when at morning the Divine
Holds to its lips the sacred wine,
Ghost-like, it fades from sight.

As the unloosened worlds go by,
They hear, unheeding, many a cry,
And swerve not from their way.
Is there no answer in the air
Unto the oft-repeated prayer
For the more perfect day?

A longing after better things—
A spreading of the folded wings—
The breathing holier breath:
More life—more life! 'Tis this we crave.
More life—more life! When this we have—
'Tis this that we call death.

Henry Gillman.

"THE FORTY IMMORTALS."

PALAIS MAZARIN.

TO BELONG some day to the Academy is the hidden ambition of every young Frenchman who adopts literature as a profession. He may rail at that body; may blame it for not giving an arm-chair to Molière, Balzac, and Michelet; may sneer at its weakness for dukes and high ecclesiastics, and may call it an accretion of old-fashioned ways and motives; nevertheless, he often dreams that he is being raised to "immortality," and often in hard times cheers himself by teasing, in an imaginary academical speech, some rival author who has had better luck. In the outset of his career he is obliged to court the public. Should there be a demand for ignoble literature, he may try, like Zola, to meet it. But Zola having made his fortune, shows, as they all do at last, a wish to conciliate the Academy, which he certainly had in his eye when he wrote his last novel, the heroine of which is virtuous enough to merit the white-rose

crown awarded annually at Nanterre to the most deserving maiden in the commune.

Low comedy has never been in favor at the Academy, where the humorous dialogues of Molière were deemed too broad for polite ears. The Grand Monarch and his red-heeled courtiers enjoyed them; but they offended the nicer taste of the Forty who, when *M. Jourdain* and *Tartuffe* were new creations, had not yet emancipated themselves from the literary canons of the Hôtel de Rambouillet.

Catherine de Vivonne, Marquise de Rambouillet, and a dainty writer named Valentin Conrart were the progenitors of the Academy. Survivals of both are perceptible at the private meetings and the public sittings. Richelieu was merely godfather. It was of almost spontaneous growth, and issued from the circles of Madame de Rambouillet and Conrart. The iron-willed Cardinal, whose ideal in the moral as in the political order of things, was uniformity, lent himself to a plan for creating a fixed standard of grammar and rhetoric. He had leveled feudal strongholds, broken down the Protestant federation at Rochelle, and turned the king's mother, who got in his way, out of the realm, to die a beggar at the gates. All power was concentrated in the sovereign's hands. Equality in servitude to the crown was established. It was expedient to clear away dialects which were an impediment to the unification of France, and would tend to transform what survived of the feudal into a federal system. Richelieu's policy was in spirit the same as Napoleon's. Though a man of violent will, he was politic enough to see that it was better to coax than to force the nation into verbal uniformity. He found the instrument for doing this ready to hand at the Hôtel de Rambouillet and in the literary circle of Conrart. They formed the mold. The iron-willed Cardinal granted the investiture.

Conrart was named perpetual Secretary of the Academy. He had permission to centralize literary activity and to direct it. The function which he and his thirty-nine colleagues were chiefly to discharge was "to purify and fix the national tongue, to throw light on its obscurities, to maintain its character and principles; and at its private meetings to keep this object in view. Their discussions were to turn on grammar, rhetoric, and poetry; their critical observations on the beauties and defects of classical French authors, in order to prepare editions of their works and to compose a new dictionary of the language. The director of the Academy was to take the advice of the other members of the company on the order in which tasks were to be executed." In virtue of another article, vacancies were to be supplied by election and members were to be the electors. Richelieu was a churchman. His idea was to establish a literary conclave. Circumstances and the sociable French genius gave his foundation the character of a salon. It was furthermore ordained that once

ALEXANDRE DUMAS FILS. (FROM A PHOTOGRAPH BY MULNIER.)

a year the Forty were, in their corporate capacity, to hear mass in the church of St. Louis, at the Sorbonne. This rule is obsolete.

Conrart was scholarly but not pedantic. He was subtle-minded, and had the ready dexterity of a man of the world. Being of agreeable countenance and a man of good fortune, he was received in those salons in which dames of high degree held literary *conversazioni*. His table was well served, he knew how to choose his guests, and he often gave hospitality to poets and aristocratic votaries of the muses at his country house. Voiture, Gombault, St. Amant, Mlle. de Scudéry, Colletet, and Péliçon belonged to his circle. They cultivated politeness and looked to Italy for their models. Conceits were then regarded as a stamp of elegance. Conrart lived at an angle of the Rue St. Martin and the Rue Vieille du Temple. The Academy met at his house before it was installed at the Louvre. Christina, the eccentric Queen of Sweden, was sometimes present at the meetings. She also dabbled in poetry and indited madrigals. The mania for versification and

conceits led to the formation of the neat, pointed style which is a characteristic of French literature. The fair literary friends of Conrart were brought on the stage by Molière, to be laughed at in "*Les Précieuses Ridicules*."

The "immortality" of members of the Academy is a survival of the high-flown style of language which was in vogue in Paris when Mlle. de Scudéry was writing her interminable novel. In ordinary speech and literary composition this mode soon died out. It took refuge in fine art. Louis Quatorze became the "Sun-King." Madame de Montespan, in becoming the favorite of "le grand monarque," brought in the sprightly, alert, piquant, natural, and yet elegant verbiage of which there are so many charming examples in Madame de Sévigné's letters.

The claim of the present Academy to an unbroken descent from the one that first met at Conrart's house is disputed, and with reason. The original Academy was swept away in 1793, along with the ancient nobility and monarchy. It was revived as a part of the Institute in 1795; and in 1803, Napoleon,

ERNEST RENAN. (FROM A PHOTOGRAPH BY LOPEZ.)

who was then First Consul, re-organized the Institute. He had been advised in the opening year of the century by Fontanes, his Minister of Public Instruction, to restore the literary corporation founded by Richelieu. But the Emperor (in all but name) shrunk from an act which might determine an outburst of hostile opinion. A popular charge brought against the Academy was that it had never offered an arm-chair to Rousseau. Voltaire, it is true, was given one; but while he only spoke to the intellect, Rousseau appealed to sensibilities and sentiments as well as to mind, and was better understood by women of all classes and by the laborious bourgeoisie. Napoleon, much as he wished to set up a disguised monarchy, and to keep within the general lines of Richelieu's policy, did not dare to revive the Academy under its former style and title. All he could venture upon doing was to add a class of Literature and Eloquence to the Institute which he had lodged in the Palais Mazarin. But he placed this class under the direction of a perpetual secretary, who was instructed to act as if the original Academy had not been abrogated. Napoleon liked the graces and amenities of the defunct monarchy, although he never tried to practice them himself. He enjoyed the taste for luxury of his soft and brainless creole wife, and was sensible to the intellectual refinement and lady-like address of Madame de Rémusat. The savants

whom the Revolution had brought up were of hard grain and angular and conceited; self-made men in Europe generally are. It was Bonaparte's wish to draw together a company of well-bred writers who would advance literature and cultivate the *art de bien vivre*. Conrart, he remembered, did not think the less justly for being a white-handed nobleman. Buffon made an elaborate toilet before sitting down to his daily task of authorship, and was careful not to let sputtering quill pens stain his point-lace wrist-frills with ink. Who ever turned a compliment with more grace than Voltaire?

Suard, the perpetual secretary of the class of Literature and Eloquence at the Institute, was at heart a royalist. But as he had not gone to Coblenz and endured the miseries of emigration, his sympathy with the ideas of progress that he had imbibed before the Revolution was not chilled. He remained an encyclopedist. Napoleon's protection did not lessen Suard's affection for the old state of things. Suard and Talleyrand agreed in thinking that those who had not lived in France previous to the downfall of the monarchy, when freedom of thought was secured by verbal dexterity and polite manners, could have no conception of the charm and suavity which can be thrown into human life. The perpetual secretary found occasion to injure the Emperor in 1812. Chateaubriand was elected to fill a vacant arm-chair. This was the first political election that ever took place in the Academy. It was a protest against the despotism of the empire in things intellectual. The *récipiendaire* was to eulogize Marie-Joseph Chénier. But he so violently attacked the Emperor that the Bureau of the Academy (or class of Literature) decided not to give him a public reception. Three years later, the desire of Suard was accomplished. Louis XVIII. was brought back by the allies. The perpetual secretary enjoyed his favor up to the time of his death in 1817. Suard died that year at the age of eighty-two. Since 1815, he had worked steadily to eliminate those democratic elements which Napoleon could not help admitting.

All the other sections or classes of the Institute have remained what the Convention, on the last day but one of its existence, and Napoleon made them. They are assemblies of learned scientists and antiquaries. Louis XVIII. restored the old name and statutes and the Academy proper.

The perpetual secretary of the Academy has a salary of 12,000 francs a year and a spacious lodging at the Institute. His influence in the literary world is like still water that runs deep. The "Philistine" world

knows little of him. Directors of the Academy are elected every year. The perpetual secretary is the managing director for life. He attends every public and private sitting, and is first to enter and last to leave. It is

tyon's will disposing of this annuity. But for Villemain the 20,000 francs a year might have been spent in encouraging imitations of Miss Edgeworth's novels and Miss Hannah More's strictures. He caused the literary

JOHN LEMOINNE. (FROM A PHOTOGRAPH BY TRUCHELOT & VALKMAN.)

he who gives sequence to the general business and turns down work for a director, who leaves all initiative to him. The questions set down for consideration are studied by him and presented by him. As he gives most attention to them, he can, by the exercise of a little tact and art, suggest their solutions and bring the majority round to them. In the prize awards, which exceed yearly the sum of 85,000 francs, his suggestions nearly always tell; 20,000 francs, the interest of part of the fortune left by a miserly philanthropist, M. Montyon, to the Academy, is spent annually in recompenses to poor people for acts of disinterested benevolence and humanity. An equal sum is given to the Frenchman whom the Academy thinks has written and published the book most useful to the advancement of manners (*mœurs*) and morals. When M. de Villemain was perpetual secretary, he suggested an elastic and elevated interpretation of the clause in Mon-

Montyon prize to be awarded to Tocqueville for his work on Democracy in America, and to authors of lexicons of Corneille's, Racine's, and Molière's tragedies and comedies, and Madame de Sévigné's letters. The prize founded by Baron Gobert is an annual one of 10,000 francs for the most eloquent page or chapter of French history. The names of Augustin Thierry and Henri Martin are on the list of those who have been rewarded in pursuance of Gobert's will. The prize for eloquence brings a pecuniary reward of only 4000 francs, but it is held the most honorable. "Eloquence" in this instance does not mean oratory, but written eulogium. The subject is confined to the life or writings of some great man. Government allows the Academy, for the payment of its officers and the conservation of its library, 85,000 francs a year and free lodgings at the Palais Mazarin.

The history of the Academy is to be found

in the reigns of its perpetual secretaries. Suard, as I have shown, mended the link in the chain of tradition which was broken on the tenth of August. Those who have reigned since 1817 are Raynouard, Auger, Andri-

prize award was the salient event of Raynouard's secretaryship.

The baggage-wagons of the allies brought something more than the Bourbons into France in 1815. Waterloo rendered English

HENRI MARTIN. (FROM A PHOTOGRAPH BY LOPEZ.)

eux (an all but forgotten poet), Villemain, and Camille Doucet. Raynouard was not the man for the place. He was a mere methodical clerk and a pedagogue. When he should have insinuated, he was dictatorial. In subjects chosen for prizes of eloquence in his time, we find that seventeenth century literature was in highest esteem. The choice of the life and writings of Vauvenargues, who was a moralist and indeed an epic character, it should be acknowledged, was due to Raynouard, and was fated to bring up in Thiers a mind created to make France deflect from the lines into which the battle of Waterloo had thrown her. Vauvenargues belonged to a noble family near Aix, in Provence, where, in 1821, Thiers, who was miserably poor, was studying law. The student was prompted by a visit to their castle to compete for the prize of 4000 francs. In winning it, he obtained money enough to come to Paris to seek his fortune along with his friend Mignet, now the senior member of the Academy. This

(which many of the *émigrés* had picked up) a fashionable language. In polite society there were Anglomaniacs, as there were in military circles, and in most of the middle-class families Anglophobes. Scott's novels and Shakspeare's plays were read at court. Miss Burney, the author of "Evelina," had married General d'Arblay, and occupied a good position in courtly circles. Those *émigrés* who had been to Germany imbibed a taste for the drama of Schiller and Goethe. The rising generation of authors who had seen history in violent action, and in no classic garb either, were bitten with the taste for an English, that is to say, a non-conventional treatment of heroes and heroines of romance and tragedy. Free thought was asserted in the time of Voltaire. Free form and literary expression was not demanded until after the battle of Waterloo. Although in close quarters with the court, which unknown to itself was for innovation, the Academy was hostile to live

DUC D'AUMALE. (FROM A PHOTOGRAPH BY FRANCK.)

books and plays—to what was stirring, striking, and colored in vivid tints. The new school of writers who were governed by inner light and direct impressions were called *Les Romantiques*. At an annual meeting of all the classes or academies of the Institute, Auger, the perpetual secretary who succeeded Raynouard, tilted at the romantic writers. They were "poetic barbarians and violated every principle of literary orthodoxy." It was for the Academy, which had been founded to improve and keep undefiled taste and diction, to stand out against the heretics. Olympian Victor Hugo was chief of the new school and had been already given the Cross of the Legion of Honor. Lamartine, who had been a child of nature in the hills of Upper Burgundy until he became a dandified member of the diplomatic service, wrote according to his own impressions. He was received in the Academy in 1829. In the same year, Victor Hugo brought out his short and poignant work, "*Les Derniers Jours d'un Condamné à Mort*." It set the impressionable heart of Paris throbbing. This was too much for Auger. He threw himself into the Seine from the bridge which connects the Palais Mazarin and the Louvre, and was drowned.

Between 1829 and 1835, the Academy through its perpetual secretaries, Andrieux and Arnault, remained hostile to free form. In the latter years, the election of M. de Villemain marked a new departure. His maxim was, that in keeping tradition alive, the present should be closely observed and its teachings accepted. Thiers, Guizot, Mignet, and Flourens were elected before Victor Hugo was admitted in 1841. Under Villemain, who died in 1871, the illustrious company reached a far higher altitude than it ever previously attained. He was singularly ugly. The figure was thick-set and vulgar; the face was lumpy and pock-pitted, but was lighted up by a bright mind. His intellect was bold and his wit subtle and delicate. Literary criticism was his forte. His charm lay in his conversational abilities. As Minister of Public Instruction, of Louis Philippe, he defended free thought and free form at the College of France. He exerted his influence to get the novel, in the person of Jules Sandeau, represented among the Forty, and the newspaper in the person of M. Prévost-Paradol. The Academy's indirect action upon literature and politics reached its apogee in Villemain's time. A militant spirit was

DUC DE BROGLIE. (FROM A PHOTOGRAPH BY FRANCK.)

aroused in it by the *Coup d'État*. Berryer was elected by way of protest against the Empire in 1852, and the late Duc de Broglie in 1855. This forensic orator submitted a written speech or harangue to the Bureau. On the day of his reception he unfolded his manuscript to read it. But he was accustomed to improvise, and needed liberty to gesticulate with his left hand. The right hand he usually thrust into the breast of his waistcoat. To be at ease, he flung away his set discourse, and, trusting to the inspiration of the moment, delivered a speech of inimitable grandeur. It was a philippic against the Empire. No journal dared to report it. The bold line he thus took resulted in a union of all the monarchists and liberals against imperialism.

When the French press was silenced by Napoleon III., the educated classes watched the receptions at the Academy with keen interest. Orleanist liberalism had a strong foothold there. Villemain, as perpetual secretary, was able to foster opposition. He lived at the Palais Mazarin, and entertained at his soirées most of the eminent writers, orators, and *beaux esprits* who stood aloof from the court. Not to drive the Emperor to bay and tempt him to deal harshly with the Academy, Villemain occasionally advised his friends to vote for non-political adherents to the Empire. Their entrance was used as an occasion for protesting against the régime under which they were obliged to live. The public looked on with outstretched head, as if expecting that every pin-prick given by an Academician would inflict a mortal wound on the spurious Cæsar. There were then many doors to the Academy. One was from the office of the

"Débats," and a second from the office of the "*Revue des Deux Mondes*." Two others were from the salons of Madame d'Haussonville, granddaughter of Madame de Staël and daughter of the late Duc de Broglie, and of Madame Jules Mohl. This lady was Irish. Her maiden name was Clarke, and her husband was Professor of Persian Literature at the College of France. For perhaps more than a quarter of a century she never missed a public sitting of the Academy. If a foreigner wanted to see in a few hours the greatest men and women of the time of Louis Philippe, the best means for succeeding was to get himself invited to Madame Mohl's. She was thin, lively, and had a vulgar face, which in her youth looked like a wrinkled skull animated by fine eyes. Her personal appearance gave her small trouble. She usually wore a coal-scuttle bonnet at the Academy, a dingy Paisley shawl, and, when crinoline was fashionable, a limp and skimp dress of some neutral color. She was nicknamed "Our Lady of the Academy." The late Queen of Holland, when visiting Paris, used to go to her dinners and soirées and give her court news. Is it because the Madonna of the Palais Mazarin used to go there in the plainest garb that showy dress at a reception is counted vulgar? The salons of Mesdames Buloz, Pailleron, Jules Simon, and the Ducs de Broglie and Chantilly are now side-ways into the Academy.

There is no reality in the "arm-chairs" in which the Forty are supposed to sit. Academicians, with the exception of the officers (*i. e.*, the director, chancellor, and perpetual secretary, forming the Bureau) and the new member, occupy ordinary chairs. Originally the officers alone had chairs; the others were ranged on benches. But the equality in the republic of letters founded by Conrart and Richelieu did not suit the cardinals who had been admitted. They were princes of the Church and electors of the Sacred College, to say nothing of their aristocratic birth. In 1713 a change was brought about. Cardinal d'Estrées, who was of the Academy, wanted to vote for a friend, and went to talk about the impediment which the sedentary rule threw in his way to Cardinals de Rohan and de Polignac, who also were of the company of the Forty. De Polignac had a Gascon's forwardness. He offered to wait on the King and submit the matter, and ask him to release their eminences from the obligation of sitting on benches. Louis Quatorze had social tact pushed to the extent of genius, and nice judgment in small things. He solved the difficulty by a general leveling up. All were to continue equal, but on a higher plane.

Forty arm-chairs were sent by the King's order to the hall in the Louvre where the Academy met, and orders were given for the removal of the benches. This settlement of the difficulty so won the hearts of those who were

other the new-comer. It rarely happened that all the two-score attended. Twenty-six was the average maximum. But members of the Academies of Soissons and of Marseilles received vacant arm-chairs. When all the Aca-

not princes of the Church or noble, that when Louis XIV. shortly after died it was proposed by one of them that henceforth each *récipiendaire* was to add in his harangue a eulogium on that monarch, to the customary eulogies on Richelieu, the Chancellor Séguier (who was one of the founders of the Academy and a friend of Conrart), on the reigning king, and on the defunct immortal whose chair he had been elected to fill. In 1803 Napoleon did not restore the chairs. The old sedentary rule which Louis Quatorze abrogated is now in force. At private and informal meetings, which are held in a room attached to the library of the Institute, members sit as they can, on chairs armless or armed.

Old court formalities were observed at the Academy's receptions in the Louvre, which appear to us quaint and picturesque. Members were placed round a long table, at one end of which sat the director and at the

demicians were seated, the director and the neophyte, who alone had entered with their heads covered, placed themselves at the ends of the table. After he had delivered his speech, the director took off his hat and made a sweeping bow to the gentleman facing him. It was the sign that his turn had come. Whenever the *récipiendaire* spoke of the King he uncovered his head and bowed. The subjects to which he was limited have been mentioned. As for the director, he was to speak only of the new member and his writings and of the reigning monarch.

Public meetings of the Academy are held in what used to be, under the old monarchy, the Chapel of the Palais Mazarin, an edifice taking the form of a Greek cross, with a central rotunda under a cupola. While the muses are not sumptuously lodged there, they have plenty of light and air. No trace of the Latin cult remains in the

public hall; every religious painting and symbol was removed when the Church was secularized. The mural paintings in *grisaille* are browned with the dust of eighty years. The Pierian Nine, arranged in the

desk on a pillar-stand, which he may or may not use. His entrance is a curious sight, intensely French in its accompanying circumstances. Escorted by soldiers, he comes in by the portal, which opens and shuts with a

ÉMILE AUGIER. (FROM A PHOTOGRAPH BY NADAR.)

pseudo-classic mode of the First Empire, decorate the cupola above the amphitheater, from which tiers of narrow benches rise in rapid gradation, and after filling the rotunda are continued up into three ends of the Greek cross. There should be a tenth muse to personify that essentially modern flower of the human brain—the novel.

The different "classes" or academies forming the Institute are seated on a platform or stage, filling a segment of the round part and the northern end of the cross. Benches reserved for them are to right and left. A wide central space between the lateral forms is covered with a dingy carpet. In the middle, near a bronze portal, which used to be the grand entrance from the quai to the church, is placed a table draped with a green cloth of baize. Behind it are three chairs for the officers. At right angles to the table, but a short distance from it, the *recipiendaire* is seated before a tall reading-

clang. The sponsors walk on each side. They and the members of the Bureau wear the uniform of the Academy. This dress is composed of trowsers and a swallow-tailed coat buttoned up to the throat, with a high standing collar, which, as well as the chest, is covered with palm leaves embroidered in a crude shade of green silk. This verdure is very trying to the masculine complexion of all ages, but especially to the one to which senility gives the tone of old ivory. Littré's picturesque ugliness was rendered hideous by the embroidery of his uniform.

Candidates for vacant seats are expected to pay canvassing visits to immortals. It is a popular error to suppose they are obliged to do so. Littré never paid any. This usage is contrary to a statute which, on the ground that electors should judge in strict accordance with literary worth, forbids personal solicitation of votes. But the Academy is a drawing-room without ladies, an athenæum club of

the most refined character, at which weekly and monthly as well as annual meetings are held. The statute in question has therefore become obsolete. Before the Revolution, when, as a matter of course, an Academician took off his hat and made a sweeping bow in mentioning the King, politics did not exist. Paris was not a city of great distances. Eminence was not acquired in an ugly rushing, shoving, and racing, as games of foot-ball are won in England. It was obtained by the spontaneously uttered approval of a small number of supercivilized, delicate-nerved, and very clever writers, and men and women of quality. Every one who counted in arts and letters knew everybody else. It is now possible for an author of great talent to be only known to his book-seller and a small set of disciples and journalists.

When Thiers, the Warwick of the bourgeois monarchy, paid the customary round of visits in 1833, he wore a camlet mantle, fastened at the neck with a large buckle. In every house at which he called he left the cloak in the ante-room, and in again donning it slipped a golden coin into the hand of the servant who helped him to put it on. This profusion arose from his native shrewdness. Parisian servants talk freely to their employers. The widow of an Academician whom M. Thiers visited to obtain his support has related to me her first impressions of him. M. Laya was the author of "*L'Ami de la Loi*," a drama written to defend Louis XVI. and played in the Reign of Terror. He was out when the candidate for immortality called. But Madame Laya asked the visitor to stay until her husband returned. She thought him odd. They fell into conversation. He had something original to say in a falsetto voice on every topic that she broached. It did not occur to her that he was the king-maker of the days of July, until M. Laya came in and recognized in him the statesman and historian. When the visitor had gone, Madame Laya said to her husband:

"Of course you will vote for him?"

"I don't know."

"Why?"

"He is not a man of the world; he is petulant and ill brooks contradiction."

"But what of that?"

"Why, because at the Academy he would be *comme un diable dans un bénitier* (like Satan in the holy-water font)."

"What matter, since he is charming. In voting for him you will do me a pleasure."

"If monsieur will allow me to risk an observation," broke in the maid, who was sewing in the drawing-room, "I shall take the liberty of saying that generous men, like good wine, soften down with age."

Vol. XXVII.—38.

OCTAVE FEUILLET. (FROM A PHOTOGRAPH BY NADAR.)

"How do you know he's generous?"

"Why, he handed me a twenty-franc piece when I buckled his cloak. Monsieur has two sons. The friendship of a man in M. Thiers's position is not to be thrown away." This argument was conclusive. M. Laya voted for the little great man, who was ever ready afterward to oblige any member of his family.

Victor Hugo, who feels that he should not attend private meetings unless to vote, only receives candidates at dinner. I was at his table in the society of three rival competitors. They were MM. Paul St. Victor, Renan, and Eugène Manuel the poet. St. Victor and Manuel talked, as well as listened to their illustrious host. Paul St. Victor was an old and much cherished friend of the poet, but angular, and held to his own opinions on socialism, religion, and philosophy. He was a Catholic and Bonapartist. Renan for three hours only listened, except to ejaculate every two or three minutes, when Victor Hugo was speaking, "*Maître, vous avez raison*." He kept his head hung on one side, and continued to smile as if in a state of beatitude. Need I say that on the day of the election "the Master" voted for him? Hugo excused himself to the older friend, St. Victor, on the ground that he was bound to protest against the fanaticism of the Bishop of Orleans.

The Academy is a place where literary men rub shoulders with polished men of the

EUGÈNE LABICHE. (FROM A PHOTOGRAPH BY TRUCHELUT & VALKMAN.)

world and forensic and parliamentary orators of the highest eminence. This mingling of classes in a little republic of letters is good for all the Forty. Owing to it, controversy among them loses its sting. Geniuses who are unable to master their irritable nerves are not held desirable associates. To mental power combined with social amenity, the Academy is of easy access. Chateaubriand, whose vanity took a rudely self-assertive form, would not probably have been elected if the immortals had not felt obliged to him for standing out against Napoleon's tyranny. Victor Hugo, who won an arm-chair in his fortieth year, was then a lady-killer as well as a great poet. The virile strength of his body, soul, and mind, were toned down by chivalrous respect for women and an almost feminine tenderness for little children. He was a lion in whose presence a lamb might play fearlessly. Lamartine got into the Academy on the basis of dandyism and poetry. Palpably, he had blood, and he had acquired the shibboleth of fashionable society in diplomacy.

Voltaire thus defined the Academy: "A learned body in which men of rank, men in

office, prelates, doctors, mathematicians, and even literary persons are received." It now contains four dukes, one of whom is royal and a soldier, two counts, one bishop, two scientists (Pasteur and J. B. Dumas), two political lawyers (Émile Ollivier and Rousse), and a great many literary men, some of whom enjoy world-wide celebrity. Journalism is represented in the latter group by Cuvillier, Fleury, and John Lemoine. The first was secretary to the late ex-King of Holland, Louis Bonaparte, and then tutor to the Duc d'Aumale. He defended warmly the interests of the Orleans family under the son of his first patron, and, notwithstanding his friendship with the Ducs d'Aumale and de Montpensier, advocated in the "*Débats*" a republican form of government when MacMahon was at the Élysée. He is an accomplished polemist and essayist. The longest of his essays fits into the third page of the "*Débats*." When Queen Mercedes died, he wrote on her a necrological article, the spirit of which was grandfatherly and very touching. John Lemoine is also a "*Débats*" leader-writer, and has never been anything else. He externally resembles those photographic images

of celebrated men in which the head is vastly magnified at the expense of body and limbs. He is gifted with that brilliant cleverness bordering upon wit which the French call *esprit*; plumes himself upon having no fixed political principles and being able to laugh at all; and is ready to break a lance one day for the Orleanists, another for the fusionists, and then for the Republic. Dwarfs have more self-confidence than giants. Under all circumstances, John Lemoinne can make-believe in his own cock-certainty that he is right. He was born in the island of Jersey, and speaks and writes English. M. de Sacy was the first journalist writing only for the daily press who was admitted to the honors of immortality. His election was in 1854. Mignet and Henri Martin are, as Thiers was, historians and journalists, but have not for years written articles. Jules Simon was for a year editor of the "*Siècle*" and for three months of the "*Gaulois*." He is an unready journalist. Ollivier's attempts to find with his pen a lever in journalism have been utter failures. He can never take a ball on the bound, and his self-consciousness gets between him and the subject that he should treat rapidly and with which alone he should be occupied while treating it.

The historical group used to be the most brilliant one at the Academy, when Mignet, Thiers, and Guizot were in their prime. Mignet is now eighty-seven. He walks or, when the weather is wet or snowy, rides in an omnibus to the Academy from his lodging in the Rue d'Aumale. The distance is about a mile and a half. To attend to his duties as a literary executor of Thiers, he resigned this year the office of secretary to the Academy of Moral Sciences and History. The emoluments were 6000 francs. Mignet fell in with Thiers at the law school of Aix in 1818. They were called to the bar simultaneously, won academical money prizes which enabled them to journey together to Paris to seek their fortune, shared the same garret, studied in the same public libraries, chose the same subjects for histories they meditated writing and wrote, worked in the same journals, promoted the candidature of Louis Philippe to the throne when he was Duke of Orleans, and lived until 1877 in the closest intimacy. Mignet remained a bachelor. He has been from 1833 a tenant in the same house, first with Madame Dosne, afterward Madame Thiers, and now with her sister, Mlle. Dosne. It is in proximity to the historical mansion in which Thiers lived in the Place St. George. The gardens of both dwellings are connected by a private alley. Mignet dined, as often as he did not accept invitations to other houses,

with his illustrious friend. He preserves his erect carriage and the ardent southern brightness of his eyes, which gleam out from beneath bushy eyebrows.

Henri Martin stands next to Mignet. This good man has rehabilitated the Druids, erected an altar to Joan of Arc, and shown the Revolution to be the triumph of the equality-loving Celt over the Frank and his feudal system. Henri Martin is in his seventy-third year. He has a tall, strong-boned, loose-made, stooping figure, and a serious face which easily lights up into smiles and expresses pleasure—mental or moral—in blushing cheeks. His inner man lives in the most transparent of glass houses. Though a well of erudition, he keeps the freshness of childhood. It delights him to oblige. His conversation, when he is set talking on a subject in which he is at home, is an instructive and delightful essay. He lives in a pretty little house of his own at Passy, far from the center of the town. He, therefore, goes often to the Senate and the Institute in clumsily made evening dress. Nothing fits him. The gloves—of cotton—are a world too big for hands that are in proportion to his stature. Though tolerant of every belief, or unbelief, he groans when he sees materialist articles in the scientific columns of the Republican papers. His grandchildren are nourished with works of Unitarian piety. One of his two children—a daughter—was the delight of his eyes and pride of his heart. She grew up in beauty, and cultivated, under Ary Scheffer, a genius for painting. On the day on which she had achieved an artistic triumph and was engaged to be married she died. Henri Martin clings to the old belief in the soul's immortality.

Taine has written a history of the Revolution, the aim of which is to show that France might have progressed more steadily but for that movement. It is the book of an industrious searcher into records, which is devoid of philosophical scope and inferior to his works of criticism.

The small fry of historians in the Academy are the Duc de Noailles, who wrote about St. Louis; the Duc de Broglie, who undertook, in his history of Constantine the Great, to refute Gibbon; Camille Rousset, whose great achievement is having classed the archives at the War Office; the Duc d'Aumale, who will probably never have the courage to finish his history of the house of Condé, the first chapter of which he brought out in England; and M. Viel-Castel, whose literary "baggage" is a history of the Restoration.

Jules Simon is also the author of a historical work. It deals with the period of four

VICTORIEN SARDOU. (FROM A PHOTOGRAPH BY MELANDRI.)

years which ended on the 24th of May, 1873. His other works are on moral philosophy and sociology, which he treats more as a man of feeling than as a reformer. His writings are inferior to his lectures; these to his speeches; and his orations to his drawing-room talk, which is the perfection of conversational genius and art. Jules Simon's private life is honest, honorable, and morally healthy. His wife is good, unaffected, intelligent, and broad-minded, and they both are wrapped up in their infant granddaughter, whose pretty childish ways console them for the ingratitude of old political associates.

The poets of the Academy are Victor Hugo, Lecomte de Lisle, and Sully-Prudhomme. With the first the whole civilized

world is acquainted. Lecomte de Lisle is "immortal" because he is Hugo's friend. As for Sully-Prudhomme, he is a modernized and middle-class Hamlet, from whom the tragic element has been eliminated, but whose heart and soul are tormented and whose intellect is perplexed by questions which science and the conditions of modern life now force upon thinking minds. He lives in a small and plainly furnished third floor opposite the Élysée. He made the acquaintance of his neighbor, President Grévy, the day on which, soon after his reception at the Academy, he paid him the regulation visit.

The dramatic group includes Victor Hugo, Legouvé, Émile Augier, Camille Doucet, Victorien Sardou, Dumas *fils*, Labiche, and

Pailleron. Victor Hugo may be said to be the chief poet, novelist, and dramatist in the Academy. He is vast, astounding, sublime, beautiful, defective, and faulty in all three branches. His genius has its scoria. Legouvé is a delightful essayist and lecturer. He is the author of "Adrienne Lecouvreur" and launched Ristori in Paris; he was in love with Malibran; is a poet, and venerates woman, as well as loves her by hereditary impulse. Old age—M. Legouvé is seventy-three—has only mellowed the experience of earlier years. He is charitable and stimulates charity in others, but avoids those trading in philanthropy. As a lecture-room or salon elocutionist he has no parallel. Sardou is better as a reader of plays because his face lends itself to delicate mimicry. Legouvé is of Breton origin and Paris breeding.

Octave Feuillet's plays are aftermaths of his novels. He studied fashionable life at the Tuileries and Compiègne, and won not only the favor but the friendship of the Empress. She went to the Academy to witness his reception, and she was to have appeared on the boards of the palace theater of Compiègne, in a character expressly written to fit her. The "Débats" first, and the war with Germany finally, prevented her from acting this part, which was a somewhat indecorous one. Octave Feuillet excels in diagnosis of the moral ailments of idle, frivolous, delicately-nurtured, and rich women. His feminine characters might be noble, were a healthy sphere of action open to them. As it is, they are flowers of evil and restless dwellers in the Land of Nod. The novelist, being unable to follow them into old age, and to show the ultimate penalties which in the natural order of things overtake all such, makes suicide the wind-up of their vain, futile, and unhappy lives. He is a painter of decadence. His morbidness is *sui generis* and has a penetrating and intoxicating charm. St. Lô, in Normandy, is his birthplace, and pictures of Norman localities abound in his novels.

Camille Doucet is the dwarf of the dramatic group. He has written only one play—a comedy, in five acts, which is almost forgotten. It is entitled "Considération," or "Respectability." Two lines of it are still remembered. They are:

"Considération! Considération!
C'est ma seule passion! ma seule passion."

He is the incarnation of amiable kindness and social tact. His election was owing to his relations, as director of theaters under the Empire, with dramatic authors belonging to

the Academy. He was the link connecting them with the imperial court. No great dramatic author save Victor Hugo resented the *Coup d'État*.

Dumas *fils* tried novel-writing at the outset of his career, but with small success. Description is not his forte. He is an analyst and a polemist, a superficial prober of sores and wounds, but knows nothing of those tempests between good and evil which sometimes rage in the human heart and conscience. We get very soon to the bottom of a worthless person. Dumas's bad people are natural. His good folks are conventional, and simply mouth-pieces whereby the author expresses his own views in short, strong, clear, ringing, and ear-catching sentences upon current vices or desirable virtues.

Dumas *père* was never an Academician. In his time the Academy would have fainted at the idea of letting in a man so spontaneous, irrepressible, imaginative, exuberant, and original, to say nothing of the Bohemianism of his life and the Africanism of his head. Guizot was then king of the Academy, and he was a prig.

Dumas *fils* inherits nothing from Africa, unless the texture of his hair and the savage frankness of speech. He takes from his father capacity for rapid literary production, light blue eyes, which protrude and stare, and the vein of kindness which runs through his man-of-business flintiness. He has a heart, and a good one, but it is not on his sleeve. In the example of his father he saw how undisguised good nature is preyed upon, and how thankless people are for spontaneous kindness. Dumas *fils* buys pictures as an investment. He is married to a Russian lady of rank and fortune, and has two daughters to whom he is devotedly attached. Desclée was to him the beau ideal of a modern actress. Sarah Bernhardt's affectations irritate him. As he cannot take her by the back of the neck and shake her, he says to her and of her the rudest things imaginable. He was the author of that *mot*, *Un os jeté à un chien* (A bone thrown to a dog), which described a picture of her with a big dog at her side. Dumas *fils* is a neighbor at the sea-side near Dieppe, of Lord Salisbury. He lives in Paris, in a detached house of his own, beautifully furnished with salable bric-à-brac and furniture, in the Avenue de Villiers. Since he entered the Academy he has cut the *demi-monde*. He is now engaged in a campaign against those sumptuous stage toilets which oblige actresses to lead vicious lives.

Pailleron writes flimsy and sparkling plays in verse. They are like those diaphanous Eastern stuffs into which gold and silver threads are interwoven; if well acted, they are

very effective. Their author is young and already very wealthy. He is married to a sister of Buloz, the actual editor of the "Revue

the valet, he accompanied the visitor to the door.

Sardou is the sole author whom a buf-

des Deux Mondes," and inhabits a stately flat in what used to be the residence of the de Chimay family on the Quai Voltaire.

Labiche's muse is purely farcical. His plays are as droll to read as to see acted. Labiche is a prodigiously hard worker. He constantly rewrites whole scenes of his comedies. His father was an opulent grocer. Labiche has a passion for agriculture and has reclaimed a large tract in Sologne. He is there "Farmer Labiche" and mayor of a commune which he created. As such, he often unites in marriage the hands of rustic couples. Until Labiche as a candidate for the Academy visited the Duc de Noailles, this nobleman had never seen him. The duke is a gentleman of the old school, formal, and apt to stand on his dignity. In showing out an author who visits him to canvass, he never advances beyond a certain number of steps. But Labiche told with a quietness that did not ruffle the octogenarian's nerves mirth-exciting stories, and made comical remarks which so tickled and pleased the duke that, instead of ringing for

fool piece served at the Academy. He got in there for two reasons. One was having caricatured Gambetta in "Rabagas," and the other was in having for his competitor the Duc d'Audiffret-Pasquier, whom M. Thiers after the 24th of May detested. Sardou is very much dependent upon stage accessories and bewildering toilets for the success of his pieces. What would "Fédora" be without Sarah Bernhardt's wondrous dresses, or the "Famille Benoiton" have been were it not for the mantua-maker, hair-dresser, and milliner? Perhaps this may account for the heat with which the author of "La Dame aux Camélias" (Dumas *fils*) resents the intrusion of Worth upon the stage. Sardou regards dramatic literature from a purely business point of view. Foreigners who come to Paris to spend their money, and who keep the theaters well filled, would not understand his best literary efforts. "Les Pattes des Mouches," a *chef d'œuvre* of wit, fancy, and invention, is not appreciated by them. It was the first play that he brought out, but not by

any means the first that he wrote. Déjazet produced it at her theater, Sardou, who had called upon her at her country cottage, having inspired that aged actress with a half maternal half sentimental interest. He had vainly knocked at many other doors. A tragedy in five acts and in verse was his initial play. He wrote it in the hope that Rachel would patronize it; but as the heroine was not a Greek or Roman, but a Queen of Sweden, she refused. For some years Sardou lived by teaching Latin to the son of an Egyptian pasha at a salary of five francs a day. He is now a millionaire and the possessor of a historical château, standing in a fine park at Marly, and of a villa at Nice. He spends the summer in one place and winter in the other.

Émile Augier, taken all round, is the greatest modern French dramatist. *Le style c'est l'homme*, and he is one of nature's noblemen. Strength and good proportion are two leading features of his drama. He does not attach much importance to scenic accessories. When the passions of human beings are in manifest play, we only think of the action in which they show themselves. It does not occur to us to look whether there are fine curtains to a window from which we see a man or woman jump with suicidal intent. We do not think of the window at all. Unlike Dumas, Augier sounds the conscience and brings it into play with a dramatic effect which bears away the spectator. He comes of a fine race, probably of Latin origin. Valence, his native town, was the center of a Gallo-Roman colony. Pigault-Lebrun was his grandfather, and he has inherited his fun and cleverness. These qualities are allied with others of a higher order. Augier has the sculptural instinct and philosophical elevation. His comedies in prose are stirring and excitants to "mental gayety"; his dramas in verse, though modern in their subjects, are written with classical simplicity and *verve*. The characters are clean-built. Augier writes French as Dryden wrote English. This dramatist is an old bachelor. He has remained one because his only sister, as he rose to eminence, was left a widow with five young children. She and they live with "Uncle Émile." The greater part of the year they reside in a plain, roomy house on the edge of the Seine at Croissy. Augier is almost a Chinese in ancestral cult. He venerates and cherishes the memory of father and mother and of the hearty and humorous Pigault-Lebrun.

Taine is like a stiff cold soil which is hard to break, and when broken, produces excellent wheat, but rarely brings forth sweet, delicate herbage. He is an encyclopedia, and has a methodic brain, which he beats very hard

when he wants to entertain and interest. Nor does he beat in vain. But the force acquired in the beating process carries him on too far in the same direction. He rides to death the system borrowed from Condillac, by which he explains the peculiarities of English and French literature, and of the Dutch, Flemish, and Italian schools of art. Variety in Taine's books and lectures is a result of will, not of spontaneous cerebration. Ardennes is his native country. He has a strong frame, and his complexion and physiognomy are Flemish. One of the eyes is slightly turned inward. Both are near-sighted. Glasses hide and remedy these defects.

Taine and his fellow-Academicians, Caro, Mézières, M. de Mazade, and Gaston Boissier, are all distinguished lecturers in great public seats of fine art and learning. Caro descants on moral philosophy at the Sorbonne. He is a handsome man, and has a bland, persuasive style. Ladies of quality form perhaps three-fourths of his auditory. He has made mince-meat of the works of German philosophers to suit their taste and mental digestions, and has explained to them, in combating it, Schopenhauer's pessimism. Schopenhauer advises human beings not to marry, because the best thing in his opinion that could happen to the world would be the extinction of humanity. He hated women because they stood in the way of this desideratum. Caro became the darling of the drawing-rooms. At the examination for the bachelor's degree last session, a candidate who feared not said to him in passing:

"I am so anxious to get through in order to do myself the pleasure of attending your lectures."

"May I ask," inquired the professor, with a smile, "whether you have a rendezvous in my lecture-room?"

M. de Mazade lectures at the Sorbonne on Latin literature, and writes articles on contemporaneous French history for the "*Revue des Deux Mondes*." They are in a severe and somewhat pompous style. In private life, their author is an exuberant Southern, speaking with a Languedoc accent.

Renan also occupies a chair at the College of France. He is the most complex of all the immortals. He is a strange compound of Gascon keenness and expansiveness, Breton superstition, and of Celtic sensibility, of *verve*, of scholastic erudition, theological lore, and Virgilian grace. An æolian harp is not more impressionable. There is a good deal of æolian harpism in the female population of little seaports in Brittany. Every scudding cloud, every moaning breeze, every storm sign affects them. They rejoice in every precursor of fine weather.

VICTOR CHERBULIEZ. (FROM A PHOTOGRAPH BY TRUCHELUT & VALKMAN.)

Renan's mother was a Breton woman, who was reared, as all her people had been time out of mind, at Tréguier, a small port of Brittany, with an old church and monastery. Renan's father was a Bordelais skipper. He was found dead at the foot of a cliff when his son was five years old. Had he been accidentally drowned, thrown overboard by the crew, or had he committed suicide? Nobody can tell. The son found more than a mother in his only sister, who was grown when they were orphaned. She had the æolian-harp impressionability, but great heart-power behind it, and the adventurous courage of a hero. Though their mother was alive, the sister attended to the education of Ernest. He and she were intellectual, and letters were represented at Tréguier only by the Church. Ecclesiasticism became the nursing mother of his literary faculties. Feminine converse and sympathy and wild sea-side nature did the rest. How well Renan understands the fishers who followed Jesus! He went from Tréguier to St. Sulpice to study theology. Rosalie, who had gone as a teacher to Russia, helped him with her purse. When she came back to France, and learned that he did not believe in the Catholic dogmas, she said: "Follow the inner light. Have faith in it only." She was the

first to discard dogmas. She accompanied her brother to Syria when he went there to study Biblical localities, and there she died. Madame Cornu, foster-sister of the late Emperor, encouraged Renan to transmute into a prose poem the work of Strauss, which ordinary minds could not digest. Renan has always been taken care of by women. His wife, a daughter of Henri Scheffer, Ary Scheffer's brother, is a cheerful Martha,—very intelligent, well instructed, and competent to chat with him about his literary plans and projects. She is an agnostic brought up in Protestantism, and he a materialist reared in the Catholic faith and still loving it.

Monsignor Perraud, the Bishop of Autun, was a class-fellow of Taine at the École Normale. He is a man of refined mind, vibrating heart, and elevated aims. He wrote twenty years ago an account of "A Tour in Ireland," which was read with delight by Madame d'Haussonville, and he has never missed an opportunity to lift up his voice in behalf of Poland. He is of an emaciated countenance; but his eyes beam with hope and faith. He believes that God's grace is inexhaustible and that it will operate a wide-world miracle.

There are usually two scientists at the Academy. Dumas, the chemist, and Pasteur are

now occupants of chairs. It is a remarkable fact that both stood out against materialism in the harangues they delivered on being received. Dumas is a Spiritualist of a deistical shade. Pasteur is a Catholic and a reactionist. Outside of his special studies Pasteur is narrow. It is erroneously supposed that he did not rise to eminence through the school of any faculty. What he did was to work his own way into the great seats of learning. He began as an usher in the lyceum of Besançon, and set before himself the task of qualifying at the Normal School for the brevet of a university professor. His mind was led toward the lilliputian side of creation by an accident. The usher had a good-natured pupil, to whom a kind godfather sent a microscope for a birthday present. The boy had not time to amuse himself with the scientific plaything, and lent it to Pasteur, who studied with it so far as he was able the insect world and the organizations of plants. He was then not quite twenty. The idea that animalcules were the origin of contagious diseases was suggested to him by an apothecary at Dôle, who got it from Raspail, a quack of genius. This idea was often thought over, and dismissed, and then taken up again. As Raspail was nearly all his life in prison for his political opinions, he had not opportunities to demonstrate experimentally the truth of his notion. Pasteur won his university gown. But he yielded to his vocation, and, instead of teaching in high schools, became a scientist and obtained a chair in the faculty of Strasburg. There he came in contact with German thinkers, and had almost a European reputation as a geologist and chemist, when he was appointed scientific director of the École Normale by the Emperor Napoleon III. He owed his nomination to the head master, Nisard, under whom he studied in that school, and who, being a devout Catholic, liked him for his attachment to his religious principles. Pasteur entered the Institute when a controversy was going on there about spontaneous generation and the unity and origin of species. He fell back upon his microscope, which he had been neglecting, to elucidate these problems. He was thus brought round again to his starting-point—that of the effect of animalcules in giving rise to contagious diseases. Swift's penetration into many things his generation did not understand was justified by Pasteur. The scientist proved that the Lilliputians could, and often did, get the better of Gulliver. In binding him down they took the names of small-pox, scarlatina, yellow fever, cholera morbus, tuberculosis, glanders, murrain, hydrophobia, and other fell plagues. Lilliput transformed grape-juice into wine

and dough into leavened bread. Pasteur then studied the laws of existence of the infinitesimal creatures and the conditions most favorable for the irreproduction or destruction. Could he modify their virulence, and turn those bred in specially arranged liquids into protecting agencies against the maladies which, in their natural state, they would cause? To use a Scriptural expression, he aimed at casting out Beelzebub by Beelzebub. It is certain that his "vaccines" are efficacious; but it is also to be feared that they break down health and weaken defenses against other morbid agencies. M. de Lesseps has deliberately averred that he never knew a fearless man to die of cholera. He was himself in the midst of it in Egypt in 1831, and turned his house, in which he continued to live, into a hospital. Yet the plague never touched him. The discoveries that fresh air, rich in oxygen, will consume microbes, and that animalcules cannot live in boiling water, are precious ones for the world. Pasteur may be known at the Academy by his absent air, and eyes in which there is, to judge by their look, no visual power. They are too habituated to the microscope to have any ordinary human focus, and they see as through a fog. Pasteur is free from conceit and loves what he thinks is true. He has been freed from the cares of life by his country. The present Chamber of Deputies has doubled the yearly pension of 12,000 francs which the Versailles Assembly granted to him. He has a rugged temper and a crabbed style as a writer. Perseverance is his dominant quality. He is undemonstrative. The face is not an expressive one; but the forehead and head are powerfully shaped.

Cherbuliez is a Swiss by birth and French by descent and by option. There is a brightness in his eyes that makes me think of mild moonbeams in which there is no heat. And so it is with the novels of Cherbuliez: They are sweet as the moonbeams that slept upon the bank in Portia's garden, and they are honest and of good report; but they do not take a grip of the reader, or stir him up to thought, emotion, or action. What the moon is to an ardent summer's sun, they are to the novels of George Sand, of whom Cherbuliez confesses himself an imitator.

Maître Rousse is the law Academician. He cannot be said to "replace" the Doric Dufaure, who had the genius of common sense, and whose plain, unvarnished style was more effective than brilliant flights of rhetorical eloquence. Rousse was brought into the Academy by the dukes, with the consent of Jules Simon and the aid of Taine, and some other reactionists. He was thus

rewarded for placing his talent, which is not of a high order, at the service of the religious orders when the famous decrees were executed against them.

Notwithstanding the laurels M. Émile Ollivier won at the bar, he would resent being called "Maitre," as advocates are styled in France. He hung up forever his cap and gown when he entered the Corps Législatif. He is in his own eyes a statesman, and he dreams of being again the prime minister of an emperor. Prince Napoleon is the quenched sun round which he revolves. Ollivier is a man who is set drunk by his own eloquence and who has lived for eighteen years in a fool's paradise. His talent—which as a rhetorician is remarkable—is entirely subjective. He is a man of friendly disposition and boundless vanity. His infatuation led him to desert his Republican friends and become an Imperialist. It dragged him into a war with Germany, because he imagined the Empress was dazzled by his genius. In return for her supposed admiration, he lent himself to her desire "to give Prussia a lesson." If he had kept his head, he would have brought the whole Orleanist party and moderate liberals of every kind round to the Empire. They were tired of being governed and wanted to reënter the governing class. In sign thereof, M. Émile Ollivier was elected an Academician shortly after he formed a cabinet. Thiers did not believe that the Empire could avoid a collision with Germany, and he foresaw that United Italy would not be with France. But not to seem factious, he advised his friends at the Academy to vote for the Emperor's "liberal" prime minister.

Maxime Descamps is able to sign himself "Academician," because he "slew the slain" in writing a virulent book against the Commune after its defeat. He has the St. Simonian talent for extracting all the good out of the world that it is capable of yielding him. As a writer he is not first-rate. What he excels in is giving a readable form to statistics in review articles.

M. de Falloux, the most clerical of the Forty, is a wealthy land-holder in Anjou; cultivates a large estate there, and corre-

sponds actively with a few distinguished old gentlemen who share his ideas.

The chair of Sandeau is now competed for by Alphonse Daudet and Edmond About. The former is an exquisite novelist, but only that. His rival has many strings to his bow, and can use them all with a master's hand. He is a journalist and polemist of the highest order, every inch a man, healthy in body and in mind, warm-hearted, and sharp-tongued when vexed, writes and speaks French as might a grandson of Voltaire and Diderot, is frank as a man who has risen direct from the popular class, thinks the best of those he likes, and says the worst of those who anger him. He is one of the best family men in Paris. With his wife and ten children he occupies a handsome and most comfortable town house and a château in the country, in both of which the virtue of hospitality is largely exercised. Daudet, through his brother Ernest, may count on a good number of Orleanist votes. But many of the Forty do not like the idea of having him at their Thursday meetings. What they object to in him is his habit of observing those whom he is with as if they were insects stuck on the glass plate of a microscope.

The Academy has no action now on politics. Its action on literature, as I have shown, is becoming remote. Life is too busy under the Republic for Academicians to attend faithfully to the task, enjoined in the statutes, of compiling a dictionary. Littré, it may be said, left the illustrious company nothing to do. There are social advantages in being one of the Forty. An Academician's wife finds it easy to obtain good matches for her daughters, although their portions are small. The book-seller, also, is more ready to enter into terms with a novelist, dramatist, or historian who is of the Academy, provided he is not fossilized or that his works have currency. But if an author is in the way to become a fossil, the right to don the palm-embroidered coat hastens the change. The literary man does not keep so fresh in as out of the Academy. Legouvé and Mignet have been exceptions. Renan has visibly gone down since he obtained a chair.

Y. D.

GARFIELD IN LONDON.

EXTRACTS FROM A JOURNAL OF A TRIP TO EUROPE IN 1867.

The following portions of the journal kept by Gen. Garfield during a trip to Europe with Mrs. Garfield in 1867, while he was yet a member of Congress, have been transcribed with absolute fidelity, saving the correction of such verbal and other errors as are inseparable from writing under such circumstances:

NEW YORK, July 13, 1867.

DURING the last few years of my life, I have learned to distrust any resolution I may make which involves keeping a diary for any considerable length of time. My life has been recently so full of action that I have but little time or taste for recording its events. But now that I am about starting for Europe with my wife, leaving our little ones behind, I am constrained, for two reasons, to attempt a record of the leading points that impress me while abroad: first, as my friend Dr. Lieber writes, if I do not take notes, I shall leave much of the trip a chaos behind me; second, a somewhat particular statement of occurrences and impressions will probably some day be pleasant and profitable for our children. These two points being kept in mind will account for the notices of little things which are likely to be found in these pages, and also for the speculations on national and individual life and character.

When I entered Williams College, in 1854, I probably knew less of Shakspeare than any student of my age and attainments in the country. Though this was a shame to me, yet I had the pleasure of bringing to those great poems a mind of some culture and imagination, and my first impressions were very strong and vivid. Something like this may occur in reference to this trip; and, however much ignorance I may exhibit, I shall here speak of what impresses me, whether it be that which has been adjudged remarkable or not.

PREPARATIONS.

1. Material. We have reduced our luggage to two large leather satchels, and we take no books except "Harper's Book of Travel," Fasquelle, a French dictionary, and a book of French conversation.

2. Funds. I take a letter of credit from Brown Brothers, a small bill of exchange on Brown, Shipley & Company, of London, and the balance in sovereigns and napoleons. The sight of coin is a reminder of the days before greenbacks and scrip had been born of rebellion. In running over my coin with a childish curiosity, I find the stamp of the elder Napoleon, of Louis XVI., Louis Philippe, and Napoleon III. I notice that the earlier stamps of Napoleon III. have no

laurel wreath on the brow, but the later ones have. Did he assume that because of the Austrian war or the Crimean?

3. The Start. At 12 o'clock and twenty-five minutes, New York time (12.08 by Washington time), our lines were cast off, and the steamer *City of London* left her wharf, Pier Number 45, North River. As I looked upon the crowd of people on the shore waving their good-byes, some with streaming eyes and the shadow of loneliness and sorrow coming over them, I felt that, though there was not one face among them I knew, and probably none who knew me, yet they were my countrymen, sharers with me of the honor and glory of the great Republic which I was leaving, and then sprang up in my heart a kind of feeling of bereavement at leaving them. Our steamer is one of the largest on the ocean. She is 395 feet long, draws 22½ feet of water, as now loaded; is registered for 1880 tons burden, and allowed to carry 780 passengers. She was built on the Clyde, and is commanded and manned by Englishmen. The master, Captain Brooks, is a fine type of the solid, capable Englishman. We have about 50 cabin passengers, and 270 in the steerage. The freight is mainly cheese, destined ultimately for the ports of the Mediterranean. We had hardly passed the "Hook" when we sailed due east. At eight in the evening we saw the last glimpse of land: it was the eastern point of Long Island. A splendid cloud-rack in the north gave us a picture, which, by looking at, became Niagara in the sky. A fine breeze gives a delightful coolness to the atmosphere, and now, at 9 P. M., we go below to sleep, after saying to our native land good-night.

SUNDAY, July 14, 1867.

AFTER a tolerably fair night's rest, awoke at half-past five. The sea was only a little rougher than last evening, and in consequence of not having the windows of our state-room closely fastened, the salt water had dashed in and pretty thoroughly saturated our carpet and lounge. At six, went on deck and found the try-sails set and the wind from the north-east helping us a little.

At half-past 10, Dr. H. read service in the cabin, and preached a short discourse. We

were so intent in watching the sailors, as they loosed and unfurled the top-sails to catch the breeze, which had veered a little to the north, that we did not know that there was any religious service till it was nearly ended. We went in long enough to hear the conclusion of the sermon and the last prayers. There was a muscular denunciation of sin, which struck me as not usual to modern thoughts. Why not better to let sin alone, and preach mercy and righteousness? After all, may it not be found in the final analysis that sin is negative, and duty, truth, and love are the only positive classes of realities? If we attend to these, we may let sin take care of itself.

When the Doctor's service ended, he came to me and talked of his visit to America. He said there was more liberality between denominations in the United States than in Europe; thought it was partly the result of the late war for the Union. I think there is *quoddam commune vinculum* among virtues and great reforms, as Cicero says, in his Oration for the poet Archias, there is among the liberal arts. Hence, political union is inducing religious union and the abolition of sects. Among all the evils of sectarianism, there is this one good thing to a philosophical mind: it enables us to see the solidarity of religious truth, as we do objects in the stereoscope. Wonder if "Ecce Homo" and "Ecce Deus"* might not be the two eyes of the same observer, and thus enable him to see the God-man on both sides at once?

There is a most pure and refreshing breeze on deck, and the day is as beautiful as we could wish. A steamer has just come in sight behind us, faster than we are, and we must be humiliated, I suppose, by having her pass us. They say it is the steamer *Manhattan* which is to conquer us. Well, it is some consolation that it is New York *versus* London.

Took a good dinner at 4 P. M., after which I was invited by the captain to his room to take a cup of coffee with him and his friend Mr. G., agent for English claims in the United States. Had a pleasant conversation on the late war, and the relations of the two countries. Walked the deck with C. for an hour and a half; saw the sun sink and the stars come out. The full moon is on our starboard, and paves a broad highway from us to the horizon with silver. On the larboard, we watch the faint moon-shadow of the ship on the waves, and wonder if shadows are not entities which shall never perish, but, in the infinite permutations of the water, may, a thousand years hence, reconstruct the image of this ship and crew somewhere on the ocean.

* These two remarkable books had recently appeared anonymously, and there was much curiosity and speculation regarding their authorship.

MONDAY, July 15, 1867.

AROSE at 6 A. M. Day more beautiful, if possible, than yesterday. Warmer than then, and it was suggested by some of the passengers that we had reached the influence of the Gulf Stream. Temperature of the air, 62°; of the sea, 66°; wind same as last evening—nearly ahead. Sailors in the fore-castle think it is because we have a clergyman aboard. Had some fun with Dr. H. in reference to it. Told him the opinion was evidently descended from the example of Jonah. Talked with him and the captain in reference to the superstitions of sailors. The captain says not one sailor in a thousand would throw a cat overboard. Should it be done, they would expect disaster. Dr. H. spoke of the habit in England of throwing a slipper after a friend as he was leaving. He told of an Irish gentleman who was going away, and, being anxious that his wife should throw her slipper, looked back and caught the heel of it in his eye, which gave him a severe wound. While he was gone, his ticket drew a large prize in the lottery, and all his neighbors said it was because of the vigorous throw of the slipper. The Doctor thought this custom is derived from the Bible, wherein a shoe is considered the symbol of a good wife. I do not remember the passage to which he referred; but I ventured to quote, *per contra*, "Over Edom will I cast out my shoe," which I had always regarded as a malediction. The Doctor escapes the force of this by declaring the passage improperly translated. The virtue of horse-shoes fastened up over doors and on the bows of ships was also discussed. It is common to England and the United States. This the Doctor was disposed to trace to a Bible origin. Iron, he said, was the symbol of the Roman Empire, or of power; hence it is considered a good omen to find iron, especially a horseshoe. I don't think that is the origin of it. I suggested it might be from the horseshoe magnet and its marvelous properties. This theory seemed to take with the company better than the Doctor's; but I suspect it would be necessary to find out, before making much noise about my theory, whether the horseshoe magnet is older or younger than the superstition.

A few minutes before 12 our engines stopped, in consequence of some derangements of the brass bearings, and now, at 1.40, we are still lying—

"As idle as a painted ship
Upon a painted ocean."

The sea is very calm, and a fishing smack from Nova Scotia is within a few miles of us, her sail flapping uselessly, though she seems to creep a little to the westward. I am not

so much annoyed as most of the passengers seem to be at the delay, for I came to rest, and this is almost the first time for six years I could say I had nothing to do, and I am trying to let my body and mind lie fallow awhile.

I take this opportunity to set it down that I have no plan of travel determined upon, it being my main purpose to rest, and do as I may please when the time comes. I have not even determined whether I will stop at Queenstown or go on to Liverpool.

After nearly four hours' delay we started again, and the day passed off most delightfully.

TUESDAY, July 16, 1867.

AROSE to a bright morning and a good breakfast. The sea is, if possible, more quiet than yesterday. It realizes the "*æquora vitrea*" of which Horace speaks.

Found a young man who is on his way to Germany to study. He is beginning German, and I have agreed to hear him recite while he is on board. In the afternoon, several hours were consumed on the main deck in games of skill, viz.: quoits, shuffle-board, marking with a piece of chalk with the feet suspended in a noose, and backing up on the hands as far as possible. Only the captain went beyond me. The clergy looked on and smiled a condescending smile; but I have no doubt they wanted to be at it themselves, and would have been but for the laws of ministerial propriety. The barometer is dropping a little.

WEDNESDAY, July 17, 1867.

AWOKE with a rough sea, and a strong wind with driving rain.

After dinner, took coffee and a cigar with the captain, and played cribbage in the evening. To-night I won a game of chess from him. He says if this day does not make me seasick, none will. Heard from him the story of his life. Very interesting. I could almost feel the old passion for the sea arise in my heart again. Were I not what I am, I should have been a sailor.

THURSDAY, July 18, 1867.

SEA calmer this morning. C. well. We went on deck about half-past seven, and soon saw Newfoundland low-lying to the north and east. This is the last glimpse we shall have of North America.

I am feeling better than for three weeks.

Strange I am not sick with this rocking motion.

SUNDAY, July 21, 1867.

A LOVELY day, with bright, warm sunshine. At 10, the captain read the church-service, and at its conclusion Doctor H—— delivered a very vigorous and impressive discourse

from Acts iv. 12. It is rarely that I listen to a broader or more liberal sermon. The leading thought was that salvation would be the result of attraction to Christ, and not the fear of hell; that religion did not make cowards, but heroes, of men. His illustrations, borrowed from the ship and our voyage, were very fine; e. g., the ship's lamps compared with reason or conscience as a guide; the ship stranded and broken up—not by storm, but by the usual motion of the waves—likened to the common effects of sin on the soul to destroy it.

I hear that the Doctor is called the Surgeon of Ireland, and I can well believe it.

A young Episcopalian clergyman from Connecticut preached at 6 P. M. a very sensible and earnest discourse. We have had a delightful day.

WEDNESDAY, July 24, 1867.

THE belief that we are to reach Ireland before to-morrow morning has made a great change in the appearance of all on board. The ship is being washed and the upper works repainted, that she may reach home with a bright face. Passengers we are to leave at Queenstown are packing up their luggage and making ready. Many who have become pleasant acquaintances are now asking each other's names for the first time. This arises from the peculiarity of life on shipboard; all formality is abandoned, and, being involved in a common destiny for the time being, they feel that right to each other which isolation confers and assume to be acquainted. The name and antecedents are of little consequence, the chief test being what each brings on board of intellect and good-fellowship for the benefit of all. The people I have become acquainted with on this ship will remain in my memory as a little world apart from all the rest of mankind. I am quite sure I have no adequate or even correct knowledge of their characters, and am equally sure that, from what they have seen of me, they have no knowledge of mine.

The life on board ship is not altogether an artificial one, but it is another from the usual life we lead. Each human being has a number of possible characters in him which changed circumstances may develop. Certainly life on the sea brings out one quite unique. Mine is as much a surprise to me as it could be to any one else. I have purposely become absorbed in the parenthetic life, and have enjoyed it so much that a fellow-passenger remarked to C. that it must be that I would be sorry when we landed.

The record I have kept of the bearings and distances of our passage has been kept chiefly for the purpose of testing the practical accuracy of the science of navigation. The test was brought to trial to-day. At noon the

captain, after telling where we were, and computing the distance to Queenstown (one hundred and sixty-nine miles), and taking into account the speed of the ship and the condition of sea and sky, said we would see an Irish island, called the "Little Skelligs," about 6 o'clock in the evening of to-day. He said it would not be thirty minutes either way from that time. At 5 o'clock there came a bright, brief shower, which cleared up the atmosphere, and at ten minutes before 6 the little speck of an island was seen; and the joyful "Land ho!" and the bells brought everybody on deck. C. suggested that it was fitting we should first see Ireland in sunshine and tears. In half an hour we were within three miles of the main-land, our signals were answered from the shore, and it was known probably in an hour afterward to the two worlds that our ship had safely crossed the Atlantic.

The first impression that Ireland makes upon me is the peculiar light which surrounds distant objects. Instead of the deep indigo-blue of our American landscape, there is a delicate, hazy purple, which I am told is peculiar to the whole of north-western Europe. It must arise from the difference in climatic and atmospheric conditions; it will be a pleasant question to discuss with some artist or scientific man. We came near enough to land to see the verdure, and this also had a peculiar coloring; not the dark, rich green of the United States, but a light *terre verte* tint, which our lichens have. I asked Dr. H. if they were not lichenized cliffs which we saw; but he said it was probably heather, or the usual verdure. I was told by the Doctor and his party that our verdure is a much darker, richer green than that of Europe.

THURSDAY, July 25, 1867.

AT 3 o'clock, just as the dawn was making the east gray, a little side-wheel steamer came alongside as we lay still at the mouth of Cork Harbor, ten miles from Queenstown, and after a terrible tumbling of luggage, without regard either to trunks or contents, more than three-quarters of all our company went on board. The bell of the little tender rang, and with three cheers for the ship, answered by our debarking friends with three more, away they went. Our stately ship turned her head toward the dawn, and steamed along the Irish coast, while I went back to sleep and dream of the brave old world that has just greeted us with such a happy welcome. Arose at half-past 8, and found we were still steaming along the southern coast of Ireland. Passed the Tuskar Rock light-house about 10 A. M., and a little before noon lost sight of Ireland, and, cross-

ing the mouth of St. George's Channel, came in sight of Wales, and coasted up the channel all day. The rough promontories and jagged hills were quite in keeping with the character of that hardy race of Cambrians from whom I am glad to draw my origin. We passed the Menai Strait, which separates Anglesea from the main-land, but which was bridged by the genius and enterprise of Stephenson. Passed Amlwch, near where the *Royal Charter* steam-ship was wrecked a few years since. The water has here a peculiar pea-green color, quite different from our American seas. The channel appears to be a very fickle water, easily provoked by the wind. In a few moments the breeze converted its calm waters into a troubled sea. After passing around the island of Holyhead, from which we saw the Dublin mail steamer making her way to Ireland, we turned into the Irish Sea, and at 10.30 P. M. lay at the mouth of the Mersey, waiting for the tide to enable us to cross the bar and go on to Liverpool, nine miles above. We could not cross till 3, and so slept one night more on board ship.

FRIDAY, July 26, 1867.

BETWEEN 3 and 5 o'clock A. M., the ship made her way up the Mersey, and waited for higher tide to get into her dock. In looking out upon the muddy water of the river, I was reminded of the use made of Shakspeare by Harriet Beecher Stowe in her "Sunny Memories of Foreign Lands":

"The quality of *Mersey* is not strained!"

When the pier-mark showed twenty-one feet, we were enabled to be worked into our dock. Our ship drew twenty-two and a half feet when we left New York, but we have consumed about seven hundred tons of coal, which has lifted us out of water about two feet. The Liverpool docks are a most remarkable exhibition of skill and energy. A long sea-wall, extending for miles on the Mersey, and parallel to the shore, is opened every few hundred feet by entrances and gates, where ships may enter, and manifold docks branch off in the interior from these entrances. The masonry is peculiar in having large masses of stone set in obliquely to bind the walls. There are fifteen miles of docks, and the city derives its wealth almost wholly from its commerce. The name of the city is said to be derived from "liver," the name of a fabulous bird, and a pool which originally occupied most of the space of the present city. At 7.30 A. M. we lay in dock, with thousands of masts on all sides of us, and before 8 stood on English soil. Just as we were landing, a drove of cabs came in sight;

a clumsy, heavy-wheeled vehicle, drawn by one horse. After the inspection of our luggage, we took a cab, and in fifteen minutes were set down at the "Angel," and took a quiet, quaintly furnished room on the third floor. I was struck with the fact that the bricks were from half an inch to an inch thicker than ours.

We drove through the market and the cemetery, visited Nelson's statue and Huskisson's. This place was the home of both Huskisson and Canning. The former was killed in 1830, on the occasion of opening the first important steam railway in the world—that between Liverpool and Manchester, I think. I am particularly interested in him in consequence of the prominent part he took in the great financial discussions of 1810.

MONDAY, July 29, 1867.

AT half-past 9 A. M. we took the N. W. R'y for London. We took a second-class coach, at £2 2s. for both. The road was very smooth, and after stopping at Crewe—there was but one stop (Rugby) in one hundred and eighty miles—we reached London in less than six hours, sometimes going at the rate of fifty miles per hour. Stayed at the Langham Hotel in Regent street. Found Henry J. Raymond and Benj. Moran, U. S. Secretary of Legation, and went with them to Parliament. The separation of specimens of natural history from works of art in the British Museum was the subject under discussion. The Liberals held that the Museum is so managed that the common people can get but little benefit from it, since it is not open at night or on Sundays. Layard spoke on the side of the Opposition. Heard Disraeli and two others from the Treasury bench. The speaking is much more conversational and business-like than in Congress; but there is a curious and painful hesitating in almost every speaker. At half-past 8, Mr. Moran called for me, and obtained my admission into the House of Lords, where I sat on the steps of the throne, and heard the debates for about two hours, so far as such speaking could be heard at all. Bulwer and the Prince of Wales had been in, but were out when I arrived. Heard Lord Russell, Lord Malmesbury, and several others, and saw a division on the Reform Bill. I am strongly impressed with the democratic influences which are very manifest in both Houses. There seems to be as much of the demagogical spirit here as in our Congress. Underneath the wigs of the Speaker and Chancellor there is still a constant reference to the demands of the people. The halls are very elaborately furnished, and have the brilliancy which the florid Gothic

always gives to a building; but they are not so well fitted to stand the assaults of time as is our more Grecian Capitol.

Went to Covent Garden Music Hall,—an old place of resort for theatrical people for a hundred years, filled with pictures of actors,—and heard fine singing of ballads, by men and boys only. Home at midnight.

TUESDAY, July 30, 1867.

VISITED St. Paul's and Westminster Abbey, where we spent most of the day. In the evening went to the House of Lords with Senator Morrill of Vermont and Mr. Gibbs of Paris. Heard Lord Cairns's speech on his two-vote system for three-cornered constituencies.*

Also, short speech from Lord Cardigan, once the leader of the "noble six hundred" at Balaklava. Also had a drive late in the evening through the streets. Home a little before midnight. Can't undertake to give the details of the day's work.

THURSDAY, Aug. 1, 1867.

SPENT the afternoon in Westminster Hall and Abbey. The statuary and paintings in Westminster Hall are worthy of the nation, and shame me when I think of the art in our noble Capitol at Washington. Note the "Last Sleep of Argyle," both from its subject and its execution. In all the monuments I have observed a manifest determination to ignore Cromwell and his associates in the work they accomplished for England. One picture, "The Burial of Charles I.," is an evident attempt to canonize him and vilify the Puritans, and yet there is the picture of "The Embarkation of the Pilgrims" for New England from Delft Haven, which seems to indicate some love for them.

The sad evidences of decay which meet one everywhere in the Abbey make the pomp of kings a mockery. The Poets' Corner is far more to me than the Chapel of Henry VII. and all the costly shrines and tombs with which the head of the cross is filled. Went through the cloisters where old monks secluded themselves in Catholic times.

In the evening, visited both Houses of Parliament, but spent most of the evening in the House of Lords. Lord Derby's gout is sufficiently allayed to allow him to be in his seat, and I had the privilege of hearing speeches from him, Lord Russell, and Earl Grey—the

* "After clause 8, Lord Cairns moved to insert the following clause: 'At a contested Election for any County or Borough represented by Three Members, no Person shall vote for more than Two Candidates.'"

(Parliamentary Reform—Representation of the People Bill—No. 227, Lords.)

latter two in the Opposition. On a division on raising the disfranchising clause from ten thousand to twelve thousand, the vote was: Ministry, 98; Opposition, 86,—a close pull for Derby. Derby is the best speaker I have heard. Saw Wm. E. Gladstone,—fine face.

FRIDAY, August 2, 1867.

SPENT the whole day in the lower story of the British Museum. The Elgin marbles disappoint me. They are more decayed and fragmentary than I had expected to see them; still, I observe that decay is, in some instances, in the inverse order of age. Westminster Abbey is more decayed than the Elgin marbles, and they much more than the statues and tablets from Nineveh. A question was raised in my mind, whether the age of statuary has not passed, and whether better and higher methods of conserving the past cannot be found. This suggestion applies only to outdoor statuary. With such as I saw in St. Stephen's Hall I am delighted. Their value cannot be overestimated. The autographs of kings and authors are very full and valuable; but, everywhere, I find an old writer takes a stronger hold on my heart than most of the old kings. There was John Milton's contract for the sale of the copyright of "*Paradise Lost*," and the autographs of nearly every literary man England has produced. The famous library which George III. bequeathed to the Museum makes me like the old hater of the United States. The Anglo-Roman antiquities were of the most interesting character, exhibiting Roman art and industry as established in Britain; immense pigs of lead, with Roman emperors' names stamped upon them. I should have mentioned that, in the morning, I called on our Minister, Charles Francis Adams, with whom I had a long and interesting conversation on American politics.

SATURDAY, August 3, 1867.

WE took the train on the South-Western Railway, at Waterloo Station, for Teddington, about sixteen miles from London. From there we walked about two miles to Hampton Court, passing, on the way through Bushy Park, a noble grove, with an avenue of horse-chestnut trees in the center more than a mile long. The trees are from two to three feet in diameter, and are in exact rows. The avenue is about one hundred feet wide, and the trees on either side three rods apart. Back of each row of horse-chestnuts are four rows of elms and oaks, making in all more than one thousand five hundred noble trees, on a sward of most soft and beautiful texture. The upper end of the avenue expands into a broad circle,

inclosing a fine pond, in the center of which is a statue of Diana and her attendants. Three hundred yards beyond the basin we enter the grounds of Hampton Court, through a gate on the posts of which are two huge lions in stone. This noble old palace and grounds were for a long time the seat of a Chapter of the Hospitallers of St. John of Jerusalem. In 1515, when Cardinal Wolsey was at the height of his power, he sent physicians to find the most healthful locality within twenty miles of London. They selected this spot, and Wolsey purchased it, erecting a palace more regal than any King of England had yet built. When Henry VIII. became jealous of its magnificence, Wolsey presented it to him. Here Henry lived, and here much of the splendor and shame of his social life was exhibited. Here Elizabeth lived many years. The good William and Mary engaged Wren to enlarge and beautify the palace and grounds, and resided here. Anne, also, and James, and the two Charleses, and succeeding sovereigns down to, and including, George II. Since then the sovereigns have made Windsor their country place, and Hampton Court has passed into a kind of hospital. The only royal rule imposed upon visitors is that they must not enter the precincts with any such plebeian vehicle as a hansom or cab; nothing less than a "fly" will do. The building covers about eight acres, and the grounds are almost as beautiful as I can conceive level ground to be made. I never weary of looking at English turf; we have nothing like it in the United States. When London can put over a square mile of land in a single park, and have a dozen of them, great and small, it is a shame that in a country where we have both room and noble trees we have not one outside of New York and Baltimore worthy of the name.* The grounds of Hampton Court are laid out a little too regularly, evidently on the artificial French model; but they are, nevertheless, very beautiful. We visited the state apartments of William and Mary, which seemed to have been constructed to symbolize and perpetuate the true and noble love of those two most worthy people. There are few sovereigns for whom I have so high a regard and admiration as these. Much of the state furniture remains in the building, and there are about one thousand two hundred pictures,—many poor, but some very good. A large number of quaint old pictures by Hans Holbein, which made me laugh at their grotesqueness, and yet I greatly admire their power and perfection. A portrait of bluff King Hal, seated under a canopy with one of his wives, and the Princess Elizabeth near him,

* Written in 1867.

was a most singular specimen of a Dutch interior. The embarkation of Henry VIII. from Dover, in 1520, and the meeting of Henry with Francis, were remarkable specimens of the Dutch notions of perspective three hundred years ago.

One room was wholly devoted to the paintings of our Philadelphian, Benj. West, who did much service for George III. The work was good, but I wondered how it affected the Republican loyalty of West. Several pictures by Titian and Rubens, and two heads by Rembrandt, the latter specially noticeable, attracted me. One room exhibited the beauties of the court of Charles II., among whom the apple-girl, Nell Gwynne, was prominent. Fine old vases of Delft ware, which William and Mary brought over from Holland, were in one room. We visited the Grand Hall, hung with tapestry, where the great assemblies were held, and where a sport was had, cruel as history or literature could devise. Shakspeare's "Henry VIII." (The Fall of Wolsey) was acted on the very stage over which were the portraits of Wolsey and Henry, wrought into the very structure of the building. Beyond the Hall was the withdrawing-room, tapestried also, where James I., better fitted to be a professor of Latin or theology than a king, presided over a convocation of, and discussion between, the doctors of the Established Church and the old Kirk, which produced great results for Great Britain.

We visited the old Black Hamburg vine in the vinery, which is 101 years old, and has now 1500 clusters. The England for which its first clusters ripened was not fit to drink of the wine of its last vintage. No country has made nobler progress against greater obstacles than this heroic England in the last hundred years. After going through "The Maze," we partook of a good dinner at the hotel near the gates, and taking the S. W. Railway, were in London in a few minutes, and in our rooms before 9 P. M.

SUNDAY, Aug. 4, 1867.

WENT at an early hour down Regent street, across Westminster Bridge, into that part of London, called Newington, to the Metropolitan Tabernacle of the Rev. C. H. Spurgeon. By good fortune we were invited by a pewholder to take seats in his pew in the second gallery, and finding our shipmate, Rev. Mr. Goodrich, of New Haven, on the steps, took him with us. I did not intend to listen to Spurgeon as to some *lusus naturæ*, but to try to discover what manner of man he was, and what was the secret of his power. In the first place, the house is a fine building, and we had a good opportunity to examine it while

the people were assembling. It will seat comfortably at least seven thousand people. The popular estimate is ten thousand, but seven thousand is nearer the fact. The building was two-thirds filled before the main doors were opened to the public. When they were opened, a great throng poured in and filled every seat, step, and aisle to the utmost. At half-past 11 Spurgeon came in, and at once offered a short, simple, earnest prayer, and read and helped the whole congregation to sing Dr. Watts's stirring hymn:

"There is a land of pure delight."

For the first time in my life I felt some sympathy with the doctrine that would reject instrumental music from church worship. There must have been five thousand voices joining in the hymn. The whole building was filled and overflowed with the strong volume of song. The music made itself felt as a living, throbbing presence that entered your nerves, brain, heart, and filled and swept you away in its resistless current.

After the singing, Spurgeon read a chapter of the lamentations of Job, and then a contrasted passage from Paul, both relating to life and death. He accompanied his reading with familiar and sensible, sometimes striking, expositional comments; and then followed another hymn, a longer prayer, a short hymn and then the sermon, from a text from the chapter he had read in Job: "All my appointed days will I wait till my change come." He evidently proceeded upon the assumption that the Bible, all the Bible, in its very words, phrases, and sentences, is the word of God; and that a microscopic examination of it will reveal ever-opening beauties and blessings. All the while he impresses you with that, and also with the living fullness and abundance of his faith in the presence of God, and the personal accountability of all to Him. An unusual fullness of belief in these respects seems to me to lie at the foundation of his power. Intellectually he is marked by his ability to hold with great tenacity, and pursue with great persistency any line of thought he chooses. He makes the most careful and painstaking study of the subject in hand. There can be no doubt that fully as much of his success depends upon his labor as upon his force of intellect. He has chosen the doctrines and the literature of the Bible as his field, and does not allow himself to be drawn aside. He rarely wanders into the fields of poesy, except to find the stirring hymns which may serve to illustrate his theme. He uses Bible texts and incidents with great readiness and appropriateness, and directs all his power, not toward his sermon,

but toward his hearers. His arrangement is clear, logical, and perfectly comprehensible, and at the end of each main division of the sermon he makes a personal application of the truth developed to his hearers, and asks God to bless it. His manner is exceedingly simple and unaffected. He does not appear to be aware that he is doing a great thing, and I could see no indication that his success has turned his head. He has the word-painting power quite at his command, but uses it sparingly. I could see those nervous motions of the hands and feet which all forcible speakers make when preparing to speak; and also in his speaking, the sympathy between his body and his thoughts, which controlled his gestures, and produced those little touches of theatrical power, so effective in a speaker. His pronunciation is exceedingly good. In the whole service I noticed but one mispronunciation. He said "transient." There appears to be almost no idiom in his language. An American audience would hardly know he was not an American.

Every good man ought to be thankful for the work Spurgeon is doing. I could not but contrast this worship with that I saw a few days ago at Westminster Abbey. In that proud old mausoleum of kings, venerable with years and royal pride, the great organ rolled out its deep tones, and sobbed and thundered its grand music, mingled with the intoning of the hired singers. Before the assembly of rich and titled worshipers sat a choir of twenty persons. The choir boys, in their white robes, had been fighting among the tombs and monuments of the nave just before the service began. However devout and effective their worship may be, it is very costly, and must be confined to a great extent to the higher classes. I felt that Spurgeon had opened an asylum where the great untitled, the poor and destitute of this great city, could come and find their sorrows met with sympathy; their lowliness and longings for a better life touched by a large heart and an undoubted faith. God bless Spurgeon! He is helping to work out the problem of religious and civil freedom for England in a way that he knows not of.

In the afternoon we walked in the Botanical Gardens, in Regent's Park, and spent nearly three hours in these delightful grounds. I never tire of the sweet and subduing beauties of this park. While sitting in the great greenhouses, under the tropical plants, we read an article from the "Westminster Review," for August, 1867, entitled "The Social Era of George III." The writer says the three greatest indications of a people's civilization are: 1. The state of the roads; 2. The state

of agriculture; 3. The mode of transportation; and proceeds to apply these texts to the state of England at the beginning (1760) of George the Third's reign and at its close (1820). I am surprised at the facts he developed. I had supposed that such great contrasts could only be shown between periods of centuries,—like that exhibited by Macaulay in the third chapter of the first volume of his *History*. But this article shows that the greater part of all the change that Macaulay shows in that chapter has taken place within the memory of men now living.

I make this note in order to keep in mind the article, that I may call it up hereafter.

I notice the old Vauxhall Gardens, so admirably described in Frances Burney's "Evelina," have disappeared. The S. W. Railway runs through them, and a thousand tenements fill the space where only people in full dress could be admitted fifty years ago.

London is still growing rapidly, and is destined to do all that cities in this age can accomplish. It is a phenomenon—a wonder which grows upon me every day.

MONDAY, August 5, 1867.

WENT again to the British Museum, and spent three hours in the upper story. Went through the zoölogical collection, which is very full. C. thought our American birds had a touch of the impudence and freedom in their bearing which characterizes the people! African, Australian, and South American vie with each other in gorgeousness of plumage. The Geological Department is exceedingly fine. I should know the place from Hugh Miller's description of it. The Pompeian remains were full of interest, and another room of Anglo-Roman antiquities confirms me in the opinion that we do not make sufficient account of the influence of the Romans upon our English civilization. From the Museum, we passed down Oxford street, among the second-hand book-stores, and took an omnibus to the Bank of England, near which, at Brown, Shipley & Co's, we find a letter from H——.

Visited the Tower of London, so full of sad, strange history. It was built by William the Conqueror, soon after the conquest, in 1066, as a defense for himself and his court against the turbulent Britons, and has been added to by many succeeding sovereigns until it is now a curious compound of all the fusions of architecture, and an embodiment of the ideas and purposes of seven or eight centuries. The White Tower in the center, built by William, has many of the old Norman features in its architecture; and, though much of its exterior has been renovated, yet

there is here and there a double-arched window of the Norman style, and, in the interior, a wonderfully well-preserved chapel of quaint Norman pillars. Its walls are thirteen feet thick, and its dungeons admitted no light nor air, except through the main entrance. The cell in which Raleigh slept, and the room where he wrote his "History of the World," were touching memorials of the heroism and intellect of a cruel age. The dungeons and inscriptions on the walls, carved by prisoners; the instruments of torture, the block and axe, and mark of the stroke; the quaint suits of armor, from the earliest days of the Norman kings till gunpowder stripped soldiers of all defense; the cavalry cuirasses, torn by shot and shell on the field of Waterloo, being the last attempt at armor on the field; the conquered banners of civilized and uncivilized nations; the weapons of all sizes and forms for the destruction of human life, from the battle-axe, pike, matchlock, stone-shot, to the one hundred thousand breech-loading Enfield rifles with which England has just armed herself; the crown jewels; the crowns worn by so many English sovereigns; the scepters, from the heavy rod of solid gold of one of the Edwards, and the splendid ivory and gold wand of the unfortunate Anne Boleyn, to the costly scepter which Victoria bore at her coronation; the baptismal font of solid gold, used at the baptism of her children; the massive golden maces, with which she opens Parliament; the inclosed spot of green in the yard, where the gallows stood, where so many criminal and innocent were put to death; the Traitor's Gate, through which all prisoners charged with high treason were brought from the Thames; the stairway, under which the fierce King John secreted the bones of his royal nephews, whom he here murdered; the room where an English duke was drowned in a butt of Malmsey,—all these have been associated in my mind with the Dinotherium, the Mastodon, the Megatherium, and the Ichthyosaurus which I saw this morning in the Museum. This Tower seemed a monster, tearing down men and families, and crunching them in its merciless jaws, as the Dinotherium crushed and devoured the fern-trees, dateless ages ago. Both are passed away. The fern-trees burn in the grates and glow in the chandeliers of thousands of happy homes, and the broken hearts and crushed hopes of a thousand martyrs, who sleep under the shadows of this terrible Tower, have given civil and religious liberty; and their memories and brave words live and glow in the hearts of many millions of Englishmen, and will bless coming generations. May the Tower stand there many centuries,

as a mark to show how high the red deluge rose, and how happy is this England of Victoria compared with that of her ancestors!

On our way home, we walked through Billingsgate, which has given a word to our language. I saw in the stalls a curious little animal, which seemed a cross between a lobster and a beetle. I asked the fishwoman who presided what they were.

"Four-pence a pint," said she.

"But," said I, "*what are they?*"

"Four-pence the pint, I tell ye."

"But," I persisted, "what is the name of the animals you have for sale?"

"Humph! *shrimps*," and, with a look of contemptuous indignation: "That's all *you* wanted!"

After dinner we went to Madame Tussaud's, in Baker street, and spent two or three hours among her wax figures and historical relics. Here were all the sovereigns of Europe, from William the Conqueror down, and many distinguished men of other nations and other ages. The verisimilitude of life in these figures produced a singular effect upon my mind, not altogether pleasing. I think it shocks us when we see Art so nearly a copy of Nature as almost to deceive us. When I see Napoleon in marble, without the accidents of boots, hat, or coat, I think of those permanent characteristics of head and face which belong to history; but when I see him so like life as to feel like begging his pardon for crowding him, I am balanced between a live and a dead man, and the effect is not pleasing. Yet I get a more vivid and, I presume, a more correct impression of how men looked than in any other way. The effigy of Washington gave me a better idea of how he looked when President than any statue or picture I have seen. Many of the dresses are the identical ones worn on State occasions. The effigies of many of the kings of England will long remain in my memory, such as William the Norman, Richard Cœur de Lion, the murderer John, from whom Magna Charta was forced, old Hal and his six wives, red-haired Elizabeth, handsome, thoughtful William of Orange. I also mention the fine head, face, and eye of Walter Scott.

TUESDAY, Aug. 6, 1867.

OUR first rainy day in London. Though we have had remarkably cool weather, a thin overcoat being almost every day comfortable, we have had but little London fog, and no shower until to-day. But all day, London has been like Mantilini's supposed condition: "a demmed, damp, moist, unpleasant body." The fog was visible, palpable, tangible; a wet, cold sheet, which, like that in Mrs. Barbauld's "Washing Day," "flaps in the face abrupt."

Called on Mr. Adams and his wife. Mrs. Adams is a woman of fine sense and vigor, * * * and showed a keen appreciation of the diplomatic struggle through which we have passed with England. Had a pleasant talk of an hour with Mr. Adams at his office; also with Morgan, Secretary of Legation. Mr. Adams spoke of the character of his father and grandfather. He thinks the chief difference was in culture, his father having much more training. He is preparing his father's works for publication. I spoke of his grandmother's letters, which he edited many years ago, and he said there were many more that should have been published.

WEDNESDAY, Aug. 7, 1867.

CAME this morning by way of St. James's Park, and entered again the old Abbey and, with my inkstand resting on the tablet of Chaucer's tomb, I make this note. We have just read Irving's chapter on Westminster Abbey, and find it wonderfully suggestive to look upon the objects that met his eye when he wrote. I notice that he praises an inscription which declares that "all the sons" of the deceased "were brave, and all his daughters virtuous," and the same thing is mentioned contemptuously by Hawthorne in his late book, "Our Old Home." I found myself leaning rather toward Hawthorne in this matter. I am struck with the different estimate which a man's contemporaries place upon him from that in which later generations hold him. Of course, I know how mendacious epitaphs are; yet they may be supposed to be about equally false, and may enable us to judge of the relative estimation in which the different dead were held. Here by my side lies Abraham Cowley, under a fine marble monument surmounted by a lofty, flower-wreathed urn. A few steps away is the bust of Milton, surmounting a decorated tablet on which William Benson, Esquire, attempts to make the world know who he was, by telling us that in the year 1737 *he* caused this bust to be made and placed here; he, who had the "distinguished honor of being one of the two Auditors of the Imprests of George II.)*" He does not see fit to tell us that Milton was Latin Secretary of State to the stout old Commonwealth, which did so much in its rough way for English liberty. That reign is quite ignored. It is only in Madame Tussaud's wax-work that I have seen "Old Noll" recognized.

* "Auditors of the Prest, or Imprests, are officers in the Exchequer who formerly had the charge of auditing the great accounts of the king's customs, naval and military expences, and of all monies impressed to any man for the king's service; but they are now superseded by the commissioners for auditing the public accounts." Rees's *Cyclopedia*: London, 1819.

Another thing that strikes me with force,—that many of the bewigged and highly praised busts are mere intruders, who ought to, if they could, feel ashamed to be thrust into such august company. For instance: why should Gulielmus Outram fill so large a space with his long, Latin eulogium, which no one cares to read, that Macaulay's bust must be pushed almost out of sight between him and the full length of Addison? By the way, this prim Addison would be ashamed, if he knew his nearest neighbors—Macaulay and Thackeray—to stand so plumply before them, who are so much his superiors in everything except style. It is appropriate that Garrick should be buried where he is, at the feet of Shakspeare; but his ridiculous, life-size statue, on the wall nearly opposite, is in a theatrical attitude, which I am sure he would not approve; and the epitaph is fustian, which he would not have spoken. I am glad to see that Lamb thought of it as it impresses me. His statue reminds me of Sam Weller, as Cruikshank shows him to us in the frontispiece of "The Pickwick Papers."

It is raining now (1.15 P. M.), and "the dim, religious light" is too feeble to read by; much too feeble to write by. I very much want B—— here, that I might watch his face and see the conflict between the historical and literary pleasure he would feel and his chronic disgust at all humbug and pretension.

In the main nave of the Abbey is the tomb of Newton, with his statue reclining on a block sarcophagus, with sculptured designs, showing his astronomical and mathematical discoveries, and also his work in the Mint on the recoinage.

THURSDAY, August 8, 1867.

VISITED Kensington Museum and Hyde Park. Met Mr. and Mrs. H——, of Cleveland, who were jaded and weary of sixteen months of sight-seeing. The museum is of much more consequence than I supposed. It contains a large collection of manufactures, ancient and modern; of articles of furniture and house-building, as well as casts of the most celebrated pieces of sculpture. Also, the cartoons of Raphael, or part of them; many paintings by Edwin and Charles Landseer, West, Reynolds, Turner, and the original of Rosa Bonheur's "Horse Fair." We spent nearly three hours here, and came away regretfully. At 4, we went to Westminster Hall. I sent Mr. Chase's letter to John Bright, who came out and got me in back of the Peers' seat, under the Speaker's gallery, where I had a fine view, and where I staid—except when divisions were being taken—till near midnight.

When I went in at half-past 4, petitions

were being presented in open house; each member reading his petition, and carrying it to the Speaker's table. There are no pages, and, besides the doorkeepers, there appear to be no officers in the House, except the Speaker, who wears a full-bottomed wig, and three clerks, who sit directly before him, in half, or short wigs.

When a member read a petition of four thousand citizens of Birmingham in favor of Lord Cairns's amendment for a third vote in tripartite constituencies, Bright followed with a monster petition on the other side. Then followed a volley of questions fired at the Administration from all sides, and their responses. Disraeli sat passionless and motionless, except a trotting of the foot, indicative of a high pitch of intellectual activity and expectancy. His face reveals nothing. The most pointed allusions, either of logic, fact, or wit, fail to move a muscle or change a line of the expression.

At 5, the Reform Bill is announced, and all sounds subside in the crowded hall—so full that several members sit in the gallery.* Disraeli, in a very calm, somewhat halting way, goes over the chief points of the Lords' amendments, puts them very adroitly, and in a very conciliatory tone speaks about twenty minutes. Meanwhile, Bright has been sitting on the second row, and next the gangway, taking a note now and then, manifesting a little nervousness in the hands and fingers, and occasionally passing his hand over his ample forehead. Mill is settled down in his seat, with his chin resting in the palm of his hand, and giving close attention, as he does to everything that passes. By the way, his face greatly disappoints me in one respect: there is nothing of the Jovine breadth and fullness of brow I expected; but there is great depth from brow to cerebellum, and strong, well-defined features. There is a nervous twitching of the muscles of his head and face, which probably results from hard work. Gladstone rises and opens the debate on the Opposition side, in an adroit speech of eight minutes, evidently reserving himself for a fuller assault later in the evening. He is the most un-English speaker I have yet heard, and the best. Disraeli shows great tact in determining how far to persist and when to yield. In that essential point of leadership, Palmerston has probably never been excelled. Disraeli is no mean disciple of his. Gladstone, with more

ability than either, is said to be especially lacking in that respect.

After several more amendments have been given up with apparent reluctance, but for the sake of harmony, the amendment of Lord Cairns is reached, on which the ministry intend to make a stubborn fight. Bright opens the attack in a speech of half an hour or more. Though cordially disliked by the Tories, he compels attention at once. With a form like that of Senator Wilson, of Massachusetts, he has a large, round, full, fine, massive head, and straight, almost delicate nose. He has a full, rotund voice, and, like Gladstone, is un-English in his style—that is, he speaks right on, with but little of that distressful hobbling which marks the mass of Parliamentary speakers. With all my sympathy with Bright and the Liberals, I am inclined to favor the amendment. I remember Mill's discussion of it in his "Representative Government," and his approving reference to the work of Hare on the same subject. Bright put the case very strongly on his side, and pointed out the anomalies it would produce; but I thought they would result from the limited application of the principle, rather than from the principle itself. I also thought it a little inconsistent in him, who has been so bold an advocate for change, to object to this as an innovation. But he put his case very strongly, and made us sympathize with his earnestness. Many speeches were leveled at him; but, like all politicians, he seems to have become a pachyderm, and paid no attention to it. Howmuchsoever they may affect to despise him, they cannot blink the fact, which even "The Times" admitted this morning in a mean attack on him, that "John Bright was the most skillful speaker in England, and, in some kinds of oratory, the first orator."

I notice that many of the leaders were high honor men at the universities. Gladstone took a "double-first"; Roundell Palmer took a "first" in classics, and many other classic honors and prizes. Mill is not a University man, but his "Logic" has been a text-book at Oxford for twenty years. Tom Hughes, who made Rugby and himself immortal, was not a first-class scholar. Forster is a good speaker and a Radical, but I do not know what his scholarship was.

At 10, Gladstone rose and spoke for nearly an hour, going into the whole question with great clearness and incisive force. He spoke with much more feeling than any other except Bright. Gladstone was followed by Lowe, who is considered the strongest man of his school in the House. He sits on the Opposition side; but on this question of suffrage is Conservative. He is nearly blind, and spoke

* Bill 79, Commons. The Bill is very voluminous, and is a comprehensive demand of the people of England for a broader and fairer participation in the legislation and administration of the affairs of their country, and for the correction of evident abuses of the Franchise.

without notes and with his eyes apparently shut. He combines sharpness with a remarkable toughness of intellectual fiber, which makes him a powerful assailant. It was exceedingly fine, the way he sought out and javelined the exposed joints of his antagonist's harness. Gladstone winced manifestly. About half-past 11 a division was had, which resulted: 206 against, and 258 in favor. This is a strong example of the influence of the Ministry. When the same principle was discussed in the Commons a few weeks ago, Disraeli made a strong speech against it, and it was negatived by 140 majority. It has been very curious to see what different and opposite motives have moved men to favor this new feature in representative government. Mill votes for this only as an installment of what he has long advocated as a *doctrinaire*: that minorities should be repre-

sented, and he hopes to see it prevail in all elections. He thinks it will vitalize voters, and virtually extend the suffrage. He votes for it as a higher step toward democracy. Gladstone opposes it for this very reason, and several others because it will give them a Tory member. "The Times" favors it for this reason, and because it thinks it will control the democratic tendencies of the bill.

The measure seems to me to be vulnerable: first, because of the practical difficulties in carrying it into operation; secondly, because of its partial application.

The voting-paper clause was taken up, and the House of Commons refused to concur with the Lords.

I left the Commons a little before midnight, having witnessed the practical consummation of the greatest advance toward political liberty made in England in a century.

From London, before leaving Great Britain, General and Mrs. Garfield went to Warwick, Stratford, York, Edinburgh, Melrose and Abbotsford, Glasgow and Ayrshire, and Leith, whence they took steamer to Rotterdam. The remainder of the trip was devoted to Holland, the Rhine, Switzerland, Italy, France, and London again. The return voyage was made from Queenstown, October 24, in the *Helvetia*.

DUM VIVIMUS, VIVAMUS

LET us enjoy the present as is meet,
Nor anger heaven to take our joys away
By weak complainings that the hours are fleet,
And death too soon shall close our little day.

In the brief space that lies 'twixt morn and eve,
Some trees of life may bloom, some hopes may grow,
Some clear persuasion that the bliss we leave
Is but a gleam of that to which we go.

So that, when falls the dusk at set of sun,
Glad we may turn from toil to rest awhile,
Sure to complete the tasks we leave undone,
With stronger purpose 'neath the morrow's smile.

E. D. R. Bianciardi.

IN WORDSWORTH'S COUNTRY.

NO OTHER English poet has touched me quite so closely as Wordsworth. All classes of men delight in Shakspeare; he is the universal genius; but Wordsworth's poetry has more the character of a message, and a message special and personal to a few readers. He stands for a particular phase of human thought and experience, and his service to certain minds is like an initiation into a new order of mysteries. His limitations make him all the more private and precious, like the seclusion of one of his mountain dales. He is not and can never be the world's poet, but

the poet of those who love solitude and solitary communion with nature. Shakspeare's attitude toward nature is for the most part like that of a gay, careless reveler, who leaves his companions for a moment to pluck a flower or gather a shell here and there, as they stroll

"By paved fountain, or by rushy brook,
Or on the beachèd margent of the sea."

But in Wordsworth's love, nature is not second, but first; the poetic rill with him rises in the mountains.

You can hardly appreciate the extent to

which he has absorbed and reproduced the spirit of the Westmoreland scenery until you have visited that region. I paused there a few days in early June, on my way south, and again on my return late in July. I walked up from Windermere to Grasmere, where, on the second visit, I took up my abode at the historic Swan Inn, where Scott used to go surreptitiously to get his mug of beer when he was stopping with Wordsworth.

The call of the cuckoo came to me from over Rydal Water as I passed along; I plucked my first foxglove by the road-side; paused and listened to the voice of the mountain torrent; heard

"The cataracts blow their trumpets from the steep";

caught many a glimpse of green, unpeopled hills, urn-shaped dells, treeless heights, rocky promontories, secluded valleys, and clear, swift-running streams. The scenery was somber; there were but two colors, green and brown, verging on black; wherever the rock cropped out of the green turf on the mountain-sides, or in the vale, it showed a dark face. But the tenderness and freshness of the green tints were something to remember,—the hue of the first springing April grass, massed and wide-spread in midsummer.

Then there was a quiet splendor, almost grandeur, about Grasmere vale, such as I had not seen elsewhere,—a kind of monumental beauty and dignity that agreed well with one's conception of the loftier strains of its poet. It is not too much dominated by the mountains, though shut in on all sides by them; that stately level floor of the valley keeps them back and defines them, and they rise up from its outer margin like rugged, green-tufted and green-draped walls.

It is doubtless this feature, as De Quincey says, this plane-like character of the valley, that makes the scenery of the Grasmere more impressive than the scenery in North Wales, where the physiognomy of the mountains is essentially the same, but where the valleys are more bowl-shaped. Amid so much that is steep and rugged and broken, the eye delights in the repose and equilibrium of horizontal lines,—a bit of table-land, the surface of the lake, or the level of the valley bottom. The principal valleys of our own Catskill region all have this stately floor so characteristic of Wordsworth's country. It was a pleasure which I daily indulged in to stand on the bridge by Grasmere Church, with that full, limpid stream before me, pausing and deepening under the stone embankment near where the dust of the poet lies, and let the eye sweep across the plane to the foot of the near mountains, or dwell upon their encircling summits

above the tops of the trees and the roofs of the village. The water-ouzel loved to linger there too, and would sit in contemplative mood on the stones around which the water loitered and murmured, its clear white breast alone defining it from the object upon which it rested. Then it would trip along the margin of the pool, or flit a few feet over its surface, and suddenly, as if it had burst like a bubble, vanish before your eyes; there would be a little splash of the water beneath where you saw it, as if the drop of which it was composed had reunited with the surface there. Then, in a moment or two, it would emerge from the water beneath which it had disappeared so quickly, and take up its stand as dry and unruffled as ever. It was always amusing to see this plump little bird, so unlike a water-fowl in shape and manner, disappear in the stream. It did not seem to dive, but simply dropped into the water, as if its wings had suddenly failed it. Sometimes it fairly tumbled in from its perch. It was gone from sight in a twinkling, and while you were wondering how it could accomplish the feat of walking on the bottom of the stream under there, it re-appeared as unconcerned as possible. It is a song-bird, a thrush, and gives a feature to these mountain streams and water-falls, which ours, except on the Pacific coast, entirely lack. The stream that winds through Grasmere vale, and flows against the embankment of the church-yard, as the Avon at Stratford, is of great beauty—clean, bright, full, trouty, with just a tinge of gypsy blood in its veins, which it gets from the black tarns and the mountains, and which adds to its richness of color. I saw an angler take some trout from it, not so brilliantly colored or so finely made as American trout. After a heavy rain the stream was not roily, but slightly darker in hue; these fields and mountains are so turf-bound that no particle of soil is carried away by the water.

Falls and cascades are a great feature all through this country, as they are a marked feature in Wordsworth's poetry. One's ear is everywhere haunted by the sound of falling water; and when the ear cannot hear them, the eye can see the streaks or patches of white foam down the green declivities. There is no hum of woods, and no trees above the valley bottom to obstruct the view or muffle the sounds of distant streams. When I was at Grasmere there was much rain, and this stanza of the poet came to mind:

"Loud is the Vale! The voice is up
With which she speaks when storms are gone,
A mighty unison of streams!
Of all her voices, one!"

The words vale and dell come to have a new meaning after one has visited Words-

worth's country, just as the words cottage and shepherd also have so much more significance there and in Scotland than at home.

"Dear child of Nature, let them rail!
—There is a nest in a green dale,
A harbor and a hold,
Where thou, a wife and friend, shalt see
Thy own delightful days, and be
A light to young and old."

Every humble dwelling looks like a nest; that in which the poet himself lived had a cozy, nest-like look; and every vale is green—a cradle amid rocky heights, padded and carpeted with the thickest turf.

Wordsworth is described as the poet of nature. He is more the poet of man, deeply wrought upon by a certain phase of nature,—the nature of those somber, quiet, green, far-reaching mountain solitudes. There is a shepherd quality about him; he loves the flocks, the heights, the tarn, the tender herbage, the sheltered dell, the fold, with a kind of poetized shepherd instinct. Lambs and sheep and their haunts, and those who tend them, recur perpetually in his poems. How well his verse harmonizes with those high, green, and gray solitudes, where the silence is only broken by the bleat of lambs or sheep, or just stirred by the voice of distant water-falls! Simple, elemental, yet profoundly tender and human, he had

"the primal sympathy
Which, having been, must ever be."

He brooded upon nature, but it was nature mirrored in his own heart. In his poem of "The Brothers," he says of his hero, who had gone to sea:

"He had been rear'd
Among the mountains, and he in his heart
Was half a shepherd on the stormy seas.
Oft in the piping shrouds had Leonard heard
The tones of water-falls, and inland sounds
Of caves and trees";

and leaning over the vessel's side and gazing into the "broad green wave and sparkling foam," he

"Saw mountains,—saw the forms of sheep that
grazed
On verdant hills."

This was what his own heart told him; every experience or sentiment called those beloved images to his own mind.

One afternoon, when the sun seemed likely to get the better of the soft rain-clouds, I set out to climb to the top of Helvellyn. I followed the highway a mile or more beyond the Swan Inn, and then I committed myself to a foot-path that turns up the mountain-side to the right, and crosses into Grisedale and so to Ulleswater. Two school-girls whom I overtook put me on the right track. The voice of a foaming mountain torrent was in

my ears a long distance, and now and then the path crossed it. Fairfield Mountain was on my right hand, Helm Crag and Dunmail Raise on my left. Grasmere plain soon lay far below. The hay-makers, encouraged by a gleam of sunshine, were hastily raking together the rain-blackened hay. From my outlook they appeared to be slowly and laboriously rolling up a great sheet of dark-brown paper, uncovering beneath it one of the most fresh and vivid green. The mown grass is so long in curing in this country (frequently two weeks) that the new blades spring beneath it and a second crop is well under way before the old is "carried." The long mountain slopes up which I was making my way were as verdant as the plain below me. Large coarse ferns or bracken, with an under lining of fine grass, covered the ground on the lower portions. On the higher, grass alone prevailed. On the top of the divide, looking down into the valley of Ulleswater, I came upon one of those black tarns or mountain lakelets which are such a feature in this strange scenery. The word tarn has no meaning with us, though our young poets sometimes use it as they do this Yorkshire word wold; one they get from Wordsworth, the other from Tennyson. But when you have seen one of those still, inky pools at the head of a silent, lonely Westmoreland dale, you will not be apt to misapply the word in future. Suddenly the serene shepherd mountain opens this black, gleaming eye at your feet, and it is all the more weird for having no eyebrow of rocks, or fringe of rush or bush. The steep, encircling slopes drop down and hem it about with the most green and uniform turf. If its rim had been modeled by human hands, it could not have been more regular or gentle in outline. Beneath its emerald coat the soil is black and peaty, which accounts for the hue of the water and the dark line that encircles it.

"All round this pool both flocks and herds might
drink

On its firm margin, even as from a well,
Or some stone basin, which the herdsman's hand
Had shaped for their refreshment."

The path led across the outlet of the tarn and then divided, one branch going down into the head of Grisedale, and the other mounting up the steep flank of Helvellyn. Far up the green acclivity I met a man and two young women making their way slowly down. They had come from Glenridding on Ulleswater, and were going to Grasmere. The women looked cold, and said I would find it wintry on the summit.

Helvellyn has a broad flank and a long back, and comes to a head very slowly and gently. You reach a wire fence well up

on the top that divides some sheep ranges, pass through a gate, and have a mile yet to the highest ground in front of you; but you could traverse it in a buggy, it is so smooth and grassy. The grass fails just before the summit is reached, and the ground is covered with small thin stone and pebbles. The view is impressive, and such as one likes to sit down to and drink in slowly—a

"grand terraqueous spectacle,
From center to circumference, unveil'd."

The wind was moderate and not cold. Toward Ulleswater the mountain drops down abruptly many hundred feet, but its vast western slope appeared one smooth, unbroken surface of grass. The following jottings in my note-book on the spot preserve some of the features of the scene. "All the northern landscape lies in sunlight as far as Carlisle

'a tumultuous waste of huge hill-tops;'

not quite so severe and rugged as the Scotch mountains, but the view more pleasing and more extensive than the one I got from Ben Venue. The black tarns at my feet,—Keppel Cove Tarn one of them, according to my map,—how curious they look! I can just discern the figure of a man moving by the margin of one of them. Away beyond Ulleswater is a vast sweep of country flecked here and there by slowly moving cloud shadows. To the north-east, in places, the backs and sides of the mountain have a green, pastoral voluptuousness, so smooth and full are they with thick turf. At other points the rock has fretted through the verdant carpet. St. Sunday's Crag, to the west across Grisedale, is a steep acclivity covered with small loose stone, as if they had been dumped over the top, and were slowly sliding down; but nowhere do I see great bowlders strewn about. Patches of black peat are here and there. The little rills, near and far, are white as milk, so swiftly do they run. On the more precipitous sides the grass and moss are lodged, and hold like snow, and are as tender in hue as the first April blades. A multitude of lakes are in view and Morecambe Bay to the south. There are sheep everywhere, loosely scattered with their lambs; occasionally I hear them bleat. No other sound is heard but the chirp of the mountain pipit (the wheat-ear flitting here and there). One mountain now lies in full sunshine, as fat as a seal, wrinkled and dimpled where it turns to the west, like a fat animal when it bends to lick itself. What a spectacle is now before me!—all the near mountains in shadow, and the distant in strong sunlight; I shall not see the like of that again. On some of the mountains the green vestments are in tatters and rags, so to speak, and

barely cling to them. No heather in view. Toward Windermere the high peaks and crests are much more jagged and rocky. The air is filled with the same white, motionless vapor as in Scotland. When the sun breaks through

'Slant watery lights, from parting clouds, apace
Travel along the precipice's base,
Cheering its naked waste of scatter'd stone.'

Amid these scenes one comes face to face with nature,

"With the pristine earth,
The planet in its nakedness,"

as he cannot in a wooded country. The primal, abysmal energies, grown tender and meditative as it were, thoughtful of the shepherd and his flocks, and voiceful only in the leaping torrents, look out upon one near at hand and pass a mute recognition. Wordsworth perpetually refers to these hills and dales as lonely or lonesome; but his heart was still more lonely. The outward solitude was congenial to the isolation and profound privacy of his own soul. "Lonesome," he says of one of these mountain dales, but

"Not melancholy,—no, for it is green
And bright and fertile, furnished in itself
With the few needful things that life requires.
In rugged arms how soft it seems to lie,
How tenderly protected,"

It is this tender and sheltering character of the mountains of the Lake district that is one main source of their charm. So rugged and lofty, and yet so mellow and delicate! No shaggy, weedy growths or tangles anywhere; nothing wilder than the bracken, which at a distance looks as solid as the grass. The turf is as fine and thick as that of a lawn. The dainty-nosed lambs could not crave a tenderer bite than it affords. The wool of the dams could hardly be softer to the foot. The last of July the grass was still short and thick, as if it never shot up a stalk and produced seed, but always remained a fine, close mat. Nothing was more unlike what I was used to at home than this universal tendency (the same is true in Scotland and in Wales) to grass, and on the lower slopes to bracken, as if these were the only two plants in nature. Many of these eminences in the north of England, too lofty for hills and too smooth for mountains, are called fells. The railway between Carlisle and Preston winds between them, as Houghill Fells, Tebay Fells, Shap Fells, etc. They are, even in midsummer, of such a vivid and uniform green that it seems as if they must have been painted. Nothing blurs or mars the hue: no stalk of weed or stem of dry grass. The scene, in singleness and purity of tint, rivals the blue of the sky. Nature does not seem to ripen and grow sere as autumn approaches, but wears the tints of May in October.

John Burroughs.

DR. SEVIER.*

BY GEORGE W. CABLE,

Author of "Old Creole Days," "The Grandissimes," "Madame Delphine," etc.

XV.

THE CRADLE FALLS.

IN the rear of the great commercial center of New Orleans, on that part of Common street where it suddenly widens out, broad, unpaved, and dusty, rises the huge dull-brown structure of brick, famed, well-nigh as far as the city is known, as the Charity Hospital.

Twenty-five years ago, when the emigrant ships used to unload their swarms of homeless and friendless strangers into the streets of New Orleans to fall a prey to yellow fever or cholera, that solemn pile sheltered thousands on thousands of desolate and plague-stricken Irish and Germans, receiving them unquestioned, until at times the very floors were covered with the sick and dying, and the sawing and hammering in the coffin-shop across the inner court ceased not day or night. Somber monument at once of charity and sin! For while its comfort and succor cost the houseless wanderer nothing, it lived and grew, and lives and grows still, upon the licensed vices of the people,—drinking, harlotry, and gambling.

The Charity Hospital of St. Charles—such is its true name—is, however, no mere plague-house. Whether it ought to be, let doctors decide. How good or necessary such modern innovations as "ridge ventilation," "movable bases," the "pavilion plan," "trained nurses," etc., may be, let the Auxiliary Sanitary Association say. There it stands as of old, innocent of all sins that may be involved in any of these changes, rising story over story, up and up; here a ward for poisonous fevers, and there a ward for acute surgical cases; here a story full of simple ailments, and there a ward specially set aside for women.

In 1857 this last was Dr. Sevier's ward. Here, at his stated hour one summer morning in that year, he tarried a moment, yonder by that window, just where you enter the ward and before you come to the beds. He had fallen into discourse with some of the more inquiring minds among the train of students that accompanied him, and waited there to finish

and cool down to a physician's proper temperature. The question was public sanitation.

He was telling a tall Arkansan, with high-combed hair, self-conscious gloves, and very broad, clean-shaven lower jaw, how the peculiar formation of delta lands, by which they drain away from the larger watercourses, instead of into them, had made the swamp there in the rear of the town, for more than a century, "the common dumping-ground and cess-pool of the city, sir!"

Some of the students nodded convincingly to the speaker; some looked askance at the Arkansan, who put one fore-arm meditatively under his coat-tail; some looked out through the window over the regions alluded to; and some only changed their pose and looked around for a mirror.

The Doctor spoke on. Several of his hearers were really interested in the then unusual subject, and listened intelligently as he pointed across the low plain at hundreds of acres of land that were nothing but a morass, partly filled in with the foulest refuse of a semi-tropical city, and beyond it where still lay the swamp, half cleared of its forest and festering in the sun—"every drop of its waters, and every inch of its mire," said the Doctor, "saturated with the poisonous drainage of the town!"

"I happen," interjected a young city student; but the others bent their ear to the Doctor, who continued:

"Why, sir, were these regions compactly built on, like similar areas in cities confined to narrow sites, the mortality, with the climate we have, would be frightful."

"I happen to know," essayed the city student; but the Arkansan had made an interrogatory answer to the Doctor, that led him to add:

"Why, yes; you see the houses here on these lands are little, flimsy, single ground-story affairs, loosely thrown together, and freely exposed to sun and air."

"I hap——," said the city student.

"And yet," exclaimed the Doctor, "malaria is king!"

He paused an instant for his hearers to take in the figure.

"Doctor, I happen to——"

Some one's fist from behind caused the speaker to turn angrily, and the Doctor resumed:

"Go into any of those streets off yonder, —Trémé, Prieur, Marais. Why, there are often ponds under the houses! The floors of bedrooms are within a foot or two of these ponds! The bricks of the surrounding pavements are often covered with a fine, dark moss! Water seeps up through the sidewalks! That's his realm, sir! Here and there among the residents—every here and there—you'll see his sallow, quaking subjects dragging about their work or into and out of their beds, until the fear of a fatal ending drives them in here. Congestion? Yes, sometimes congestion pulls them under suddenly, and they're gone before they know it. Sometimes their vitality wanes slowly, until malaria beckons in consumption."

"Why, Doctor," said the city student, ruffling with pride of his town, "there are plenty cities as bad as this. I happen to know, for instance —"

Dr. Sevier turned away in quiet contempt.

"It will not improve our town to dirty others, or to clean them, either."

He moved down the ward, while two or three members among the moving train, who never happened to know anything, nudged each other joyfully.

The group stretched out and came along, the Doctor first and the young men after, some of one sort, some of another,—the dull, the frivolous, the earnest, the kind, the cold,—following slowly, pausing, questioning, discouraging, advancing, moving from each clean, slender bed to the next, on this side and on that, down and up the long sanded aisles, among the poor, sick women.

Among these, too, there was variety. Some were stupid and ungracious, hardened and dulled with long penury as some in this world are hardened and dulled with long riches. Some were as fat as beggars; some were old and shriveled; some were shriveled and young; some were bold; some were frightened; and here and there was one almost fair.

Down at the far end of one aisle was a bed whose occupant lay watching the distant, slowly approaching group with eyes of unspeakable dread. There was not a word or motion—only the steadfast gaze. Gradually the throng drew near. The faces of the students could be distinguished. This one was coarse; that one was gentle; another was sleepy; another trivial and silly; another heavy and sour; another tender and gracious. Presently the tones of the Doctor's voice could be heard, soft, clear, and without that trum-

pet quality that it had beyond the sick-room. How slowly, yet how surely, they came! The patient's eyes turned away toward the ceiling; they could not bear the slowness of the encounter. They closed; the lips moved in prayer. The group came to the bed that was only the fourth away; then to the third; then to the second. There they paused some minutes. Now the Doctor approaches the very next bed. Suddenly he notices this patient. She is a small woman, young, fair to see, and, with closed eyes and motionless form, is suffering an agony of consternation. One startled look, a suppressed exclamation, two steps forward,—the patient's eyes slowly open. Ah, me! It is Mary Richling.

"Good-morning, madam," said the physician, with a cold and distant bow; and to the students, "We'll pass right along to the other side," and they moved into the next aisle.

"I am a little pressed for time this morning," he presently remarked, as the students showed some gentle unwillingness to be hurried. As soon as he could, he parted with them and returned to the ward alone.

As he moved again down among the sick, straight along this time, turning neither to right nor left, one of the Sisters of Charity—the hospital and its so-called nurses are under their oversight—touched his arm. He stopped impatiently.

"Well, Sister?" (bowing his ear).

"I—I,—the—the—" His frown had scared away her power of speech.

"Well, what is it, Sister?"

"The—the last patient down on this side —"

He was further displeased. "I'll attend to the patients, Sister," he said; and then, more kindly, "I'm going there now. No, you stay here—if you please." And he left her behind.

He came and stood by the bed. The patient gazed on him.

"Mrs. Richling," he softly began, and had to cease.

She did not speak or move; she tried to smile, but her eyes filled, her lips quivered.

"My dear madam," exclaimed the physician, in a low voice, "what brought you here?"

The answer was inarticulate, but he saw it on the moving lips.

"Want," said Mary.

"But your husband?" He stooped to catch the husky answer.

"Home."

"Home?" He could not understand.

"Not gone to—back—up the river?"

She slowly shook her head: "No, home. In Prieur street."

Still her words were riddles. He could not see how she had come to this. He stood silent, not knowing how to utter his thought. At length he opened his lips to speak, hesitated an instant, and then asked :

"Mrs. Richling, tell me plainly: has your husband gone wrong?"

Her eyes looked up a moment upon him, big and staring, and suddenly she spoke :

"Oh, Doctor! My husband go wrong? John go wrong?" The eyelids closed down, the head rocked slowly from side to side on the flat hospital pillow, and the first two tears he had ever seen her shed welled from the long lashes and slipped down her cheeks.

"My poor child!" said the Doctor, taking her hand in his, "No, no! God forgive me! He hasn't gone wrong; he's not going wrong. You'll tell me all about it when you're stronger."

The Doctor had her removed to one of the private rooms of the pay ward, and charged the Sisters to take special care of her. "Above all things," he murmured, with a beetling frown, "tell that thick-headed nurse not to let her know that this is at anybody's expense. Ah, yes; and when her husband comes, tell him to see me at my office as soon as he possibly can."

As he was leaving the hospital gate he had an after-thought: "I might have left a note." He paused, with his foot on the carriage-step. "I suppose they'll tell him,"—and so he got in and drove off, looking at his watch.

On his second visit, although he came in with a quietly inspiring manner, he had also, secretly, the feeling of a culprit. But midway of the room, when the young head on the pillow turned its face toward him, his heart rose. For the patient smiled. As he drew nearer she slid out her feeble hand. "I'm glad I came here," she murmured.

"Yes," he replied; "this room is much better than the open ward."

"I didn't mean this room," she said. "I meant the whole hospital."

"The whole hospital!" He raised his eyebrows, as to a child.

"Ah! Doctor," she responded, her eyes kindling, though moist —

"What, my child?"

She smiled upward to his bent face.

"The poor—mustn't be ashamed of the poor, must they?"

The Doctor only stroked her brow, and presently turned and addressed his professional inquiries to the nurse. He went away. Just outside the door he asked the nurse:

"Hasn't her husband been here?"

"Yes," was the reply, "but she was asleep, and he only stood there at the door and

looked in a bit. He trembled," the unintelligent woman added, for the Doctor seemed waiting to hear more—"he trembled all over; and that's all he did, excepting his saying her name over to himself like, over and over, and wiping of his eyes."

"And nobody told him anything?"

"Oh, not a word, sir!" came the eager answer.

"You didn't tell him to come and see me?"

The woman gave a start, looked dismayed, and began:

"N-no, sir; you didn't tell——"

"Um—hum," growled the Doctor. He took out a card and wrote on it. "Now see if you can remember to give him that."

XVI.

MANY WATERS.

AS THE day faded away it began to rain. The next morning the water was coming down in torrents. Richling, looking out from a door in Prieur street, found scant room for one foot on the inner edge of the sidewalk; all the rest was under water. By noon the sidewalks were completely covered in miles of streets. By two in the afternoon the flood was coming into many of the houses. By three it was up at the door-sill on which he stood. There it stopped.

He could do nothing but stand and look. Skiffs, canoes, hastily improvised rafts, were moving in every direction, carrying the unsightly chattels of the poor out of their overflowed cottages to higher ground. Barrels, boxes, planks, hen-coops, bridge lumber, piles of straw that waltzed solemnly as they went, cord-wood, old shingles, door-steps, floated here and there in melancholy confusion; and down upon all still drizzled the slackening rain. At length it ceased.

Richling still stood in the door-way, the picture of mute helplessness. Yes, there was one other thing he could do; he could laugh. It would have been hard to avoid it sometimes, there were such ludicrous sights—such slips and sprawls into the water; so there he stood in that peculiar isolation that deaf people content themselves with, now looking the picture of anxious waiting, now indulging a low deaf man's chuckle when something made the rowdies and slatterns of the street roar.

Presently he noticed at a distance up the way a young man in a canoe, passing, much to their good-natured chagrin, a party of three in a skiff, who had engaged him in a trial of speed. From both boats a shower of hilarious French was issuing. At the nearest corner

the skiff party turned into another street and disappeared, throwing their lingual fire-works to the last. The canoe came straight on with the speed of a fish. Its dexterous occupant was no other than Narcisse.

There was a grace in his movement that kept Richling's eyes on him, when he would rather have withdrawn into the house. Down went the paddle always on the same side, noiselessly, in front; on darted the canoe; backward stretched the submerged paddle and came out of the water edgewise at full reach behind, with an almost imperceptible swerving motion that kept the slender craft true to its course. No rocking; no rush of water before or behind; only the one constant glassy ripple gliding on either side as silently as a beam of light. Suddenly, without any apparent change of movement in the sinewy wrists, the narrow shell swept around in a quarter circle, and Narcisse sat face to face with Richling.

Each smiled brightly at the other. The handsome Creole's face was aglow with the pure delight of existence.

"Well, Mistoo 'Itchlin', 'ow you enjoyin' that watah? As fah as myseff am concerned, 'I am afloat, I am afloat on the fee-us 'olling tide.' I don't think you fine that stweet pwetty dusty to-day, Mistoo 'Itchlin'?"

Richling laughed.

"It don't inflame my eyes to-day," he said.

"You muz egscuse my i'ony, Mistoo 'Itchlin'; I can't 'ep that sometime'. It come natu'al to me, in fact. I was on'y speaking i'oniously juz now in calling allusion to that dust; because, of co'se, theh is no dust to-day, because the g'ound is all covvud with watah, in fact. Some people don't understand that figgah of i'ony."

"I don't understand as much about it myself as I'd like to," said Richling.

"Me, I'm ve'y fon' of it," responded the Creole. "I was making seve'al i'onies ad those fwen' of mine juz now. We was 'unning a 'ace. An' thass anothet thing I am fon' of. I would 'ather 'un a 'ace than to wuck faw a livin'. Ha, ha, ha! I should thing so! Anybody would, in fact. Bud thass the way with me—always making some i'onies." He stopped with a sudden change of countenance, and resumed gravely: "Mistoo 'Itchlin', looks to me like you' lookin' ve'y salad." He fanned himself with his hat. "I dunno 'ow 'tis with you, Mistoo 'Itchlin', but I fine myseff ve'y oppressive thiz evening."

"I don't find you so," said Richling, smiling broadly.

And he did not. The young Creole's burning face and resplendent wit were a sunset glow in the darkness of this day of overpowering

adversity. His presence even supplied, for a moment, what seemed a gleam of hope. Why wasn't there here an opportunity to visit the hospital? He need not tell Narcisse the object of his visit.

"Do you think," asked Richling, persuasively, crouching down upon one of his heels, "that I could sit in that thing without turning it over?"

"In that pee-ogue?" Narcisse smiled the smile of the proficient as he waved his paddle across the canoe. "Mistoo 'Itchlin',"—the smile passed off,—"*I dunno if you'll billiv me, but at the same time I muz tell you the tooth*——"

He paused inquiringly.

"Certainly," said Richling, with evident disappointment.

"Well, it's juz a poss'bil'ty that you'll we-fwain fum spillin' out fum yeh till the negs cawneh. Thass the manneh of those who ah not acquainted with the pee-ogue. 'Lost to sight, to memo'y deah'—if you'll egscuse the maxim. Thass Chawles Dickens mague use of that egspwession."

Richling answered, with a gay shake of the head, "I'll keep out of it." If Narcisse detected his mortified chagrin, he did not seem to. It was hard: the day's last hope was blown out like a candle in the wind. Richling dared not risk the wetting of his suit of clothes; they were his sole letter of recommendation and capital in trade.

"Well, au'evoi, Mistoo 'Itchlin'." He turned and moved off—dip, glide, and away.

DR. SEVIER stamped his wet feet on the pavement of the hospital porch. It was afternoon of the day following that of the rain. The water still covering the streets about the hospital had not prevented his carriage from splashing through it on his double daily round. A narrow and unsteady plank spanned the immersed sidewalk. Three times, going and coming, he had crossed it safely, and this fourth time he had made half the distance well enough; but, hearing distant cheers and laughter, he looked up street; when—splatter!—and the cheers were redoubled.

"Pretty thing to laugh at!" he muttered. Two or three by-standers, leaning on their umbrellas in the lodge at the gate and in the porch, where he stood stamping, turned their backs and smoothed their mouths.

"Hah!" said the tall Doctor, stamping harder. Stamp!—stamp! He shook his leg.—"Bah!" He stamped the other long, slender, wet foot and looked down at it, turning one side and then the other.—"F-fah!"—The first one again.—"Psha!"—The other.—Stamp!—stamp!—"Right—into it!"

—up to my *ankles!*” He looked around with a slight scowl at one man, who seemed taken with a sudden softening of the spine and knees, and who turned his back quickly and fell against another who, also with his back turned, was leaning tremulously against a pillar.

But the object of mirth did not tarry. He went as he was to Mary’s room, and found her much better—as, indeed, he had done at every visit. He sat by her bed and listened to her story.

“Why, Doctor, you see, we did nicely for awhile. John went on getting the same kind of work and pleasing everybody, of course, and all he lacked was finding something permanent. Still, we passed through one month after another, and we really began to think the sun was coming out, so to speak.”

“Well, I thought so, too,” put in the Doctor. “I thought if it didn’t, you’d let me know.”

“Why, no, Doctor, we couldn’t do that; you couldn’t be taking care of well people.”

“Well,” said the Doctor, dropping that point, “I suppose as the busy season began to wane that mode of livelihood, of course, disappeared.”

“Yes,”—a little one-sided smile,—“and so did our money. And then, of course,”—she slightly lifted and waved her hand.

“You had to live,” said Dr. Sevier, sincerely.

She smiled again, with abstracted eyes. “We thought we’d like to,” she said. “I didn’t mind the loss of the things so much—except the little table we ate from. You remember that little round table, don’t you?”

The visitor had not the heart to say no. He nodded.

“When that went, there was but one thing left that could go.”

“Not your bed?”

“The bedstead; yes.”

“You didn’t sell your bed, Mrs. Richling?”

The tears gushed from her eyes. She made a sign of assent.

“But then,” she resumed, “we made an excellent arrangement with a good woman who had just lost her husband and wanted to live cheaply, too.”

“What amuses you, madam?”

“Nothing great. But I wish you knew her. She’s funny. Well, so we moved downtown again. Didn’t cost much to move.”

She would smile a little in spite of him.

“And then?” said he, stirring impatiently and leaning forward. “What then?”

“Why, then I worked a little harder than I thought,—pulling trunks around and so on,—and I had this third attack.”

The Doctor straightened himself up, folded his arms, and muttered:

“Oh!—oh! *Why* wasn’t I instantly sent for?”

The tears were in her eyes again, but—

“Doctor,” she answered, with her odd little argumentative smile, “how could we? We had nothing to pay with. It wouldn’t have been just.”

“Just!” exclaimed the physician, angrily.

“Doctor,” said the invalid, and looked at him.

“Oh—all right.”

She made no answer but to look at him still more pleadingly.

“Wouldn’t it have been just as fair to let me be generous, madam?” His faint smile was bitter. “For once? Simply for once?”

“We couldn’t make that proposition, could we, Doctor?”

He was checkmated.

“Mrs. Richling,” he said suddenly, clapping the back of his chair as if about to rise, “tell me;—did you or your husband act this way for anything I’ve ever said or done?”

“No, Doctor! no, no; never. But—”

“But kindness should seek—not be sought,” said the physician, starting up.

“No, Doctor, we didn’t look on it so. Of course we didn’t. If there’s any fault, it’s all mine. For it was my own proposition to John, that as we *had* to seek charity, we should just be honest and open about it. I said, ‘John, as I need the best attention, and as that can be offered free only in the hospital, why, to the hospital I ought to go.’”

She lay still, and the Doctor pondered. Presently he said:

“And Mr. Richling—I suppose he looks for work all the time?”

“From daylight to dark!”

“Well, the water is passing off. He’ll be along by and by to see you, no doubt. Tell him to call, first thing to-morrow morning, at my office.” And with that the Doctor went off in his wet boots, committed a series of indiscretions, reached home, and fell ill.

In the wanderings of fever he talked of the Richlings, and in lucid moments inquired for them.

“Yes, yes,” answered the sick doctor’s physician, “they’re attended to. Yes, all their wants are supplied. Just dismiss them from your mind.” In the eyes of this physician, the Doctor’s life was invaluable, and these patients or pensioners an unknown and, most likely, an inconsiderable quantity; two sparrows, as it were, worth a farthing. But the sick man lay thinking. He frowned.

“I wish they would go home.”

“I have sent them.”

"You have? Home, to Milwaukee?"

"Yes."

"Thank God!"

He soon began to mend. Yet it was weeks before he could leave the house. When one day he reëntered the hospital, still pale and faint, he was prompt to express to the Mother-Superior the comfort he had felt in his sickness to know that his brother physician had sent those Richlings to their kindred.

The Sister shook her head. He saw the deception in an instant. As best his strength would allow, he hurried to the keeper of the rolls. There was the truth. Home? Yes,—to Prieur street,—discharged only one week before. He drove quickly to his office.

"Narcisse, you will find that young Mr. Richling living in Prieur street, somewhere between Conti and St. Louis. I don't know the house; you'll have to find it. Tell him I'm in my office again, and to come and see me."

Narcisse was no such fool as to say he knew the house. He would get the praise of finding it quickly.

"I'll do my mose awduous, seh," he said, took down his coat, hung up his jacket, put on his hat, and went straight to the house and knocked. Got no answer. Knocked again and a third time; but in vain. Went next door and inquired of a pretty girl, who fell in love with him at a glance.

"Yes, but they had moved. She wasn't *jess ezac'ly* sure where they *had* moved to, *unless-n* it was in that little house yondeh between St. Louis and Toulouse; and if they wasn't there, she didn't know *where* they was. People ought to leave words where they's movin' at, but they don't. You're very welcome," she added, as he expressed his thanks; and he would have been welcome had he questioned her for an hour. His parting bow and smile stuck in her heart a six months.

He went to the spot pointed out. As a Creole, he was used to seeing very respectable people living in very small and plain houses. This one was not too plain even for his ideas of Richling, though it was but a little one-street-door-and-window affair, with an alley on the left running back into the small yard behind. He knocked. Again no one answered. He looked down the alley and saw, moving about the yard, a large woman, who, he felt certain, could not be Mrs. Richling.

Two little short-skirted, bare-legged girls were playing near him. He spoke to them in French. Did they know where Monsieu' 'Itchlin' lived? The two children repeated the name, looking inquiringly at each other.

"*Non, miché*," "No, sir, they didn't know."

"*Qui reste ici?*" he asked. "Who lives here?"

"*Ici? Madame qui reste là c'est Mizziz Ri-i-i-ly!*" said one.

"Yass," said the other, breaking into English and rubbing a mosquito off of her well-tanned shank with the sole of her foot, "'tis Mizziz Ri-i-i-ly what live there. She jess move een. She's got a lill baby.—Oh! you means dat lady what was in de Chatty Hawspill!"

"No, no! A real, nice *lady*. She nevva saw that Cha'ity Hospi'l."

The little girls shook their heads. They couldn't imagine a person who had never seen the Charity Hospital.

"Was there nobody else who had moved into any of these houses about here lately?" He spoke again in French. They shook their heads. Two boys came forward and verified the testimony. Narcisse went back with his report: "Moved,—not found."

"I fine that ve'y d'oll, Doctah Seveeah," concluded the unamused, hanging up his hat; "some peop' always 'ard to fine. I h-even notiz that sem thing w'en I go to colic some bill. I dunno 'ow 'tis, Doctah, but I assu' you I kin tell that by a man's physio'nomy. Nobody teach me that. 'Tis my own *ingeen-w'ty* 'as made me to discovveh that, in fact."

The Doctor was silent. Presently he drew a piece of paper toward him and, dipping his pen into the ink, began to write:

"Information wanted—of the whereabouts of John Richling——"

"Narcisse," he called, still writing, "I want you to take an advertisement to the 'Picayune' office."

"With the gweatez of pleazheh, seh." The clerk began his usual shifting of costume. "Yessch! I assu' you, Doctah, that is a p'oposition moze entily to my satizfagtion; faw I am suffe'ing faw a smoke, and deztitute of a ciga'ette! I am aztonizh' 'ow I did that, to egs-hauz them unconsciously, in fact." He received the advertisement in an envelope, whipped his shoes a little with his handkerchief, and went out. One would think, to hear him thundering down the stairs, that it was twenty-five cents' worth of ice.

"Hold o——" The Doctor started from his seat, then turned and paced feebly up and down. Who, besides Richling, might see that notice? What might be its unexpected results? Who was John Richling? A man with a secret, at the best; and a secret, in Dr. Sevier's eyes, was detestable. Might not Richling be a man who had fled from something? "No! no!" The Doctor spoke aloud. He had promised to think nothing ill of him. Let the poor children have their silly secret. He spoke again. "They'll find out the folly of it by and by." He let the advertisement go; and it went.

XVII.

RAPHAEL RISTOFALO.

RICHLING had a dollar in his pocket. A man touched him on the shoulder.

But let us see. On the day that John and Mary had sold their only bedstead, Mrs. Riley, watching them, had proposed the joint home. The offer had been accepted with an eagerness that showed itself in nervous laughter. Mrs. Riley then took quarters in Prieur street, where John and Mary, for a due consideration, were given a single neatly furnished back room. The bedstead had brought seven dollars. Richling, on the day after the removal, was in the commercial quarter, looking, as usual, for employment.

The young man whom Dr. Sevier had first seen, in the previous October, moving with a springing step and alert, inquiring glances from number to number in Carondelet street was slightly changed. His step was firm, but something less elastic, and not quite so hurried. His face was more thoughtful, and his glance wanting in a certain dancing freshness that had been extremely pleasant. He was walking in Poydras street toward the river.

As he came near to a certain man who sat in the entrance of a store, with the freshly whittled corner of a chair between his knees, his look and bow were grave, but amiable, quietly hearty, deferential, and also self-respectful—and uncommercial: so palpably uncommercial that the sitter did not rise or even shut his knife.

He slightly stared. Richling, in a low, private tone, was asking him for employment.

"What?" turning his ear up and frowning downward.

The application was repeated, the first words with a slightly resentful ring, but the rest more quietly.

The store-keeper stared again and shook his head slowly.

"No, sir," he said, in a barely audible tone. Richling moved on, not stopping at the next place, or the next, or the next; for he felt the man's stare all over his back until he turned the corner and found himself in Tchoupitoulas street. Nor did he stop at the first place around the corner. It smelt of deteriorating potatoes and up-river cabbages, and there were open barrels of onions set ornamentally aslant at the entrance. He had a fatal conviction that his services would not be wanted in malodorous places.

"Now isn't that a shame?" asked the chair-whittler, as Richling passed out of sight. "Such a gentleman as that, to be beggin' for work from door to door!"

"He's not beggin' f'om do' to do'," said a second, with a Creole accent on his tongue and a match stuck behind his ear like a pen. "Beside, he's too *much* of a gennlemun."

"That's where you and him differs," said the first. Hefrowned upon the victim of his delicate repartee with make-believe defiance. Number Two drew from an outside coat-pocket a wad of common brown wrapping-paper, tore from it a small, neat parallelogram, dove into an opposite pocket for some loose smoking-tobacco, laid a pinch of it in the paper, and, with a single dexterous turn of the fingers, thumbs above, the rest beneath—it looks simple, but 'tis an amazing art—made a cigarette. Then he took down his match, struck it under his short coat-skirt, lighted his cigarette, drew an inhalation through it that consumed a third of its length, and sat there with his eyes half-closed and all that smoke somewhere inside of him.

"That young man," remarked a third, wiping a tooth-pick on his thigh and putting it in his vest-pocket as he stepped to the front, "don't know how to *look* fur work. There's one way fur a day-laborer to look fur work, and there's another way fur a gentleman to look fur work, and there's another way fur a—a—a man with money to look fur something to put his money into. *It's jest like fishing!*" He threw both hands outward and downward, and made way for a porter's truck with a load of green meat. The smoke began to fall from Number Two's nostrils in two slender blue streams. Number Three continued:

"You've got to know what kind o' hooks you want, and what kind o' bait you want, and then, after *that*, you've —"

Numbers One and Two did not let him finish.

"—Got to know how to fish," they said; "that's so!" The smoke continued to leak slowly from Number Two's nostrils and teeth, though he had not lifted his cigarette the second time.

"Yes, you've got to know how to fish," reaffirmed the third. "If you don't know how to fish, it's as like as not that nobody can tell you what's the matter; an' yet, all the same, you aint goin' to ketch no fish."

"Well, now," said the first man, with an unconvinced swing of his chin, "*spunk* 'll sometimes pull a man through; and you can't say he aint spunky." Number Three admitted the corollary. Number Two looked up: his chance had come.

"He'd a wipped you faw a dime," said he to Number One, took a comforting draw from his cigarette, and felt a great peace.

"I take notice he's a little deaf," said Number Three, still alluding to Richling.

"That'd spoil him for me," said Number One.

Number Three asked why.

"Oh, I just wouldn't have him about me. Didn't you ever notice that a deaf man always seems like a sort o' stranger? I can't bear 'em."

Richling meanwhile moved on. His criticisms were right. He was not wanting in courage; but no man from the moon could have been more an alien on those sidewalks. He was naturally diligent, active, quick-witted, and of good, though may be a little too scholarly address; quick of temper, it is true, and uniting his quickness of temper with a certain bashfulness—an unlucky combination, since, as a consequence, nobody had to get out of its way; but he was generous in fact and in speech, and never held malice a moment. But besides the heavy odds which his small secret seemed to be against him, estopping him from accepting such valuable friendships as might otherwise have come to him, and besides his slight deafness, he was by nature a recluse, or, at least, a dreamer. Every day that he set foot in Tchoupitoulas, or Carondelet, or Magazine, or Fulton, or Poydras street, he came from a realm of thought, seeking service in an empire of matter.

There is a street in New Orleans called *Triton Walk*. That is what all the ways of commerce and finance and daily bread-getting were to Richling. He was a merman—ashore. It was the feeling rather than the knowledge of this that prompted him to this daily, aimless trudging after mere employment. He had a proper pride, once in awhile a little too much; nor did he clearly see his deficiencies; and yet the unrecognized consciousness that he had not the commercial instinct made him willing—as Number Three would have said—to "cut bait" for any fisherman who would let him do it.

He turned without any distinct motive and, retracing his steps to the corner, passed up across Poydras street. A little way above it he paused to look at some machinery in motion. He liked machinery—for itself rather than for its results. He would have gone in and examined the workings of this apparatus had it not been for the sign above his head, "No Admittance." Those words always seemed painted for him. A slight modification in Richling's character might have made him an inventor. Some other faint difference, and he might have been a writer, a historian, an essayist, or even—there is no telling—a well-fed poet. With the question of food, raiment, and shelter permanently settled, he might have become one of those resplendent flash lights that at intervals dart their beams across the dark waters of the world's igno-

rance, hardly from new continents, but from the observatory, the study, the laboratory. But he was none of these. There had been a crime committed somewhere in his bringing up, and as a result he stood in the thick of life's battle, weaponless. He gazed upon machinery with child-like wonder; but when he looked around and saw on every hand men,—good fellows who ate in their shirt-sleeves at restaurants, told broad jokes, spread their mouths and smote their sides when they laughed, and whose best wit was to bombard one another with bread-crusts and hide behind the sugar-bowl,—men whom he could have taught in every kind of knowledge that they were capable of grasping, except the knowledge of how to get money,—when he saw these men, as it seemed to him, grow rich daily by simply flipping beans into each other's faces, or slapping each other on the back, the wonder of machinery was eclipsed. Do as they did? He? He could no more reach a conviction as to what the price of corn would be to-morrow than he could remember what the price of sugar was yesterday.

He called himself an accountant—gulping down his secret pride with an amiable glow that commanded, instantly, an amused esteem. And to judge by his evident familiarity with Tonti's beautiful scheme of mercantile records, he certainly—those guessed whose books he had extricated from confusion—had handled money and money values, in days before his unexplained coming to New Orleans. Yet a close observer would have noticed that he grasped these tasks only as problems, treated them in their mathematical and enigmatical aspect, and solved them without any appreciation of their concrete values. When they were done, he felt less personal interest in them than in the architectural beauty of the store-front, whose window-shutters he had never helped to close without a little heart-leap of pleasure.

But standing thus, and looking in at the machinery, a man touched him on the shoulder.

"Good-morning," said the man. He wore a pleasant air. It seemed to say, "I'm nothing much, but you'll recognize me in a moment; I'll wait." He was short, square, solid, beardless; in years, twenty-five or six. His skin was dark, his hair almost black, his eyebrows strong. In his mild black eyes you could see the whole Mediterranean. His dress was coarse, but clean; his linen soft and badly laundered. But under all the rough garb and careless, laughing manner was visibly written again and again the name of the race that once held the world under its feet.

"You don't remember me?" he added after a moment.

"No," said Richling, pleasantly, but with embarrassment. The man waited another moment, and suddenly Richling recalled their earlier meeting. The man, representing a wholesale confectioner in one of the smaller cities up the river, had bought some cordials and sirups of the house whose books Richling had last put in order.

"Why, yes I do, too!" said Richling. "You left your pocket-book in my care for two or three days; your own private money, you said."

"Yes." The man laughed softly. "Lost that money. Sent it to the boss. Boss died—store seized—everything gone." His English was well pronounced, but did not escape a pretty Italian accent, too delicate for the printer's art.

"Oh! that was too bad!" Richling laid his hand upon an awning-post and twined an arm and leg around it as though he were a vine. "I—I forget your name."

"Ristofalo. Raphael Ristofalo. Yours is Richling. Yes, knocked me flat. Not got cent in world." The Italian's low, mellow laugh claimed Richling's admiration.

"Why, when did that happen?" he asked.

"Yes'day," replied the other, still laughing.

"And how are you going to provide for the future?" Richling asked, smiling down into the face of the shorter man. The Italian tossed the future away with the back of his hand.

"I got nothin' do with that." His words were low, but very distinct.

Thereupon Richling laughed, leaning his cheek against the post.

"Must provide for the present," said Raphael Ristofalo. Richling dropped his eyes in thought. The Present! He had never been able to see that it was the present which must be provided against, until, while he was training his guns upon the future, the most primitive wants of the present burst upon him right and left like whooping savages.

"Can you lend me dollar?" asked the Italian. "Give you back dollar an' quarter to-morrow."

Richling gave a start and let go the post. "Why, Mr. Risto—falo, I—, I—, the fact is, I"—he shook his head—"I haven't much money."

"Dollar will start me," said the Italian, whose feet had not moved an inch since he touched Richling's shoulder. "Be aw right to-morrow."

"You can't invest one dollar by itself," said the incredulous Richling.

"Yes. Return her to-morrow."

Richling swung his head from side to side as an expression of disrelish. "I haven't been employed for some time."

"I goin' t'employ myself," said Ristofalo.

Richling laughed again. There was a faint betrayal of distress in his voice as it fell upon the cunning ear of the Italian; but he laughed too, very gently and innocently, and stood in his tracks.

"I wouldn't like to refuse a dollar to a man who needs it," said Richling. He took his hat off and ran his fingers through his hair. "I've seen the time when it was much easier to lend than it is just now." He thrust his hand down into his pocket and stood gazing at the sidewalk.

The Italian glanced at Richling askance, and with one sweep of the eye from the softened crown of his hat to the slender, white, bursted slit in the outer side of either well-polished shoe, took in the beauty of his face and a full understanding of his condition. His hair, somewhat dry, had fallen upon his forehead. His fine, smooth skin was darkened by the exposure of his daily wanderings. His cheek-bones, a trifle high, asserted their place above the softly concave cheeks. His mouth was closed and the lips were slightly compressed; the chin small, gracefully turned, not weak—not strong. His eyes were abstracted, deep, pensive. His dress told much. The fine plaits of his shirt had sprung apart and been neatly sewed together again. His coat was a little faulty in the set of the collar, as if the person who had taken the garment apart and turned the goods had not put it together again with practiced skill. It was without spot and the buttons were new. The edges of his shirt-cuffs had been trimmed with the scissors. Face and vesture alike revealed to the sharp eye of the Italian the woe underneath. "He has a wife," thought Ristofalo.

Richling looked up with a smile. "How can you be so sure you will make, and not lose?"

"I never fail." There was not the least shade of boasting in the man's manner. Richling handed out his dollar. It was given without patronage and taken with simple thanks.

"Where goin' to meet to-morrow morning?" asked Ristofalo. "Here?"

"Oh! I forgot," said Richling. "Yes, I suppose so; and then you'll tell me how you invested it, will you?"

"Yes; but you couldn't do it."

"Why not?"

Raphael Ristofalo laughed. "Oh! fifty reason'."

SEAL OF THE TWENTY-FOUR PROPRIETORS OF EAST JERSEY.

HUSBANDRY IN COLONY TIMES.*

BY EDWARD EGGLESTON.

I.

NEW WAYS IN A NEW WORLD.

WHEN Philip Carteret, the first governor of New Jersey, landed at Elizabethtown, he did not come ashore with the petty-royal pomp affected by many provincial governors, but marched from the landing-place to his capital town, which contained four families, with a hoe on his shoulder,—a bit of theatrical display by which he signified his intention of becoming a planter with the people. For by the time the English settlement of the Jerseys began, the old illusions were dead; and it had become a recognized principle that colonies could not live by mines, or by the fur trade, and that tillage was the only sure basis for a plantation. The device on the seal of East Jersey is wrought of "English corn" and "Indian corn,"—wheat and maize,—symbols of the soberer expectation at the period of the Scotch and Quaker migrations.

But in the earliest period, even the agricultural notions of the planters and projectors had the prevailing hue of romance; it was only from a few men of impertinent common sense, like Captain John Smith, that one heard of breadstuffs as profitable for colonial production. Having a new world to try in, the English emigrants were bent on trying for new, or at least for un-English, sources of wealth. It was, indeed, a sort of commercial treason to grow that which might disturb the market for the produce of English farms or looms; and hence the most child-like experiments were made upon the youthful hemisphere in husbandry, as well as in religion and government.

II.

VISIONARY PROJECTS AND FAILURES.

PERHAPS the most curious and instructive example on record of persistent effort to run counter to economic gravitation is to be found in the attempts at silk-raising in the colonies. For more than a hundred and sixty years, down to the very outbreak of the Revolution, persevering efforts were made by kings, privy councils, parliaments, governors, proprietaries, provincial councils, legislative assemblies, noblemen, philosophers, and ladies to secure the success of silk-growing in the thirteen British-American provinces. During most of this period England itself was seething with the spirit of commercial and agricultural innovation. About the time of the sailing of the Virginia argosy, an effort was making to introduce the silk-worm to the ungenial British climate, in order that the newly imported silk throwsters and weavers of Spitalfields and Moorfields might have fiber which had not paid a commercial tribute to France and Italy. Two years after the settling of Jamestown, the first mulberries were planted in England, and the king himself engaged in the silk business. The rudiments of colonization were not understood then; everything must be forced prematurely from a plantation that had no adequate roofs to shelter it, or corn enough to keep away starvation. Along with the making of potash, iron, and glass, and the growing of cotton and the vine, silk-culture was begun by men who required to be fed and clothed from England. Before the James River plantation was nine years old, Virginia sent to England silk that had, perhaps, cost more than the value of an equal bulk of gold. A little later it was ob-

* Copyright, 1883, by Edward Eggleston. All rights reserved.

served that the wild caterpillars of America spun silk upon the native mulberries, and the flagging silk craze was revived, a French treatise on silk-growing was translated, and in 1620 a new attempt was made by skilled Frenchmen sent over for the purpose. The highest hopes were raised to be dashed by the Indian outbreak of 1622, which saved divers visionary projects from a more disgraceful failure. In 1623, before the smoke of the Indian massacre and the counter-massacres had cleared away, law was invoked to compel the planting of white mulberries and the raising of silk. This was desired not only for the sake of

SILK-WINDING. FAC-SIMILE OF A PICTURE IN EDWARD WILLIAMS'S "VIRGINIA TRULY VALUED": 1650.

the silk, but in order to supplant tobacco — tobacco being almost the only thing concerning which the Stuart kings had scruples of conscience. While yet the Indian war raged fitfully, cocoons seem to have been again produced; there is a story that Charles I., at his coronation in 1625, wore a robe of silk grown in Virginia. Having clothed a king, the silk-worms rested. Fourteen years later, new attempts were made and a considerable quantity of silk was sent to the king, but again failure was covered by an Indian massacre. Edward Digges, who was chosen governor of Virginia under the Commonwealth in 1655, produced four hundred pounds of Virginia silk in that year, and announced that he had overcome all the main difficulties; whereupon the silk fever broke out afresh and raged with unabated fury for ten years; the excitement spread also among sentimental economists in England, and silk-worms' eggs were gratuitously dispatched to the James River, along with no end of good advice. A young lady in England sent word to the colony that if the worms were only let loose upon the trees, they would feed themselves. Wild projects for raising silk from the native silk-worm were elaborated by writers who had never seen an American caterpillar or his coarse cocoon of silken homespun. Writers of more consequence announced that tobacco would soon be wholly laid aside for the light work of silk-culture, and that servants would thenceforth be little needed in the Arcadian land of Virginia. Digges went so far as to import "two Armenians out of Turkey," to show the way of feeding and winding, whereupon this poetic apostrophe to him was spun in England:

"Courage, brave Sir; since ayde from God is sent, Proceed, go on, drive forth thy great intent."

The House of Burgesses passed a law for the planting of one mulberry-tree to every ten acres of land. Rewards of many grades were offered for the production of silk. George the Armenian was paid four thousand pounds of tobacco in 1656 to induce him to stay in the country, and he received another thousand pounds of tobacco when, at length, he had actually produced ten pounds of silk. The premiums offered by the Assembly rose until, in 1658, ten thousand pounds of tobacco were promised for the raising of fifty pounds of silk. Sir William Berkeley, who in 1662 made many fair promises to the court that he would secure for England commercial independence in silk, flax, and potash, was promised a liberal reward for the first ship of three hundred tons that he should send home from Virginia laden with these commodities. The chief result from all this excitement was that, in 1668, Charles II. received a present of three hundred pounds of Virginia silk, which he ordered to be wrought up for "our owne use," and to the excellence of which he gave a certificate. But Virginia silk cost too much for other than royal wear, and by this time the fourth and greatest of Virginia silk manias was on the wane; the law requiring the planting of mulberries had already been withdrawn, in 1666, as useless.

And yet the colony was in the position of a delinquent that had failed to fulfill the promise of its youth. At the coming of Huguenot refugees to the upper James River, the project was once more revived, and the French Protestants long produced silk for domestic use. In 1730, about a hundred and twenty years after the first attempt to wind silk in Virginia, raw silk was again sent thence to England, this time to the amount of three hundred pounds.

In almost every colony the same experiments were tried, with the same apparent success and with the same ultimate failure, due not to physical, but to economic causes. Huguenot refugees were sent to South Carolina at the king's expense, in 1679, to introduce the culture of wine, oil, and silk; but the eggs of the silk-worms which they brought hatched out at sea and perished for want of mulberry leaves. Sir Nathaniel Johnson, afterward governor of South Carolina, called his plantation Silkhope, and sent silk to England in 1699. Under his fostering care, by 1707, the rearing of the worms "had come into great improvement," some families producing forty or fifty pounds a year apiece. A part of this they worked up in their domestic manufacture, mixed with wool, to make what was called "druggets." Silk was produced fitfully after this time, and very small quantities occasionally appear in the table of exports. In 1750 the export reached a climax of a hundred and eighteen pounds. Some public-spirited Charleston ladies of high standing substituted the winding of silk for the tamer recreations of needle-work and the playing of the harpsichord. One of them, the mother of General Pinckney, spun and wove three dress-patterns from silk of her own production; of these, one naturally went to adorn a royal person — this time the princess-dowager of Wales; another was sent to Lord Chesterfield; and the third remains in America to this day.

But Georgia, the devoted victim of many Utopian schemes, was the principal scene of the silk folly. Next to the founding of an earthly paradise, the most cherished purpose of the Georgia trustees was the supplanting of all other countries in the production of silk. In a beautiful garden of acclimation, at Savannah, the cross-walks were planted with orange-trees, and the squares filled with white mulberries. One mulberry-tree to every ten acres had been exacted in Virginia. Georgia ordained the planting of a hundred times as many, or ten trees to every acre. Italian workmen were employed, with English girl apprentices; English gardeners were taught to care for the trees, and English joiners learned to make the machines. In 1734 the first windings of Georgia silk were carried to England, and, as a matter of course, the queen wore a dress of the new silk at the next celebration of the king's birthday. A filature was built in Savannah, and bounties were paid, by which means the price of silk was doubled. The production under this artificial stimulation grew apace. In 1762 and in each of the two following years, over fifteen thousand pounds of cocoons were bought at

the filature, and in 1766 the production had mounted to twenty thousand pounds. But, with all this apparent prosperity, a first step had not been taken toward the permanent establishment of the industry. The bounty was taken off in this year, and silk left to sell at its normal price. In three or four years the production had almost entirely ceased.

At various times, the rage for mulberry planting extended to Massachusetts and a governor of Connecticut, among others, is said to have succeeded in raising silk enough to clothe himself and his family. Silk was believed at one time to be the long-sought staple that should take away the reproach of barrenness from New England. Jared Eliot, the most eminent of New England agriculturists, thought after trial that it was as easy to make silk as linen, and he advocated the planting of mulberries with arguments of the kind in vogue at the time: the tree was good for fire-wood, bore good fruit, was equal to cedar for timber, improved the land by shading it, and lastly afforded groves for retirement; the garden of Eden, remarks the farmer-clergyman in triumphant conclusion, was not furnished with palaces, but with a multitude of trees.

Nor did the middle provinces escape the contagion. The Swedes who first settled on the Delaware were to raise silk according to the programme prepared for them. Half a century later, Penn proposed mulberry-trees, and a specimen of silk from Pennsylvania was seen in England in 1726. Franklin was an active promoter of silk-culture; a filature was established in Philadelphia, and, by the old method of offering premiums, two thousand three hundred pounds were procured for winding in 1771, the most of it from the New Jersey side of the river. The Queen of George III. wore a full court-dress of this silk — the last of all the garbs produced by loyal American silk-growers for English royalty. The succeeding silk fever produced a suit for Washington, and it is at this writing given out that a society of enthusiasts have their silk-worms at work on one for Mrs. Garfield.

All the American colonial experiments proved that there is no physical obstacle to the production of silk in America; but they all showed also the insuperable economic objection to such an enterprise. The Swiss at Purrysburg, in South Carolina, and the Salzburger in Georgia, whose modes of life and labor were those of European peasants, produced cocoons with more success than any others. The pastor of the Salzburger touched the core of the difficulty when he showed that, after the premiums were taken off, his people

could earn two shillings a day at other labors and barely one at tending silk-worms. But hobby-riders are never unhorsed: the failure was attributed to the culpable negligence of the planters in not importing a larger proportion of women slaves who might have been put to raising silk.

Wine-culture was set agoing by the same considerations of national policy as silk-raising, was tried with the same persistent iteration in almost if not quite every one of the American colonies, and failed from the same economic difficulties. Before they had bread to satisfy hunger, the James River settlers had made sour wine of wild grapes. In 1632 the growing of five vines was made obligatory on every planter, and in 1658 ten thousand pounds of tobacco were promised to him who should first produce two tuns of Virginia wine. The tolerable fitness of the Virginia climate and soil for grape-growing was proved over and over again, by the vine-dressers brought over from France in the first years, by the Huguenots, who produced wine on a small scale for a long time, by the Palatines on the Rappahannock, and by many others. Beverley, the historian, won a wager of a thousand guineas by making four hundred gallons of wine from his vineyard of three acres. Yet, so late as 1762, subscriptions were solicited to set on foot a new beginning of grape-culture in Virginia.

Undaunted by climate, the Massachusetts immigrants asked for French vine-dressers in 1629, and later an island in Boston harbor was leased to Governor Winthrop by the sanguine General Court for a hogshead of the best wine that should be made there annually. In the patroonship of Rensselaer at Albany wine was proposed, as it was by the Swedish pioneers on the Delaware. It was attempted by French settlers in Rhode Island and Carolina; the latter province was expected to supply the whole demand of the West Indies. William Penn only hesitated whether to import foreign wines or to "fine" the American ones, and ended by trying both plans, establishing a vineyard with two thousand French vines near Philadelphia. It is unnecessary to trace further this chronicle of failure in wine-growing. To the end of the colonial epoch these efforts were renewed; vine-dressers were sent over and rewards were offered, but no considerable quantity was ever made. It was cheaper at that day to import from Madeira and Portugal than to divert labor from the profitable American staples to grow wine, and the law of relative cheapness is as hard to escape as that of gravitation.

Other favorite plants for experiment were

madder, which was tried from the extreme South to Albany, and olive trees, which were several times introduced; for there was good hope that the South would prove, in the phrase of a writer of the time, "a very good oyl country." Leave was given to make oil from nuts, in South Carolina, in 1714. Minuit and his Swedes sowed canary seed on the Delaware, but it was "afterward neglected"—probably from lack of canary birds to eat it. The Utopian plans of Oglethorpe for Georgia led to experiments in gross with coffee, cotton, palma christi, tea, and "several physical plants of the West Indies." The cinchona tree would have been tried also, but for the impossibility of procuring anything to plant except the bark. North Carolina is said to have attempted coffee.

The persistent effort to find some staple commodity for New England, other than that which grew in the sea, led to experiments in that inhospitable clime with almost every agricultural plant of the world. "Staple commodities are things they want there," says a writer named Wiggins, whose letter, bearing date 1632, is preserved in the English archives. He recommends a consultation with "one Lane, a merchant tailor," who had just come from the West Indies, and who desired to introduce into New England a staple, the name of which is to this day shrouded in the mystery thrown about it by Wiggins and the merchant tailor. But neither Lane nor Wiggins, nor any of the long line of projectors who came after, succeeded in finding an important agricultural commodity suited to the New England sandy coasts and rocky hill-sides; and this, notwithstanding the hops, licorice, madder, and woad roots sent out at the beginning, the mulberries so often planted, and the coffee-berries sown by Harvard students in 1723, and by other students in 1748, and in spite of the cotton attempted in Connecticut by Jared Eliot,—which last would perhaps have succeeded, had not the frost interfered with it before it was ripe,—and in spite of the licorice, hemp, and indigo tried by the same enterprising clergyman, and the English walnuts grafted by Judge Sewall. New York, New Jersey, and Pennsylvania had wheat, Maryland and Virginia tobacco, the Carolinas rice and indigo; but New England, like a disinherited youth, was forced to take to the sea; from which, by the hard toil of fisheries and foreign trade, was won a fortune as good, certainly, as that gotten by the richest staple commodities of the more genial countries to the southward.

The ardor for novel projects in the colonies was but a symptom of the fever in the metropolis. Manifestations of this spirit are

found in the repeated propositions from England and the actual attempts in America to domesticate the American bison as a substitute for the ox; and the yet more startling plan for the "unwinding" of the James River sturgeon, and for the extraction of perfume from the musk-rat. Any one of these seems feasible, however, when compared with the proposal, made in 1650, to tame the American Indian, and use him in winding silk, and in diving for pearls in the Virginia waters.

III.

THE TOBACCO STAPLE.

BUT in a new land trial of many ways is needful, and the bold man who makes experiments has always the chance of finding a new pathway; out of the thousand experiments emerges one discovery. Of all the colonial experimenters and projectors, one of the most fortunate was John Rolfe, the first Englishman to hazard marriage with an American savage, whereby he procured years of peace, in which the pioneer colony took firm root,—and the first Virginian to risk the planting of tobacco for the market. Two facts had put this last experiment well out of the reach of probable failure; tobacco was already growing in the Indian fields in Virginia, and it was already an article of sale in Europe, having been introduced into Portugal nearly a century before the settlement of Jamestown.

When the Virginians applied the spade to its culture it soon became much more productive than it had been in the rudely tilled Indian patches; in 1621, before the planting of tobacco was ten years old, fifty-five thousand pounds were sent from the James River to Holland, the land of smokers. In this same year began the efforts of the royal government in England to put restrictions on the production of the despised narcotic. The wide-spread opposition to tobacco at that time seems to have come partly from a dislike of novelties, partly from a belief that it tended to produce a degeneration of the English race, and partly from the multiform puritanism that was spreading among people of every rank, and which objected to self-indulgences except in the ancient and well-established English forms of heavy eating and stout drinking. James I., notwithstanding his own intemperate use of strong liquors and his hatred of puritanism, had already published a "Counterblast to Tobacco," and he now undertook to resist economic forces, with as much chance of success as his remote predecessor Knut had of arresting the incoming

tide. Tobacco was in demand; a few years later a hundred thousand Englishmen were in bondage to it, and the very plowmen had learned to take it in the field. Virginia was able to supply it in better quality than any other country. This conjunction of demand and supply settled the destiny of the much-battered pioneer colony. In five years after the destructive massacre, and still more destructive terror, of 1622, there were more than four thousand English on the Virginia river banks, well housed and prosperous. Two years later, in 1631, the Privy Council of Charles I. declared that this plant enervated "both body and courage," and the king announced that he had "long expected some better fruit than tobacco and smoke" from Virginia. The colony also desired, for other reasons than those assigned by the king, to prevent excessive production. Having tried in vain every conceivable form of minute regulation, the legislature ordered the destruction of all the bad and half the good in 1640; and when the price had further declined, divers attempts were made to wholly suppress tobacco-growing for one season in order that the market might rally.

All natural conditions were favorable to the culture of tobacco in the Chesapeake region. Virgin land was without any known limit, and the climate was congenial. The small farmer, and the English servant newly freed from a four or five years' bondage, could begin a tobacco-field without other capital than an axe, a mattock, and a hoe. Every comer was entitled to fifty acres of land, subject to an insignificant quit-rent. The easy application to tobacco of the labor of indentured servants, convicts, and negro slaves, made it a favorite crop with the large land-holder; the navigable rivers and broad estuaries of the Chesapeake and Albemarle regions enabled the planters to ship their bulky hogsheads direct from their own barns, or to boat them to the inspector's warehouse. These advantages, and the agreement of tobacco-raising with the country-gentleman notions and pride in land-ownership brought from England, made it inevitably the leading occupation of the country. The habits of the people in the two Chesapeake colonies were soon molded by their staple, so that tobacco held its own, almost to the exclusion of all other productions, except wheat and maize; and this in the teeth of the restrictions of royal monopolies at first and of burdensome navigation acts afterward, and notwithstanding a duty of six times the plantation value on what was consumed in England. Tobacco was subjected, besides, to plunder on ship-board, to exasperating frauds in the customs,

to unreasonable extortions from the merchants under pretense of samples, and to a tare of one twenty-sixth of what remained after all this robbery.

At first the planters simply threw their tobacco in heaps and allowed it to cure as heaven pleased by exposure to the sun and the air. As early as 1617 a Mr. Lambert invented the better way of hanging it on lines, and an order was sent to England for cordage; but it occurred to somebody at a later time that the plant would hang as well on Virginia sticks as on London strings. Pegs were driven into the stalks to hang it by, until some new inventor saved the trouble with pegs by partly splitting the stalks and so hanging them on the sticks. A more important change was wrought when, at some not remembered period, the primitive dependence on outdoor exposure for curing gave way to the method of drying by a slow fire in an airy barn. The Virginia and Maryland planters, though conservative and slow-going in all besides, carried their own particular art, step by step, to high perfection; and then, by excluding the poorer sorts from European shipment, through a rigorous system of inspection, they gained a world-wide reputation for producing the staple at its best.

By the beginning of the eighteenth century private "rolling houses," for the deposit and shipment of the staple, had become common, and early in the century both the Chesapeake colonies established public places for the deposit of tobacco. The quality was more perfectly guaranteed by the utterance of transferable warehouse certificates of deposit, which passed current for money.

In 1730 twenty-four thousand tons of shipping were required to carry a year's crop from Maryland and Virginia, and before the close of the provincial period there were two hundred large vessels in the trade, carrying a hundred thousand hogsheads annually. The navigation laws required that all of this should first be landed in England, where it paid a duty equal to a million and a half of dollars, an amount greater than that brought into the exchequer by any other commodity. No bounty was ever paid to promote the culture of the despised "weed," as King James had nicknamed it; the English government and the colonial legislatures alike sought to repress it; but the sure action of an economic gravitation begotten of climate, soil, social condition, and market demand, was strong enough to restrict even the profitable wheat culture, and to extinguish almost all other forms of industry in the two tobacco colonies. The staple entered into the whole life of the people, furnished currency, gave form to com-

merce, affected manners, made slavery profitable and persistent, and pervaded all legislation.

There was, of course, no sharp line of demarkation for the growth of a staple. When the early overproduction of tobacco made a secondary crop desirable in Virginia and Maryland, wheat was profitably grown, and became a crop of such magnitude in the later years of the colonial period, that it was believed to threaten the ascendancy of tobacco. Tobacco, in turn, stretched the area of its growth far to the north. The Delaware country was famous for its fine tobacco in the days of the Swedish and Dutch dominions, and at one period, after the coming of the Quakers, Philadelphia loaded fourteen ships a year with this staple. New York from Dutch times grew tobacco for export; there were official inspectors of it as early as 1638. It was grown in New England, and as far toward the pole as Quebec. But in the English colonies north of Delaware Bay, climate and social conditions turned the balance slowly but surely in favor of wheat, and the middle colonies became like the ancient land of Egypt for corn. North Carolina grew tobacco; but in the southern and sea-coast counties of that colony, the rosin, pitch, and turpentine of the pine forests were more profitable, and their production was more suited to the habits of the people. Even in South Carolina tobacco was the great staple of the "upper counties."

IV.

RICE AND INDIGO.

THE destiny of South Carolina was changed by a single lucky experiment. In 1696, when the colony was more than thirty years old, the pioneers were still engaged in buying furs from the Indians, extracting rosin, tar, and turpentine from the pines, cutting timber for shipment, and growing slender harvests of grain on the light soil along the coast. Attempts had already been made to grow indigo, ginger, and cotton; but these had not answered expectation. A small and unprofitable kind of rice had also been tried in 1688. But one Thomas Smith thought that a patch of wet land at the back of his garden in Charleston resembled the soil he had seen bearing rice in Madagascar. It chanced in 1696, that a brigantine from that island anchored in distress near Sullivan's Island, and the captain, an old friend of this enterprising Thomas Smith, was able to furnish him a bag of Madagascar rice suitable for seed. It grew luxuriantly in the wet corner of the

JARED ELIOT. (FROM AN OIL PORTRAIT IN POSSESSION OF CHARLES G. ELLIOT, ESQ., CLINTON, CONN.)

garden, and the seed from this little harvest was widely distributed. In three or four years the art of husking the rice was learned. African slaves were easily procured in the West Indies, and the face of society in the young State was presently changed: South Carolina became a land of great planters and of a multitude of toiling negroes. Smith was raised to the rank of landgrave, and made governor of the colony three years after the success of his rice-patch. The new grain was at first grown on uplands; but the planters afterward discovered that the neglected swamps were more congenial and

less exhaustible. The cruelly hard labor of separating the grains from the adhering husks crippled the strength and even checked the increase of the negroes; but in the years just preceding the Revolution this task came to be performed with mills driven by the force of the incoming and outgoing tides, or turned by horses or oxen. A hundred and forty thousand barrels of Carolina rice, of four or five hundred weight apiece, were annually exported before the war of independence. Through the example of a governor of Georgia, the culture of rice spread into that colony, and completed the ruin of the silk business.

Nearly half a century before the bag of seed-rice fell into Thomas Smith's hands, this grain had been tried in Virginia by Governor Sir William Berkeley, and had yielded thirty-fold. It seems to have had a humble place as one of the products of south-eastern Virginia many years afterward. Rice was also grown as far northward as New Jersey; there was a considerable exportation of it from

In South Carolina, where indigo became a leading staple, rivaling rice and only yielding to cotton after the Revolution, its introduction was due to the enterprise and intelligence of a young lady. Miss Eliza Lucas, who afterward, as Mrs. Pinckney, made gowns from home-grown silk, not daunted by the failure of early experiments with indigo, procured seed from Antigua about 1741 or 1742.

PRIMITIVE MODE OF GRINDING CORN.

Salem as early as 1698, while the culture of it was yet in its beginnings in Carolina.

We may reckon among Virginia commodities indigo, which awakened in 1649 almost as much interest as the experiments with silk and vines. "All men begin to get some of the seeds," says a writer of the time, "and know it will be of ten times the gain to them as tobacco." He adds that "gain now carries the Bell." During this indigo fever some of the more sanguine Virginians modestly hoped to wrest the indigo trade "from the Mogull's country, and to supply all Christendome. This will be many thousands of pounds in the year." More than a hundred years after the experiment of 1649, indigo is again mentioned along with bar iron and ginseng as one of the less important exports from the colony to Great Britain, but its culture was in a feeble and failing condition.

Her first planting, made in March, was destroyed by a frost; the second attempt in April was cut down by a worm; but the third succeeded. An expert, brought to show the manner of making the dye, proved treacherous; but the perseverance of the lady won the victory at length, and by 1745 the possibility of growing indigo in Carolina was proven. Two years later two hundred thousand pounds were sent to England, and the annual exportation reached more than a million pounds in the last years of the colonial period.

V.

WHEAT, MAIZE, AND MINOR PRODUCTS.

IN 1634 Massachusetts, having more new emigrants on her untamed soil than she was

able to feed, sent a ship to Bermuda for bread. Finding none there, the captain secured five thousand bushels of wheat in Virginia, "for the relief of New England." But a few years later, when emigrants suddenly ceased to come to Massachusetts Bay, the supply of money which the new-comers brought, and the market for food products which they afforded, abruptly failed, and there was no means for paying the debts due in England,

which the planters had either captured in the chase or bought of the Indians.

For what legislation had failed to achieve, natural causes, when left to themselves, had wrought. The overproduction and consequent low price of tobacco in 1640, and at later periods, had promoted the culture of wheat and maize in both of the Chesapeake colonies; so that before the Revolutionary struggle set in, Maryland was accustomed to

A CONESTOGA WAGON IN THE BULL'S HEAD YARD, PHILADELPHIA.

or for purchasing things needed thence. It was in this emergency that the first exportation of farm produce from Massachusetts took place. A ship-load of wheat was made up with much ado and sent abroad as the best purchasing agent within reach. The General Court expressed the opinion that wheat would be the staple of New England, and forbade its use for bread or malt. But in Massachusetts, as elsewhere, it was found that the production of staples depended on causes not within the control of law-making bodies. Indian corn at this early day had not become an article for shipment, and in this same year it was so abundant as to be unsalable. Later, when the prolific New England people had multiplied and given themselves to the fisheries, to whale-hunting, and to foreign commerce, and when the belts of alluvial land had been impoverished by bad husbandry, food was sought farther south. In all the rivers flowing into the Chesapeake and Albemarle Sound the New England peddling craft brought to the very door of the easy-going planters rum, sugar, molasses, and salt, with ready-made clothing, at exorbitant prices, besides smaller commodities. These were bartered for the superabundant bread and meat of the southerly colonies, and for the peltries

send six hundred thousand bushels of wheat annually to England, and Virginia nearly as much. The latter colony and North Carolina also exported maize to Portugal, to South America, and to feed the West Indian negroes. Oats were early and abundantly sown in Virginia. As the English beer passed out of use, Indian corn took the place of barley, and was even used to make a sort of beer by a process of "malting by drying in an oven." Rye was sown for bread in New England from the first. In Virginia its culture was promoted by the Scotch and Irish settlers of the valley, who used it as a basis for the whisky which they preferred to the tamer beer of the English. The white-blossoming and red-ripening buckwheat, which is so bright an object in our spring and summer landscapes, was used in Carolina to feed cattle in the first years of the eighteenth century, and was early brought into the valley of Virginia, perhaps by emigrants from the European continent. The raising of cereals for the market extended from New England to South Carolina. From the latter Indian corn was exported after 1739, while wheat was produced by the German palatines in the interior.

But the great bread-giving region lay in New York, New Jersey, and Pennsylvania;

A PLANTATION GATE-WAY. ENTRANCE TO THE ESTATE OF WILLIAM BYRD AT WESTOVER, VA.

from the lands between the Connecticut and the Susquehanna, the British West Indies and the Mediterranean countries received large supplies of wheat and flour. By the middle of the eighteenth century, eight or nine thousand of the great white-topped Conestoga wagons, drawn each by four, six, or even eight horses, were required to bring to the busy little market city of Philadelphia the produce of the farms of the interior, besides all that was floated down the Delaware and the Schuylkill. New York at the same time sent out large shipments of grain, brought from the Hudson valley, Long Island, and the Jersey bays, in sloops. Of flour and bread, also, New York exported about six thousand tons annually. The "bread," which was a large element in the outward trade of the three chief wheat provinces, was hard-tack, sold to ships and sent to the West Indies and elsewhere. There was a bakery attached to almost every mill. In 1770 the exports of flour and bread from all the colonies were equal in value to three millions of our money,

besides a million bushels of wheat and more than half as much of Indian corn. For domestic use Indian corn became very early the indispensable source of supply. At first it was pounded in wooden mortars, after the Indian way, or ground in hand-mills, after the old English fashion. In all the colonies, farmers lived chiefly upon bread of Indian meal.

The greatest difference between the agriculture of the later provincial period and that of our time, so far as the nature of the products is concerned, lies in the fact that the cotton staple held then a very insignificant place. It was introduced into Virginia before 1620, and many efforts were made to give it commercial importance. Governor Andros succeeded in awakening an enthusiasm for cotton culture in Virginia at the close of the seventeenth century; but enthusiasm is a poor substitute for profit, and cotton fell away again, though at the Revolutionary period Virginia grew more than any other State. Cotton for domestic use was grown successfully from southern New Jersey southward, and a small quantity was exported from South Carolina in 1748. But the economic barrier to its commercial importance seemed insurmountable; one man could grow more than all the spare hands on a plantation could clean from the seed. The irksomeness of this work of cleaning led to the invention of gins to rid the cotton of its seed; but they all, in some way, injured the fiber. It was not until after the separation of the colonies from England that the invention of Whitney's gin gave the cotton plant a swift ascendancy in the South, driving indigo from the field.

Hemp was much fostered by legislative bounties, and its culture was advocated by theorists and patriots who wished to see the king's navy supplied from the king's dominions, and not from the distant land of "the Czar of Muscovy." Liberal bounties were paid to promote its culture, and among other visionary schemes one was broached in the bubble period of 1720 to settle a whole county in Virginia with felons who should be forced to cultivate hemp, the county to be called Hampshire—name full of disagreeable suggestion to those who were to have inhabited it. Like other petted children of colonial agriculture, hemp came to no great things. The Massachusetts people in 1641 set "all hands" to work on hemp and flax, and burned down several houses while zealously drying their flax. In 1646 the Virginia Assembly required every county to send ten boys or girls to Jamestown for instruction in the flax houses. In spite of all this coddling, flax was more fortunate than hemp, for its culture was pro-

moted in all the colonies by Irish immigrants accustomed to fields of flax and linen-wheels at home. There was a thriving trade to Ireland in flaxseed, the Irish flax not being

was required to inclose a quarter of an acre for vines, roots, and so forth. Nine years later, the observant Dutch voyager De Vries saw a garden on the James, in which was a

HOME OF JOHN BARTRAM, THE COLONIAL BOTANIST AND AGRICULTURIST, NEAR PHILADELPHIA.

allowed to ripen its seed; and there were a good many mills in New England for expressing linseed oil.

The potato, originally a South American plant, was introduced to Virginia by Sir John Harvey in 1629, though it was unknown in some counties of England a hundred and fifty years later. In Pennsylvania, potatoes are mentioned very soon after the advent of the Quakers; they were not among New York products in 1695, but in 1775 we are told of eleven thousand bushels grown on one sixteen-acre patch in this province. Potatoes were served, perhaps as an exotic rarity, at a Harvard installation dinner in 1707; but the plant was only brought into culture in New England at the arrival of the Presbyterian immigrants from Ireland in 1718. Five bushels were accounted a large crop of potatoes for a Connecticut farmer; for it was held that, if a man ate them every day, he could not live beyond seven years.

Gardens, with whatever else made for luxury in living prospered among the Virginia squires. As early as 1624, every freeman

profusion of Provence roses, apple, pear, and cherry trees, and all the fruits which he had been accustomed to see in the horticultural land of Holland. In 1649, "potatoes, sparagus, carrets, turnips, parsnips, onions, and hartichokes" are set down among Virginia "roots." "The gallant root of potatoes are common, and so are all kinds of garden stuff," says the ungrammatical Hammond, in 1656. On the other hand, Beverley, the historian of Virginia, from the point of view of an agricultural reformer, declares, at the beginning of the eighteenth century, that "they ha'nt many gardens in the country fit to bear the name." The Labadist travelers complained in 1680 that the garden vegetables in one part of Maryland were "few and coarse"; but in 1775 Arthur Young, the best known of English agriculturists, thought that no part of the world could boast more plentiful or more general production of garden vegetables than the two Chesapeake colonies.

The climate and other conditions were less favorable to gardens in New England, but vegetables, vines, and orchards were tried from

the outset in Massachusetts. Gardening in New England largely fell to women; even the sale of garden seeds was in their hands. Besides the medicinal and culinary herbs of the old English gardens, New England women were accustomed to give little plats to flowers. In 1698 Pennsylvania colonists boasted the possession of "most of the garden herbs and roots of England"; but the best gardening in Pennsylvania was due to the patient and thorough-going Germans. In the genial climate of the South, a great variety of garden plants were found to thrive; but the opening of new lands for the culture of rice and indigo in South Carolina brought about a general neglect of horticulture; cabbages, onions, and potatoes were imported at Charleston until after the Revolution. The sweet potato was adopted from the aborigines in all the Southern colonies, and it is yet known in the market as the "Carolina." The squash in many varieties was of aboriginal origin, and, everywhere planted; the water-melon was largely used in the Middle and South, and Jared Eliot brought a new variety from Russia suited to the New England climate.

Perhaps the best of colonial gardeners were the Dutch of the Hudson River region. With the love of horticulture characteristic of their nation, they wrought the rugged interior of Manhattan island into thrifty, and in some cases elegant gardens. The growth of New Amsterdam, in the period of Dutch rule, was held in check by the engrossing of large lots for village gardens. To the Hollanders is attributed the introduction of the red, white, and carnelian roses, gillyflowers, tulips, white lilies, marigolds, and garden violets. Orchards, chiefly, though not wholly, of seedling fruit, became common in every province at an early period; even the Iroquois adopted the apple from early comers, and in the course of time raised large orchards. The Lenni Lenape on the Delaware grew peaches before Penn came, and the Congarees in Carolina, about 1708, had the art of drying peaches. One large and hardy peach-tree was so early and so widely distributed, even among tribes remote from European settlers, that it was called the Indian peach, and was thought to be indigenous even by John Bartram, the botanist.

Cider was at first made by pounding the apples by hand, often in wooden mortars, such as were used for Indian corn. The pomace was sometimes pressed in baskets. Vast quantities of cider were made in New England in the eighteenth century; a village of but forty families made three thousand barrels in 1721; a larger town turned out ten thousand. The greater part of the cider was sent to "the

islands," whither also went large shipments of American apples, accounted already superior to those from England. From Pennsylvania to Virginia, fruit on trees was by custom free to all-comers; in Virginia, the surplus peaches from orchards of ten to thirty acres in extent were thrown to the hogs, after the annual supply of brandy had been distilled.

All the bees in the colonies were the offspring of a few swarms brought to Massachusetts Bay at or soon after the first settlement. The production of honey was not large in New England; in Pennsylvania almost every farmer kept seven or eight swarms; but in the southern colonies the quantity of honey about 1750 is described as "prodigious." This was used not only for the table, but for making the old English strong liquor, metheglin. The bees were for the most part rudely hived in cross sections of the gum-tree, hollowed by natural decay; whence, in the South and West, a beehive of any kind is often called a bee-gum.

VI.

CATTLE.

THE first cattle that were brought over sea to be the beginners of new herds were valuable beyond price, and in Virginia it was made a crime punishable with death to kill one of them. In the great migration to Massachusetts Bay, the death of a cow or a goat was signaled from ship to ship. Sometimes, in the chronicles of the time, the death of a brute and that of a person are set down in the same sentence in such a way as to excite a smile in the modern reader, who fails to remember that the animal was of greater consequence to the welfare of the colony than the person,—the brute was the harder to replace. But having the wide, unfenced earth for pasture ground, cows soon became cheap and abundant; in New England they shrank to less than one-third their former value about 1642, and the decline had the effect of a modern financial crash on the trade and credit of the little colony. In Virginia, notwithstanding the destruction of breeding cattle in the early famines and that wrought by the savages in 1622, they were counted by thousands in 1629. Forty years after the *Susan Constant* brought Englishmen to James River, there were twenty thousand horned cattle there, with three thousand sheep, two hundred horses, fifty asses, and five thousand goats.

In 1670 a planter in the new settlements of Carolina thought it a great matter to have three or four cows; thirty years later two

hundred were a common allowance, and some had a thousand head of cattle apiece. In all the colonies the wild grass and the browse of the woods was the main dependence; but the rich annual grasses were, after awhile,

CATTLE EAR-MARK, AS REGISTERED, FROM BAILEY'S "HISTORY OF ANDOVER."

From the Records of Andover: "December the 25th 1734 the ear-mark that James Frie Giveth his cattle and other Creatures is as followeth *viz*, a half cross cut out of the under side of the left ear split or cut out about the middell of the Top of the ear, called by som a figger of seven."

reduced or extirpated by the close cropping, which did not allow opportunity to mature seed, and long before the artificial culture of grasses had become common in England, the perennial English grasses were introduced into New England, Long Island, and Pennsylvania, by sowing the unwinnowed sweepings of English haymows. A few corn-husks and a little wheat-straw were sometimes fed to cows; but in the depth of winter the half wild and starving creatures often perished by venturing too far into the marshes in search of food. In Pennsylvania, so late as the middle of the eighteenth century, superstitious people were wont to tie a dogwood bough about a cow's neck when she staggered and fell down from inanition in the spring; the dogwood was probably regarded as a sort of tonic. In Virginia, at one period, it was expected that the hides of the cattle dying every winter would furnish shoes for all the negroes on the plantation. In the seventeenth century some of the Virginians held that to house or milk cows in the winter would be the death of them. A better system came in as the colonial period drew to its close; the German settler in Pennsylvania, indeed, adhered from the first to the usage of the fatherland, and sheltered his cows from the tempests of the winter under the same roof with his numerous children, and later in the great barns that marked the growing prosperity which follows hard work and frugal living in a fertile country.

On the other hand, the English colonists brought the bad custom of neglecting live stock from England. At the beginning of American settlements, cattle were almost as much exposed and starved in England as they were, for a century afterward, in the colonies. The culture of forage plants was a novelty in the mother country in the time of the Commonwealth; the growth of root crops,

for winter feeding, was introduced among English farmers about 1760. The branding-iron, which in the colonies was used to mark the ownership and the town to which the wandering beast belonged, was employed in England in the fourteenth century, and probably earlier, and no doubt lingered in the mother country until after the North American migrations.

Notwithstanding the multitude of herds that filled the woods from Maine to Georgia, one hears little of the exportation of any dairy products except from Rhode Island, Pennsylvania, and New York. Farmers in the northern colonies often had no milk at all in the winter, and little children were obliged to soak their bread in cider for a substitute. On the eastern shore of Maryland, in 1680, it was matter of doubt whether one would find milk or butter in a planter's house even in summer.

In 1666 it was a boast that it cost no more to raise an ox in Carolina than it did to rear a hen in England. The ranch system had its beginning in Virginia and the Carolinas and among the Spaniards of Florida. "Cowpens," as they were then called, were established on lands not yet settled, and cattle were herded in droves of hundreds or thousands. Small prairies existed in many places, North and South, and these, with thinly wooded plains, were especially devoted to pasturage after beef came to have a commercial value. In some parts of Massachusetts a "hayward" was employed to attend the cattle of a whole township, which were kept together in one drove. Sometimes the townsmen took turns in herding the cows, after a very ancient European custom. Similar arrangements prevailed in the great herds on the plains of Long Island, where little artificial ponds, lined with clay, were made to hold rain-water for the stock—a device brought from England, and still used in Texas. In some places a peninsula was chosen for a "herd walk," and fenced at its junction with the mainland, to keep the cows in and the wolves out. The reach at Nahant, and Cow Neck on Long Island, for examples, were thus fenced to inclose, by aid of the sea, gigantic common pastures. Coney Island was filled with cattle, completely hedged by natural barriers and sheltered by the bushes, and Fisher's Island, at New Haven, was inhabited by goats.

At first, the settlers fired the woods in spring, to get rid of the undergrowth and make room for grass. The practice, like many others, was borrowed from the Indians, who burned out the bushes systematically that they might get about easily, and that the

deer might have better range. There are traditions yet preserved of the splendor of these fires when seen by night. At a later period, when fires had come to be dangerous to the denser settlements, the people in some places were required to cut underbrush for a certain number of days every spring. In the first years of the eighteenth century the wild meadows of the South and the marshes of New England began to be reclaimed by drainage; sometimes they were inclosed with fences or ditches, and used for fattening cattle. The value of marsh hay became known; timothy—first cultivated by Timothy Hansen in Maryland or Virginia—and clover were sown by thrifty farmers in the more settled regions; and the value of corn-fodder began to be understood.

If the cattle were countless, the hogs "swarmed like vermin upon the earth." On the New England coast, in the earliest time, the droves of pigs fed on the refuse of the fishing stages, and their meat acquired a flavor so rank and aquatic that the Indians preferred that of the white man's dogs. In Carolina, the swarming hogs came out of the woods at the sound of a horn to eat a little refuse of potatoes or turnips fed to keep them from becoming utterly wild. In Virginia, no account was made of swine in the inventory of the estate of a man of substance; uncaught pigs were not easily numbered. The countless hogs furnished the most of the meat, as Indian corn supplied the greater part of the bread, in all the colonies. In New England, each family had, after the old English custom, its "powdering tub,"—not yet everywhere disused,—in which the pork for the family table was salted, and from which it was taken to be smoked by hanging in the ample chimney.

Small attention could be paid to the breed of animals living at large; from this cause, and the annual course of semi-starvation, the stock of all kinds degenerated in size, but acquired, by merely natural selection, the tough vitality which has made our so-called "native" cattle valuable for cross-breeding. Only in the pineries of the North-east was attention given to the size of cattle; the lumberman of the Piscataqua prided himself, beyond all things, on the size and strength of his yellow oxen. Instead of improving the breed of the myriads of neat cattle in the colonies, the experimenters of that day made repeated attempts to domesticate buffalo calves. These became gentle enough, but persisted in going where they listed by butting down any fence that stood in the way; and it was discovered after awhile that a species tamed for thousands of years was better.

Six or seven dollars of our money was the price in Virginia of a cow and calf, "sight unseen," as the phrase went; whether big or little, young or old, was not considered. Horses, cattle, and sheep were not taxed: "they turn to so little account," says the chronicler. The Virginia beef was small, but sweet; that of Carolina poor and lean; but large droves of Carolina cattle were driven through Virginia to fatten on Pennsylvania blue grass, before going to the Philadelphia market. New England cattle in early times survived the long winters rather as outlines than oxen; but later they were better cared for, and Massachusetts people learned the art of giving to an ox exhausted in the yoke a year or two of rest and good feed; by which beef was produced "that would credit the stalls of Leadenhall market," as an English traveler attested. Connecticut, less given to the fisheries than the colonies to the east, exported more salt beef than all the other colonies together, while Rhode Island became known for its dairies.

The growing up of many horses, neat cattle, and hogs in the wilderness, without knowledge of men or marks of branding-irons upon them, gave rise to new and exciting forms of sport. Wild beeves and hogs were fair game for the rifle of the hunter. A wondering Scotch-Irishman writes, in 1737, from New York to the Presbyterian minister in the town of his nativity, relating, as one of the attractions of America, "horses that are wild in the wilderness, that are yer ain when ye can grip them." In some of the royal and proprietary colonies, these wild animals were at times claimed as part of the revenue, under the old English doctrine of the right of the king or the manor lord to estrays. But such a claim was hard of enforcement. In some parts of the Chesapeake region, and perhaps elsewhere, a customary "right in the woods" pertained to every planter, and was matter of sale and purchase. It consisted in a claim upon a definite proportion of the unmarked cattle in the forest. In Virginia and North Carolina, men mounted on steeds trained to thread the mazes of the forest without touching the rider's foot against a tree would give chase for hours to a wild horse until he stopped from exhaustion, whereupon one of the pursuers would clap bridle and saddle upon the captive and mount while yet he was too weary to rebel. The scrubby little "tackeyes" still taken in the marshes along the North Carolina coast are descendants of the wild horses of the colony.

A horse whose stature reached fourteen, and in some colonies thirteen hands, was accounted large enough to breed from, even

by those who were seeking to arrest by legislation the deterioration of the stock. But these undersized creatures were exceedingly hardy and suited to a new country, whether for riding or for work under the pack-saddle. Rarely shod, their hoofs became hard, and they were frequently ridden fifty miles in a day at "a good, sharp hand-gallop."

From the latter part of the seventeenth century, attention was given to the improvement of their horses by the Virginians, whose country-squire traditions and frantic love for racing made them always more careful of the strain of their steeds than the other colonists were. Many horses of pure Arabian blood were bred in Virginia and some in Maryland, and these "fleet and beautiful thoroughbreds" were the admiration of travelers. Virginia horses, in the Revolutionary time, fetched double the price of those bred without care in the northern colonies, which latter were much derided by foreigners.

Good horses were not entirely wanting in the other colonies; the rich rice-planters of Carolina, indeed, toward the close of the colonial period, rivaled the Virginians in their truly English passion for fine horses and for racing. Penn imported three blood mares at his first coming, and in 1699 he brought over "the magnificent colt Tamerlane," of the best strain in England. But to the German farmers of Pennsylvania is due the credit of producing the great Conestoga horses, the finest draught animals on the continent in the colonial age, and perhaps the most substantially valuable of all American horses so long as the horse had to do the work now done by the railway. Staten Island was also noted for horses larger than the degenerate breed of the mainland. As early as 1667, Hull, the maker of the Massachusetts pine-tree shillings, hit on Point Judith as a peninsula suited to the raising of "large and fair mares and horses"; and in later times Rhode Island, with parts of Connecticut, became famous for excellent horses, many valuable stallions having been brought from Virginia. That delightful American eccentricity, the natural pacer, was known in Virginia not later than the first quarter of the eighteenth century. The "Narragansett pacers" of Rhode Island came into request at about the same time, and in New England, where racing was unknown, the pace became the commonest gait of horses in the country towns. The awkward but "prodigiously" rapid natural amble of the American pacer was a sort of world's wonder, and was thought to have been learned from the cows with which the colts were herded.

The hardy Canadian horse, longest naturalized to American conditions, was much valued

and widely distributed through the colonies in later times. One other breed deserves mention: the Chickasaws—the first mounted Indians known to the English—carefully

ANCIENT HORSESHOES FLOWED UP IN SCHENECTADY CO., N. Y.
(IN THE NEW YORK STATE AGRICULTURAL MUSEUM.)

guarded from mixture their fine race of horses derived from the Spaniards.

Notwithstanding the large numbers sent to the West India Islands from all the colonies, horses were more than abundant. Laws were made in several provinces to reduce "the extravagant multitude of useless horses and mares that are in the woods."

The only domestic animal that did not multiply to excess in the wild pastures of America was the sheep, which had for deadly foes the American wolf and the English woolen manufacturer. The wolves were reduced by a system that had been followed for centuries in England, of paying liberal bounties for the heads of destructive animals. The public officer who redeemed these heads cropped the ears, so that a head once paid for might be debarred from passing current for a second reward. In the province of New York the constable's house was rendered conspicuous by the decoration of its front with grinning wolf-heads, which the law required him to nail up in this fashion. But, however much the colonists might have desired it, they could not affix the head of an English cloth-worker to the front gable of the constable's house. There was nothing that English legislation

of the time sought more persistently than the development of the English woolen trade;—among the devices for promoting this end was a law commanding every Englishman to go to his grave in a woolen shroud for the good of his country. The growth of the woolen industry in Ireland or the colonies was repressed with severity; the importation of a sheep for the improvement of the colonial breed was punishable with the amputation of the right hand. In spite of wolves and acts of parliament, many thousand sheep were raised, but they had to be folded within hearing of the farmer and his dogs. The negligent methods prevalent in a new country bore more hardly on sheep than on other animals, and it was estimated that about one-third of all the sheep in the northern colonies perished in a single hard winter, a little before the middle of the eighteenth century.

The keeping of sheep in New England and on Long Island was much promoted by the holding of lands and tending of herds in common; and the one thousand New England sheep of 1642 had trebled their number by 1652. The town of Milford, in Connecticut, sequestered a large common and kept more than a thousand sheep as public property, the profits going to defray town expenses. When, in the eighteenth century, the common lands and such vast Long Island pastures as Hempstead plains were divided, sheep-raising became more expensive and difficult.

VII.

TOOLS AND TILLAGE.

THE cumbrous and complicated English plow of the period could not have been of much use to the colonists until it had undergone modification. As late as 1786 it required "four oxen, two men, and a boy" to run a plow in the west of England; the midland

plow of the same period required five or six horses; the old Scotch plow two horses, aided by two or four oxen; and the primitive plow team of eight oxen, known from remotest antiquity, could still be found in use in Great

ANCIENT HAND-MADE SPADE. (STATE AGRICULTURAL MUSEUM, ALBANY, N. Y.)

Britain. One hears of a plow in the colony of Virginia drawn by four horses, driven by a postilion riding the near horse next the plow, and of a plow in Georgia, in 1735, drawn by six horses. The plow in the colonies, however, generally took on a simpler and ruder form; it was sometimes built by the farmer, and ironed at the nearest smithy. The one-handled plow was held by the left hand; the right bore a plow staff for cleaning the dirt from the wooden mold-board. Simplicity was carried to an extreme in Virginia, where there were few artisans; in some cases a grubbing hoe bound to a plow-beam was used with perfect seriousness to scratch the light soil of the peninsulas. In Massachusetts, the fortunate owner of a plow sometimes made a business of going about to plow for his neighbors; the town would now and then pay a bonus for keeping in repair the only plow within its bounds.

Carts also were often home-made—the body being fast to the axle-tree, so that dumping was impossible. The first Swedes on the Delaware, and perhaps others, had carts with truck wheels sawed from the liquid-amber or sweet-gum tree—probably mere cross-sections of a round log. Two skids fastened together made a "drag," or "sledge," to which was hitched a single ox or horse, for drawing burdens over the grass or ground in summer. This sledge was used on the northern frontier, in Pennsylvania, and in Carolina, and with it the Maryland and Virginia planter sometimes dragged his tobacco hogsheads to the place of shipment. But the commonest mode of moving tobacco was yet more naked: the cask was strongly hooped, and then rolled by human strength along the hot and sandy roads often fifteen or twenty miles

COLONIAL PLOW WITH WOODEN MOLD-BOARD. 1706. (STATE AGRICULTURAL MUSEUM, ALBANY, N. Y.)

to the inspector's warehouse, known for this reason as a "rolling-house." The road, which went round about to avoid hills, was called a "rolling-road." When oxen or horses were used in rolling, a tongue and axle were fitted into the ends of the hoghead.

The New England settlers were curiously slow to learn the great lesson of their climate. While the Dutch were traveling and hauling great loads upon the snow, their Connecticut and Massachusetts neighbors laid in wood in November in cumbrous carts, and this continued to the close of the seventeenth century; it was much later before long journeys were undertaken upon sleigh-runners. English farmers, more than five hundred years ago, made their own horse-collars of straw. The American colonists also made them of straw, and added the art of weaving them from the husks of the maize. But oxen chiefly were used for plowing and other farm work in the seventeenth, and even into the eighteenth century. When the "horse-hoe," a progenitor of our modern cultivator, came into vogue in England, and was brought to the colonies, Jared Eliot used oxen to draw it, yoking them far apart that they might pass on each side of the row of Indian corn. But the cheapness of the horse brought that animal into more general use in the years just preceding the Revolution.

Grain was reaped with sickles, though "scythe-cradles" were not unknown. Threshing was done in New England with a flail; in New York and to the southward wheat was often trodden out by horses or oxen on the hard and well-prepared threshing floor in the open field. Both methods are older than human records, and both continue in out-of-the-way places to-day. Winnowing was performed in the primitive way, by throwing the grain against the wind and then running it through sieves; in some places large willow winnowing fans were used. The winnowing machine in its simplest form is a Dutch device, and did not reach England until 1710; "Dutch fans" were little known in the colonies.

While virgin land was abundant, manure was but little sought for, though in New England the settlers learned from the Indians the art of burying a whole fish in each hill of corn. In some places, the horse-foot crab was cut in pieces and put into the hill for both corn and potatoes. A part of the stipend of a minister in Cape Cod was two hundred fish from each of his parishioners to fertilize his sandy corn-ground. The Connecticut agriculturist,

ALEXANDER SPOTSWOOD, GOVERNOR OF VIRGINIA FROM 1710 TO 1723. (FROM A PORTRAIT BELONGING TO BENJAMIN ROBINSON, ESQ., OF KING WILLIAM CO., VA., AND NOW IN THE VIRGINIA STATE LIBRARY.)

Eliot, used creek mud and sand, and sowed clover to recuperate worn-out fields, as did the Pennsylvania botanist and agriculturist, Bartram, following a fashion then just coming into English agriculture. But Eliot could not introduce another practice freshly brought to England from the Low Countries,—that of growing turnips on poor lands and putting sheep on them. "Our poor land is so poor," he writes, "that it will not bear turnips bigger than buttons." In Maryland and North Carolina, no method of fertilizing was known but one that has been followed in Europe since the middle ages,—that of using a pen of movable hurdles for confining cattle at night on an impoverished piece of ground; and sheep were thus confined for the same purpose in New England.

Travelers from Europe united with colonial writers in condemning the general badness of farming in the thirteen provinces. Clayton and Beverley in Virginia and Eliot in New England were unsparing in their denunciations of the slovenly husbandry of their neighbors. Clearings were frequently made by merely girdling the larger trees and burning up the undergrowth. On land treated in this way, the dead trees presented a ghostly appearance, and their falling boughs endangered the lives of travelers. Wheat was dragged in with a tree-top or with a wooden-tine harrow. Spades and hoes were made by

country smiths, and were unwieldy. Pennsylvanians sometimes sowed oats in the rows of Indian corn and followed with wheat, thus killing out the noxious blue grass and destroying the fertility of the soil at a blow. In this and the more southern provinces, land weary of hard usage was allowed to lie fallow, or was abandoned to old-field pines. The colonial farmer, North and South, had so long scratched the earth's cuticle that he came to believe that deep plowing ruined the land. Jared Eliot was one of the first to set the example of actually stirring the ground.

But in every new land a sort of bad husbandry is good husbandry. The very first comers suffered from their failure to perceive this. They felt obliged, in the antique phrase of Jared Eliot, "to stubb all staddles,"—that is, to grub up by the roots the smaller saplings,—and to cut down, or at least trim up, all the great trees. They even leveled and pulverized the ground with rollers, after the method of English farmers. It took years to show them that the conditions of success were different in a new world. In England, land was precious and labor cheap; the problem was to get as much as possible out of an acre. But in America, acres were unnumbered and human hands were few. To get as much as possible out of a man was the stint set before the colonists. The Virginian never calculated how much his field yielded to the acre: he counted his yield to the hand. It was inevitable that the planter of tobacco should girdle and burn the trees for new ground in preference to fertilizing an old field, and that the New England farmer should leave the roots in his field and impoverish the soil by the shallowest culture. The newly come English farmer who tried to improve colonial methods no doubt paid the penalty of failure; just as the emigrant from the older States who tries deep plowing and clean culture on cheap prairies remote from markets now grows poor, while his neighbors prosper by an energetic skimming of the

land. The difficulties of the very earliest colonial agriculture discouraged careful farming. The forest was a deadly foe; a great part of the settler's life was passed in killing trees. The New Englander had to watch his sandy field on the coast for two weeks after corn planting, to keep the wolves from digging it up in search of the fish that enriched the hill. In some colonies, the squirrels were so pernicious that two-pence apiece was paid for killing them; in Maryland and northern Virginia, every planter was obliged by law to bring to a public office the heads of four of these pests. Then, too, the woods tempted the settler from his toils with abundant and savory meat, and the virgin streams were alive with fish. Only the indefatigable, conservative, and frugal German peasant on the Pennsylvania limestone soil, aided as he was by the toil in the field of his wife and children, could farm with thoroughness in such an environment.

As population increased, as cities were built, as commerce opened markets, and land grew valuable in the parts of the country that had been earliest settled, superficial farming, grown by this time to a tradition, was no longer commendable, or even excusable. The influence of enlightened example became necessary to abolish it. Virginia was said to have been more improved in Governor Spotswood's time than in the century preceding. The governor himself, and some such lords of great estates as William Byrd of Westover, were influential in introducing improvements; and half a century later Josiah Quincy found Virginia agriculture very far advanced. Jared Eliot—an enlightened and wealthy clergyman-farmer in Connecticut—tried all the artificial grasses of England. He introduced the drill, and persuaded the ingenious President Clap, of Yale College, to simplify its construction from the cumbrous English model. In a hundred ways, this grandson of the apostle Eliot strove for the betterment of

MEDAL AWARDED TO REV. JARED ELIOT, NOW IN POSSESSION OF CHARLES G. ELLIOT, ESQ., GOSHEN, N. Y.

American husbandry; but his writings have the air of begging pardon that a clergyman should make himself useful beyond the range of his profession. He excuses himself by telling how Charles V., on a visit to the Netherlands, sought out the tomb of Buckhelsz, who enriched his country by finding out a method for curing and barreling herring. Bartram, the botanist, and other Pennsylvania Quakers used many improvements in farming, and the wet lands on the Schuylkill were drained. Irrigation was also used in some parts of Pennsylvania to promote the growth of grass, and the agriculturist Masters made composts of forest leaves in the modern fashion. It is interesting to know that there was occasional correspondence between the men, scattered through the colonies, who were striving to lift agriculture out of the rut of stupidity into which it is always apt to sink. One reads with pleasure that fifty copies of Eliot's first little "Essay on Field Husbandry" were bought by "Benjamin Franklin, Esq., of Philadelphia," and that the progressive Bordley, of Maryland, ordered "Dr. Eliot's Essays" by way of London.

Alongside the new-born enthusiasm for science and the desire for improvement in practical affairs, which makes the later colonists seem to belong to our age rather than to the preceding one, there lingered many incongruous superstitions, even in the minds of

intelligent men. The almanacs of the time were publications of considerable importance, and one finds in these little pamphlets exact directions for regulating farming operations by the position of the sun in the zodiac. Even Eliot cannot shake himself free from these notions; his essays tell us with unruffled gravity that trees must be girdled in the old of the moon, "that day the sun moves out of the foot into the head," but brush is to be cut when the sun is in the heart. This day for giving a fatal stab to obnoxious alders unhappily falls, now and then, on Sunday, as the good parson confesses. In one of his later papers he half apologizes for his astrological nonsense, as though he had a dawning perception of its absurdity. In the very year before the outbreak of the Revolution the "Massachusetts Calendar" tells its readers to cut timber, for lasting, in the last quarter of the moon, naturally; but wood for firing should come down in the first quarter — perhaps because the moon is then firing up; and there follows a list of the proper phases of the moon for killing bees, for sheep-shearing, apple-gathering, hedge-cutting, manuring land, grafting trees, cutting hair, and I know not how many operations besides. Similar notions can be found to-day among the illiterate; a hundred years ago and more, they were treated as scientific principles by men of liberal training.

SOME OLD CONSIDERATIONS.

THE Puritan lies in his tomb —

A grand fellow was he in his day;
But now he's so bothered for room
He'd have hardly the space to pray,
Should he rise on his knees.

Not a foot from him down below
Great Sachem Paupmunock lies,
With his kettle of corn and his bow;
And both he might use, could he rise,
And sit at his ease.

Right over the two is my bed,
Delightfully propped on the great;
And here at my ease overhead
I rest on two Pillars of State,
And I sleep very well.

If they muttered a word under ground,
I dare say 'twould come to my ears;
But I've heard not the slightest sound,
And they've slept there two hundred years,
So the records tell.

I muse as I think of them there,
And sometimes I laugh to myself,
As I say — What a fine old pair!
But how easily laid on the shelf,
When we youngsters came!

The Sachem sang in his throat,
The Puritan twanged through his nose;
We sing a more lively note
Of the ruby red and the rose:—
In the end 'tis the same.

We too shall hobble away
From the merry folk and the fire;
"Good-bye" to the singers shall say,
And pass from the lute and the lyre,
From the folk and the flame.

GENERAL SHERMAN.*

FOR a few days prior to the first of November last, a tall, spare man, with erect soldierly bearing, a face curiously furrowed up and down, crosswise and diagonally, with wrinkles, gray, stubbly beard, but with light brown hair showing scarcely a trace of time's first touches, and with a hazel eye of a keen and youthful expression, might have been seen directing the packing of books and papers in a large, handsome room of the new War Department building at Washington. He wore a simple business suit, and the two assistants who helped him in the task of arranging the volumes and documents were also clad in plain clothes. Occasionally the tall man sat down at a desk and wrote a page or two of foolscap, which he added to a pile of manuscript, or rapidly wrote a letter in a small, clear, peculiar hand. His movements were so alert and his physical expression was so vigorous that no one, seeing him for the first time, would have thought for a moment of calling him old. It was William Tecumseh Sherman, General of the Army of the United States; the manuscript was his last report as Commander-in-Chief; the assistants were his aides-de-camp, and the preparations going on were for the removal of his personal papers, and for turning over the office to his successor. A recent act of Congress provided for the retirement from active service of all officers on reaching the age of sixty-four. General Sherman will reach this limit of age on the 18th of February, but he anticipated the date for relinquishing his command to the Lieutenant-General, in order that the latter might make recommendations concerning the army, as its new chief, to Congress at the present session.

The signing of a few official papers, and a cordial shaking of hands with the new commander, was all there was of ceremony connected with the transfer of command. The control of the military forces of a powerful nation was passed over without the beat of a drum or the firing of a salute. Aside from the great martial renown of the two general officers who took part in this simple ceremony, the event was one of national interest. Our system of government provides very few positions of dignity in which the tenure is suffi-

ciently long for the occupants to get a firm hold upon the regard and memory of their fellow-citizens. Presidents come and go, and the fame of each largely effaces that of him who went before. As to cabinet ministers, who can remember those in office ten years ago? The office of commander-in-chief, on the other hand, is one of both dignity and permanence. Even if there had been no Shiloh, no Vicksburg, no Atlanta, and no March to the Sea, the retirement from this high post of one who, like General Sherman, has held it for nearly fifteen years, would be a memorable event. When such an event marks the withdrawal from public life of one of the most famous generals of modern times and one of the great popular heroes of our Civil War, it attracts universal attention.

The title of General does not pass from Sherman to Sheridan with the transfer of the command of the army. Sheridan remains Lieutenant-General. In 1869, soon after the promotion of Sherman to the rank of general, made vacant by Grant's accession to the Presidency and the consequent promotion of Sheridan to Sherman's former rank of lieutenant-general, Congress, in a spirit of small economy both of titles and of pay, enacted that the two highest grades in the military establishment should continue only during the life of the then incumbents. Thus there is no further promotion beyond the grade of major-general. Since the foundation of the government there have been but three commanders with the full title of general. The first was Washington, upon whom the rank was conferred by Congress a few weeks before his death, and a few months after he had been made lieutenant-general in anticipation of a war with France; the second was Grant, to honor whom Congress revived the grade in 1866; the third was Sherman, who was promoted to Grant's place in 1869.†

The Memoirs of General Sherman, written by himself, and published in 1875, begin at his twenty-sixth year and end with the close of the civil war. They form a remarkably vivid and graphic picture of nineteen years of his life. The personality of the writer is everywhere infused into the narrative. The book mirrors the man. It takes no account, however, of his boyhood or early manhood.

* The writer wishes to acknowledge indebtedness in particular to General Grant and to General Sherman, for information and for revision of the proofs.

† The following is a list of the officers who have acted as commanders-in-chief of the army, by seniority of rank or by special assignment from the President:

Its opening sentence is, "In the spring of 1846, I was a first-lieutenant of Company G, Third Artillery, stationed at Fort Moultrie, South Carolina." We like to read about the early careers of famous men. We want to know whether the boy showed the budding of the genius which made the man great, what conditions molded his character, what circumstances threw him into the channels of action where he won renown. General Sherman has left this curiosity to be satisfied by some future biographer. A few facts concerning his youth and early manhood have been gathered for this sketch.

General Sherman did not come of a military family. His ancestors were mainly lawyers and preachers. The Sherman genealogy, like that of most old New England families, goes back to the first of the name who emigrated from Europe, and no further. Edmund Sherman left Dedham, Essex County, England, in 1634, with his three sons, and landed in Massachusetts. The sons were Edmund, Samuel, and John, and all were at Boston in 1636. John was a preacher: There also came over a cousin, one Captain John Sherman, from whom descended Roger Sherman, of Revolutionary fame, and William M. Evarts and George F. Hoar, statesmen of the present day. From Samuel descended the family of General Sherman, through the following line: Rev. John Sherman, born 1650; another John, born 1687; Daniel, a judge, born 1721; and Taylor, also a judge, born 1758, grandfather of the General, who married Betsey Stoddard and had three children—Charles, Daniel, and Betsey. To Grandmother Betsey might be attributed the talent of the later members of the family. She was a woman of uncommon

strength of character, who was always called on to give advice in times of trouble to her whole circle of relatives and descendants—a strong-willed, intelligent, managing woman, of a type much rarer in the present generation than it was a century ago. Judge Taylor Sherman was a man of position in Norwalk, Connecticut, and was one of the commissioners appointed by the State to quiet the Indian title to the Fire Lands district in Ohio, a part of the tract ceded by Congress to compensate Connecticut people for their losses in Benedict Arnold's raid. The Fire Lands are embraced in the present counties of Huron and Erie. Judge Sherman established the county seat of Huron and named it Norwalk, from his home town. He received two sections of land for his services, and, returning to Connecticut, died in 1815.

His son, Charles R. Sherman, was admitted to the Norwalk bar at the age of twenty, and signalized the event by marrying his sweetheart, Mary Hoyt, in defiance of the dictates of prudence; and then, starting for Ohio to make a career for himself, leaving his bride behind, he settled at Lancaster, and next year returned to bring his wife and a baby, that had arrived in the meantime, out to his new home, by a horseback journey of over six hundred miles. The young lawyer volunteered in the war of 1812, but saw no fighting, his service being as a commissary; and after that brief episode he came back to his practice at Lancaster. His family increased and multiplied, as was the way of the sturdy New England stock of that day. Eleven children were born to him, six boys and five girls, and all grew up and married. Of these are now living Elizabeth, William Te-

1. George Washington, from June, 1775, to December, 1783.

2. Henry Knox, from December, 1783, to June, 1784.

3. Major Doughty, from June, 1784, to September, 1789. There was no United States army during this period, except two companies of artillery commanded by a major. The Continental line had been disbanded, and a new army had not been formed.

4. Josiah Harmar, from September, 1789, to March, 1791.

5. Arthur St. Clair, from March, 1791, to March, 1792.

6. Anthony Wayne, from March, 1792, to December, 1796.

7. James Wilkinson, from December, 1796, to July, 1798.

8. George Washington, who was created a lieutenant-general and resumed the command of the army, from July, 1798, to December, 1799.

9. Alexander Hamilton, from December, 1799, to June, 1800. It used to be a mooted question in the War Department whether Hamilton had ever commanded the army, but the recent discovery of an order bearing his signature as "major-general commanding" settled the dispute.

10. James Wilkinson, from June, 1800, to January, 1812.

11. Henry Dearborn, from January, 1812, to June, 1815, the period of the war of 1812.

12. Jacob Brown, from June, 1815, to February, 1828.

13. Alexander McComb, from May, 1828, to June, 1841.

14. Winfield Scott, from June, 1841, to November, 1861, the longest term of all. Scott was the first officer, after Washington, who held the rank of lieutenant-general. This was conferred upon him by Congress after the outbreak of the civil war, but did not pass to his successor in command.

15. George B. McClellan, from November, 1861, to March, 1862.

16. Henry W. Halleck, from July, 1862, to March, 1864.

17. Ulysses S. Grant, from March, 1864, to March, 1869.

18. William T. Sherman, from March, 1869, to November, 1883.

19. Philip H. Sheridan, from November, 1883. The portraits of all these commanders, except Major Doughty, can be seen on the walls of the Army Headquarters office at Washington.

cumseh, John Hoyt, and Fanny. The father took a fancy to the character of the Indian chief Tecumseh, who flourished in the Northwest in the early part of the present century and was killed at the battle of Tippecanoe, and wanted to bestow the name on his first-born son; but the mother objected, and the baby was called Charles, after one of her brothers. The father renewed his proposition when the second son was to be named, but was again overruled in favor of James; but after both brothers had been honored, a third son was born, and a compromise was effected by the parents, by virtue of which the father assented that his first name should be William, and the mother that the cognomen of the Indian chief should be his second, or "middle name." So he was called William Tecumseh Sherman, and as he grew up his companions, seizing upon the more uncommon word, usually nicknamed him "Cump," or "Tecumps." The father was appointed a judge of the Supreme Court of Ohio in 1824, soon after Tecumseh's birth, by Governor Ethan A. Brown. One of the General's earliest recollections is of the group of children waiting on the porch of the Lancaster house for the Judge to come riding home from his circuit, and of their competition for the honor of mounting his horse and taking it to the stable. On one occasion success in this rivalry came near being fatal to Tecumseh, for the animal threw him upon a pile of stone, where he was picked up for dead with wounds upon his head, the scars of which he still carries.

Judge Sherman died suddenly in Lebanon, in 1829, leaving his widow an income of only two hundred and fifty dollars a year with which to bring up eleven children. The second boy had obtained a place in a store in Cincinnati. The eldest was in college at Athens. The other children were at home attending the village schools. Fortunately, the Judge had left behind him many friends, who came forward with practical offers of assistance to the family. He was a kindly, social man, and was greatly beloved by his associates of the bench and bar. Good humor beamed from his face. He had a clear head, a generous heart, and a ready wit. The three older boys were adopted by friends and relatives. Charles Hammond, of Cincinnati, took Lampson. John, the future Senator and Secretary of the Treasury, was sent to an uncle in Mount Vernon. Tecumseh entered the household of Thomas Ewing, then a member of the United States Senate, and one of the most powerful of the Whig statesmen of that day. Ewing was warmly attached to the dead Judge, and treated his friend's son as though he had been his own. The lad was destined for the

West Point Military Academy by his guardian, and his studies in the village schools took the direction of preparing him for the examination required for admission to that institution. One summer he laid aside his books and worked as rod-man with the engineers who were constructing the Hocking Valley Canal. For every day's work he was paid a silver half dollar, and he was supremely happy in the possession of the first money gained by his own toil.

In looking back upon his youth in Lancaster, General Sherman does not remember that he had even the ordinary boy's fondness for reading about wars and battles. He cared most for history and books of travel, and was very fond of novels—a taste he has not outgrown. The grizzled veteran of sixty-four reads a good romance with as much interest as did the school-boy of eighteen. He is a remarkably fast reader, having a faculty of going through a volume rapidly and extracting what is new and interesting to him, while rejecting all the dullness, repetition, and mere padding. For poetry he never cared much, reading with most pleasure Shakspeare and narrative poems of dramatic character, such as Scott's "Marmion" and "The Lady of the Lake." He was a good student, getting along in his Latin as far as Horace, and in Greek to the *Græca Majora*, before going to West Point. In his physical habits he was active and vigorous, fond of outdoor sports and of long tramps with rod and gun. All the region around Lancaster was as well known to him as his own door-yard. Every wood, stream, and hill was familiar ground. He had a great memory for the topography of a country and an instinct for pushing his way through forests and thickets—faculties that in after years stood him in good stead.

He went to the Military Academy with no ambition to be a soldier, but with a great desire to secure the education offered. In that day, to get an education was the ambition of every bright boy in the West. Good schools were rare then, and the people were poor. Education was not the cheap and convenient thing it is to-day. To be fed, clothed, and housed at the expense of the Government, and taught mathematics, languages, and engineering, seemed an enormous prize to lads who worked hard on farms and in shops eight months in the year to get the means to go to school the other four. The fortunate possessors of cadetships at West Point were universally envied. Young Sherman did not, like Lincoln and Garfield, pass through a boyhood of toil and privation, for his guardian was in comfortable circumstances; but he fully appreciated the advantage of going to the Military Academy. His idea at the

time was that he would not stay long in the army when through with the Academy, but would go West and become a civil engineer.

He was sixteen when he received his appointment to West Point, procured by the influence of his guardian, and started on what then seemed a long and adventurous journey. Three days and nights of stage travel brought him to Frederickstown, Maryland, whence there was a railroad to Washington; but he was advised to avoid the novel and dangerous mode of travel and stick to the coach, which he did. General Jackson was President at the time, and was at the zenith of his fame. The young cadet stared for an hour through the wooden palings of the White House grounds, watching the great man pace up and down the gravel walk, muffled in an enormous overcoat and wearing upon his head an uncouth cloth cap. The journey to New York was made by railroad to Baltimore, boat to Havre de Grace, rail to Wilmington, boat to Philadelphia, boat to Bordentown, rail to Amboy, and boat to New York. Sherman stopped at the American Hotel in Broadway, just above the Astor House, kept by "Billy" Cozzens, and the next day went up the river to West Point, and reported at the Academy. He had no trouble in passing the examination.

The life of the Academy was irksome to him because of its restraints. In the Corps of Cadets he was not considered a good soldier. This is shown by the fact that he was never selected for any office in the corps, but remained a private for the entire four years. He was not particular in his dress, and his bearing was not sufficiently military to secure the commendation of the martinets of the school. He applied himself closely to his studies, however, stood high in drawing, chemistry, mathematics, and philosophy, and so succeeded in reaching the grade of sixth in a class of forty-three. It is perhaps worth remarking here that men who have successfully conducted great campaigns and fought great battles have not, as a rule, taken much interest in the polishing of buttons, or the exact alignment of a company of troops.

Sherman's distaste for military matters went further than the details of dress and drill. He felt no special liking or aptitude for the profession of a soldier. That he succeeded in it so remarkably he now attributes to mental grasp and intensity of purpose rather than to any inborn talent. In his own opinion he was not a natural soldier; but he could make all his thoughts and feelings converge to one point, which he acknowledges to be a military quality. He had no love for pomp and parade, for uniforms, gold lace, and feathers;

the paraphernalia of war excited no enthusiasm in his nature, and he instinctively abhorred violence. We must admit that there was nothing manifested in the character of the West Point cadet that marked him as one destined to play a great part in the greatest war of modern times. Yet he displayed excellent qualifications for either soldier or citizen—self-poise, a quick intelligence, close application to the task at hand, keen observation both of persons and things, and conscientiousness.

After his graduation, in 1840, Sherman was commissioned a second lieutenant in the Third regiment of artillery, and sent to Florida with a company of recruits. General Zachary Taylor was in command there. The worst of the Seminole war was over; but there were still many savages lurking in the Everglades, and the business of the troops was to hunt them out, capture them, and remove them to the Indian Territory. It was rough work for the young lieutenant; but he enjoyed the wild life of the forest, the bayous, and the swamps. The habit of independent judgment which characterized his opinions and operations during the civil war, showed itself thus early. He thought the policy of the Government toward the Seminoles a mistake. The Indian Territory he believed to be much better fitted for the abode of white people than Florida. The latter was an Indian paradise, abounding in game and fish, but of small account for white settlement. The Seminoles, Choctaws, Chickasaws, Cherokees, and Creeks should have been concentrated in Florida, where they would have been surrounded by the sea on all sides but one, and could easily have been protected against encroachment, and the vast agricultural plains west of Arkansas should have been left open to civilization. This was his idea then, and he has never changed it.

From Florida, after two winter campaigns, Lieutenant Sherman was transferred to Fort Moultrie, near Charleston, South Carolina. There he remained four years, fretting, no doubt, at the uneventful life of the garrison, but finding diversion in hunting all through the lowland counties of the State, and in the aristocratic society of the then rich and proud little city close at hand across the bay from the fort, to which his uniform was a passport. Charleston then exercised an intellectual and political leadership throughout the South out of all proportion to her population, and Sherman was able to gain an insight into the Southern character which was of great service to him when he came to march armies through the Southern States. What was of even greater importance, he learned, and never afterward forgot, the topography of the

region. After the March to the Sea in 1864, when his victorious army turned northward through South Carolina, he knew the roads and the fords, and remembered that when the "up country" was impassable by reason of the spring mud, the low country, nearer the sea, was sandy, and the river bottoms were hard.

It is remarkable to what an extent Sherman's early career gave him special fitness for the great part he played during the rebellion. In 1843 he was ordered to Marietta, Georgia, on some duty connected with losses of property during the Seminole war. He spent three weeks there, and, with his habit of riding and hunting, became well acquainted with the region north of Atlanta, where he was to fight battles and conduct grand strategic movements twenty-one years later. A ride across western Georgia to Belfonte, Alabama, and a stay of four weeks at the Augusta Arsenal, gave him a further acquaintance with the region. "That the knowledge I then gained was of infinite use to me, and consequently to the Government, I have always felt and stated," wrote General Sherman in a recent letter referring to his early career. When he fought his way down to Atlanta in 1864, pushing back mile by mile a daring and active enemy, he remembered all the features of the country—the course of the streams, the gaps in the mountain ranges, the roads, and the strong defensible positions. His knowledge even went so far as the location of farms and houses. On ordering General McPherson to charge with his corps the Confederate intrenchments on Kenesaw Mountain, he said: "About half-way up the mountain you will find a plateau where there is a peach orchard; it will be a good place to stop and let your men get breath for the assault." He recalled, just at the time when the recollection was most valuable, his visit to the peach orchard in 1843, and how the owner had told him he had planted it on the north side of the mountain so that the buds would not develop too soon and be nipped by the spring frosts.

The Mexican war gave Sherman no experience in fighting. His company was sent out to California to help hold the territory on the Pacific coast just wrested from Mexico. He got a valuable experience, however, as adjutant to Colonel Mason, who exercised both civil and military power prior to the organization of the State. In this position he mingled in the political and business life of the strangely varied and energetic community which the gold discoveries had attracted to California. It was an excellent place to study human nature, and to weigh the characters and powers of individuals. There was little military routine in the life of the lieutenant

of artillery, but a great deal of active intercourse with men and affairs. In 1850 he returned to the East, and on May day married in Washington Ellen Boyle Ewing, a daughter of his former guardian, Senator Thomas Ewing. The house in which the wedding took place is still standing on Pennsylvania avenue—a very plain building now, but a fine mansion in those days. There were famous guests at the wedding—Clay, Webster, and Benton, and President Zachary Taylor with all his cabinet—and it was a brilliant affair, with music, dancing, and feasting, and was followed by a bridal tour to Niagara Falls.

The lieutenant was appointed Captain and Acting Commissary of Subsistence and stationed at St. Louis, whence in 1852 he was transferred to New Orleans. In 1853 he accepted a proposition to go back to California with money furnished by a St. Louis capitalist, and in company with a friend to start a bank in San Francisco. He was tired of the army, where there seemed to be nothing ahead for him but the rank of major, which was the highest he supposed he could reach by a lifetime of service; so he embraced this very flattering opportunity to get into civil life, and threw up his commission. The St. Louis capitalist must have reposed extraordinary confidence in the two young ex-officers to whom he gave his money to use on the other side of the continent; but they justified his faith in their honesty and capacity. The bank was established and did a good business. Sherman took it safely through a panic, mingled in the turbulent, eager life of those days of wild speculation, sudden fortunes, and as sudden ruin, vigilance committees, and political upheavals; a major-general of State militia at one time, and at all times a conservative citizen, upon whom men could rely to pay debts when due, give sound advice, keep a cool head under all circumstances, and act energetically when occasion required.

The San Francisco bank flourished for five years; but in 1858, after the flush times were over, the St. Louis capitalist wished to withdraw his funds. So the business was closed up and all the creditors were paid in full, and Sherman soon found himself back in his boyhood's home at Lancaster without occupation. In 1859 he went to Leavenworth, Kansas, as a lawyer and real estate agent. He knew nothing of law except what he had learned from reading Blackstone and Kent while in the army; but Judge Lecompte said he would admit him to the bar, without examination, "on the ground of general intelligence." He was now thirty-nine years old, with a wife and children, and had still his place to make in life. From his thirteen years' army service he

had gained the reputation of being a quick, intelligent, willing officer, and that was all. From his venture in business life he had gained plenty of experience, but no fortune. The expenses of his family and of travel had consumed his savings.

In this situation, and with no very flattering outlook for legal business in a rude frontier town, he was glad to receive an offer from the Governor of Louisiana, through the influence of a friend, of the superintendency of a new educational institution endowed with a grant of land from Congress and of money from the State, called the "Louisiana Seminary of Learning and Military Academy," to be established at Alexandria. The State conferred upon him the title of Colonel, and he set to work with his characteristic zeal and concentration of purpose to organize the school. In a few months it was in good shape, with a fair attendance of cadets. The superintendent was well liked and respected; but the high excitement of the Presidential campaign of 1860 soon made his position uncomfortable. The mania of secession was spreading rapidly through the South. A growing prejudice against Northern men pervaded all classes. Colonel Sherman's brother John was a United States Senator from Ohio, and one of the most conspicuous of the Republican leaders. Naturally the Superintendent of the Louisiana Military Academy fell under suspicion as being unsound on the slavery question and the so-called rights of the South. Some of the leading politicians undertook to corner him at a dinner party, and asked him point-blank to give his views on the institution of slavery. He did not hesitate to say that he thought the field hands should receive better treatment, and that the practice of separating families, and selling wives away from their husbands and children from their mothers should be reformed altogether. The slave-holders respected him for his frankness, and did not trouble him further; but when Louisiana prepared to join in the mad whirl of disunion, Sherman wrote to the Governor asking to be relieved from his position at the Academy the moment the State determined to secede. "On no earthly account," he wrote, "will I do any act or think any thought hostile to or in defiance of the old Government of the United States." He left Louisiana soon after, with an official acceptance of his resignation and a letter from the Governor abounding in handsome and hearty compliments. His family were sent to the Ewing homestead in Lancaster, a refuge always in times of trouble and uncertainty, while he went to St. Louis to look for something to do. When the rebellion began with the firing on Fort Sumter, in April,

1861, he was president of a street railroad company in that city.

Soon after the first outbreak of hostilities, Sherman proffered his services to the War Department in a frank letter, in which he said that his army record would indicate the position in which he could be of most service. He was offered the chief clerkship of the War Department, coupled with the promise of early advancement to the post of Assistant Secretary. This clerkly office in a Washington bureau was not at all to his liking. He did not volunteer under the three months' call for troops, because he had a family to support and could not give up his new business relations for a ninety-days' commission. Besides, he had no faith in Secretary Seward's ninety-day theory of the war. His residence in Louisiana had impressed him with a just conception of the determination, enthusiasm, and courage of the Southern people. He knew they were in earnest in their States' rights doctrine, and believed they would fight long and bravely in defense of their idea. With that idea he had no sympathy, and he was eager to combat it in behalf of the unity and supremacy of the nation. When the three years' call for volunteers was made by Lincoln in May, 1861, he was eager to go to the field, and gladly accepted the colonelcy of one of the new regiments of regulars, the Thirteenth. It was a long step forward from his last army rank of captain to the colonelcy of a regiment; but those were days when colonels and even generals were made out of shop-keepers and lawyers, and trained soldiers were in great request. It might be said that Sherman had powerful friends close to the Administration at Washington, who no doubt had a hand in influencing his appointment; but, on the other hand, there was his West Point education, his thirteen years of army service, and the impression he had everywhere made upon his seniors as a man competent for command and for the management of large affairs. If he had had no brother in the Senate and no friends in the Cabinet, he would in the end have made his way to the front of events just as Grant did, and Sheridan and Thomas and McPherson, and all the other really great commanders of the civil war.

Soon the War Department sent for the new colonel to come to Washington and to leave the recruiting of his regiment to his subordinates. Into the next four years were closely crowded the great events, experiences, and successes of Sherman's life. He now entered upon the field of action for which his whole previous career was a fortunate schooling and training. His military studies; his campaigns in the Florida Everglades; his hunting excursions

sions and travels in South Carolina, Georgia, and Alabama; his intimate acquaintance with the Southern people; his participation in the military government of California; his business career in that State in times when the strongest qualities of human nature were developed by the eager rush and competition of a wild multitude from all over the world seeking sudden wealth; his residence in Louisiana and association with its public men when the ferment of secession was in progress—all this varied experience was a remarkably effective preparation for a quick-brained, positive, patriotic man to play a great rôle in the war. There was nothing fortuitous in Sherman's success. He had no "lucky star." His great military achievements were the result of training and experience acting upon a nature at once susceptible and resolute, thoughtful and energetic, prudent and courageous. Let us add that he had the emphatic advantage for a military commander of perfect physical health and a robust, wiry constitution, capable of enduring great fatigue, and that he was forty-one years old, and therefore in the full enjoyment of his bodily and mental powers.

It is not within the scope of this article to describe in detail the events connected with Sherman's war record. They are a part of recent history, known to every school-boy. Besides, he has himself described them in the very frank, clear, straightforward narrative of his "Memoirs," wherein the story of his campaigns, his relations with his superior and subordinate officers, and his personal opinions and feelings, from Bull Run to Bentonville, is fully told. Within the limits of the present sketch, we can only glance at the most salient points of his war record—turning-points where the pathway to success was not plain, or steps of progress to greater eminence as a commander.

At Blackburn's Ford, just before the Bull Run battle, he "saw for the first time cannon-balls strike men and crash through the trees." He commanded a brigade in the battle, and threw his three regiments in succession, in good military shape, across an open field upon a portion of the enemy's line sheltered in a wood, but each came back repulsed. He held them together, however, and did not take them off the field until the rout became general all around them. Then he brought them back to the forts near Washington in rather better shape than most of the other brigades. He was profoundly mortified at the result of the affair; and when a report came to camp that he with certain other colonels were to be made brigadier-generals, he was incredulous, and remarked that it was more probable they would all be court-martialed and cashiered, as

they deserved, for the loss of the battle and the shamefully disorderly retreat.

The promotions were made, however, and Sherman was sent off to Kentucky as a brigadier-general. He had gained a valuable experience at Bull Run, though he did not realize it at the time. He had discovered that he could handle a brigade under fire with coolness and presence of mind, and that he did not "get stampeded," as the expression was at the time, by disaster.

The beginning of Sherman's career as a general officer was clouded by a cruel slander, which gained wide currency in the press of the country and came near blasting all his hopes of usefulness in the struggle against the rebellion. From Washington he was sent to Louisville, and was, temporarily and much against his wishes, placed in command of the forces gathered to resist the movement of the enemy into Kentucky. While busy organizing his raw levies, he was visited by the Secretary of War, Simon Cameron, who asked him how many troops he wanted in his department. At that time, new regiments, as fast as raised, were being sent either to the army of the Potomac at the East or to Fremont in Missouri. McClellan had one hundred thousand men to operate on a line sixty miles long; Fremont as many to move from a base one hundred miles long; while Sherman had only eighteen thousand men to hold a line three hundred miles long, which was the center and key to the whole position. With these facts in mind, he answered Cameron's question by saying, "Sixty thousand men now, and two hundred thousand before we are done." Soon after, some one in the war office, in a conversation with Adjutant-General Lorenzo Thomas, at which a newspaper correspondent was present, said, "Sherman must be crazy; he wants two hundred thousand men sent to Kentucky." Next day it was telegraphed to a New York daily that the Secretary of War thought Sherman crazy, and in a few days' time the story had spread throughout the press of the country that he was actually insane, or, at least, rather off his mental balance. Perhaps his quick, nervous, earnest manner gave some color to the wretched story; at all events, there were returning officers who pretended to know him and who professed to have doubts as to his soundness, when questioned by newspaper reporters. His "insanity" proved to be prophecy, for before six months had elapsed there were more than sixty thousand Union soldiers in Kentucky, and before the war ended the Federal armies south of the Ohio were fully two hundred thousand strong. Sherman was relieved and sent to St. Louis,

where Halleck had succeeded Frémont. Halleck put him in command of a camp of instruction; but when General Grant began his brilliant campaign against Fort Henry and Fort Donelson, he was posted at Paducah to gather troops from Indiana and Ohio and send them up to reinforce Grant. Both Grant and Sherman were brigadier-generals; but Sherman then outranked Grant by virtue of his regular army colonelcy, and Congress had not passed the law which authorized the assignment of general officers to command seniors of the same grade. Nevertheless, Sherman made no assertion of his right to command. Every boat loaded with troops which went up the Cumberland or the Tennessee brought to Grant a cordial note from him, asking what more he could do to aid him, and offering to come and serve under him in any capacity. Here was the beginning of the historic military and personal friendship which lasted throughout the war and since, and was never marred by clashing ambition or jealousy.

Grant was made a major-general for the capture of Fort Donelson, so there was no question of relative rank after that. Sherman joined him soon after with fresh troops, and was assigned to the command of a division. From that time on, whenever Grant was promoted, he recommended Sherman for the position he had vacated. As the one advanced, the other followed, step by step—to the command of the Army of the Tennessee, to the command of the four armies operating in the military division of the Mississippi, to the lieutenant-generalship of the army after the war, and then to the post of general when Grant became President.

General Sherman's hardest battle was Shiloh. He commanded the key of the position and held it. He regards it as the most severe struggle of the war. There was no chance for military genius to show itself by strategy and maneuvers. It was a soldiers' fight—a test of manhood where courage and steadiness won the day. The question was whether Grant's forces could stand their ground against the tremendous assaults of the enemy until dark, when Buell could come up with reinforcements. General Grant has often said, in describing the battle, that, as he rode from end to end of the line again and again, he always felt renewed confidence when he passed Sherman's position and exchanged a few words with him. Whatever happened, he felt sure Sherman would hold his ground.

Shiloh gave Sherman new life. He had been cast down by the newspaper stories about his sanity. "Now I was in high feather," he writes in his *Memoirs*. He had led a division in a pitched battle, and felt confidence in

himself. The insanity story was revived again after his repulse at Chickasaw Bayou; but he had gained the friendship and good opinion of his commanding general and the love of his soldiers, and could afford to laugh at it. The Chickasaw Bayou affair was a part of the failure of General Grant's first demonstration against Vicksburg. Grant moved down from Holly Springs; Sherman with his division went down the Mississippi and up the Yazoo on steam-boats; they were to meet in the rear of Vicksburg. The Confederate generals Van Dorn and Forrest raided and destroyed Grant's communications. Sherman, who was cut off from telegraphic news of his chief, failed to get a lodgment in the rear of Vicksburg, and the whole plan miscarried, to be succeeded, however, by the more brilliant and entirely successful movement of the following spring.

Certain incidents connected with the Vicksburg campaign of 1863 are well worth narrating here, as showing Sherman's lack of the jealousy and egotism which marred the characters of many of the generals of the late war. All that rainy winter, when the country along the Mississippi was flooded and the army was inactive, General Grant held to a purpose, never once divulged to any person, of sending the fleet past the Vicksburg batteries when the spring opened, and throwing his army below the town to invest it from the south. When fair weather came, he secured the coöperation of Admiral Porter, and then issued his orders to his division commanders. Sherman's part in the plan was to go up the Yazoo and make a feint against Haines's Bluff. When he received his orders, he hastened to Grant's head-quarters and argued against what seemed to him a very hazardous move. He thought Grant was placing himself in a position where an enemy would have maneuvered a year to get him—a hostile force on both sides of him, and one of them between him and his base of supplies. Sherman failed to convince Grant, who had been cut off from his base at Oxford some months before and had learned that he could subsist an army upon the country. Besides, he believed that in the critical condition of opinion in the North, a great risk ought to be taken for the prospect of a great success. In a letter to Rawlins, Grant's chief of staff, written next day, Sherman reiterated his objections to the plan of campaign. The letter was shown to Grant and remained unanswered. With perfect loyalty to his chief, and without the least feeling of resentment for the rejection of his plan of falling back on Memphis and operating on the line of the railroad, Sherman carried out his part of the campaign as zealously and

energetically as though the whole scheme had been his own. During eighteen days of forced marches and fighting and forty-nine days of siege, he did not once take off his clothes to sleep. After Grant's forces had crossed the Big Black, Sherman was given the lead in the advance upon Vicksburg. The two generals rode out one morning ahead of the marching columns, careless of the occasional bullets that came whistling by from squads of retreating rebel pickets. They reached the top of Walnut Hills, which Pemberton, the Confederate general, had occupied the year before, and which Sherman had in vain assaulted from the low land in front. There Sherman exclaimed with enthusiasm, "Grant, this is the biggest campaign in history. You ought to write a report on it at once. Napoleon never made a campaign like this." A few days later, when Sherman was holding the lines facing east from the Big Black to Haines's Bluff, Governor Yates came down from Illinois to visit the camps, accompanied by all the State officers. As Grant was passing along the lines one day, he came upon Sherman, whose back was toward him, and who was saying to a knot of the Illinois visitors: "This is the greatest campaign in history, and Grant deserves all the credit for it. I wrote him a letter before we started, in opposition to the whole plan." Now the letter was never sent to the War Department, nor made public in any way, and Sherman need not have mentioned it; but he was not willing to have any credit given to him which belonged to Grant.

After the fall of Vicksburg, the battle of Chattanooga, and the relief of Knoxville, Sherman marched across the State of Mississippi from west to east, making what is known in the history of the war as the Meridian raid. He had two divisions of troops, and found no great difficulty in penetrating the enemy's country, and foraging for supplies for his men and animals. The success of the raid set him to thinking about the feasibility of a much longer one, which should cut the Confederacy in two. Indeed, the expedition was the forerunner of Sherman's March to the Sea. It emancipated him from the "base-of-supplies" theory of campaigning, to which all the Union generals in the first two years of the war had been closely wedded, and from which the rough experience of having his communications cut and his stores burned had freed Grant the previous fall after his advance south from Holly Springs. The autumn of 1863 brought the half-defeat, half-victory of Chickamauga, the retirement of Rosecrans from the command of the Army of the Cumberland, the concentration of forces under Grant at Chattanooga, the skillfully planned

and brilliantly fought battle of Missionary Ridge, in which Sherman bore a conspicuous part, the promotion of Grant to the general command of all the Union forces and the immediate command of the Army of the Potomac, and Sherman's succession to the leadership of the four armies of the Tennessee, the Cumberland, the Ohio, and the Trans-Mississippi. Sherman now felt that the time was close at hand to strike a death-blow at the vitals of the Confederacy. He had in round numbers one hundred thousand men, after providing for the garrisons in his rear and for the protection of the railroad to Nashville which brought him supplies. The conditions of the war had changed. For the first two years of the struggle, no general was wholly responsible for the result of a movement, because no one could be sure that his plans would be carried out by his subordinate commanders. Well-meaning incompetency, bungling zeal, if not positive disobedience of orders, were constantly spoiling the best-laid schemes. When a commanding general sent a brigade or a division out on one or the other flank to march to a given place, or make a particular demonstration, the chances were hardly even that the orders would be strictly carried out. But by 1864 the political generals, and what the soldiers called the "corn-stalk brigadiers," had been weeded out or seasoned into good officers, and the rank and file had been inured to hard marching and steadiness under fire. "We could now play the game of war," says Sherman, speaking of the plans for his Atlanta campaign. How well he played the game need not be rehearsed here. By vigorous attacks in front, followed by skillful flank movements, he crowded his enemy southward through the broken and difficult country of upper Georgia, driving him from one strongly fortified position after another. The campaign might truthfully be called a hundred-days' battle, for there was hard fighting almost every day, from the time the advance began until the evacuation of Atlanta. Up to that time Atlanta, the focus of the Georgia system of railways, had been the objective point; but when Atlanta fell, and the Confederate General Hood extricated his army from the steadily encircling grasp of his antagonist, and made off into Alabama, with evident designs on Middle Tennessee and Kentucky, Sherman chose a new objective point—the army of General Lee, nearly a thousand miles distant at Richmond, Virginia. Here was the crisis of his career. Here his military genius shone with the brightest luster. Both Lincoln and Grant urged him by telegraph to follow Hood in his retreat—urged, but did not com-

mand, and wisely, at last, left all to his own judgment. Sherman penetrated Hood's plans, divining that, after gathering up reënforcements in Alabama, he would strike at Nashville. He sent back the prudent, courageous Thomas with two corps to encounter Hood and hold Nashville, and destroying his own communications set out with sixty thousand men to march through the enemy's country to the sea, three hundred miles distant, with the ultimate purpose of getting in the rear of Lee's army in Virginia.

The plan of this boldest and most successful strategic movement of the war was entirely Sherman's. There was no council of war. The first information the corps commanders had of the movement was in the orders for the march. Each received a map showing the sea-board, from Hilton Head to Ossabaw Sound, and the country back as far as Atlanta. Sherman had no doubt about his ability to subsist his army on the country as he advanced, and if provisions should wholly fail he reflected that he had twelve thousand horses and mules. He remembered that, while he was in California, an army officer had traversed two thousand miles of desolate country with a small party, living upon mule meat the whole way. Besides, he had carefully studied the latest census returns from the counties he expected to march through, and knew about how many thousands of people were living in each. These people must be producing corn and meat, and their food supplies would subsist his soldiers.

General Joseph E. Johnston, who commanded the Confederate forces engaged in resisting the advance upon Atlanta, once narrated the following incident, which well illustrated the impression Sherman had made upon the minds of the Southern soldiery at that time as a commander of resources and ready expedients. Johnston stood on Kennesaw Mountain watching with his glass the movements of his enemy's wagon-trains on the great plain to the northward. A staff officer came riding up with the news that the rebel cavalry had got in the rear of Sherman's army and had burned a number of railroad bridges. The officer had been forced to make a detour of two days to get around the Union Army. Scarcely had he finished speaking when a whistle was heard, and a moving train appeared in the distance, showing that Sherman had already rebuilt the bridges and re-opened his communications. Walking past a group of soldiers lounging in the shade a few minutes later, the General overheard them discussing Sherman's chances of success. Said one of them: "We'll make it a Moscow campaign and destroy his whole army." "How can you make it a Moscow campaign without

any snow?" asked his less enthusiastic comrade. "I mean that we'll cut his communications, destroy everything, and starve him out. We'll burn all the bridges." "Don't you know he carries duplicate bridges along with him?" "Well, we'll blow up the big tunnel." "Oh, hell!" exclaimed the other man, with a look of disgust; "you don't know old Tecumseh Sherman. He's got a duplicate tunnel too!"

The Atlanta campaign, followed by the March to the Sea and the subsequent rapid movement through the Carolinas, may be said to have disemboweled the Confederacy. The rebellion collapsed when Lee surrendered his army in Virginia to Grant, because there was no line of retreat, no practicable point for resistance. Hood's army had been crushed by Thomas at Nashville in exact accordance with Sherman's foresight. After the surrender of Johnston in North Carolina, there was no organized rebel force nearer than Texas powerful enough to be called an army. Public opinion North and South was right in instantly according to Grant and Sherman the supreme honors for bringing the war to an end.

For Sherman, however, the war closed, as it had begun, with much bitterness and injustice. His laurels were made very thorny for a time by a fierce political animosity which cruelly misconstrued his acts and motives. The terms of surrender for Johnston's army, which he forwarded to Washington for approval, raised a tempest of passionate denunciation. He was accused of surrendering to Johnston. Even the Secretary of War, Mr. Stanton, usually cool-headed and just, sent a dispatch to the newspapers intimating that Sherman was facilitating the escape of Jefferson Davis with wagon-loads of specie. At this distance of time it is difficult to comprehend this sudden outburst of distrust and hostility, and impossible to find excuse for the calumnies heaped upon a gallant soldier who had rendered such conspicuous service to his country. His terms for Johnston's surrender provided that the rebel soldiers should return home with a pledge that they would not be molested so long as they obeyed the laws, and that the State governments existing in the South should go on with their civil functions. A short time before he had met Lincoln, and believed that these conditions were approved by the President. But since then Lincoln had been assassinated, and the new President, Andrew Johnson, was at that time full of gall and bitterness toward the conquered South. The Republican leaders had conceived projects of holding the conquered States by military force, obliterating their local governments, and giving the elective franchise to the blacks. Sherman's simple and

generous terms clashed with these plans. Grant was sent post-haste by Stanton to take charge of matters in North Carolina; but on arriving there he wisely left Sherman to negotiate the new terms with Johnston, and to march his victorious army up to Washington to be mustered out. The whole question of the political future of the revolted States was left for Congress to determine. Sherman soon realized the truth of the prediction made by old General Scott in 1861, that after the war should end no power on earth would be able to restrain the fury of the non-combatants.

That the question was determined unfortunately and wrongly, General Sherman still believes. Though a Republican in his party attachment, he had no sympathy with the reconstruction measures. He still thinks the long epoch of misgovernment, turbulence, discontent, and bloodshed through which the South passed, after the war ended, to reach its present condition of quiet and prosperity, might have been avoided; that a dozen years were worse than lost, and the general progress of the whole country checked; that negro suffrage was prematurely enforced; that it would have come in good time through the operation of political forces in the States themselves. In his opinion the long, costly, and angry experiment of reconstruction only brought the South, in the end, to the point where he proposed it should start when arms were laid down—that is to say, to the enforcement of order and individual rights by local public opinion and State law, without the interference of the national government.

SHERMAN'S habits during his campaigns were of the simplest. He rose early in the morning, and was up late at night. In the face of the enemy, five hours' sleep sufficed him. Before the reveille sounded, he was often in the saddle and out on the most exposed parts of his line. The orders were always to arouse him at any hour of the night, if reports came in. During the Atlanta campaign he set the example to his troops of discarding tents and reducing baggage to a minimum. There was but one tent attached to his head-quarters, and that was used by his adjutant-general and his clerks. With his staff he slept on the ground under a tent fly, which was stretched at night over a pole resting in the crotches of some convenient saplings. It used to be said that his head-quarters were in a candle-box, because one or two small boxes, emptied of the candles they originally had contained, served to transport his papers. The soldiers called him "Old Tecums" and "Uncle Billy," the latter nickname coming into general use in the army during the March to the

Sea. At his head-quarters a single sentry stood guard; but nobody, whether officer or private soldier, who wanted to speak to the General, was stopped. He always had a cordial and encouraging word for the soldiers when he rode along the lines in front of the enemy or passed a marching column. For the details of military etiquette and ceremony he cared nothing; but for steadiness in action and endurance in hard marching, he had a quick eye and a ready word of praise. He was usually communicative and outspoken, unless his plans demanded secrecy. Sometimes his frankness deceived the enemy more than concealment would have done. After he captured Savannah, he sent a flag-of-truce boat to Charleston and gave permission to go upon it to the families of Confederate officers who wished to get inside the Confederate lines. Among the applicants for passes was the wife of a Confederate surgeon, who told the General she wanted to go to Columbia, South Carolina, to join her husband. "Don't go to Columbia, madam," exclaimed Sherman. "I shall be there myself in a few days with my whole army. You are at liberty to tell that to your rebel friends in Charleston." The lady made haste to communicate this information to the Confederate commanders in Charleston as soon as she arrived; but all agreed that, if Sherman actually meant to march to Columbia, he would never have said so. His advance reached Columbia a day after the surgeon's wife arrived.

Many good anecdotes of Sherman were current during the war. Some of them, he once said, when they were brought to his notice, had been told of every general since Hannibal. Here is one of unquestionable authenticity, which shows his sagacity in dealing with the population of conquered towns. After he occupied Memphis, the people kept the churches, schools, and places of business closed, so that, save for the movements of the soldiers, the place looked like a city of the dead. He issued an order directing that the stores and shops should be opened during business hours, the schools resume their courses, and the churches hold their customary services. Among the people who called at his head-quarters to protest against this order, or to ask for explanations, was the clergyman of an Episcopal church, who said that the ritual of his denomination contained a prayer for the President which, under the circumstances, embarrassed him. "Whom do you regard as your President?" asked Sherman, bluntly. "We look upon Mr. Davis as our President," replied the minister. "Very well; pray for Jeff Davis if you wish. He needs your prayers badly. It will take a great

deal of praying to save him." "Then I will not be compelled to pray for Mr. Lincoln?" "Oh, no. He's a good man, and don't need your prayers. You may pray for him if you feel like it, but there's no compulsion," answered Sherman, instantly divining that the worthy clergyman wanted to pose as a martyr before his parishioners, and had hoped that he would be ordered to use the prayer for the President of the United States. The next Sunday the prescribed prayer was so modified by the preacher as to leave out all mention of the President, and to refer only to "all in authority."

After the great review of homeward-bound troops in Washington, in the spring of 1865, General Sherman was sent to St. Louis, to command in the Indian country. He was not intrusted with any of the business of reconstruction, and wanted nothing to do with it. In the West he found a field of effort entirely congenial, the protection of the great Pacific Railroad then being built westward from the Missouri River. He took the warmest interest in this enterprise, regarding it as destined to complete the work of consolidating and unifying the American people—a work in the progress of which the great civil war would be regarded from the historical point of view as only a tragic incident. Much of the time he spent out on the line in Nebraska and Wyoming. He held councils with the Indian tribes, and told the chiefs that if they interfered with the construction of the railroad the Government would send out all the soldiers it lately had in the South and exterminate them. In later years, the Northern and Southern roads to the Pacific had the benefit of his active interest and protection. His troops guarded the surveyors and track-builders, and cleared hostile Indians from the path of the advancing rails. Strongly inspired, as always, with the national idea, he saw in the long lines reaching across the continent the bands of perpetual union for the Republic as well as the arteries for the circulation of the forces of civilization.

Since his promotion to the rank of general, Sherman has been the commander of the army in fact as well as in name. He has traversed every State and Territory, and visited every military post in the country except two. He used to direct the movement of troops in Idaho and Arizona by telegraph from his head-quarters in the War Department as effectually as he had those of the companies at the Washington Arsenal, almost within sight of his windows. It may well be doubted whether there is any man living as familiar with the geography, resources, and means of communication of the whole United States, from

Florida to Alaska and from Maine to Mexico. He has been a great traveler, making long journeys every summer, traversing thousands of miles of bridle-trails and rough roads over deserts and mountains, in the far West, to inspect the garrisons, visit the Indian reservations, and facilitate the construction of the Pacific railroads,—always observant, energetic, hardy and cheerful, defying fatigue, and picking up bits of information from every one he met,—a delightful companion for a tough march or for an evening at a frontier post or by a hunter's camp-fire.

In 1871 and 1872 General Sherman spent a year in the Old World, visiting the Mediterranean countries, Turkey, the Caucasus, Russia, Austria, Germany, and the nations of Western Europe. He kept a journal of the tour—a big, solidly bound volume, written in a clear, graceful hand, intended only for a personal record, but abounding in vigorous descriptions of people and places. Friends who are privileged to read it do not find much about the armies of Europe. He attended reviews when invited, but he cared more for the affairs of peace—the people, their ways of living, and their comparative standing in the scale of civilization; the cities and their characteristics; the railways, ports, agriculture, and manufactures of the regions he visited. In time of peace he is evidently more a citizen than a soldier. He went to the battle-fields of the then recent Franco-Prussian war, however, and, remembering with what vigor his antagonist at Atlanta, General Hood, had resisted the movements to coop him up, what tremendous blows he had struck in quick succession at different points on the steadily enveloping line, and how he had finally escaped with his whole army, he came to the conclusion that, with courage and good generalship, Napoleon could have cut his way out of Sedan, or Bazaine out of Metz.

It may be permitted to glance at the home and social life of one who has been so long in a conspicuous public position. Eight children have been born to General Sherman, of whom six are living. One died an infant, and was never seen by the father. Willie, the eldest boy, who was with the General in his campaign on the Mississippi, and was greatly beloved by the soldiers, died in 1863. The eldest of those living is Minnie, now Mrs. Fitch, whose husband resigned a lieutenantcy in the navy that he might enjoy a home life, and is now a manufacturer. The second daughter, Lizzie, is unmarried. Thomas, the eldest son remaining, was educated first in the Georgetown Seminary, then at Yale College, and then in the St. Louis Law School.

He gave up a law partnership to become a Catholic priest, greatly against his father's wishes. The third daughter, Ella, Mrs. Thakara, is, like her eldest sister, the wife of an ex-naval officer, who is now engaged in manufacturing. Rachel and Philemon Tecumseh are the two younger children.

General Sherman enjoys a harmonious and affectionate family life. He is social in his nature, and during his long residence in Washington he mingled freely in the society of the capital, liking best, however, not the grand parties and receptions, but small gatherings having an intellectual bent — a paper to be read, perhaps, on some scientific discovery or some recent explorations, and afterward a little unpretentious music and much good conversation. Such gatherings are frequent in Washington during the winter season, and the tall, erect form of the General of the Army was often conspicuous at them. It made no difference whether the house was that of a millionaire or a foreign Minister, or of some poor artist or department clerk; for Sherman was always very democratic in his social habits, caring little for wealth or high position. He is exceedingly fond of the drama in all its higher forms, and is a frequent visitor of theaters. Writing of this taste in a private letter, published in the newspapers not long ago, he said:

"To me the stage is not only a powerful instructor, but the very best kind of a rest in the midst of the cares of life. Seated in an audience, with some well-arranged play, one experiences not only a needed rest, but more, a cheerful mental support, relieving the mind far more than reading or even social converse. I have always been, am now, and purpose to be, a great friend of the drama, a friend of those who play upon the stage, and a friend of the managers who bear the burden of preparation and arrangement."

He is active and temperate in his habits, eating but twice a day and taking much ex-

ercise on horseback and on foot, frank and cordial in his manner, accessible to all, still fond of the woods and the fields, of good novels, and of young company, and not appearing as old within eight or ten years as the *Army Register* makes him out to be. It seems a pity that he should be shelved upon the retired list when he is as well fitted as ever for command.

If we were to shut our eyes to the verdict of history and to the glamour of romance which surrounds successful commanders, and should take an original and coldly critical view of General Sherman's career during the civil war, we should still have to dissent wholly from his modest estimate of himself, that he had no natural military genius. For the minor business of soldiering as a profession we may grant that he had no taste or special talent; but for leading great armies he certainly displayed the highest qualities. His is the genius, not of drills and reviews, but of grand maneuvers and of decisive action in the crisis of a campaign,—the genius that directs large bodies of troops over a wide expanse of country to produce a prearranged result; that divines where an enemy is going to strike and prepares for the event; that sees the weak spot in an adversary's strategic plan or line of battle and delivers an effective blow at the right time; the genius, too, that inspires a whole army with lofty, patriotic fervor and perfect *esprit de corps*, that commands the confidence of officers and men, and that makes of regiments, brigades, divisions, and corps a single vast organism moved by one will. In these highest attributes of successful generalship, Sherman must fairly be ranked with the great military chiefs, not of our own country and our late war alone, but of the whole world and of all history.

E. V. Smalley.

HER CHOICE.

"BEHOLD! it is a draught from Lethe's wave.
Thy voice of weeping reacheth even that strand
Washed by strange waters in Elysian land;
I bring the peace thy weary soul doth crave.
Drink, and from vain regret thy future save."
She lifted deep, dark eyes wherein there lay
The sacred sorrow of love's ended day,
Then took the chalice from the angel's hand.
Life with new love, or life with memory
Of the old love? Her heart made instant choice;
Like tender music rang the faithful voice:
"O sweet my love, an offering to thee!"
And with brave smile, albeit the tears flowed fast,
Upon the earth the priceless draught she cast.

Eliza Calvert Hall.

“HIS WIFE’S DECEASED SISTER.”

It is now five years since an event occurred which so colored my life, or, rather, so changed some of its original colors, that I have thought it well to write an account of it, deeming that its lessons may be of advantage to persons whose situation in life is similar to my own.

When I was quite a young man I adopted literature as a profession, and, having passed through the necessary preparatory grades, I found myself, after a good many years of hard and often unremunerated work, in possession of what might be called a fair literary practice. My articles, grave, gay, practical, or fanciful, had come to be considered with a favor by the editors of the various periodicals for which I wrote, on which I found in time I could rely with a very comfortable certainty. My productions created no enthusiasm in the reading public; they gave me no great reputation or very valuable pecuniary return; but they were always accepted, and my receipts from them, at the time to which I have referred, were as regular and reliable as a salary, and quite sufficient to give me more than a comfortable support.

It was at this time I married. I had been engaged for more than a year, but had not been willing to assume the support of a wife until I felt that my pecuniary position was so assured that I could do so with full satisfaction to my own conscience. There was now no doubt in regard to this position, either in my mind or in that of my wife. I worked with great steadiness and regularity; I knew exactly where to place the productions of my pen, and could calculate with a fair degree of accuracy the sums I should receive for them. We were by no means rich; but we had enough, and were thoroughly satisfied and content.

Those of my readers who are married will have no difficulty in remembering the peculiar ecstasy of the first weeks of their wedded life. It is then that the flowers of this world bloom brightest; that its sun is the most genial; that its clouds are the scarcest; that its fruit is the most delicious; that the air is the most balmy; that its cigars are of the highest flavor; that the warmth and radiance of early matrimonial felicity so rarely the intellectual atmosphere that the soul mounts higher and enjoys a wider prospect than ever before.

These experiences were mine. The plain claret of my mind was changed to sparkling champagne; and at the very height of its effervescence I wrote a story. The happy thought

that then struck me for a tale was of a very peculiar character, and interested me so much that I went to work at it with great delight and enthusiasm, and finished it in a comparatively short time. The title of the story was “His Wife’s Deceased Sister”; and when I read it to Hypatia she was delighted with it, and at times was so affected by its pathos that her uncontrollable emotion caused a sympathetic dimness in my eyes which prevented my seeing the words I had written. When the reading was ended, and my wife had dried her eyes, she turned to me and said: “This story will make your fortune. There has been nothing so pathetic since Lamartine’s ‘History of a Servant Girl.’”

As soon as possible the next day I sent my story to the editor of the periodical for which I wrote most frequently, and in which my best productions generally appeared. In a few days I had a letter from the editor, in which he praised my story as he had never before praised anything from my pen. It had interested and charmed, he said, not only himself, but all his associates in the office. Even old Gibson, who never cared to read anything until it was in proof, and who never praised anything which had not a joke in it, was induced by the example of the others to read this manuscript, and shed, as he asserted, the first tears that had come from his eyes since his final paternal castigation, some forty years before. The story would appear, the editor assured me, as soon as he could possibly find room for it.

If anything could make our skies more genial, our flowers brighter, and the flavor of our fruit and cigars more delicious, it was a letter like this. And when, in a very short time, the story was published, we found that the reading public was inclined to receive it with as much sympathetic interest and favor as had been shown to it by the editors. My personal friends soon began to express enthusiastic opinions upon it. It was highly praised in many of the leading newspapers; and, altogether, it was a great literary success. I am not inclined to be vain of my writings, and, in general, my wife tells me, think too little of them; but I did feel a good deal of pride and satisfaction in the success of “His Wife’s Deceased Sister.” If it did not make my fortune, as my wife asserted that it would, it certainly would help me very much in my literary career.
